Department of Commerce Howard Lutnick, Secretary National Institute of Standards and Technology Craig Burkhardt, Acting Under Secretary of Commerce for Standards and Technology and Acting NIST Director NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 Certain equipment, instruments, software, or materials, commercial or non-commercial, are identified in this paper in order to specify the experimental procedure adequately. Such identification does not imply recommendation or endorsement of any product or service by NIST, nor does it imply that the materials or equipment identified are necessarily the best available for the purpose. There may be references in this publication to other publications currently under development by NIST in accordance with its assigned statutory responsibilities. The information in this publication, including concepts and methodologies, may be used by federal agencies even before the completion of such companion publications. Thus, until each publication is completed, current requirements, guidelines, and procedures, where they exist, remain operative. For planning and transition purposes, federal agencies may wish to closely follow the development of these new publications by NIST. Organizations are encouraged to review all draft publications during public comment periods and provide feedback to NIST. Many NIST cybersecurity publications, other than the ones noted above, are available at <https://csrc.nist.gov/publications>. Authority This publication has been developed by NIST in accordance with its statutory responsibilities under the Federal Information Security Modernization Act (FISMA) of 2014, 44 U.S.C. § 3551 et seq., Public Law (P.L.) 113-283. NIST is responsible for developing information security standards and guidelines, including minimum requirements for federal information systems, but such standards and guidelines shall not apply to national security systems without the express approval of appropriate federal officials exercising policy authority over such systems. This guideline is consistent with the requirements of the Office of Management and Budget (OMB) Circular A-130. Nothing in this publication should be taken to contradict the standards and guidelines made mandatory and binding on federal agencies by the Secretary of Commerce under statutory authority. Nor should these guidelines be interpreted as altering or superseding the existing authorities of the Secretary of Commerce, Director of the OMB, or any other federal official. This publication may be used by nongovernmental organizations on a voluntary basis and is not subject to copyright in the United States. Attribution would, however, be appreciated by NIST. NIST Technical Series Policies Copyright, Use, and Licensing Statements NIST Technical Series Publication Identifier Syntax Publication History Approved by the NIST Editorial Review Board on YYYY-MM-DD [Will be added to final publication.] Supersedes NIST Series XXX (Month Year) DOI [Will be added to final publication, if applicable.] How to Cite this NIST Technical Series Publication: Ross R, Pillitteri V (2025) Enhanced Security Requirements for Protecting Controlled Unclassified Information. (National Institute of Standards and Technology, Gaithersburg, MD), NIST Special Publication (SP) NIST SP 800- 172r3 fpd. <https://doi.org/10.6028/NIST.SP.800-172r3.fpd> Author ORCID iDs Ron Ross: 0000-0002-1099-9757 Victoria Pillitteri: 0000-0002-7446-7506

(e) Contracting officers shall also refer to 3.104-4 for procedures related to the disclosure, protection, and marking of contractor proprietary business information, contractor bid or proposal information, and source selection information submitted to the Government. (f) The contracting officer shall follow agency procedures when providing any CUI to an offeror to ensure offeror compliance with the requirements in 32 CFR part 2002 . 4.403-6 CUI incident reports. (a) Agencies shall protect against the improper use or release of information that includes contractor proprietary business information or contractor-attributable information to the extent required by law. See paragraph (g)(9) of 52.204-XX, Controlled Unclassified Information, for details on how contracting officers may use or share this information. (b) For CUI in a non-Federally-controlled facility- (1) Designate the agency point of contact to whom the contractor reports a CUI incident in the SF XXX Part C, Section IV. When the SF XXX is not used in a contract, the point of contact is the contracting officer (see 52.204-YY(b)). (2) The SF XXX will list any special incident reporting requirements for CUI Specified. (3) Upon notification of a CUI incident, the contracting officer shall notify the requiring activity of the CUI incident as soon as practicable and in accordance with agency procedures. If the CUI incident occurs on an order against an indefinite delivery contract, the ordering agency contracting officer shall make the contracting officer for the

indefinite delivery contract aware of the notification. (c) When the contractor is required to provide information system images preserved under the requirements of paragraph (g)(4) of the clause at 52.204-XX or as directed by the contracting officer in response to contractor notification under paragraph (b)(2) of the clause at 52.204-YY, in accordance with agency procedures, the contracting officer shall provide instructions to the contractor for submitting the system images. The contractor is required to hold the system images for 90 days unless the Government declines interest. (d)(1) The contracting officer shall not interpret a contractor's report of a CUI incident to mean that the contractor or a subcontractor at any tier failed to provide adequate safeguards for CUI or otherwise failed to meet the requirements of the clause at 52.204-XX, without further analysis by the agency. (2) When a CUI incident is reported, the contracting officer shall consult with appropriate agency personnel (e.g., program office or requiring activity) before taking any action under the contract related to the CUI incident. When the contract includes the clause at 52.204-XX, the contracting officer shall consider such CUI incidents in the context of an overall assessment of the contractor's compliance with the requirements of the clause at 52.204-XX.

that a regulated entity must review and modify security measures. Section 164.306 does not explicitly reference specific security measures, and we are concerned that recent caselaw has highlighted conditions that may cause regulated entities to misinterpret regulatory text that connects the maintenance provision at 45 CFR 164.306(e) with the documentation requirements in 45 CFR 164.316 and the administrative safeguards. Through OCR's educational and enforcement efforts, we also have observed inadequacies in compliance with security management processes. For example, some regulated entities have (printed page 936) incorrectly interpreted the standards to not require implementing administrative safeguards, such as risk analyses, for all relevant electronic information systems. Some regulated entities have not documented in writing their policies, procedures, plans, and analyses. [442] As discussed above, many mistakenly treated ·addressable· implementation standards as optional. [443] Enforcement experience has shown that regulated entities generally do not perform all elements of the risk management process that are fundamental to protecting the confidentiality, integrity, and availability of ePHI and to cybersecurity more broadly. In addition, since the Security Rule was issued in 2003 and revised in 2013, newer, more protective security technology has become widely available to regulated entities, and best practices for securing electronic information have evolved. NIST has published numerous guides, including its recent Cybersecurity Framework 2.0, providing resources for establishing and implementing policies and practices to better manage cybersecurity risks. [444] OCR is drawing upon its enforcement experience, as well as best practices, guidelines, processes, and procedures for improving cybersecurity to propose changes to these standards to better protect ePHI that a regulated entity creates, receives, maintains, or transmits. We believe that these proposals would help ensure that regulated entities implement compliance activities that are consistent with recommendations made by NIST, the HHS 405(d) program, and standards setting bodies regarding cybersecurity. Because business associates are directly liable for compliance with the Security Rule, in our 2013 Security Rule revisions we did not require covered entities to implement any additional safeguards to ensure that their business associate is in fact in compliance. [445]

, DoD established a Regulatory Reform Task Force to review and validate DoD regulations, including the DFARS. A public notice of the establishment of the DFARS Subgroup to the DoD Regulatory Reform Task Force, for the purpose of reviewing DFARS provisions and clauses, was published in the Federal Register at 82 FR 35741 on August 1, 2017, and requested public input. No public comments were received on this provision. Subsequently, the DoD Task Force reviewed the requirements of DFARS provision 252.204-7004, Alternate A, System for Award Management, and determined that the DFARS coverage was redundant and recommended removal. II. Applicability to Contracts at or Below the Simplified Acquisition Threshold and for Commercial Items, Including Commercially Available Off-the-Shelf Items This rule merely removes obsolete DFARS provision 252.204-7004, Alternate A, System for Award Management. Therefore, the rule does not impose any new requirements on contracts at or below the simplified acquisition threshold and for commercial items, including commercially available off-the-shelf items. III. Executive Orders 12866 and 13563 Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866 , Regulatory

Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804 . IV. Executive Order 13771 This rule is not an E.O. 13771 , Reducing and Controlling Regulatory Costs, regulatory action, because this rule is not significant under E.O. 12866 . V. Publication of This Final Rule for Public Comment Is Not Required by Statute The statute that applies to the publication of the Federal Acquisition Regulation (FAR) is the Office of Federal Procurement Policy statute (codified at title 41 of the United States Code). Specifically, 41 U.S.C. 1707(a)(1) requires that a procurement policy, regulation, procedure or form (including an amendment or modification thereof) must be published for public comment if it relates to the expenditure of appropriated funds, and has either a significant effect beyond the internal operating procedures of the agency issuing the policy, regulation, procedure, or form, or has a significant cost or administrative impact on contractors or offerors. This final rule is not required to be published for public comment, because DoD is not issuing a new regulation; rather, this rule merely removes an obsolete requirement from the DFARS. VI. Regulatory Flexibility Act

(i) The Level 1 self-assessment must be performed using the objectives defined in NIST SP 800-171A Jun2018 (incorporated by reference, see § 170.2) for the security requirement that maps to the CMMC Level 1 security requirement as specified in table 1 to paragraph (c)(1)(ii) of this section. In any case where an objective addresses CUI, FCI should be substituted for CUI in the objective. (ii) Mapping table for CMMC Level 1 security requirements to the NIST SP 800-171A Jun2018 objectives. Table 2 to § 170.15 (c)(1)(ii) ·CMMC Level 1 Security Requirements Mapped to NIST SP 800-171A Jun2018 CMMC Level 1 security requirements as set forth in § 170.14(c)(2) NIST SP 800-171A Jun2018 AC.L1-b.1.i 3.1.1 AC.L1-b.1.ii 3.1.2 AC.L1-b.1.iii 3.1.20 AC.L1-b.1.iv 3.1.22 IA.L1-b.1.v 3.5.1 IA.L1-b.1.vi 3.5.2 MP.L1-b.1.vii 3.8.3 PE.L1-b.1.viii 3.10.1 First phrase of PE.L1-b.1.ix (FAR b.1.ix.*) 3.10.3 Second phrase of PE.L1-b.1.ix (FAR b.1.ix.*) 3.10.4 Third phrase of PE.L1-b.1.ix (FAR b.1.ix.*) 3.10.5 SC.L1-b.1.x 3.13.1 SC.L1-b.1.xi 3.13.5 SI.L1-b.1.xii 3.14.1 SI.L1-b.1.xiii 3.14.2 SI.L1-b.1.xiv 3.14.4 SI.L1-b.1.xv 3.14.5 *.Three of the 48 CFR 52.204-21 requirements were broken apart by ·phrase· when NIST SP 800-171 R2 was developed. (iii) Additional guidance can be found in the guidance document listed in paragraph (b) of appendix A to this part. (2) Artifact retention. The artifacts used as evidence for the assessment must be retained by the OSA for six (6) years from the CMMC Status Date. § 170.16 CMMC Level 2 self-assessment and affirmation requirements. (a) Level 2 self-assessment. To comply with Level 2 self-assessment requirements, the OSA must meet the requirements detailed in paragraphs (a)(1) and (2) of this section. An OSA conducts a Level 2 self-assessment as detailed in paragraph (c) of this section to achieve a CMMC Status of either Conditional or Final Level 2 (Self). Achieving a CMMC Status of Level 2 (Self) also satisfies the requirements for a CMMC Status of Level 1 (Self) detailed in § 170.15 for the same CMMC Assessment Scope. (1) Level 2 self-assessment requirements. The OSA must complete and achieve a MET result for all security requirements specified in § 170.14(c)(3) to achieve the CMMC Status of Level 2 (Self). The OSA must conduct a self-assessment in accordance with the procedures set forth in paragraph (c)(1) of this section and submit assessment (printed page 83228) results in Supplier Performance Risk System (SPRS). To maintain compliance with the requirements for a CMMC Status of Level 2 (Self), the OSA must conduct a Level 2 self-assessment every three years and submit the results in SPRS, within three years of the CMMC Status Date associated with the Conditional Level 2 (Self). (i) Inputs to SPRS. The Level 2 self-assessment results in the SPRS shall include, at minimum, the following information: (A) CMMC Level. (B) CMMC Status Date. (C) CMMC Assessment Scope. (D) All industry CAGE code(s) associated with the information system(s) addressed by the CMMC Assessment Scope.

Implementing the proposals likely would require regulated entities to engage workforce members or consultants for certain activities. The Department assumes that an information security analyst would perform most of the activities proposed in the NPRM, consistent with the existing Security Rule requirements. The Department expects that a computer and information systems manager would revise policies and procedures, a training and development specialist would revise the necessary workforce training, a lawyer would revise business associate agreements, and a compensation and benefits manager would revise health plan documents for plan sponsors. To the extent that these assumptions affect the Department's estimate of costs, the Department solicits comment on its assumptions, particularly assumptions in which the Department identifies the level of workforce member (e.g., analyst, manager, licensed professional) that would be engaged in activities and the amount of time that particular types of workforce members spend conducting activities related to this RIA as further described below. Table 3 lists pay rates for occupations referenced in the cost estimates for the NPRM. Table 3-Occupational Pay Rates 944 Occupation code and title Fully

loaded hourly wage 2023 Average hourly wage 15-1212·Information Security Analysts \$119.94 \$59.97 13-1151·Training and Development Specialists 69.20 34.60 11-3111·Compensation and Benefits Manager 145.14 72.57 11-3021·Computer and Information Systems Managers 173.76 86.88 23-1011·Lawyers 169.68 84.84 13-1111·Management Analysts 111.08 55.54 43-0000·Office and Administrative Support Occupations 46.10 23.05 The Department assumes that most regulated entities would be able to incorporate changes to their workforce training into existing cybersecurity awareness training programs and Security Rule training rather than conduct a separate training because the total time frame for compliance from date of publication of a final rule would be 240 days. [945] Regulated Entities Affected The changes proposed in this NPRM would apply to covered entities (i.e., health care providers that conduct covered electronic transactions, health plans, and health care clearinghouses) and their business associates (including subcontractors). The Department estimates the number of covered entities to be 822,600 business establishments (see table 4). By calculating costs for establishments, rather than firms, [946] some burdens may be overestimated because certain costs would be borne by a parent organization rather than each separate facility. Similarly, benefits and transfers would be overestimated because entity assumptions flow through to those quantifications. However, decisions about the level of an organization that is responsible for implementing certain requirements likely varies across the health care industry. The Department requests data on the extent to which certain burdens are borne by each facility versus an umbrella organization. According to Census data, [947]

Functionality requirements are the technical security features (referred to as "security enforcing functions") that are implemented in an IT system in order to support the system's requirements for the maintenance of confidentiality, integrity, and availability. The ITSEC defines ten example functionality classes: FI, F2, F3, F4, F5, F6, F7, F8, F9, and FIO. Functionality classes FI - F5 are roughly equivalent to the TCSEC classes CI, C2, BI, B2, and B3.^ Functionality classes F6 FIO represent integrity, availability, data communications integrity, data communications confidentiality, and data communications confidentiality and integrity, respectively. The System Security Study Committee was formed in 1988 in response to a request from the Defense Advance Research Projects Agency (DARPA) to address the security and trustworthiness of U.S. computing and communications systems. The Committee, composed of 16 individuals from industry and academia including computer and communications security researchers and practitioners and software engineers, was charged with developing a national research, engineering, and policy agenda to help the U.S. achieve a more trustworthy computing technology base by the end of the century. In 1991, the Committee published the Computers at Risk - Safe Computer in the Information Age [5] report, which presents the Committee's assessment of key computer and communications security issues and its recommendations for enhancing the security and trustworthiness of the U.S. computing and communications infrastructure. * since encryption algorithms are subject to national export control, statements specifying data encryption have been stated as advisories rather than requirements. This will allow the data encryption mechanism to be packaged by the vendor as a separate option and not "bundled" into the baseline system.

Example 1	Example 2	Example 3
Control(s)	Periodic vulnerability assessments Patch deployment capabilities	Unique user accounts Authentication method(s) Audit logs Audit log alerting/evaluation Power generator AC unit Upstream network provider Web load balancers Web servers
KPI	Percentage of vulnerabilities patched Unsuccessful logins in a 1-hour period Outage time in hours	Leading KRI Number of computers with critical (CVSS 10) vulnerabilities that have not been patched in 10 days 4 failed logins for a single user 29 failed logins across all users Outages affecting more than 5 %of customers that have lasted 1.5 hours Outages lasting over 2 hours that affect fewer than 5 %of customers
Lagging KRI	Number of computers with CVSS 10 vulnerabilities that have not been patched in 15 days 5 failed logins for a single user 30 failed logins across all users	Current outages affecting more than 5 %of customers that have lasted more than 2 hours

Control(s) | · Periodic vulnerability assessments · Patch deployment capabilities | · Unique user accounts · Authentication method(s) · Audit logs · Audit log alerting/evaluation | · Power generator · AC unit · Upstream network provider · Web load balancers · Web servers | | KPI | Percentage of vulnerabilities patched | · Unsuccessful logins in a 1-hour period | · Outage time in hours | | Leading KRI | Number of computers with critical (CVSS 10) vulnerabilities that have not been patched in 10 days | · 4 failed logins for a single user · 29 failed logins across all users | · Outages affecting more than 5 %of customers that have lasted 1.5 hours · Outages lasting over 2 hours that affect fewer than 5 %of customers | | Lagging KRI | Number of computers with CVSS 10 vulnerabilities that have not been patched in 15 days | · 5 failed logins for a single user · 30 failed logins across all users | · Current outages affecting more than 5 %of customers that have lasted more than 2 hours |

(B) For a commercial central station, protective signaling service station, or residential monitoring station, there will be a sufficient number of trained guards available to respond to alarms. Guards will be cleared only if they have the ability and responsibility to access the area or container(s) housing classified material (i.e., keys to the facility have been provided or the personnel are authorized to enter the building or check the container or area that contains classified material). (C) Uncleared guards dispatched by a commercial central station, protective signaling service station, or residential monitoring station in response to an alarm will remain on the premises until a designated, cleared representative of the facility arrives, or for a period of not less than 1 hour, whichever comes first. If a cleared representative of the facility does not arrive within 1 hour following the arrival of the guard, the central control station must provide the CSA with a report of the incident that includes the name of the subscriber facility, the date and time of the alarm, and the name of the subscriber's representative who was contacted to respond. A report will be submitted to the CSA by the end of business on the next business day. (D) Subcontracted guards must be under a classified contract with either the installing alarm service company or the cleared facility. (printed page 83341) (iii) The response time will be in accordance with the provisions in paragraphs (c)(1) through (c)(3) in this section as applicable. When environmental factors (e.g., traffic, distance) legitimately prevent meeting the requirements for TOP SECRET information, as indicated in paragraph (c)(3) in this section, the CSA may authorize up to a 30-minute response time. The CSA approval will be documented on the alarm system description form and the specified response time will be noted on the alarm certificate. The requirement for response is 80 percent within the time limits. (4) Installation. The IDS will be installed by an NRTL-approved entity or by an entity approved in writing by the CSA. When connected to a commercial central station, GCMS, national industrial monitoring station, or residential monitoring station, the service provided will include line security (i.e., the connecting lines are electronically supervised to detect evidence of tampering or malfunction). The level of protection for the alarmed area will include all points of probable entry (perimeter doors and accessible windows) with magnetic contacts and motion detectors positioned in the probable intruder paths from the probable points of entry to the classified information. In accordance with Federal Standard 809, no IDS sensors (magnetic contacts or vibration detectors) will be installed on GSA-approved security containers. CSA authorization on the alarm system description form is required in the following circumstances:

(ii) Access is sought by an individual who fails or refuses to comply with the established procedural requirements, including refusing to name a physician to receive medical records when required (see paragraph (f) of § 310.17) or to pay fees (see § 310.20). (2) Always explain to the individual the specific reason access has been refused and how he or she may obtain access. (c) Notifying the individual. Formal denials of access must be in writing and include as a minimum: (1) The name, title or position, and signature of a designated Component denial authority. (2) The date of the denial. (3) The specific reason for the denial, including specific citation to the appropriate sections of the Privacy Act (5 U.S.C. 552a) or other statutes, this part, DoD Component instructions, or CFR authorizing the denial; (4) Notice to the individual of his or her right to appeal the denial through the Component appeal procedure within 60 calendar days; and (5) The title or position and address of the Privacy Act appeals official for the Component. (d) DoD

Component appeal procedures. Establish internal appeal procedures that, as a minimum, provide for:

- (1) Review by the Head of the Component or his or her designee of any appeal by an individual from a denial of access to Component records.
- (2) Formal written notification to the individual by the appeal authority that shall:
 - (i) If the denial is sustained totally or in part, include as a minimum:
 - (A) The exact reason for denying the appeal to include specific citation to the provisions of the Act or other statute, this part, Component instructions or the CFR upon which the determination is based;
 - (B) The date of the appeal determination;
 - (C) The name, title, and signature of the appeal authority; and
 - (D) A statement informing the applicant of his or her right to seek judicial relief.
 - (ii) If the appeal is granted, notify the individual and provide access to the material to which access has been granted.
- (3) The written appeal notification granting or denying access is the final Component action as regards access.
- (4) The individual shall file any appeal from denial of access within no less than 60 calendar days of receipt of the denial notification.
- (5) Process all appeals within 30 days of receipt unless the appeal authority determines that a fair and equitable review cannot be made within that period. Notify the applicant in writing if additional time is required for the appellate review. The notification must include the reasons for the delay and state when the individual may expect an answer to the appeal.
- (e) Denial of appeals by failure to act. A requester may consider his or her appeal formally denied if the appeal authority fails:
 - (1) To act on the appeal within 30 days;
 - (2) To provide the requester with a notice of extension within 30 days; or
 - (3) To act within the time limits established in the Component's notice of extension (see paragraph (d)(5) of this section).
- (f) Denying access to OPM records held by the DoD Components.

- There is a widely held perception among manufacturers that consumers place a higher value on the design/functionality/aesthetics/usability of home IoT devices and a lesser value on security. As a result, manufacturers have invested more resources into creating designs that are feature-rich and user-friendly and less on cybersecurity. Maarten Bron said, 'Some research indicates that in general, consumers perceive value in functions/features of a device. For manufacturers, cybersecurity is knowledge/resource intense.' Panelist Rebecca Herold observed that 'manufacturers invest more into making the device look good and easy to use.' Bron said that manufacturers do not know where to start in terms of 'baking security' into home IoT devices, and cited NISTIRs and other European government agency documents as helpful references for manufacturers.

- Some workshop participants challenged the perception that consumers do not value security as much as they do usability and features. Panelist Jean Camp said, 'We're asking consumers to evaluate risk with no basis to do so. If you give people a default that offers privacy and security, they will choose to pay more. One study showed that consumers will pay on average \$17 more for a lightbulb that's private and secure.' Panelist Rebecca Herold added, 'Manufacturers assume that consumers don't care if security isn't built in because if they wanted it, they would ask for it. The problem with that belief is that most consumers assume security is already built in and turned on by default.'

- Manufacturers' delays in adding security features (encryption, adding more powerful processors, locked down interfaces, strong password usage) to home IoT devices may result in increased costs, design changes, or have an impact on functionality. Mark Haney gave an example of having to charge a smart watch battery daily versus weekly.

http://www.cnss.gov/Assets/pdf/cnssi_4009.pdf). These definitions are established and widely accepted Government definitions. No change is made to the rule. Comment: One comment stated that U.S. based systems are not adequately defined. Response: To further clarify terms, the term 'U.S. based' has been added to the definitions section (§ 236.2(n)). Comment: One comment recommended changing the definition of U.S. citizen to eliminate the phrase 'holding a U.S. passport,' and adding text on 'Green Cards.' Response: The recommendation to add 'U.S. citizen' to the definitions section is accepted and is added to § 236.2(o). For the purpose of the rule, a U.S. citizen includes a person born in the U.S. or naturalized. The recommendation to eliminate 'holding a U.S. passport' as part of the U.S. citizen definition is also accepted in the definition of 'U.S. citizen,' (see § 236.2(o)). Comment: One comment recommended changing the definition of GFI to a more descriptive term so as not to tie it to Government procurement. Response: The definition of GFI in the rule is applicable only to the DIB CS/IA program (see § 236.2(j)), and does not relate to any specific procurement activities. There is no indication that the use of this term has led to any confusion amongst the DIB participants. No change is made to the rule. Comment: Two comments dealt with aspects of sharing information that could ward against threats and improve Operational Security (OPSEC). Response: The purpose of the DIB CS/IA program is to enable cyber threat information sharing with DIB participants to improve operational security of DIB networks and information

systems. No change is made to the rule. Comment: One comment suggested replacing the phrase ·to use the GFI on non-U.S. based covered DIB systems,· with ·to reside on non-U.S. based covered DIB· in §-236.4(g). Response: After evaluation, the recommended change in terminology from ·use· to ·reside· does not provide additional technical clarity. No change is made to the rule. Comment: Two comments recommended the language be amended to include the words ·or as soon as practicable thereafter· following the word ·discovery· and expressed caution that less knowledgeable participants will be prone to over report which consumes scarce Government and industry resources and obscures the significant incidents (§-236.5(b)). (printed page 62434) Response: Timeliness in reporting cyber incidents involving covered defense information is an integral component of the DIB CS/IA program. The rule makes provisions for initial and follow-up reporting (§-236.5(b) and (c)). While the DIB CS/IA program is voluntary, cyber security encourages sharing information as quickly as possible to provide the clearest understanding of the cyber threat targeting DoD program information. This enables cyber threat information provided by DIB participants to be shared with other DIB participants and Government stakeholders on a timely basis. No change is made to the rule. Comment:

(4) Clearly mark a report containing information submitted in confidence as containing that information. When reports contain information pertaining to an individual, 5 U.S.C. 552a (also known as and referred to in this rule as ·The Privacy Act of 1974, as amended,·) permits the withholding of certain information from the individual in accordance with specific exemptions, which include authority to withhold release of information to the extent that the disclosure of the information would reveal the identity of a source who furnished the information to the USG under an express promise that the identity of the source would be held in confidence. (b) Reports to be submitted to the FBI. The contractor will promptly submit a written report to the nearest field office of the FBI regarding information coming to the contractor's attention concerning actual, probable, or possible espionage, sabotage, terrorism, or subversive activities at any of its locations. (1) An initial report may be made by phone, but it must be followed up in writing (e.g., email or formal correspondence), regardless of the FBI's disposition of the report. (2) The contractor will promptly notify the CSA when they make a report to the FBI and provide the CSA a copy of the written report. (c) Reports to be submitted to the CSA. ·(1) Adverse information. Contractors are required to report adverse information coming to their attention concerning any of their employees determined to be eligible for access to classified information, in accordance with this rule, SEAD 3, and CSA-provided guidance. Contractors will not make reports based on rumor or innuendo. (i) The termination of employment of an employee does not negate the requirement to submit this report. If a contractor employee is assigned to a USG location, the contractor will furnish a copy of the report and its final disposition to the USG security point of contact for that location. (ii) Pursuant to *Becker v. Philco*, 372 F.2d 771 (4th Cir. 1967), cert. denied 389 U.S. 979 (1967), and subsequent cases, a contractor may not be liable for defamation of an employee because of communications that are required of and made by a contractor to an agency of the United States under the requirements of this rule or under the terms of applicable contracts. (printed page 83324) (2) Suspicious contacts. Contractors will report information pertaining to suspicious contacts with employees determined to be eligible for access to classified information, and pertaining to efforts to obtain illegal or unauthorized access to the contractor's cleared facility by any means, including: (i) Efforts by any individual, regardless of nationality, to obtain illegal or unauthorized access to classified information.

The contingency plan protects resources, minimizes customer inconvenience, and identifies key staff, assigning specific responsibilities in the context of the recovery. Contingency plans are critical to protecting the availability, integrity, and security of data during unexpected adverse events. Contingency plans should consider not only how to respond to disasters such as fires and floods, but also how to respond to cyberattacks. Cyberattacks using malicious software, such as ransomware, may render an organization's data unreadable or unusable. In the event data is compromised by a cyberattack, restoring the data from backups may be the only option for recovering the data and restoring normal business operations. For example, the faulty software update by CrowdStrike made it impossible for health care systems worldwide to use their Windows-based systems. [607] There were many instances where surgical procedures and health care appointments were cancelled, schedules upended, and pharmacies were unable to fill prescriptions. Regulated entities need to make and implement contingency plans they would use when such events occur to enable themselves to get back to their core functions of providing or paying for health care. The Department and NIST have issued extensive guidance on contingency planning, including detailed descriptions of key activities,

sample questions for regulated entities to consider when standing up a contingency plan, and information on how the results of the risk analysis feed into contingency plans. [608] Unfortunately, many regulated entities have not implemented the required (printed page 955) planning and then have been unable to fully recover from ransomware attacks that bring down electronic systems that create, receive, maintain, or transmit ePHI. For example, a large health system that experienced a ransomware attack had to shut down services at multiple locations and encountered difficulties restoring those services. OCR's investigation indicated a potential failure to, among other things, implement contingency plans. [609] Such planning is crucial for maintaining the resilience of a regulated entity's health IT. To address these inadequacies in compliance and to protect the confidentiality, integrity, and availability of ePHI, the Department proposes to redesignate the standard for a contingency plan at 45 CFR 164.308(a)(7)(i) as proposed 45 CFR 164.308(a)(13)(i) , to add a paragraph heading to clarify the organization of the regulatory text, and to modify the regulatory text to clarify it. The modified standard, as proposed, would require a regulated entity to establish (and implement as needed) a written contingency plan, consisting of written policies and procedures for responding to an emergency or other occurrence, including, but not limited to, fire, vandalism, system failure, natural disaster, or security incident, that adversely affects relevant electronic information systems.

(Comment 187) Many comments state that lot codes are not currently used in tracking products at the distributor and retailer levels, and that requiring lot codes to be recorded by these entities would represent a large change in business practice. One comment states that only 10 percent of food distributors currently use lot numbers to track their food products. One comment states that its facility tested the proposed requirement to establish records of lot numbers in its daily operations and concluded that there would be an 80 percent loss in productivity as a result of the requirement. Another comment states that labor costs for unloading a truck at a distributor would increase by a factor of 15 under an exhaustive check of shipper and lot code information. The comment further states that a conservative estimate of the unloading costs would be a threefold increase in current costs if a less exhaustive spot check of the lot codes is required. Other comments illustrate the dramatic change in current business practices that would result from requiring lot codes to be included in records. However, several comments indicate that although the technology to maintain lot codes in bar code format does not currently exist, the industry is moving in that direction and such a requirement might be feasible in 5 to 7 years. (Response) In estimating the costs of the rule, FDA assumed that all required information provided for in the regulation represented only small deviations from current business practice. The comments received strongly suggest that the cost estimates for maintaining records on lot codes for distributors and retailers were substantially understated. The results reported by one comment of an experiment that tested the requirement in their daily operations indicated an 80 percent loss in productivity. Other estimates of the increase in labor costs that would result from this requirement ranged from three-fold to fifteen-fold. FDA revises the estimates of the costs to maintain records on lot codes by assuming an 80 percent loss in productivity for retailers and distributors from compliance with this provision. For other policy options included in this analysis as well as in the final rule, the requirement to establish and maintain records containing lot codes is relaxed to be consistent with current feasibility. 3. Records Retention Costs

Section 170.15 addresses how an OSA will achieve and maintain compliance with CMMC Level 1 Self-Assessment. The OSA must successfully implement the security requirements listed in § 170.14(c)(2) within their Level 1 CMMC Assessment Scope as described in § 170.19(b). Successful implementation requires meeting all objectives defined in NIST SP 800-171A for the corresponding CMMC Level 1 security requirements as outlined in the mapping table 1 to § 170.15(c)(1)(i). After implementation, the OSA must perform a self-assessment to verify the implementation and score themselves using the scoring methodology provided in § 170.24. All objectives must be met in order for a security requirement to be considered fully implemented; no security requirements may be placed on a POA&M for Level 1. The OSA must then input their results into SPRS as described in § 170.15(a)(1)(i) and submit an affirmation as described in § 170.22. In order to be eligible for a contract with a CMMC Level 1 Self-Assessment requirement, the OSA must have a Level 1 Self-Assessment and have submitted an affirmation. These activities must be completed annually. Section 170.16-CMMC Level 2 Self-Assessment and Affirmation Requirements Section 170.16 addresses how an OSA will achieve and maintain compliance with CMMC Level 2 Self-Assessment. The OSA must successfully implement the security requirements listed in § 170.14(c)(3) within its Level 2 CMMC Assessment Scope as described in § 170.19(c). Successful implementation requires meeting all

objectives defined in NIST SP 800-171A for the corresponding CMMC Level 2 security requirements. After implementation, the OSA must perform a self-assessment to verify the implementation and score themselves using the scoring methodology provided in § 170.24. All objectives must be met in order for a security requirement to be considered fully implemented; in some cases, if not all objectives are met, some security requirements may be placed on a POA&M as provided for in § 170.21. If the minimum score has been achieved and some security requirements are in a POA&M, the OSA has a Conditional Self-Assessment; if the minimum score has been achieved and no security requirements are in a POA&M, the OSA has a Final Self-Assessment. For Conditional Self-Assessments, a POA&M close-out must be conducted within 180 days as described in § 170.21(b). After both Conditional Self-Assessment and Final Self-Assessment, the OSA must input their results into SPRS as described in § 170.16(a)(1)(i) and submit an affirmation as described in § 170.22. In order to be eligible for a contract with a CMMC Level 2 Self-Assessment requirement, the OSA must have a Level 2 Conditional Self-Assessment or Level 2 Final Self-Assessment and have submitted an affirmation. The Level 2 Self-Assessment must be completed tri-annually and the affirmation must be completed annually.

Section 170.17 CMMC Level 2 Certification Assessment and Affirmation Requirements

, the Federal Food, Drug, and Cosmetic Act is referred to as ‘the act.’ Thus, when the regulation is quoted in this preamble, the term ‘the act’ will be used to refer to the Federal Food, Drug, and Cosmetic Act. However, in this preamble, we refer to the Federal Food, Drug, and Cosmetic Act as ‘the FD&C Act’ to distinguish it from the Bioterrorism Act.) Section 414(b) of the FD&C Act provides, in part, that the Secretary of Health and Human Services (the Secretary), may by regulation establish requirements regarding the establishment and maintenance, for not longer than 2 years, of records by persons (excluding farms and restaurants) who manufacture, process, pack, transport, distribute, receive, hold, or import food. The records that are required to be kept by these regulations are those needed by the Secretary for inspection to allow the Secretary to identify the immediate previous sources and immediate subsequent recipients of food, including its packaging, to address credible threats of serious adverse health consequences or death to humans or animals. Section 306(d) of the Bioterrorism Act provides that the Secretary ‘shall’ issue regulations establishing recordkeeping requirements under section 414(b) of the FD&C Act no later than 18 months after enactment of the Bioterrorism Act, that is, by December 12, 2003. In addition, the Bioterrorism Act adds a new section 414(a) to the FD&C Act (printed page 71563) that provides records inspection authority to FDA. Section 414(a) of the FD&C Act provides that, if the Secretary has a reasonable belief that an article of food is adulterated and presents a threat of serious adverse health consequences or death to humans or animals, persons who manufacture, process, pack, distribute, receive, hold, or import food must provide access to records related to the food that are needed to assist the Secretary in determining whether the food is adulterated and presents a threat of serious adverse health consequences or death to humans or animals. Section 306 of the Bioterrorism Act also amends section 704(a) of the FD&C Act (21 U.S.C. 374(a)) to authorize FDA inspections of all records and other information described in section 414 of the FD&C Act, when the Secretary has a reasonable belief that an article of food is adulterated and presents a threat of serious adverse health consequences or death to humans or animals. In addition, section 306(c) of the Bioterrorism Act amends section 301 of the FD&C Act (21 U.S.C. 331

(C) From subsection (d) because these provisions concern individual access to and amendment of certain records contained in this system, including law enforcement, counterterrorism, investigatory, and intelligence records. Compliance with these provisions could alert the subject of an investigation of the fact and nature of the investigation, and/or the investigative interest of intelligence or law enforcement agencies; compromise sensitive information related to national security; interfere with the overall law enforcement process by leading to the destruction of evidence, improper influencing of witnesses, fabrication of testimony, and/or flight of the subject; could identify a confidential source or disclose information which would constitute an unwarranted invasion of another's personal privacy; reveal a sensitive investigative or intelligence technique; or constitute a potential danger to the health or safety of law enforcement personnel, confidential informants, and witnesses. Amendment of these records would interfere with ongoing counterterrorism, law enforcement, or intelligence investigations and analysis activities and impose an impossible administrative burden by requiring investigations, analyses, and reports to be continuously reinvestigated and revised. (D) From subsection (e)(1) because it is not always possible to determine what information is relevant and necessary to complete an identity comparison between the individual seeking access and a known or suspected terrorist. Also, because DoD and other agencies may not always know what information about an encounter with a known or suspected terrorist will be

relevant to law enforcement for the purpose of conducting an operational response. (E) From subsection (e)(2) because application of this provision could present a serious impediment to counterterrorism, law enforcement, or intelligence efforts in that it would put the subject of an investigation, study, or analysis on notice of that fact, thereby permitting the subject to engage in conduct designed to frustrate or impede that activity. The nature of counterterrorism, law enforcement, or intelligence investigations is such that vital information about an individual frequently can be obtained only from other persons who are familiar with such individual and his/her activities. In such investigations, it is not feasible to rely upon information furnished by the individual concerning his own activities. (F) From subsection (e)(3) to the extent that this subsection is interpreted to require DoD to provide notice to an individual if DoD or another agency receives or collects information about that individual during an investigation or from a third party. Should this subsection be so interpreted, exemption from this provision is necessary to avoid impeding counterterrorism, law enforcement, or intelligence efforts by (printed page 14811)

is a DoD information collection used to conduct its monitoring and oversight of contractors. OMB Control Number 0704-0567, DoD Contract Security Classification Specification, this collection is used by both DoD and agencies which have an industrial security agreement with DoD. OMB Control Number 0704-0573, Defense Information System for Security, is a DoD automated system for personnel security, providing a common, comprehensive medium to record, document, and identify personal security actions within DoD including submitting adverse information, verification of security clearance status, requesting investigations, and supporting continuous evaluation activities. It requires personal data collection to facilitate the initiation, investigation and adjudication of information relevant to DoD security clearances and employment suitability determinations for active duty military, civilian employees and contractors seeking such credentials. OMB Control Number 0704-0496, Joint Personnel Adjudication System, an information system which requires personal data collection to facilitate the initiation, investigation and adjudication of information relevant to DoD security clearances and employment suitability determinations for active duty military, civilian employees and contractors seeking such credentials. OMB Control Number 0704-0579, Certificate Pertaining to Foreign Interests SF (328) which is a common form which can be used by all CSAs. OMB Control Number 3150-0047, 10 CFR part 95, Facility Security Clearance and Safeguarding of National Security Information and Restricted Data, is an NRC information collection used to obtain an FCL and for safeguarding Secret and Confidential National Security Information and Restricted Data. Licensees under 10 CFR part 95 fall within two categories, those who possess, use or transmit classified matter at their site or a cleared contractor site, and those licensees and contractors who only need access to classified matter at a government or appropriately cleared non-government site. OMB Control Number 1910-1800, Security Package, is a DOE information collection used by DOE to conduct its monitoring and oversight of contractors under its security cognizance and to provide a platform for other CSAs, GCAs or prime contractors to verify whether a contractor has a DOE-granted FCL. Executive Order 13132, "Federalism" E.O. 13132 establishes certain requirements that an agency must meet when it promulgates a final rule (and subsequent final rule) that imposes substantial direct requirement costs on (printed page 83312) State and local governments, preempts State law, or otherwise has Federalism implications. This final rule will not have a substantial effect on State and local governments. List of Subjects in 32 CFR Part 117 Classified information; Government contracts; USG contracts National Industrial Program (NISP); Prime contractor Subcontractor Accordingly, the Department of Defense amends chapter I of title 32 of the CFR

In addition to proposing the elimination of default passwords, the Department proposes a specific requirement for a regulated entity to deploy MFA in the implementation specification for MFA at proposed 45 CFR 164.312(f)(2)(ii). We propose to expressly require MFA, as recommended by NCVHS, because it increases security by ensuring that a compromise of a single credential does not allow access to unauthorized users. [775] MFA is an effective way to reduce the risk of brute force attacks and to increase the cost of such attack, making such an attack less appealing to intruders. [776] Further, deployment of MFA aligns with the Department's essential CPGs for Email Security and Multifactor Authentication because use of MFA would be applicable to email access and protect assets connected to the internet. [777] Accordingly, proposed 45 CFR 164.312(f)(2)(ii)(A) would require a regulated entity to deploy MFA to all technology assets in its relevant electronic information systems to verify that the person seeking access to its relevant electronic information system is the user that the person claims to be. A regulated entity should deploy MFA to all technology assets in its relevant electronic information systems in a manner consistent with its

risk analysis. MFA allows for the use of different categories of factors as described earlier. A decision by a regulated entity to use specific factors during specific circumstances where MFA is deployed will be dependent upon the risks to ePHI identified by the regulated entity and the ability of technology to use such factors to authenticate specific users. For example, certain behavioral characteristics may not satisfy current standards for MFA; however, the Department anticipates that it may be reasonable and appropriate in the future for a regulated entity to adopt a solution where users provide such characteristics as one of the factors. Additionally, a regulated entity may identify varying levels of risk posed by its technology assets and elect to deploy MFA in different ways to address the risk posed by each asset. For example, consistent with its risk analysis, a regulated entity may choose to deploy a single sign-on (SSO) authentication solution using MFA to allow users to access multiple local applications, while also requiring users to authenticate using MFA to access certain cloud-based services. This proposed implementation specification generally is consistent with ASTP/ONC's Health Data, Technology, and Interoperability: Patient Engagement, Information Sharing, and Public Health Interoperability (HTI-2) NPRM's proposed revisions to the MFA criterion requiring certified health IT to support authentication, through multiple elements, of the user's identity, according to today's standards such as those recommended by NIST, and enable user to configure, enable, and disable the MFA capabilities. [778]

3.1.3 Authorization Vulnerability (CWE-284) Description Authorization is the process of assigning correct system permissions to an authenticated entity.

5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. (C) The specific sections of 5 U.S.C. 552 a from which the system is exempt are 5 U.S.C. 552a(c)(3) , (d)(1) through (4), (e)(1), (e)(4)(G), (H), (I), and (f). (ii) Authority. 5 U.S.C. 552a(k)(2) and (k)(5) . (iii) Reasons. (A) From subsection (c)(3), as to grant access to an accounting of disclosures as required by the Privacy Act, including the date, nature, and purpose of each disclosure and the identity of the recipient, could alert the subject to the existence of the investigation or prosecutive interest by DLA or other agencies. This could seriously compromise case preparation by prematurely revealing its existence and nature; compromise or interfere with witnesses or making witnesses reluctant to cooperate; and lead to suppression, alteration, or destruction of evidence. (B) From 5 U.S.C. 552a(d)(1) through (4) and (f) , as providing access to records of a civil or administrative investigation, and the right to contest the contents of those records and force changes to be made to the information contained therein, would interfere seriously with and thwart the orderly and unbiased conduct of the investigation and impede case preparation. Providing access rights normally afforded under the Privacy Act would provide the subject with valuable information that would allow: Interference with or compromise of witnesses or render witnesses reluctant to cooperate; lead to suppression, alteration, or destruction of evidence; enable individuals to conceal wrongdoing or mislead the course of the investigation; and result in the secreting of or other disposition of assets that would make them difficult or impossible to reach to satisfy any Government claim arising from the investigation or proceeding. (C) From 5 U.S.C. 552a(e)(1) , as it is not always possible to detect the relevance or necessity of each piece of information in the early stages of an investigation. In some cases, it is only after the information is evaluated in light of other evidence that its relevance and necessity will be clear. (D) From 5 U.S.C. 552a(e)(4)(G) and (H) , as this system of records is compiled for law enforcement purposes and is exempt from the access provisions of 5 U.S.C. 552a(d) and (f) . (E) From 5 U.S.C. 552a(e)(4)(I) , as to the extent that this provision is construed to require more detailed disclosure than the broad, generic information currently published in the system notice, an exemption from this provision is necessary to protect the confidentiality of sources of information and to protect privacy and physical safety of witnesses and informants. DLA will, nevertheless, continue to publish such a notice in broad generic terms as is its current practice. (6) System identifier and name. S510.30 (Specific/General Exemption), Freedom of Information Act/Privacy Act Requests and Administrative Appeal Records. (i) Exemption.

at 25212) may be true for suppliers in other packaging segments, but is simply incorrect when it comes to the cartonboard segment of the industry. The comment states that packaging companies in that segment will find it more expedient to keep records on all materials—both outer packaging and contact substances—rather than to document only the food contact materials, because many of the same materials can be used for both purposes, and it would be prohibitively expensive to segregate these uses. The comment notes that this would result in a recordkeeping requirement for nearly all facilities that manufacture packaging and packaging components, and all of their suppliers, if FDA retains the proposed approach. One comment states the inclusion of “immediate food packaging” and “food contact substances” in the definition of “food” creates a difficult and (printed page 71584) unnecessary compliance effort throughout the supply chain. The comment suggests that FDA remove the requirement to establish and maintain records on “immediate food packaging” and “food contact substances” after such materials are either accompanying or affixed to the food, thus eliminating duplicative tracking and burdensome paperwork. If records are kept on the food, the comment states that those same records could be used to trace the packaging and labeling materials to the farm and point of initial contact with the food. From there, the material's original manufacturing/processing facility can be identified, where detailed records on the immediate subsequent transporter and recipient (likely the farm) will be maintained according to the regulations. (Response) FDA agrees with these comments in part. FDA is finalizing the definition of “food” as proposed and is not excluding food contact substances from the definition. As discussed in the following paragraphs and provided in §§ 1.327(i) and (j) of this final rule, however, FDA is using our discretion to exclude specified persons and activities from recordkeeping requirements for packaging and food contact substances. These comments raise the question of what Congress intended “food” to mean for purposes of recordkeeping and access. In construing the recordkeeping and access provisions of the Bioterrorism Act, FDA is confronted with two questions. First, has Congress directly spoken to the precise question presented (Chevron step one)? *Chevron, U.S.A., Inc. v. NRDC, Inc.*, 467 U.S. 837, 842 (1984). To find no ambiguity, Congress must have focused directly on the question presented and have articulated clearly its intention. *Young v. Community Nutrition Institute*, 476 U.S. 974, 980 (1986). If Congress has spoken directly and plainly, the agency must implement Congress's unambiguously expressed intent. *Chevron*, 467 U.S. at 842-843. If, however, the Bioterrorism Act is silent or ambiguous as to the meaning of “food,” FDA may define “food” in a reasonable fashion (Chevron step two). *Chevron*, 467 U.S. at 842-843; *FDA v. Brown & Williamson Tobacco Corp.*

Through its Internet Policy Task Force, the Department intends to recommend public policies and private-sector norms that can markedly improve the overall cybersecurity posture of private sector infrastructure operators, software and service providers, and users outside the critical infrastructure and key resources realm and of their customers. Cybersecurity and Commerce: Due to the Department's over-arching responsibility to advance the nation's commercial interests, the Task Force is focused on the cybersecurity challenges facing businesses and consumers that use the Internet. The nation's e-commerce interests are significant. Growth in online sales and expanding use of the Internet are creating new jobs and contributing directly to our economic recovery. Businesses of all sizes increasingly use the Internet to order and track inventory, sell products and services, store financial and other proprietary information, and interact with their customers. These shifts in business practices and other measures have led to a greatly increased average growth in productivity over the last fifteen years. [7] Over the long term, such growth benefits our

global competitiveness. [8] Taking into account both business-to-consumer and business-to-business transactions, online commerce in 2007 accounted for more than \$3 trillion in revenue for U.S. companies. [9] In the business-to-consumer e-commerce space, the United States economy enjoyed an increase in revenue of more than 500 percent between 1999 and 2007. [10] Even during the recent economic downturn, the economic benefits provided by the Internet economy increased. In 2009, online retail sales grew 2.0 percent to reach \$134.9 billion, [11] while total retail sales fell 7 percent in that same year. Also in 2009, U.S. mobile commerce sales grew more than 200 percent compared to the previous year, reaching \$1.2 billion. [12] Analysts expect this growth to continue in 2010, projecting \$2.4 billion in mobile commerce. [13] Notwithstanding this consistent, impressive growth, companies continue to face significant challenges in their ability to appropriately protect their computer systems, secure their proprietary, personal, and financial information, and safeguard the integrity of business and other transactions that they conduct over the Internet. Reports of significant, persistent, individual cyber intrusions occur on a regular basis, as do reports of widespread, untargeted cyber incidents. The Cyberspace Policy Review described a coordinated attack in 49 cities on more than 130 automated teller machines in 2008, as well as a single 2007 data breach at one company that resulted in more than 45 million compromised consumer financial accounts. [14]

means the act of eliminating the functional capabilities and inherent military design features from DoD personal property. Methods and degree range from removal and destruction of critical features to total destruction by cutting, tearing, crushing, mangling, shredding, melting, burning, etc. (2) Export-controlled items means items subject to the Export Administration Regulations (EAR) (15 CFR parts 730-774) or the International Traffic in Arms Regulations (ITAR) (22 CFR parts 120-130). The term includes: (i) Defense items, defined in the Arms Export Control Act, 22 U.S.C. 2778(j)(4)(A) , as defense articles, defense services, and related technical data, etc.; and (ii) Items, defined in the EAR as ·commodities,· ·software,· and ·technology,· terms that are also defined in the EAR, 15 CFR 772.1 . (3) Ineligible transferees means individuals, entities, or countries: (i) Excluded from Federal programs by the General Services Administration as identified in the Excluded Parties Listing System (EPLS) (<https://www.epls.gov/>); (ii) Delinquent on obligations to the U.S. Government under surplus sales contracts; (iii) Designated by the Department of Defense as ineligible, debarred, or suspended from defense contracts; or (iv) Subject to denial, debarment, or other sanctions under export control laws and related laws and regulations, and orders (printed page 52144) administered by the Department of State, the Department of Commerce, the Department of Homeland Security, or the Department of the Treasury. (4) Scrap means property that has no value except for its basic material content. For purposes of demilitarization, scrap is defined as recyclable waste and discarded materials derived from items that have been rendered useless beyond repair, rehabilitation, or restoration such that the item's original identity, utility, form, fit, and function have been destroyed. Items can be classified as scrap if processed by cutting, tearing, crushing, mangling, shredding, or melting. Intact or recognizable components and parts are not ·scrap.· (5) Serviceable or usable property means property with potential for reutilization or sale ·as is· or with minor repairs or alterations. (b) Inventory disposal schedules. Unless disposition instructions are otherwise included in this contract, the Contractor shall complete SF 1428, Inventory Schedule B, within the Plant Clearance Automated Reutilization Screening System (PCARSS). Information on PCARSS can be obtained from the plant clearance officer and at <http://www.dcmil/ITCSO/CBT/PCARSS/index.cfm> . (1) The SF 1428 shall contain the following: (i) If known, the applicable Federal Supply Code (FSC) for all items, except items in scrap condition. (ii) If known, the manufacturer name for all aircraft components under Federal Supply Group (FSG) 16 or 17 and FSCs 2620, 2810, 2915, 2925, 2935, 2945, 2995, 4920, 5821, 5826, 5841, 6340, and 6615.

A fundamental problem with log management that occurs in many organizations is effectively balancing a limited quantity of log management resources with a continuous supply of log data. Log generation and storage can be complicated by several factors, including a high number of log sources; inconsistent log content, formats, and timestamps among sources; and increasingly large volumes of log data. Log management also involves protecting the confidentiality, integrity, and availability of logs. Another problem with log management is ensuring that security, system, and network administrators regularly perform effective analysis of log data. This publication provides guidance for meeting these log management challenges. - GLYPH<c=31;font=/APONEK+Webdings> Antimalware Software. The most common form of antimalware software is antivirus software, which typically records all instances of detected malware, file and system disinfection attempts, and file

quarantines. 3 Additionally, antivirus software might also record when malware scans were performed and when antivirus signature or software updates occurred. Antispyware software and other types of antimalware software (e.g., rootkit detectors) are also common sources of security information. - GLYPH<c=31;font=/APONEK+Webdings> Intrusion Detection and Intrusion Prevention Systems. Intrusion detection and intrusion prevention systems record detailed information on suspicious behavior and detected attacks, as well as any actions intrusion prevention systems performed to stop malicious activity in progress. Some intrusion detection systems, such as file integrity checking software, run periodically instead of continuously, so they generate log entries in batches instead of on an ongoing basis. 4 - GLYPH<c=31;font=/APONEK+Webdings> Remote Access Software. Remote access is often granted and secured through virtual private networking (VPN).

From the NIST SP 800-172 Rev 3 Final Public Draft: Information includes CUI and metadata that contains security attributes associated NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 with information. Integrity-checking mechanisms including parity checks, cyclical 2097

3.3.4 Access Control for Applications... 3.3.4 Access Control for Applications Different types of remote access architectures offer different levels of granularity for application access control.

At the request of a FOIA requester, records provided under this part shall be authenticated with an appropriate seal whenever necessary to fulfill an official Government or other legal function. This service is in addition to that required under the FOIA and is not included in the FOIA fee schedule. The DoD Components may charge a fee of \$5.20 for each authentication. (j) Combatant commands. (1) The Combatant Commands are placed under the jurisdiction of the OSD, instead of the administering Military Department or the Chairman of the Joint Chiefs of Staff, for the purpose of administering the DoD FOIA Program. This policy represents an exception to the policies directed in DoD Directive 5100.3; it authorizes and requires the Combatant Commands to process FOIA requests in accordance with 32 CFR part 285 and this part. When requested, the Combatant Commands shall forward directly to the DFOIPO all correspondence associated with the appeal of an initial denial for records under the provisions of the FOIA. The Combatant Commands will advise requesters that they have the right to appeal any adverse determinations to the DFOIPO. (2) The Combatant Commands shall comply with all provisions of this part that apply to the DoD Components except the appointments of an appellate authority and a FOIA Public Liaison. (k) Security clearances and access for FOIA personnel. Due to the nature of their duties and responsibilities, FOIA personnel need access to all records requested through their respective offices, regardless of the sensitivity or classification of the information. The DoD Components shall ensure FOIA personnel have the appropriate clearances and accesses to perform their duties. (l) Use of Contractors in FOIA Administration. According to DoD Instruction 1100.22 and OMB Circular A-76, there are certain functions, known as inherently governmental activities that cannot be outsourced to a contractor. Since some of the functions of the FOIA Officer are inherently governmental, the DoD Components shall be careful not to outsource those FOIA functions that are inherently governmental. Primarily, activities which require the exercise of substantial discretion in applying government authority or in making decisions for the government are inherently governmental. Inherently governmental FOIA functions include: (1) Formulating and/or approving FOIA policies and procedures. (2) Making final determinations regarding whether to treat incoming correspondence as a FOIA or Privacy Act request. (3) Deciding any issues regarding the scope or interpretation of the request. (4) Determining the appropriateness of claimed exemptions. (5) Approving the approach taken in negotiations/discussions with the requester. (6) Deciding administrative appeals. (7) Conducting final review of all outgoing correspondence, memoranda, and release packages. (8) Drafting court documents for filing in FOIA lawsuit in which the government's legal strategy and affirmative defense are determined.

Moreover, this proposal is consistent with guidance issued by HHS and NIST for implementing this standard and associated implementation specifications. For example, in guidance issued in 2005, we explained that regulated entities must identify workforce members who need access to ePHI to carry out their duties. [545] For each workforce member or job function, the regulated entity must identify the ePHI that is needed, when it is needed, and make reasonable efforts to control access to the ePHI, a concept generally referred to as role-based access (i.e., authorizing access to ePHI only when such access is appropriate based on the workforce member's role). [546] This also includes identification of the computer systems and applications that provide access to the ePHI. A regulated entity must provide only the minimum necessary access to ePHI that is required for

a workforce member to do their job. [547] As described in HHS guidance, access authorization is the process of determining whether a particular user (or a computer system) has the right, consistent with their function, to carry out a certain activity, such as reading a file or running a program. [548] Implementation may vary among regulated entities, depending on the size and complexity of their workforce, and their electronic information systems that contain ePHI. For example, in a small medical practice, all staff members may need to access all ePHI in their information systems because each staff member may perform multiple functions. In this case, the regulated entity would document the reasons for implementing policies and procedures that permit this type of global access. If the documented rationale is reasonable and appropriate, this may be an acceptable approach. The implementation specification provision for authorization and/or supervision provides the necessary checks and balances to ensure that all members of the workforce have appropriate access (or, in some cases, no access) to ePHI. NIST guidance provides descriptions of key activities and sample questions for regulated entities implementing this implementation specification. [549] To implement procedures for the authorization and/or supervision of workforce members who work with ePHI or in locations where it might be accessed, the guidance advises regulated entities to consider whether chains of command and lines of authority have been established, as well as the identity and roles of supervisors. A regulated entity also should establish clear job descriptions and responsibilities, which includes defining roles and responsibilities for all job functions; assigning appropriate levels of security oversight, training, and access; and identifying in writing who has the business need and who has been granted permission to view, alter, retrieve, and store ePHI and at what times, under what circumstances, and for what purposes. [550]

From subsections (c)(3) and (d) because the exemption is needed to encourage those who know of exceptional medical or educational conditions or family maltreatments to come forward by protecting their identities and to protect such sources from embarrassment or recriminations, as well as to protect their right to privacy. It is essential that the identities of all individuals who furnish information under an express promise of confidentiality be protected. Granting individuals access to information relating to criminal and civil law enforcement, as well as the release of certain disclosure accounting, could interfere with ongoing investigations and the orderly administration of justice, in that it could result in the concealment, alteration, destruction, or fabrication of information; could hamper the identification of offenders or alleged offenders and the disposition of charges; and could jeopardize the safety and well being of parents and their children. Exempted portions of this system also contain information considered relevant and necessary to make a determination as to qualifications, eligibility, or suitability for Federal employment and Federal contracts, and that was obtained by providing an express or implied promise to the source that his or her identity would not be revealed to the subject of the record. (6) System identifier and name. F036 AF PC A, Effectiveness/Performance Reporting System. (i) Exemption. Evaluation material used to determine potential for promotion in the Military Services (Brigadier General Selectee Effectiveness Reports and Colonel and Lieutenant Colonel Promotion Recommendations with close out dates on or before January 31, 1991) may be exempt pursuant to 5 U.S.C. 552a(k)(7) , but only to the extent that the disclosure of such material would reveal the identity of a confidential source. Therefore, portions of this system of records may be exempt pursuant to 5 U.S.C. 552a(k)(7) from the following subsections of 5 U.S.C. 552a(c)(3) , (d), (e)(4)(H), and (f). (ii) Authority. 5 U.S.C. 552a(k)(7) . (iii) Reasons. (A) From subsection (c)(3) because making the disclosure accounting available to the individual may compromise express promises of confidentiality by revealing details about the report and identify other record sources, which may result in circumvention of the access exemption. (B) From subsection (d) because individual disclosure compromises express promises of confidentiality conferred to protect the integrity of the promotion rating system. (C) From subsection (e)(4)(H) because of and to the extent that portions of this record system are exempt from the individual access provisions of subsection (d). (D) From subsection (f) because of and to the extent that portions of this record system are exempt from the individual access provisions of subsection (d). (7) System identifier and name. F036 AFDP A, Files on General Officers and Colonels Assigned to General Officer Positions. (i) Exemption.

The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the Nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology. ITL's responsibilities include the development of management,

administrative, technical, and physical standards and guidelines for the cost-effective security and privacy of other than national security-related information in federal information systems. 3.10. MAYO 3.10. MAYO

The Department's proposal would also require that the procedures for contingency operations proposed at 45 CFR 164.310(a)(2)(i) support the regulated entity's contingency plan, instead of the current requirement specifying that the procedures support the restoration of lost data under the disaster recovery plan and emergency mode operations plan in the event of an emergency. [647] This proposal would align the implementation specification for contingency operations with the standard for contingency planning at proposed 45 CFR 164.308(a)(13)(i) by specifically ensuring that the written policies and procedures support the required contingency plan. It also would avoid duplicating the implementation specification for disaster recovery planning at proposed 45 CFR 164.308(a)(13)(ii)(D) , which would require a regulated entity to address the restoration of lost data and systems in the disaster recovery plan component of its contingency plan. We propose to modify 45 CFR 164.310(a)(2)(ii) to clarify that the written policies and procedures that constitute the facility security plan must apply to all of the regulated entity's facilities and equipment contained within those facilities. The Department proposes to retitle the implementation specification for access control and validation procedures at 45 CFR 164.310(a)(2)(iii) as ·Access management and validation procedures· and to require regulated entities to establish and implement written procedures to both authorize and manage a person's role-based access to facilities. In the implementation specification for maintenance records, the Department proposes at 45 CFR 164.310(a)(2)(iv) , to change the provision heading to ·Physical maintenance records· and to add security cameras to the list of examples of physical security components about which a regulated entity is required to implement written policies and procedures to document repairs and modifications. Both proposals are consistent with and recognize the evolution of the role that technology plays in managing and granting physical access to facilities. Consistent with our proposals to add maintenance requirements where we believe it is necessary for regulated entities to review, test, and modify their security measures on a particular cadence, we also propose to add an implementation specification for maintenance at proposed 45 CFR 164.310(a)(2)(v) . The maintenance provision would require that, for each facility, a regulated entity review and test its written policies and procedures at least once every 12 months, and to modify those policies and procedures as reasonable and appropriate based on that review. c. Section 164.310(b)(1)-Standard: Workstation Use and Section 164.310(c)-Standard: Workstation Security Further, in the standards for workstation use and workstation security at 45 CFR 164.310(b) (redesignated as proposed 45 CFR 164.310(b)(1) and (c)

ncidents must be communicated to the personnel defined below: 8. Details of cybersecurity events will be shared with ICS-CERT 15 to help secure the organization, including helping secure the industry. The Department of Homeland Security Cybersecurity and Infrastructure Security Agency (CISA) provides services for manufacturers to report cybersecurity events.

Safeguarding Covered Defense Information and Cyber Incident Reporting, requires defense contractors and subcontractors to provide ·adequate security· to process, store or transmit CUI on information systems or networks, and to report cyber incidents that affect these systems or networks. The clause states that to provide adequate security, the contractor shall implement, at a minimum, the security requirements in ·National Institute of Standards and Technology (NIST) Special Publication (SP) 800-171 Rev 2, Protecting CUI in Nonfederal Systems and Organizations.· Contractors are also required to flow down DFARS clause 252.204-7012 to all subcontracts that involve CUI. However, neither FAR 52.204-21 nor DFARS 252.204-7012, provide for DoD verification of a contractor's implementation of basic safeguarding requirements specified in FAR 52.204-21 nor the security requirements specified in DFARS 252.204-7012 which requires implementation of NIST SP 800-171 Rev 2 prior to contract award. Instead, DFARS clause 252.204-7012 requires prospective contractors or subcontractors to self-attest upon submission of their offer that they have implemented or will implement NIST SP 800-171 Rev 2. Findings from DoD Inspector General report (DODIG-2019-105 ·Audit of Protection of DoD CUI on Contractor-Owned Networks and Systems·) indicate that DoD contractors did not consistently implement mandated system security requirements for safeguarding CUI and recommended that DoD take steps to assess a contractor's ability to protect this information. The report emphasizes that malicious actors can exploit the vulnerabilities of contractors' networks and systems and exfiltrate information related to some of the Nation's most valuable advanced defense technologies. Due to these shortcomings and the associated risks to national security, the

Department developed the Cybersecurity Maturity Model Certification (CMMC) Program to assess contractor and subcontractor implementation of DoD's required cybersecurity standards. The Cybersecurity Maturity Model Certification (CMMC) Program verifies compliance with DoD cyber protection standards by defense contractors and subcontractors. It is designed to protect sensitive unclassified information that is shared by the Department with its contractors and subcontractors. The program incorporates a set of cybersecurity requirements into acquisition contracts and provides the Department increased assurance that contractors and subcontractors are meeting these requirements. The CMMC Program has three key features: Tiered Model: CMMC requires that companies implement cybersecurity requirements at progressively advanced levels, depending on the type and sensitivity of the information. The (printed page 89103) program also sets forth the process for information flow down to subcontractors. Assessment Requirement: CMMC assessments allow the Department to verify the implementation of cybersecurity requirements. Implementation through Contracts:

- Hypervisor host user account management - Hypervisor host authentication and access control - Routine administration of Host OS (e.g., keeping patches current) - Routine administration of Guest OS - Security of Guest OSs running on VMs - Security of Applications/Services running on VMs Configuration changes, module version changes, and patches affect the content of the hypervisor platform components such as BIOS, hypervisor kernel, and back-end device drivers running in the kernel. To ensure that each of these components that are part of the hypervisor stack can be trusted, it is necessary to check their integrity through a hardware-rooted attestation scheme that provides assurance of boot integrity. Checking integrity is done by cryptographically authenticating the hypervisor components that are launched. This authentication verifies that only authorized code runs on the system. Specifically, in the context of the hypervisor, the assurance of integrity protects against tampering and low-level targeted attacks such as root kits. If the assertion of integrity is deferred to a trusted third party that fulfills the role of trusted authority, the verification process is known as trusted attestation . Trusted attestation provides assurance that the code of the hypervisor components has not been tampered with. In this approach, trust in the hypervisor's components is established based on trusted hardware. In other words, a chain of trust from hardware to hypervisor is established with the initial component called the root of trust . This service can be provided by a hardware/firmware infrastructure of the hypervisor host that supports boot integrity measurement and the attestation process. In short, a measured launch environment (MLE) is needed in the hypervisor host.

During the processing of a Freedom of Information Act (FOIA) and Privacy Act (PA) request, exempt materials from other systems of records may in turn become part of the case record in this system. To the extent that copies of exempt records from those ·other· systems of records are entered into this system, the Inspector General, DoD, claims the same exemptions for the records from those ·other· systems that are entered into this system, as claimed for the original primary system of which they are a part. (ii) Authority. 5 U.S.C. 552a(j)(2) , (k)(1), (k)(2), (k)(3), (k)(4), (k)(5), (k)(6), and (k)(7). (iii) Reasons. Records are only exempt from pertinent provisions of 5 U.S.C. 552a to the extent such provisions have been identified and an exemption claimed for the original record and the purposes underlying the exemption for the original record still pertain to the record which is now contained in this system of records. In general, the exemptions were claimed in order to protect properly classified information relating to national defense and foreign policy, to avoid interference during the conduct of criminal, civil, or administrative actions or investigations, to ensure protective services provided the President and others are not compromised, to protect the identity of confidential sources incident to Federal employment, military service, contract, and security clearance determinations, to preserve the confidentiality and integrity of Federal testing materials, and to safeguard evaluation materials used for military promotions when furnished by a confidential source. The exemption rule for the original records will identify the specific reasons why the records are exempt from specific provisions of 5 U.S.C. 552a . (6) System identifier and name. CIG-21, Congressional Correspondence Tracking System. (i) Exemption. During the processing of a Congressional inquiry, exempt materials from other systems of records may in turn become part of the case record in this system. To the extent that copies of exempt records from those ·other· systems of records are entered into this system, the Inspector General, DoD, claims the same exemptions for the records from those ·other· systems that are entered into this system, as claimed for the original primary system of which they are a part. (ii) Authority. 5 U.S.C. 552a(j)(2) , (k)(1), (k)(2), (k)(3), (k)(4), (k)(5), (k)(6), and (k)(7). (ii) Reasons. Records are only exempt from pertinent provisions of 5 U.S.C. 552a to the extent such provisions

have been identified and an exemption claimed for the original record and the purposes underlying the exemption for the original record still pertain to the record which is now contained in this system of records. In general, the exemptions were claimed in order to protect properly classified information (printed page 14802)

Given the dynamic nature of cyber threats, it is important for even the most sophisticated commercial entities to be vigilant. One of the best ways to improve defensive capabilities is for good actors to share important information with each other and with appropriate authorities. Yet in our listening sessions, we heard comments that questioned whether enough is being done on this front. Security breach legislation has gone into effect in many states. [19] Nonetheless, our current perception is that for many reasons firms that have experienced cyber intrusions or attacks either do not know with whom to share that information or are reluctant to share. In the immediate aftermath of a recent, high-profile cyber incident, we heard a variation on this theme. Reportedly, even the most sophisticated small and medium-sized firms are daunted by how complicated it can be to share information on the incidents they have suffered. A successful, targeted intrusion might involve exploitation of a technology vulnerability, loss of customer information, theft of intellectual property or other digital assets, and loss of financial information. Such an exploit might be executed and addressed in a matter of minutes or hours, yet reporting the incident and the losses to the proper officials could consume numerous man-hours, with business owners unsure whether the expenditure of that amount of time yields any benefit to the business. We seek comment on whether there is adequate awareness of information sharing programs. Are existing information sharing mechanisms adequately-resourced but under-utilized? If so, what deters their use? How can the state of affairs be improved? Are there parts of the business community that do not know the governmental points-of-contact, US-CERT, to report, share information on, and seek guidance regarding cybersecurity incidents? If there are parts of the business community that are unaware of available resources, which parts are they and what steps might help to raise their awareness? Even among that who are aware of the resources and mechanisms available for information sharing and assistance, is there a reluctance to use them? If so, why? Does the government adequately assist businesses in the throes or in the aftermath of a cyber incident? Should the government create a cybersecurity service center to assist the business community in implementing protection measures, sharing information about cyber threats reported by businesses and other sources, and dealing with cybersecurity incidents that occur? What other steps can be taken to improve situational awareness across the business sector? 3. Web Site and Component Security Increasingly, malware and other malicious content are able to infect computers and other user access devices (e.g.,

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Defense Office of the Secretary 32 CFR Part 159 [DOD-2008-OS-0125/RIN 0790-AI38] AGENCY: Office of the Under Secretary of Defense for Acquisition, Technology, and Logistics, DoD. ACTION: Final rule. SUMMARY: This Rule establishes policy, assigns responsibilities and provides procedures for the regulation of the selection, accountability, training, equipping, and conduct of personnel performing private security functions under a covered contract during contingency operations, combat operations or other significant military operations. It also assigns responsibilities and establishes procedures for incident reporting, use of and accountability for equipment, rules for the use of force, and a process for administrative action or the removal, as appropriate, of PSCs and PSC personnel. For the Department of Defense, this Rule supplements DoD Instruction 3020.41, ·Contractor Personnel Authorized to

Accompany the U.S. Armed Forces, which provides guidance for all DoD contractors operating in contingency operations. This Rule was published as an Interim Final Rule on July 17, 2009 because there was insufficient policy and guidance regulating the actions of DoD and other governmental PSCs and their (printed page 49651) movements in operational areas. This Rule ensures compliance with laws and regulations pertaining to Inherently Governmental functions, and ensures proper performance by armed contractors. DATES: Effective Date: This rule is effective September 12, 2011. FOR FURTHER INFORMATION CONTACT: Chris Mayer, Director, Armed Contingency Contractor Policy and Programs, Office of the Deputy Assistant Secretary of Defense (Program Support), (571) 232-2509. SUPPLEMENTARY INFORMATION: The publication of this Rule is required to meet the mandate of Section 862 of the 2008 National Defense Authorization Act (NDAA), as amended by Section 813(b) of the 2010 NDAA and Section 832 of the 2011 NDAA. DoD has determined that the updates implementing Section 832 of the 2011 NDAA do not require additional public comment. These updates are in direct compliance with current statute, do not set a precedent in updating the interim final, and any delay in implementing these updates would be detrimental to U.S. security. Background This Final Rule [1] is required to meet the mandate of Section 862 of the FY 2008 NDAA, as amended, which lays out two requirements:

From the NIST SP 800-172 Rev 3 Final Public Draft: Advanced automation and predictive NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 analytics capabilities are typically supported by artificial intelligence concepts and 1516

Evaluation material used to determine potential for promotion in the Military Services, but only to the extent that the disclosure of such material would reveal the identity of a confidential source. (b) Promises of confidentiality. (1) Only the identity of sources that have been given an express promise of confidentiality may be protected from disclosure under paragraphs (a)(1), (5), and (7) of this section. However, the identity of sources who were given implied promises of confidentiality in inquiries conducted before September 27, 1975, also may be protected from disclosure. (2) Ensure promises of confidentiality are not automatically given but are used sparingly. Establish appropriate procedures and identify fully categories of individuals who may make such promises. Promises of confidentiality shall be made only when they are essential to obtain the information sought (see 5 CFR part 736). (c) Access to records for which specific exemptions are claimed. Deny the individual access only to those portions of the records for which the claimed exemption applies. Subpart G-Publication Requirements §-310.30 Federal Register publication. (a) What must be published in the Federal Register . (1) Four types of documents relating to the Privacy Program must be published in the Federal Register : (i) DoD Component Privacy Procedural rules; (ii) DoD Component exemption rules; and (iii) System notices. (iv) Match notices (See subpart L to this part). (2) See DoD 5025.1-M, [9] Directive Systems Procedures and Administrative Instruction (AI) No. 102, [10] Office of the Secretary of Defense Federal Register System for information pertaining to the preparation of documents for publication in the Federal Register . (b) The effect of publication in the Federal Register . Publication of a document in the Federal Register constitutes official public notice of the existence and content of the document. (c) DoD Component rules. (1) Component Privacy Program procedures and Component exemption rules are subject to the rulemaking procedures prescribed in AI 102. (2) System notices are not subject to formal rulemaking and are published in the Federal Register as Notices, not rules. (3) Privacy procedural and exemption rules are incorporated automatically into the CFR. System notices are not published in the CFR. (d) Submission of rules for publication. (1) Submit to the DPO, ODA&M, all proposed rules implementing this part in proper format (see DoD 5025.1-M and AI 102) for publication in the Federal Register . (2) This part has been published as a final rule in the Federal Register . Therefore, incorporate it into your Component rules rather than by republication (see AI 102). (3) DoD Component procedural rules that simply implement this Regulation need only be published as final rules in the Federal Register (see DoD 5025.1-M and AI 102). If the Component procedural rule supplements this part in any manner, they must be published as a proposed rule before being published as a final rule.

NIST reserves the right to add or remove platforms in future updates to the SCAP 1.2 Validation Program. The platforms supported at the release of this document included several versions of Microsoft Windows and Red Hat Enterprise Linux. The SCAP Validation Program may add support for new platforms which will be listed on the SCAP Validation Program web page. For the most current list of available platforms, please refer to <http://scap.nist.gov/validation>. This document identifies a specific set of SCAP component specifications as described in Section 2 and the associated Derived

Test Requirements (DTRs) as described in Section 4. Minor updates to SCAP component specifications and products do not invalidate currently validated products. Major changes in functionality, including support for new SCAP technologies, may require product revalidation.

At the same time, the procedures in this rule allow companies determined to be under FOCI to be cleared through a FOCI mitigation or negation agreement and thus realize billions of dollars in classified contracts. By maintaining the capability for foreign-owned U.S. contractors to compete for classified contracts with FOCI mitigation, DoD, through the NISP, enhances competition and realizes cost savings through that competition. Background DoD, as one of the four NISP CSAs, provides oversight of more than 10,000 U.S. contractors as well as another 3,000 divisions and branch offices of those contractors on behalf of the DoD Components and the non-DoD Components. Non-DoD Components issuing contracts requiring access to classified information who are not one of the four designated NISP CSAs (i.e., the Department of Energy, the Office of the Director of National Intelligence, the Nuclear Regulatory Commission and the DoD) must enter into agreements with DoD to establish the terms of oversight on their behalf. Currently, the procedures for assessing initial FCL eligibility for U.S. companies and continued FCL eligibility for U.S. contractors which may be subject to FOCI are not uniform or consistent since these procedures do not apply to the non-DoD Components. Currently, DoD does not have uniform procedures to assess the risks and the potential adverse impact on the performance of contracts requiring access to classified information due to any FOCI information reported by U.S. contractors or U.S. companies in process for an FCL. The rule will provide uniform and effective procedures for DoD to assess the risks associated with reports of material changes to FOCI information which are submitted annually by U.S. contractors. The rule also establishes procedures and criteria for appropriate actions to mitigate or negate any existing FOCI factors when DoD determines a U.S. company in process for an FCL or a U.S. contractor is under FOCI and is thus ineligible for access to classified information. The rule also prescribes responsibilities for FOCI matters, to include assessment of risks which may result from a contractor's FOCI information. Finally, it outlines security measures DoD may consider, implement, and oversee to mitigate or negate the effects of FOCI to an acceptable level for classified contract performance. The addition of this rule is part of DoD's retrospective plan, completed in August 2011, under Executive Order 13563 , Improving Regulation and (printed page 19469) Regulatory Review. Executive Order 13563

The Contractor may implement alternative, additional, or compensating cyber supply chain risk management security controls from those stated in the contract, when authorized in writing by the Contracting Officer. (h) Notifiable incident reporting, incident response and threat reporting. For contract coverage on security incident and cyber threat reporting, see FAR clause 52.239-ZZ, Incident and Threat Reporting and Incident Response Requirements for Products or Services Containing Information and Communications Technology, in this contract. (i) Limitations on access to, use, and disclosure of Government data, Government-related data, and any associated metadata. (1) The Contractor shall not access, use, or disclose Government data, Government-related data, and any associated metadata unless specifically authorized under the contract or task or delivery order or in writing by the Contracting Officer. (i) When authorized, the access, use, or disclosure of Government data, Government-related data, and any associated metadata shall only be for purposes specified in the contract or task or delivery order. (ii) The Contractor shall ensure that its employees are subject to all such access, use, and disclosure prohibitions and obligations of this paragraph. (iii) The access, use, and disclosure prohibitions and obligations of this paragraph shall survive the expiration or termination of this contract. (2) The Contractor shall use Government metadata only to manage the operational environment that supports the Government data and for no other purpose unless otherwise permitted with the prior written approval of the Contracting Officer. (3) The Contractor shall notify the Contracting Officer promptly of any requests from a third-party for access to Government data, Government-related data, or any associated metadata, including any warrants, seizures, or subpoenas it receives, including those from another Federal, State, or local agency. The Contractor shall comply with applicable clauses, regulations, and laws concerning protection of Government data and Government-related data from any unauthorized disclosure. (4) The Contractor shall not publish or disclose in any manner, without the Contracting Officer's written consent, the details of any safeguards either designed or developed by the Contractor under this contract or otherwise provided by the Government. (j) Cryptographic key services. The Government reserves the right to implement and operate its own cryptographic key management, key revocation, and key escrow services. If key services are provided by the contractor, the contractor shall provide the agency with applicable key material and services. (k) List of

operational technology equipment. Unless the contract states otherwise, the Contractor shall develop and maintain a list of the physical location of all operational technology included within the boundary of a FIS covered by this contract.

For CMMC Level 3, the estimates factor in the assessment, reporting and affirmation activities in addition to estimates for NRE and RE to implement and maintain CMMC Level 3 requirements. CMMC Level 3 requirements are a subset of NIST SP 800-172 Feb2021 Enhanced Security Requirements as described in § 170.30 of the CMMC rule and are not currently required through other regulations. CMMC Level 3 is expected to apply only to a small subset of DIB contractors. The Cost Categories used for each CMMC Level are described below:

1. Nonrecurring Engineering Costs: Estimates consist of hardware, software, and the associated labor to implement the same. Costs associated with implementing the requirements defined in FAR clause 52.204-21 and NIST SP 800-171 R2 are assumed to have been implemented and are therefore not accounted for in this cost estimate. As such, these costs only appear in CMMC Level 3. Where nonrecurring engineering costs are referenced, they are only accounted for as a one-time occurrence and are reflected in the year of the initial assessment.
2. Recurring Engineering Costs: Estimates consist of annually recurring fees and associated labor for technology refresh. Costs associated with implementing the requirements defined in FAR clause 52.204-21 and NIST SP 800-171 R2 are assumed to have been implemented and are therefore not accounted for in this cost estimate. As such, these costs only appear in CMMC Level 3.
- Assessment Costs: Estimates consist of activities for pre-assessment preparations (which includes gathering and/or developing evidence that the assessment objectives for each requirement have been satisfied), conducting and/or participating in the actual assessment, and completion of any post-assessment work. Assessment costs are represented by notional phases. Assessment costs assume the offeror/contractor passes the assessment on the first attempt (conditional with an allowable POA&M or final). Each phase includes an estimate of hours to conduct the assessment activities including:
 - (a) Labor hour estimates for a company (and any ESP support) to prepare for and participate in the assessment.
 - (b) C3PAO cost estimates for companies pursuing a certification.
 - (c) Labor hour estimates for certified assessors to work with the small business to conduct the actual assessment. (printed page 83205)Assessment Costs broken down into phases.
 - Phase 1: Planning and preparing for the assessment.
 - Phase 2: Conducting the assessment (self or C3PAO).
 - Phase 3: Reporting of Assessment Results.
 - Phase 4: POA&M Closeout (for CMMC Level 3 only, where allowed, if applicable). CMMC allows a limited open Plan of Action and Milestones (POA&M) for a period of 180 days to remediate the POA&M, see § 170.37.
3. Affirmations:

Thus, the Department proposes to require a regulated entity to consider the ability of its implementation of a particular security measure to aid it in preventing, withstanding, and recovering from an emergency or other occurrence that affects the confidentiality, integrity, or availability of ePHI, including a successful security incident. The Department proposes this new requirement to better enable regulated entities to ensure the confidentiality, integrity, and availability of all ePHI that they create, receive, maintain, or transmit. The general rules require regulated entities to not only prevent threats and hazards to the confidentiality and integrity of ePHI, but also to ensure the availability of ePHI, even during a security incident that has the potential to severely hinder the ability of a regulated entity to provide health care or to bring it to a standstill. This new factor would require a regulated entity to consider whether a particular approach to complying with a standard and the associated implementation specifications can help it recover from an emergency or other occurrence, in addition to maintaining operations throughout the event. The Department proposes this factor to complement its proposals to strengthen the standards for security incident procedures [428] and contingency planning [429] and proposals for new standards for patch management [430] and vulnerability management, [431] discussed in detail below. If finalized, these proposals would help to ensure that regulated entities put in place the necessary measures to implement these standards. The factors contemplate that regulated entities will regularly evaluate the security measures they have applied to comply with the

standards and implementation specifications based on the technology available and known risks and vulnerabilities at the time of the evaluation. The Department expects that when the existing factors are considered with the factor proposed in this NPRM, a regulated entity would be required to consider whether a specific technical control has become sufficiently ubiquitous such that choosing not to adopt it would be unreasonable. c. Section 164.306(c)-Standards and Implementation Specifications To address the Department's concerns regarding the apparent misunderstanding by regulated entities of -addressable-, we propose to modify 45 CFR 164.306(c) and (d)

3.6.1 Multiple Capabilities Support Addressing Each Attack Step | ... 3.6.1 Multiple Capabilities Support Addressing Each Attack Step There is a many-to-many relationship between security capabilities and attack steps.

This system of records is exempt from subsections (c)(3) and (d) of section 552a of 5 U.S.C. which would require the disclosure of investigatory material compiled solely for the purpose of determining access to classified information, but only to the extent that the disclosure of such material would reveal the identity of a source who furnished information to the Government under an expressed promise that the identity of the source would be held in confidence, or prior to September 27, 1975, under an implied promise that the identity of the source would be held in confidence. A determination will be made at the time of the request for a record concerning whether specific information would reveal the identity of a source. This exemption is required in order to protect the confidentiality of the sources of information compiled for the purpose of determining access to classified information. This confidentiality helps maintain the Government's continued access to information from persons who would otherwise refuse to give it. (4) System identifier and name. DWHS P32, Standards of Conduct Inquiry File. (i) Exemption. This system of records is exempted from subsections (c)(3) and (d) of 5 U.S.C. 552a, which would require the disclosure of: Investigatory material compiled for law enforcement purposes; or investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, military service, or Federal contracts, but only to the extent that the disclosure of such material would reveal the identity of a source who furnished information to the Government under an express promise or, prior to September 27, 1975, under an implied promise that the identity of the source would be held in confidence. If any individual is denied any right, privilege, or benefit that he would otherwise be entitled by Federal law, or otherwise be eligible, as a result of the maintenance of investigatory material compiled for law enforcement purposes, the material shall be provided to that individual, except to the extent that its disclosure would reveal the identity of a source who furnished information to the Government under an express promise or, prior to September 27, 1975, under an implied promise that the identity of the source would be held in confidence. At the time of the request for a record, a determination will be made concerning whether a right, privilege, or benefit is denied or specific information would reveal the identity of a source. (ii) Authority. 5 U.S.C. 552a(k)(2) and (5). (iii) Reasons.

Identification of a known vulnerability in a relevant electronic information system or a component thereof is a necessary precursor for a regulated entity to take action to mitigate the vulnerability. A 2019 study on vulnerability and patch management found that 48 percent of respondents reported that their organizations had at least one breach in the preceding two years. Of those, 60 percent said that the breaches could have occurred because an available patch for a known vulnerability had not been applied. [804] Accordingly, the Department also proposes a new implementation specification for monitoring at proposed 45 CFR 164.312(h)(2)(ii) to require that a regulated entity monitor authoritative sources for known vulnerabilities on an ongoing basis and take action to remediate identified vulnerabilities in accordance with the regulated entity's patch management program. [805] The Department expects such monitoring to be conducted on an ongoing basis and is not proposing to specify a minimum time interval for reviewing sources. We are also not proposing to prescribe the specific sources of known vulnerabilities because such sources may change over time and the vulnerabilities for which regulated entities may be monitoring may vary greatly among regulated entities. We propose to require that the sources used must be authoritative. Examples of authoritative sources of known vulnerabilities would include NIST's National Vulnerability Database [806] and CISA's Known Exploited Vulnerabilities Catalog. [807] The proposed implementation specification for penetration testing at 45 CFR 164.312(h)(2)(iii) would require a regulated entity to conduct periodic testing of the regulated entity's relevant electronic information systems for vulnerabilities, commonly referred to as penetration testing. Penetration tests identify vulnerabilities in the security features of an application, system, or

network by mimicking real-world attacks [808] and are an effective way to identify weaknesses that could be exploited by an attacker. [809] The proposal would require such testing to be conducted by qualified person(s). We propose to describe a qualified person as a person with appropriate knowledge of and experience with generally accepted cybersecurity principles and methods for ensuring the confidentiality, integrity, and availability of ePHI. We believe that within the cybersecurity industry, it is understood that a person who is qualified to conduct such penetration testing is an individual who has a combination of one or more qualifying credentials, skills, or experiences to perform ·ethical hacking· or ·offensive security· of information systems. The proposal would require a regulated entity to conduct such testing at least once every 12 months, or in accordance with the regulated entity's risk analysis, [810] whichever is more frequent. Lastly, we are proposing a new implementation specification for patch and update installation at 45 CFR 164.312(h)(2)(iv)

24/7, with allowance for remote/on-call staff. (xi) IR.L3-3.6.2e Establish and maintain a cyber-incident response team that can be deployed by the organization within 24 hours. (xii) PS.L3-3.9.2e Ensure that organizational systems are protected if adverse information develops or is obtained about individuals with access to CUI. (xiii) RA.L3-3.11.1e Employ threat intelligence, at a minimum from open or commercial sources, and any DoD-provided sources, as part of a risk assessment to guide and inform the development of organizational systems, security architectures, selection of security solutions, monitoring, threat hunting, and response and recovery activities. (xiv) RA.L3-3.11.2e Conduct cyber threat hunting activities on an on-going aperiodic basis or when indications warrant, to search for indicators of compromise in organizational systems and detect, track, and disrupt threats that evade existing controls. (xv) RA.L3-3.11.3e Employ advanced automation and analytics capabilities in support of analysts to predict and identify risks to organizations, systems, and system components. (xvi) RA.L3-3.11.4e Document or reference in the system security plan the security solution selected, the rationale for the security solution, and the risk determination. (xvii) RA.L3-3.11.5e Assess the effectiveness of security solutions at least annually or upon receipt of relevant cyber threat information, or in response to a relevant cyber incident, to address anticipated risk to organizational systems and the organization based on current and accumulated threat intelligence. (xviii) RA.L3-3.11.6e Assess, respond to, and monitor supply chain risks associated with organizational systems and system components. (xix) RA.L3-3.11.7e Develop a plan for managing supply chain risks associated with organizational systems and system components; update the plan at least annually, and upon receipt of relevant cyber threat information, or in response to a relevant cyber incident. (xx) CA.L3-3.12.1e Conduct penetration testing at least annually or when significant security changes are made to the system, leveraging automated scanning tools and ad hoc tests using subject matter experts. (xxi) SC.L3-3.13.4e Employ physical isolation techniques or logical isolation techniques or both in organizational systems and system components. (xxii) SI.L3-3.14.1e Verify the integrity of security critical and essential software using root of trust mechanisms or cryptographic signatures. (xxiii) SI.L3-3.14.3e Ensure that specialized assets including IoT, IIoT, OT, GFE, Restricted Information Systems, and test equipment are included in the scope of the specified enhanced security requirements or are segregated in purpose-specific networks. (xxiv) SI.L3-3.14.6e Use threat indicator information and effective mitigations obtained from, at a minimum, open or commercial sources, and any DoD-provided sources, to guide and inform intrusion detection and threat hunting.

From the NIST SP 800-172 Rev 3 Final Public Draft: Such statements should be addressed to: 800-171comments@list.nist.gov NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 vi Table of Contents 114

Similar to the requirements for non-cloud FISs in clause 52.239-YY, the clause 52.239-XX: (1) at paragraph (c), reserves the Government's right to implement and operate its own cryptographic key services under the contract; (2) at paragraph (d), specifies the limitations on contractor access to, use, and disclosure of Government data and Government-related data under the contract; (3) at paragraph (e), requires contractors to handle security incident and cyber threat reporting in accordance with proposed FAR clause 52.239-ZZ; (4) at paragraph (f), specifies the terms for the Government's authorized representatives' access to Government and Government-related data, contractor personnel, and contractor facilities; (5) at paragraph (g), requires contractors to notify the contracting officer of any requests from a third-party (including another Federal, State, or local agency) for access to Government data and Government-related data; (6) at paragraph (h), requires contractors to indemnify the Government from any liability that arises out of the

performance of the contract because of the contractor's introduction of certain information or matter into Government data or the contractor's unauthorized disclosure of certain information or material; and (7) at paragraph (i), specifies when to include the substance of the clause in subcontracts. III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT) and for Commercial Products (Including Commercially Available Off-the-Shelf (COTS) Items) or for Commercial Services This rule applies section 7 of the Internet of Things Cybersecurity Improvement Act of 2020 (15 U.S.C. 278g-3e) to acquisitions valued at or below the SAT because of the notwithstanding section 1905 in 15 U.S.C. 278g-3e(a)(2) which applies the Act to such acquisitions. This rule also applies to acquisitions for commercial products, including COTS items, and commercial services because Government data and systems require protection regardless of dollar value or commerciality of the product or service. To implement paragraphs (a) and (b)(1) of section 7 of the Act, this rule adds a new policy at FAR 39.X02-1(b), Prohibited IoT devices in Federal information systems. The policy prescribed at FAR 39.X02-1(b) applies when agencies are acquiring IoT devices. A. Applicability to Contracts at or Below the Simplified Acquisition Threshold 41 U.S.C. 1905

Requirements for safeguarding CUI residing on Federal and non-Federal systems, as identified in the SF XXX, Controlled Unclassified Information (CUI) Requirements; Requirements for reporting and managing security incidents; Actions that may be necessary to validate compliance; Minimum CUI training requirements; and The requirement for contractors to flow down CUI requirements to subcontractors, if applicable. (15) FAR 52.204-21, Basic Safeguarding of Covered Contractor Information Systems. Text is added for the definition and at paragraph (b)(3) for the identification of covered Federal information. (16) FAR clause 52.212-5 is updated to reflect that FAR clause 52.204-XX is applicable to acquisitions of commercial products and services. FAR clause 52.213-4 is updated to reflect usage of the FAR 52.204-XX clause in simplified acquisitions for other than commercial products or services. FAR clause 52.244-6 is updated to address the flow down to subcontracts for the two new clauses. (17) Additional minor edits are made at FAR 1.106 to add the OMB control number information for the provision and clause, at FAR 42.302 to update a cross-reference, and at FAR subpart 53.2 to add the new SF XXX, Controlled Unclassified Information (CUI) Requirements. III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT) and for Commercial Products, Including Commercially Available Off-the-Shelf (COTS) Items, or Commercial Services This rule proposes a new provision at FAR 52.204-WW, Notice of Controlled Unclassified Information Requirements. The proposed provision is prescribed at FAR 4.403-7(a) for use in solicitations that contain the clause at FAR 52.204-XX or the clause at FAR 52.204-YY. The rule proposes a new clause at FAR 52.204-XX, Controlled Unclassified Information. The proposed clause is (printed page 4281) prescribed at FAR 4.403-7(b) for use in solicitations and contracts if the requiring activity has marked the Yes box in Part A of the SF XXX, except for solicitations and contracts solely for the acquisition of COTS items. The rule proposes a new clause at FAR 52.204-YY, Identifying and Reporting Information That Is Potentially Controlled Unclassified Information. The proposed clause is prescribed at FAR 4.403-7(c) for use in solicitations and contracts if the requiring activity has marked the No box in Part A of the SF XXX, excluding solicitations and contracts solely for the acquisition of COTS items. This rule also proposes to amend the FAR to implement 32 CFR part 2002

From the NIST SP 800-172 Rev 3 Final Public Draft: 03.13.05E Change Processing and Storage Locations 1839 C Change the location of [Assignment: organization-defined processing and/or storage] [Selection (one): [Assignment: organization-defined time frequency]; at random time intervals]. DISCUSSION Adversaries target critical missions and business functions and the systems that support those missions and business functions while also trying to minimize the exposure of

their existence and tradecraft. The static, homogeneous, and deterministic nature of organizational systems targeted by adversaries make such systems more susceptible to attacks with less adversary cost and effort to be successful. Changing processing and storage locations (also referred to as moving target defense) addresses the advanced persistent threat using tech

From the NIST SP 800-172 Rev 3 Final Public Draft: insider threat 2982 The threat that an insider will use their authorized access, wittingly or unwittingly, to do harm to the security of the United States. This threat can include damage to the United States through espionage, terrorism, unauthorized disclosure, or through the loss or degradation of departmental resources or capabilities. integrity Guarding against improper information modification or destruction and includes ensuring information non-repudiation and authenticity. (K) Use the clause at 252.246-7003, Notification of Potential Safety Issues, as prescribed in 246.371. (L) Use the provision at 252.247-7026, Evaluation Preference for Use of Domestic Shipyards-Applicable to Acquisition of Carriage by Vessel for DoD Cargo in the Coastwise or Noncontiguous Trade, as prescribed in 247.574(e).] (M) Use the clause at 252.247-7027, Riding Gang Member Requirements, as prescribed in 247.574(f). * * * * * PART 252-SOLICITATION PROVISIONS AND CONTRACT CLAUSES 5. Add section 252.204-7011 to read as follows: 252.204-7011 Alternative Line Item Structure. As prescribed in 204.7109(b), insert the following provision: ALTERNATIVE LINE-ITEM STRUCTURE (SEP 2011) (a) Line items are the basic structural elements in a solicitation or contract that provide for the organization of contract requirements to facilitate pricing, delivery, inspection, acceptance and payment. Line items are organized into contract line items, subline items, and exhibit line items. Separate line items should be established to account for separate pricing, identification (see section 211.274 of the Defense Federal Acquisition Regulation Supplement), deliveries, or funding. The Government recognizes that the line item structure in this solicitation may not conform to every offeror's practices. Failure to correct these issues can result in difficulties in accounting for deliveries and processing payments. Therefore, offerors are invited to propose an alternative line item structure for items on which bids, proposals, or quotes are requested in this solicitation to ensure that the resulting contract structure is economically and administratively advantageous to the Government and the Contractor. (b) If an alternative line item structure is proposed, the structure must be consistent with subpart 204.71 of the Defense Federal Acquisition Regulation Supplement and PGI 204.71. A sample solicitation line-item structure and a corresponding offer of a proposed alternative line-item structure follow. CIS Safeguard 4.8 · Uninstall or Disable Unnecessary Services on Enterprise Assets and Software Uninstall or disable unnecessary services on enterprise assets and software, such as an unused file sharing service, web application module, or service function. Implementation Groups: 2,3 Asset Type: devices Security Function: protect Parent Control: Secure Configuration of Enterprise Assets and Software

) provides a single integrated, cohesive industrial security program to protect classified information to preserve our Nation's economic and technological interests. Under the NISP, the USG establishes requirements for the protection of classified information to be safeguarded in a manner equivalent to its protection within the executive branch of USG, where practicable. For industry, those requirements are included in the NISPOM. When bound by contract, license, or grant, industry must comply with the NISPOM and any Cognizant Security Agency (CSA)-specific supplementary guidance for unique CSA mission requirements. As the Executive Agent of the NISP, the Secretary of Defense is responsible for overall implementation of the program. The Department of Defense (DoD) issues and maintains the NISPOM with the concurrence of the other four NISP CSAs and in consultation with other affected Federal agencies. DoD codified the NISPOM in a final rule on December 21, 2020 (85 FR 83300-83364) National Industrial Security Program Operating Manual (NISPOM) to add 32 CFR part 117 to the Code of Federal Regulations (CFR). The rule was effective on February 24, 2021. In

addition to adding the NISPOM to the CFR, the final rule incorporated requirements of Security Executive Agent Directive (SEAD) 3, Reporting Requirements for Personnel with Access to Classified Information or Who Hold a Sensitive Position. SEAD 3 requires reporting by all contractor cleared personnel who have been granted eligibility for access to classified information. The final rule provided a single nation-wide implementation plan to include SEAD 3 reporting by all contractor cleared personnel to report specific activities that may adversely impact their continued national security eligibility, such as reporting of foreign travel and foreign contacts. NISP CSAs are required to conduct an analysis of such reported activities to determine whether they pose a potential threat to national security and take appropriate action. Finally, the rule also implemented the provisions of Section 842 of Public Law 155-232, which removed the requirement for a covered National Technology and Industrial Base (NTIB) entity operating under a special security agreement pursuant to the NISP to obtain a national interest determination as a condition for access to proscribed information. The 60-day public comment period ended on February 19, 2021. On August 19, 2021, DoD published a technical amendment to the December final rule (at 86 FR 46597-46599

(B) If a prospective subcontractor requires access to classified information during the pre-award phase and does not have the appropriate entity eligibility determination or a classified information safeguarding capability, the prime contractor will request the CSA of the subcontractor to initiate the necessary action. (iii) If access to classified information will not be required, the contract is not a classified contract within the meaning of this rule. If the prime contract contains requirements for release or disclosure of protected information that is not classified, such as CUI, the requirements will be incorporated in the solicitation and the subcontract and are not covered by this rule. (2) Prospective subcontractors entity eligibility determinations. (i) The prime contractor will verify whether the prospective subcontractors have the appropriate entity eligibility determination and also a classified information safeguarding capability, if a subcontract requirement. This determination can be made if there is an existing contractual relationship between the parties involving classified information of the same or higher category, and must be verified by accessing the CSA-designated database, or by contacting the CSA. (ii) If a prospective subcontractor does not have the appropriate entity eligibility determination or a classified information safeguarding capability, the prime contractor will request that the CSA of the subcontractor initiate the necessary action. (A) Requests will include, at a minimum, the full name, address, and contact information for the requester; the full name, address, and contact information for a contact at the facility to be processed for an entity eligibility determination; the level of clearance and the required classified information safeguarding capability; and full justification for the request. (B) Requests for safeguarding capability will include a description, quantity, end-item, and classification of the information related to the proposed subcontract. (C) Other factors necessary to help the CSA determine if the prospective subcontractor meets the requirements of this rule will be identified, such as any special access requirements. (3) Lead time for entity eligibility determination when awarding to an uncleared subcontractor. Requesting contractors will allow sufficient lead time in connection with the award of a classified subcontract to enable an uncleared bidder to be processed for the necessary entity eligibility determination. When the entity eligibility determination cannot be granted in sufficient time to qualify the prospective subcontractor for participation in the current procurement action, the CSA will continue the entity eligibility determination processing action to qualify the prospective subcontractor for future contract consideration provided: (i) The delay in processing the entity eligibility determination was not caused by a lack of cooperation on the part of the prospective subcontractor.

The NC green onion traceback investigation in 2003, which was part of the largest Hepatitis A outbreak that has ever occurred in the United States, is another example of the importance of intrastate records. There, the amount of time spent on the traceback within that State was twice as long as the other three tracebacks done in other states because the distributor in NC did not have records. Traceback from the TN outbreak took over a month, the GA traceback took a month, and Pennsylvania (PA) traceback took a week. Because we had no intrastate records in the NC outbreak, the traceback was determined to be inconclusive after two months, which meant that we would not have been able to identify the farms involved if it had not been for the other outbreaks. This year, there was an *Escherichia coli* (*E. coli*) O157:H7 outbreak associated with bagged lettuce product in CA that was only in intrastate commerce. That traceback might have been lost had records not have been available. Exempting intrastate transporters could significantly impede FDA's ability rapidly and effectively to respond to a public health emergency involving a food transported within

a state, particularly if the adulteration occurred during transport and the food was delivered to multiple sources within the State. In scenarios where time is of the essence to prevent serious injuries or death on a large scale, having records available becomes even more critical. In addition, not only must FDA be able to rapidly obtain records, it is imperative that FDA be assured that those records contain certain essential information to allow FDA to prevent further harm in an efficient and effective manner. Additional examples of circumstances involving food products that have significant intrastate manufacturing/processing or distribution are provided in the following paragraphs: An intrastate sandwich/snack food company that sells to retail outlets for consumption had an outbreak of Listeriosis or Salmonellosis that was traced back to the sandwiches. The product was completely distributed using the company trucks within the state. FDA was unable to determine which sandwiches caused the outbreak. The sandwiches were delivered to retail customers, and it was impossible to track which sandwiches went to which retailer. The transporter did not track which product was delivered to which location. In this case, the firm had to recall all of its products. Retail stores regularly purchase food, especially locally grown produce, from truck farmers. These farm trucks travel from store to store within a state, sometimes selling an entire truckload to a store, other times a portion. There is no manifest or record other than a bill of sale-e.g., 200 cantaloupes from Farmer Brown. If the contamination occurred on the truck, FDA would not have a record from the truck of all other delivery sites.

These U.S. Munitions List commodities are authorized by the U.S. Government under the U.S. [AUS or UK, as applicable] Defense Trade Cooperation Treaty for export only to [AUS or UK, as applicable] for use in approved projects, programs or operations by members of the [AUS or UK, as applicable] Community. They may not be retransferred or re-exported or used outside of an approved project, program, or operation, either in their original form or after being incorporated into other end-items, without the prior written approval of the U.S. Department of State. (5) Labeling. (i) Defense articles (other than technical data) will be individually labeled with the appropriate identification; or, where such labeling is impracticable (e.g., propellants, chemicals), will be accompanied by documentation (such as contracts or invoices) clearly associating the defense articles with the appropriate markings. (ii) Technical data (including data packages, technical papers, manuals, presentations, specifications, guides and reports), regardless of media or means of transmission (i.e., physical, oral, or electronic), will be individually labeled with the appropriate identification detailed. Where such labeling is impracticable, the data will be accompanied by documentation (such as contracts or invoices) or oral notification clearly associating the technical data with the appropriate markings. (iii) Defense services will be accompanied by documentation (e.g. contracts, invoices, shipping bills, or bills of lading clearly labeled with the appropriate identification). (6) Transfers. (i) All defense articles that fall under the scope of the Treaties must be transferred from the U.S. point of embarkation through channels approved by both the United States and the UK or the United States and AUS, as applicable. (ii) For transfers of defense articles as freight, the contractor will prepare a transportation plan. For transfer of classified U.S. defense articles, a freight forwarder must have a valid entity eligibility determination and a classified information storage capability at the appropriate level. For unclassified U.S. defense articles transferred as freight, a freight forwarder is not required to be cleared. (7) Records. Contractors will maintain records of exports, transfers, re-exports, or re-transfers of defense articles subject to the Treaties for a minimum of five years. The contractor will make records available to the CSA upon request. In accordance with the ITAR parts 126.16 and 126.17 the records will contain: (i) Port of entry or exit. (ii) Date and time of export or import. (iii) Method of export or import. (iv) Commodity code and description of the commodity, including technical data. (v) Value of export. (vi) Justification for export under the Treaties. (vii) End-user or end-use. (viii) Identification of all U.S. and foreign parties to the transaction. (ix) How export was marked. (x) Security classification of the export.

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Defense Office of the Secretary [DoD-2006-OS-0129] RIN 0790-AB03 32 CFR Part 310 AGENCY: Department of Defense. ACTION: Final rule. SUMMARY: The Department of Defense is updating policies and responsibilities for the Defense Privacy Program which implements

the Privacy Act of 1974. EFFECTIVE DATE: April 13, 2007. FOR FURTHER INFORMATION CONTACT: Mr. Vahan Moushegian, Jr., at (703) 607-2943. SUPPLEMENTARY INFORMATION: The proposed rule was published in the Federal Register on July 14, 2006 at 71 FR 40282. No public comments were received. Some administrative changes were made as a result of comments on the corresponding DoD issuance and Office of Management and Budget guidance. Changes involve revision of the terms for personal and compromised information; the incorporation of additional considerations when determining if a social security number will be collected; a reorganization of the procedures involving Congressional or General Accountability Office access to records; an expanded explanation of record disposal procedures and the access exemption; additional consideration involving training and technical/special security requirements; and new notification procedures when there is a loss or theft of information. Executive Order (E.O.) 12866, 'Regulatory Planning and Review' It has been determined that 32 CFR part 310 is not a significant regulatory action. The rule does not (1) Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy; a sector of the economy; productivity; competition; jobs; the environment; public health or safety; or State, local, or tribal governments or communities; (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another Agency; (3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in this Executive Order. Public Law 96-354, 'Regulatory Flexibility Act' (5 U.S.C. Chapter 6) It has been determined that this rule is not subject to the Regulatory Flexibility Act because it would not, if promulgated, have a significant economic impact on a substantial number of small entities because it is only concerned with the administration of Privacy Program within the Department of Defense. Public Law 96-511, 'Paperwork Reduction Act' (

Exemptions. (A) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, military service, Federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5), but only to the extent that such material would reveal the identity of a confidential source. (B) Portions of this system of records are exempt from the following subsections of the Privacy Act: (c)(3), (d), (e)(4)(G) and (H), and (f). (ii) Authority. 5 U.S.C. 552a(k)(5). (iii) Reasons. Exempted portions of this system contain information considered relevant and necessary to make a release determination as to qualifications, eligibility, or suitability for Federal employment, and was obtained by providing an express or implied promise to the source that his or her identity would not be revealed to the subject of the record. (11) System identifier and name. N05354-1, Equal Opportunity Information Management System. (i) Exemptions. (A) Information specifically authorized to be classified under E.O. 12958, as implemented by DOD 5200.1-R, may be exempt pursuant to 5 U.S.C. 552a(k)(1). (B) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, military service, Federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5), but only to the extent that such material would reveal the identity of a confidential source. (C) Portions of this system of records are exempt from the following subsections of the Privacy Act: (c)(3), (d), (e)(4)(G) through (I), and (f). (ii) Authority. 5 U.S.C. 552a(k)(1) and (k)(5). (iii) Reasons. Granting access to information in this system of records could result in the disclosure of classified material, or reveal the identity of a source who furnished information to the Government under an express or implied promise of confidentiality. Material will be screened to permit access to unclassified material and to information that will not disclose the identity of a confidential source. (12) System identifier and name. N05520-1, Personnel Security Eligibility Information System. (i) Exemptions. (A) Information specifically authorized to be classified under E.O. 12958, as implemented by DOD 5200.1-R, may be exempt pursuant to 5 U.S.C. 552a(k)(1). (B) Investigatory material compiled for law enforcement purposes may be exempt pursuant to 5 U.S.C. 552a(k)(2). However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of such information, the individual will be provided access to such information except to the extent that disclosure would reveal the identity of a confidential source.

From the NIST SP 800-172 Rev 3 Final Public Draft: · Implementing dual authorization controls for critical or sensitive operations 337 · Limiting persistent storage to isolated enclaves or domains · Implementing a comply-to-connect approach for systems and networks · Extending configuration

management requirements by establishing authoritative sources for addressing changes to systems and system components · Periodically refreshing or upgrading organizational systems and system components to a known state or developing new systems or components · Employing a security operations center with advanced analytics to support continuous monitoring and the protection of systems · Using deception to confuse and mislead adversaries regarding the information they use for decision-making, the value and authenticity of the information they a

The DoD disagreed with the comment that the CAICO should determine the length of time a CCP certification is valid. DoD has a significant interest in ensuring the quality of assessors in the CMMC ecosystem and the currency of their training. The DoD does not agree with the assertion that managerial, and personnel related skills are most relevant for success as a Lead Assessor. As written, § 170.11 of the rule requires Lead Assessors to have a balance of technical and managerial expertise. A Lead Assessor also requires assessment or audit experience. The DoD views these skills as the minimum required to adequately provide the technical guidance and managerial oversight of the assessment team. The DoD declined to revise the rule to specify IT and/or Cybersecurity for the required audit experience. The DoD also disagreed with a recommendation to require Lead CCAs to have industry-specific knowledge of the industry in which the OSC being assessed participates. The DoD found that this requirement would unreasonably restrict C3PAOs from participating in a broad range of assessments and could have a negative effect on the ability of the DIB to schedule CMMC Level 2 certification assessments. The OSC can select a C3PAO with the experience it considers valuable. The DoD declined a commentor's request to modify the rule to allow the CAICO to determine the requirement for the frequency of CCA/CCP certification. The DoD considers the 3 years certification period a key CMMC program requirement that will be enacted and managed by the CAICO. The DoD also declined to change the rule to extend the certification timeline to 4 years for those earning a certification prior to completion of rulemaking. Additionally, the DoD did not accept the recommendation to remove the requirement for providing documentation in the English language, which applies to all official information that would be provided to the CAICO, CMMC AB, or the DoD. The DoD disagreed with a commenter's recommendation to remove the second sentence in § 170.11(b)(7) that prohibits individual assessors from using any IT other than that provided to them by the C3PAO that has been contracted to perform that OSA's assessment. This sentence is required to eliminate ambiguity, particularly for C3PAOs that may have implemented a BYOD program or that allow some work roles to use personal devices. The DoD updated the rule to provide additional clarity. The DoD does not concur with the comment calling for a DoD Manual 8140.03 requirement on CCAs. Assessment teams are required to have a Lead Assessor who must meet the higher level of the DoDM 8140.03 requirements. The rule has been updated to remove reference to DoD Manual 8570. The experience requirements referenced for the Lead CCA are cumulative. The rule has been updated to move Lead CCA requirements to the end of § 170.11, but not to create a new section.

because granting access to information that is properly classified pursuant to E.O. 12958 , as implemented by DoD 5200.1-R, may cause damage to the national security. (11) System identifier and name. DUSP 11, POW/Missing Personnel Office Files. (i) Exemption. Information classified under E.O. 12958 , as implemented by DoD 5200.1-R, may be exempt pursuant to 5 U.S.C. 552a(k)(1) . (ii) Authority. 5 U.S.C. 552a(k)(1) . (iii) Reasons. From subsection 5 U.S.C. 552a(d) because granting access to information that is properly classified pursuant to E.O. 12958 , as implemented by DoD 5200.1-R, may cause damage to the national security. (12) System identifier and name. DFOISR 05, Freedom of Information Act Case Files. (i) Exemption. During the processing of a Freedom of Information Act request, exempt materials from other systems of records may in turn become part of the case record in this system. To the extent that copies of exempt records from those ·other· systems of records are entered into this system, the Office of the Secretary of Defense claims the same exemptions for the records from those ·other· systems that are entered into this system, as claimed for the original primary system of which they are a part. (ii) Authority. 5 U.S.C. 552a(j)(2) , (k)(1), (k)(2), (k)(3), (k)(4), (k)(5), (k)(6), and (k)(7). (iii) Reasons. Records are only exempt from pertinent provisions of 5 U.S.C. 552a to the extent such provisions have been identified and an exemption claimed for the original record and the purposes underlying the exemption for the original record still pertain to the record which is now contained in this system of records. In general, the exemptions were claimed in order to protect properly classified information relating to national defense and foreign policy, to avoid interference during the conduct of criminal, civil, or administrative actions or investigations, to ensure protective services provided the President and others are not compromised, to protect the identity of confidential sources incident to Federal employment, military service, contract, and security

clearance determinations, to preserve the confidentiality and integrity of Federal testing materials, and to safeguard evaluation materials used for military promotions when furnished by a confidential source. The exemption rule for the original records will identify the specific reasons why the records are exempt from specific provisions of 5 U.S.C. 552a . (13) System identifier and name. DFOISR 10, Privacy Act Case Files. (i) Exemption.

Offerors and contractors must report cyber incidents on unclassified networks or information systems, within cloud computing services, and when they affect contractors designated as providing operationally critical support, as required by statute. a. The clause at DFARS 252.204-7012, Safeguarding Covered Defense Information and Cyber Incident Reporting, covers cyber incident reporting requirements for incidents that affect a covered contractor information system or the covered defense information residing therein, or that affects the contractor's ability to perform the requirements of the contract that are designated as operationally critical support and identified in the contract. b. DFARS provision 252.204-7008, Compliance with Safeguarding Covered Defense Information Controls, requires an offeror that proposes to vary from any of the security controls of National Institute of Standards and Technology (NIST) Special Publication (SP) 800-171 in effect at the time the solicitation is issued to submit to the contracting officer a written explanation of how the specified security control is not applicable or an alternative control or protective measure is used to achieve equivalent protection. c. DFARS provision 252.239-7009, Representation of Use of Cloud Computing, requires contractors to report that they anticipate or do not anticipate utilizing cloud computing service in performance of the resultant contract. The representation will notify contracting officers of the applicability of the cloud computing requirements at DFARS clause 252.239-7010 of the contract. d. DFARS clause 252.239-7010, Cloud Computing Services, requires reporting of cyber incidents that occur when DoD is purchasing cloud computing services. These DFARS provisions and clauses facilitate mandatory cyber incident reporting requirements in accordance with statutory regulations. When reports are submitted, DoD will analyze the reported information for cyber threats and vulnerabilities in order to develop response measures as well as improve U.S. Government understanding of advanced cyber threat activity. In addition, the security requirements in NIST SP 800-171 are specifically tailored for use in protecting sensitive information residing in contractor information systems and generally reduce the burden placed on contractors by eliminating Federal-centric processes (printed page 36832) and requirements. The information provided will inform the Department in assessing the overall risk to DoD covered defense information on unclassified contractor systems and networks. Jennifer D. Johnson, Editor/Publisher, Defense Acquisition Regulations System. [FR Doc. 2022-13233 Filed 6-17-22; 8:45 am] BILLING CODE 5001-06-P

(2) Consider the following: (i) The relationship of each item of information retained and collected to the purpose for which the system is maintained; (ii) The specific impact on the purpose or mission of not collecting each category of information contained in the system; (iii) The possibility of meeting the informational requirements through use of information not individually identifiable or through other techniques, such as sampling; (iv) The length of time each item of personal information must be retained; (v) The cost of maintaining the information; and (vi) The necessity and relevancy of the information to the purpose for which it was collected. (g) Discontinued information requirements. (1) Stop collecting immediately any category or item of personal information for which retention is no longer justified. Also delete this information from existing records, when feasible. (2) Do not destroy any records that must be retained in accordance with disposal authorizations established under 44 U.S.C. 3303a , Examination by Archivist of Lists and Schedules of Records Lacking Preservation Value; Disposal of Records. § 310.11 Standards of accuracy. (a) Accuracy of information maintained. Maintain all personal information used or may be used to make any determination about an individual with such accuracy, relevance, timeliness, and completeness as is reasonably necessary to ensure fairness to the individual in making any such determination. (b) Accuracy determinations before dissemination. Before disseminating any personal information from a system of records to any person outside the Department of Defense, other than a Federal Agency, make reasonable efforts to ensure the information to be disclosed is accurate, relevant, timely, and complete for the purpose it is being maintained (see § 310.21(d)). § 310.12 Government contractors. (a) Applicability to government contractors. (1) When a DoD Component contract requires the operation or maintenance of a system of records or a portion of a system of records or (printed page 18764) requires the performance of any activities associated with maintaining a system of records, including the collection, use, and dissemination of records, the record system or the portion of the record system affected are considered to be maintained by

the DoD Component and are subject to this part. The Component is responsible for applying the requirements of this part to the contractor. The contractor and its employees are to be considered employees of the DoD Component for purposes of the criminal provisions of 5 U.S.C 552a(i) during the performance of the contract. Consistent with the Federal Acquisition Regulation (FAR), Part 24.1, contracts requiring the maintenance or operation of a system of records or the portion of a system of records shall include in the solicitation and resulting contract such terms as are prescribed by the FAR.

(Comment 70) Two comments state that many nontransporters own trucks or other vehicles and transport food as an incidental part of their operations. For example, many food distributors deliver food by truck to their customers and also may transport food returns. These entities should not be classified as transporters for their distribution practices that are incidental to the nontransporters' holding, processing, packing, importing, or receiving of food. The comments ask that the final rule clarify that an entity is either a transporter or a nontransporter, and that FDA will not consider the same entity a transporter for some purposes and a nontransporter for other purposes. The final rule should confirm that a food distributor is a nontransporter. A food distributor should not automatically be considered a transporter simply because it delivers food using its own truck fleet. If FDA were to consider the same company a transporter for some purposes and a nontransporter for other purposes, this would create tremendous confusion regarding what records are required to be retained. (Response) Both the proposed and final rule define a transporter as a person who has possession, custody, or control of an article of food for the sole purpose of transporting the food. A person who owns food, or who holds, processes, packs, imports, receives, or distributes food for purposes other than transportation is not a transporter, even if the person also transports food. In the example presented in the comment, a manufacturer that owned its own trucks to deliver food would not be considered a transporter. However, because FDA has exempted all foreign persons except those who transport food in the United States from this rule, foreign persons who transport food in the United States are subject to the requirements applicable to transporters regardless of whether that person has possession, custody, or control of the food for the sole purpose of transporting that food. (Comment 71) One comment states that the proposed definition of 'nontransporter' reads as follows: 'Nontransporter means a person who owns food or who holds, processes, packs * * *. The same reference to a 'person' is included in the definitions of 'nontransporter immediate previous source' and 'nontransporter immediate subsequent recipient.' The comment asks whether the proposed rules apply to firms and other legal entities and/or physical persons. Any other solution would, in the comment's view, neither be appropriate nor practicable. (Response) The maintenance and inspection of records provisions in section 306 of the Bioterrorism Act apply to 'persons (excluding farms and restaurants) who manufacture, process, pack, transport, distribute, receive, hold, or import food.' The term 'person' has the same meaning as in section 201(e) of the FD&C Act and includes individuals, partnerships, corporations, and associations.

The DoD declined to delete text stating that OSAs may elect to complete a self-assessment or pursue CMMC certification assessment to distinguish themselves as competitive because the recommendation did not result in a substantive change. CMMC rule describes anticipated impacts on the DIB in the Impact and Cost Analysis section. Speculation on market forces affecting the DIB is outside of the scope of the CMMC program. Speculation on market forces affecting CMMC (printed page 83128) ecosystem CCP and CCA roles are also outside of the scope of the CMMC program. Likewise, limitations on career opportunities and associated issues such as burn-out or job satisfaction are beyond the scope of the program. The DoD declines to comment on external market factors impacting CMMC compliance. The seven-year timespan reflects the DoD's estimate for all DIB members to achieve CMMC compliance. The implementation plan ramps up CMMC assessment requirements over 4 phases, such that the ecosystem will reach maximum capacity by year four. The DoD does not agree with commenter assertions that 70,000 or more entities will require CMMC Level 2 assessment by October 1, 2026. Table 6 of the Impact and Cost Analysis of CMMC 2.0 section provides the DoD's estimate of CMMC assessment numbers by year and level. DoD considered many alternatives before deciding upon the current CMMC structure. By design, the CMMC program depends on the supply and demand dynamics of the free market, enabling it to naturally scale and adapt to capacity requirements. Planned changes to DCMA staffing levels have been considered with regard to implementation of CMMC Level 3 and C3PAO assessments as described in this rule. The DIBCAC will communicate extensively with contractors about the conduct of a Level 3 assessment during the pre-assessment planning phase. 15. Assessments a. Level 1 and Mapping of 15 Level 1 to 17 Level 2 Requirements Comment: A few questions were submitted about CMMC level 1 requirements, on topics such as whether DoD intended affirmations for

CMMC level 1 be required annually versus triennially, and whether specific policies and procedures documentation is required for Level 1 self-assessments. One commenter asked about limits on deficiency remediation and re-accomplishing an assessment in the event a company fails a CMMC Level 1 self-assessment. Another commenter asked for the specific wording to reflect a CMMC Level 1 assessment score in SPRS.

As in other contexts, the Government may specify additional guidance in the solicitation. CMMC assessments will be identified as pre-award requirements. Subcontractors at each tier are responsible for submitting their own assessment and affirmation information in SPRS. CMMC self-assessments and certifications will be reflected in SPRS, including an indicator of the currency of the credentials. Contracting Officers and Program Managers need not review any assessment artifacts, only the resulting scores and certificate validity period. Work arrangements between the prime and subcontractor are beyond the scope of this rule, however, if CUI is flowed down and will be processed, stored, or transmitted on subcontractor information systems in the performance of a DoD contract then CMMC requirements also flow down as described in § 170.23. The DoD will not track progress toward certification but will implement CMMC as a pre-award requirement. An OSA's pursuit of a C3PAO assessment is a business decision to be made by each contractor considering the contract opportunities it wishes to pursue. The DoD disagrees with one commenter's assertion that CMMC requirement will flow down regardless of what work they do, because it does not acknowledge the point that flow-down requirements are for subcontractors who process, store, or transmit CUI. The text of § 170.23, clearly conditions the flow-down to those cases when a subcontractor will process, store, or transmit FCI or CUI. The prime contractor's responsibility is to flow down CMMC assessment requirements as described in § 170.23 and to ensure that FCI and CUI are not further disseminated to subcontractors that do not meet the CMMC requirement indicated in § 170.23. Likewise, subcontractors must also flow down CMMC requirements and ensure that FCI and CUI are not further disseminated to subcontractors that do not meet the CMMC requirement indicated in § 170.23. Section 170.23 has been revised to make this clearer. DoD declines to accept the recommendation to treat CUI like classified data. Classified information is managed differently from CUI, and different safeguarding regulations apply to these different categories of information (each of which are defined in 32 CFR part 2002). This rule makes no change to CUI policies for marking of data, and CMMC levels are not CUI categories in the DoD CUI registry. Primes and their subcontractors must understand flow-down requirements based on § 170.23, which clearly identifies requirements that apply when subcontractors will process, store, or transmit CUI in performance of the subcontract and the Prime contractor has a requirement of Level 3 certification assessment (i.e.,

(F) From subsections (e)(4)(G), (e)(4)(H), and (e)(4)(I) (Agency Requirements) and (f) (Agency Rules), because portions of this system are exempt from the individual access provisions of subsection (d) for the reasons noted above, and therefore NGA is not required to establish requirements, rules, or procedures with respect to such access. Providing notice to individuals with respect to existence of records pertaining to them in the (printed page 14784) system of records or otherwise setting up procedures pursuant to which individuals may access and view records pertaining to themselves in the system would undermine investigative efforts and reveal the identities of witnesses, and potential witnesses, and confidential informants. (G) From subsection (e)(5) (Collection of Information) because with the collection of information for law enforcement purposes, it is impossible to determine in advance what information is accurate, relevant, timely, and complete. Compliance with subsection (e)(5) would preclude NGA personnel from using their investigative training and exercise of good judgment to both conduct and report on investigations. (H) From subsection (e)(8) (Notice on Individuals) because compliance would interfere with NGA's ability to cooperate with law enforcement who would obtain, serve, and issue subpoenas, warrants, and other law enforcement mechanisms that may be filed under seal and could result in disclosure of investigative techniques, procedures, and evidence. (I) From subsection (g)(1) (Civil Remedies) to the extent that the system is exempt from other specific subsections of the Privacy Act. (4) System identifier and name. NGA-008, National Geospatial-Intelligence Agency Polygraph Records System. (i) Exemption. Investigatory material compiled for law enforcement purposes, other than material within the scope of subsection 5 U.S.C. 552a(j)(2) , may be exempt pursuant to 5 U.S.C. 552a(k)(2) . However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of the information, the individual will be provided access to the information exempt to the extent that disclosure would reveal the identity of a confidential source. Note 1 to paragraph (a)(4)(i). When claimed, this exemption allows limited protection of investigative

reports maintained in a system of records used in personnel or administrative actions. (ii) Authority. 5 U.S.C. 552a(k)(2) . (iii) Reasons. Pursuant to 5 U.S.C. 552a(k)(2) , the Director of NGA has exempted this system from the following provisions of the Privacy Act, subject to the limitation set forth in 5 U.S.C. 552a(c)(3) ; (d); (e)(1), (e)(4)(G), (e)(4)(H), (e)(4)(I); and (f). Exemptions from these particular subsections are justified, on a case-by-case basis to be determined at the time a request is made, for the following reasons:

Review and periodically update a risk analysis in response to changes in the environment and/or operations, security incidents, or occurrence of a significant event. Conduct risk analyses consistent with policies and procedures. Failing to document any efforts to develop, maintain, and update policies and procedures for conducting risk analyses was common. For example, health care providers commonly submitted documentation of some security activities performed by a third-party security vendor, without submitting documentation of any risk analysis that served as the basis of such activities. [475] Many regulated entities used and relied on outside persons to manage or perform risk analyses for their organizations; however, these outside persons frequently failed to meet the requirements of the Security Rule. Regulated entities also frequently and incorrectly assumed that a purchased security product satisfied all of the Security Rule's requirements. The responsibility to maintain an appropriate risk analysis rests with the regulated entity. Accordingly, it is essential that regulated entities understand and comply with risk analysis requirements to appropriately safeguard PHI. Numerous OCR investigations reflect the failure of regulated entities to develop and implement holistic risk analysis programs. For example, OCR's investigation of a health system in the aftermath of a ransomware attack found evidence of potential failures to: conduct a compliant risk analysis to determine the potential risks and vulnerabilities to ePHI in its systems; implement a contingency plan to respond to emergencies, like a ransomware attack, that damage systems that contain ePHI; and implement policies and procedures to allow only authorized users access to ePHI. [476] In another recently concluded investigation involving a large medical center, the covered entity reported that over a seven-month period, one of its employees inappropriately accessed the ePHI of more than 12,000 patients and then sold certain patient information to an identity theft ring. [477] OCR's investigation indicated potential violations of the requirement to conduct an accurate and thorough risk analysis of the potential risks and vulnerabilities to the confidentiality, integrity, and availability of all of the ePHI held by the medical center, as well as the requirement at 45 CFR 164.308(a)(1)(ii)(D) to implement procedures to regularly review records of information system activity, such as audit logs, access reports, and security incident tracking. In another case, the OCR settled a ransomware cyberattack investigation with a business associate. [478] The cyberattack affected the ePHI of over (printed page 941)

(C) From subsection (d) because access to the records contained in this system would inform the subject of a criminal investigation of the existence of that investigation, provide the subject of the investigation with information that might enable him to avoid detection or apprehension, and would present a serious impediment to law enforcement. (D) From subsection (e)(1) because in the course of criminal investigations, information is often obtained concerning the violation of laws or civil obligations of others not relating to an active case or matter. In the interests of effective law enforcement, it is necessary that this information be retained since it can aid in establishing patterns of activity and provide valuable leads for other agencies and future cases that may be brought. (E) From subsection (e)(2) because in a criminal investigation the requirement that information be collected to the greatest extent possible from the subject individual would present a serious impediment to law enforcement in that the subject of the investigation would be placed on notice of the existence of the investigation and would therefore be able to avoid detection. (F) From subsection (e)(3) because the requirement that individuals supplying information be provided with a form stating the requirements of subsection (e)(3) would constitute a serious impediment to law enforcement in that it could compromise the existence of a confidential investigation, reveal the identity of confidential sources of information and endanger the life and physical safety of confidential informants. (G) From subsections (e)(4)(G) and (e)(4)(H) because portions of this system of records have been exempted from the access provisions of subsection (d), making these subsections not applicable. (H) From subsection (e)(4)(I) because the identity of specific sources must be withheld in order to protect the confidentiality of the sources of criminal and other law enforcement information. This exemption is further necessary to protect the privacy and physical safety of witnesses and informants. (I) From subsection (e)(5) because in the collection of information for law enforcement purposes it is impossible to determine in advance what information

is accurate, relevant, timely, and complete. With the passage of time, seemingly irrelevant or untimely information may acquire new significance as further investigation brings new details to light and the accuracy of such information can only be determined in a court of law. The restrictions of subsection (e)(5) would restrict the ability of trained investigators and intelligence analysts to exercise their judgment in reporting on investigations and impede the development of intelligence necessary for effective law enforcement.

a broad spectrum of activities including many different engineering disciplines, computer programming, systems analysis, mathematics, management, information technology auditing, privacy, and law. Members also have an extensive history of professional publications, and professional journalism. Members have worked (and in many cases, continue to work) on the development and evolution of some of the most important pieces of information security and privacy legislation in the federal government, including the Privacy Act of 1974, the Computer Security Act of 1987, the E-Government Act (including FISMA), and other e-government services and initiatives.

This year the Computer Security Division (CSD) continued its efforts to improve information system security. This effort was accomplished through raising awareness of information technology risks, vulnerabilities, and protection requirements-particularly for new and emerging technologies. We continued to research, study, advise Agencies of IT vulnerabilities, and devise techniques for the cost-effective security and privacy of sensitive Federal systems. We continued to develop standards, metrics, tests, and validation programs to promote, measure, and validate security in systems and services. We also developed guidance to increase secure IT planning, implementation, management, and operation. This effort was conducted to assist our everexpanding customer base that now includes federal, state, and local governments, the healthcare community, colleges and universities, small businesses, the private sector, and the international community. - Methods for assessing effectiveness of security requirements - SP 800-53A, Guide for Assessing the Security Controls in Federal Information Systems (first public draft issued July 2005). - Procedures for capturing results of security requirement assessments and results of security program assessments - SP 800-26 Revision 1, Guide for Information Security Program Assessments and System Reporting Form (first public draft issued August 2005). - Bring the security planning process up to date with key standards and guidelines developed by NIST - SP 800-18 Revision 1, Guide for Developing Security Plans for Federal Information Systems (first public draft issued August 2005).

The Global Sourcing team is responsible for traditional SCRM. While SCRM is formally dedicated to this team, the Consumer Electronics Company encourages open communication for concerns relating to product integrity and risk. The company considers broad executive attention an important component for handling supply chain risk and leadership roles with formal SCRM responsibilities, including the CEO, CFO, VP of Global Sourcing, and Director of Information Technology. In particular, the internal information technology team works directly with Global Sourcing to mitigate potential cybersecurity threats presented by suppliers and upstream components. As the Consumer Electronics Company's business as an automobile OEM supplier continues to grow, downstream customer requirements are driving the company to mature their supply chain program. In 2015, Fiat Chrysler recalled 1.4 million cars ii after Wired Magazine iii revealed that a cybersecurity vulnerability exposed affected vehicles to remote control, allowing an attacker to manipulate steering, braking, and audio systems. The resulting public attention led to greater investment in C-SCRM throughout the auto industry. The industry's enhanced requirements for the Consumer Electronics Company and other suppliers include stronger controls for upstream supply partners, highlighting the value of the company's CTPAT participation.

7-12 7-12 7-13 7-13 7-13 7-13 Design Standards o 7-14 Organization Control . 7-14 Access Control . 7-15 Phase Review/Project Control Testing/System Assurance ^ 7-16 7-16 Promotion Process Documentation 7-17 7-17 Auditor/Independent Party Involvement Configuration Management 7-17 Emergency Procedures 7-18 categories: physical, system and

administrative. The physical controls include the traditional "put the system in a vault" measures, including perimeter control, hazard protection and backup mechanisms. System controls include hardware/software access control techniques, program integrity measures, audit trail techniques and failure response procedures. Administrative control techniques include what are commonly referred to as Change Control Procedures. Control techniques must be evaluated against each of the access control, accuracy, and availability factors and an overall score must be arrived at for each of those factors. Development procedures - standards, configuration management, certification, etc.

Public Law 96-511, Paperwork Reduction Act (44 U.S.C. Chapter 35) Notwithstanding any other provision of law, no person is required to respond to, nor is subject to a penalty for failure to comply with, a collection of information, subject to the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.) (PRA), unless that collection of information displays a currently valid Office of Management and Budget (OMB) Control Number. This proposed rule involves collections previously approved by OMB under the following control numbers. OMB Control Number: 0704-0194, DD Form 441, Department of Defense Security Agreement OMB Control Number: 0704-0571, National Industrial Security System OMB Control Number: 0704-0567, DoD Contract Security Classification Specification OMB Control Number: 0704-0573, Defense Information System for Security (DISS) OMB Control Number: 0704-0579, Certificate Pertaining to Foreign Interests, SF 328 OMB Control Number: 3150-0047, 10 CFR part 95 , Facility Security Clearance and Safeguarding of National Security Information and Restricted Data OMB Control Number: 1910-1800, Security DoD believes the total burden hours associated with these collections are not expected to change based on the amendments proposed in this rule. Information on the current version of these collections, including all supporting materials, can be obtained at <https://www.reginfo.gov/public/do/PRAMain> and typing in the OMB control number. Section 202, Public Law 104-4 , Unfunded Mandates Reform Act. Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1532) requires agencies to assess anticipated costs and benefits before issuing any rule whose mandates require spending in any one year of \$100 million in 1995 dollars, updated annually for inflation. This rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs. Executive Order 13132 , Federalism. E.O. 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This rule will not have a substantial effect on State and local governments. Executive Order 13175 , Consultation and Coordination With Indian Tribal Governments. Executive Order 13175 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct compliance costs on one or more Indian tribes, preempts tribal law, or affects the distribution of power and responsibilities between the federal government and Indian tribes. This rule will not have a substantial effect on Indian tribal governments. List of Subjects in 32 CFR Part 117 Classified information; Government contracts; USG contracts National Industrial Security Program (NISP); Prime contractor Subcontractor

Under the CMMC Assessment Process (CAP) v2.0: ****Conditional certification****: Issued when an organization meets most CMMC Level 2 requirements but has a limited number of NOT MET findings with approved POA&M entries. The organization must remediate all POA&M items within 180 days and undergo a closeout assessment to achieve final certification. ****Final certification****: Issued when all 110 NIST SP 800-171 requirements are assessed as MET (or when all POA&M items from a conditional certification are closed). The final certification is valid for three years. Key points: - Not all gaps qualify for POA&M treatment. Critical security controls may need to be fully implemented before any certification is issued. - The C3PAO makes the certification recommendation; the Cyber AB issues the certification. - Organizations should aim for full implementation before the assessment to avoid the risk and cost of a conditional certification and closeout.

, (k)(2), or (k)(5) from subsections 5 U.S.C. 552a(c)(3) , (d), (e)(1), (e)(4)(G), (e)(4)(H), (e)(4)(I) and (f). (ii) Authority. 5 U.S.C. 552a(k)(1) , (k)(2), or (k)(5). (iii) Reasons. (A) From subsection (c)(3) because the release of the disclosure accounting would permit the subject of a criminal investigation or matter under investigation to obtain valuable information concerning

the nature of that investigation which will present a serious impediment to law enforcement. (B) From subsection (d), because access to the records contained in this system would inform the subject of a criminal investigation of the existence of that investigation, provide the subject of the investigation with information that might enable him to avoid detection or apprehension, and would present a serious impediment to law enforcement. (C) From subsection (e)(1) because in the course of criminal investigations, information is often obtained concerning the violation of laws or civil obligations of others not relating to an active case or matter. In the interests of effective law enforcement, it is necessary that this valuable information be retained since it can aid in establishing patterns of activity and provide valuable leads for other agencies and future cases that may be brought. (D) From subsections (e)(4)(G) and (e)(4)(H) because portions of this system of records have been exempted from the access provisions of subsection (d), making these subsections not applicable. (E) From subsection (e)(4)(I) because the identity of specific sources must be withheld in order to protect the confidentiality of the sources of criminal and other law enforcement information. This exemption is further necessary to protect the privacy and physical safety of witnesses and informants. (F) From subsection (f) because portions of this system of records have been exempted from the access provisions of subsection (d). (26) System identifier and name. A0381-20b DAMI, Foreign Intelligence/Counterintelligence/Information Operations/Security Files. (i) Exemption. (A) Information specifically authorized to be classified under E.O. 12958, as implemented by DoD 5200.1-R, may be exempt pursuant to 5 U.S.C. 552a(k)(1). (B) Investigatory material compiled for law enforcement purposes, other than material within the scope of subsection 5 U.S.C. 552a(j)(2), may be exempt pursuant to 5 U.S.C. 552a(k)(2). However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance (printed page 14758) of such information, the individual will be provided access to such information except to the extent that disclosure would reveal the identity of a confidential source.

case record, the NGB hereby claims the same exemptions for the records from those other systems that are entered into this system, as claimed for the original primary SOR which they are a part. (ii) Authority. 5 U.S.C. 552a(j)(2), (k)(1), (k)(2), (k)(3), (k)(4), (k)(5), (k)(6), and (k)(7). (iii) Reasons. Records are only exempt from pertinent provisions of 5 U.S.C. 552a to the extent such provisions have been identified and an exemption claimed for the original record and the purposes underlying the exemption for the original record still pertain to the record which is now contained in this SOR. In general, the exemptions were claimed in order to protect properly classified information relating to national defense and foreign policy, to avoid interference during the conduct of criminal, civil, or administrative actions or investigations, to ensure protective services provided the President and others are not compromised, to protect the identity of confidential sources incident to Federal employment, military service, contract, and security clearance determinations, to preserve the confidentiality and integrity of (printed page 14786) Federal testing materials, and to safeguard evaluation materials used for military promotions when furnished by a confidential source. The exemption rule for the original records will identify the specific reasons why the records are exempt from specific provisions of 5 U.S.C. 552a. (2) System identifier and name. INGB 005, Special Investigation Reports and Files. (i) Exemption. Investigatory material compiled for law enforcement purposes, other than material within the scope of subsection 5 U.S.C. 552a(j)(2), may be exempt pursuant to 5 U.S.C. 552a(k)(2). However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of the information, the individual will be provided access to the information except to the extent that disclosure would reveal the identity of a confidential source. Note 1 to paragraph (e)(2)(i). When claimed, this exemption allows limited protection of investigative reports maintained in a SOR used in personnel or administrative actions. Any portion of this SOR which falls within the provisions of 5 U.S.C. 552a(k)(2) may be exempt from the following subsections of 5 U.S.C. 552a: (c)(3), (d), (e)(1), (e)(4)(G), (H), and (I), and (f). (ii) Authority. 5 U.S.C. 552a(k)(2). (iii) Reasons. (A) From subsection (c)(3) of 5 U.S.C. 552a because to grant access to the accounting for each disclosure as required by 5 U.S.C. 552a

3.3.1 | Data Recording | 3-13 | 3.3.1 Data Recording Audit data is recorded from several sources (such as the logon host's operating system or a remote application) to produce a complete picture of a user's security relevant actions.

The Department also considered proposing to permit small and rural health care providers to adopt

alternate compensating controls, in lieu of the specified implementation specifications, to meet certain standards. After careful consideration, the Department concluded that it potentially could be just as costly to identify and adopt compensating controls that are reasonable and appropriate for small and rural health care practices. Small and rural health care providers would likely need to either hire personnel or contract with cybersecurity experts to identify potential compensating controls that would meet the relevant standard and provide implementation support. Accordingly, the Department declines to put forward such proposals at this time. The Federal Information Security Modernization Act The Department considered the requirements of the Federal Information Security Modernization Act (FISMA) [992] and whether compliance with FISMA by Federal agencies that are also regulated entities would be comparable to meeting the proposals in this NPRM. FISMA requires each Federal agency to develop, document, and implement an agency-wide program to provide information security for the information and information systems that support the operations and assets of the agency, including those provided or managed by another agency, contractor, or other source. [993] After careful consideration, the Department does not believe that a regulated entity's compliance with FISMA would necessarily ensure compliance with all applicable proposed requirements in this NPRM because FISMA's requirements and the Security Rule's requirements are designed to serve different purposes. FISMA primarily focuses on securing Federal information systems, while the Security Rule applies specifically to ePHI. This NPRM contains specific proposed requirements, not found in FISMA, which are tailored to ensure the confidentiality, integrity, and availability of ePHI. Therefore, although the Department believes that FISMA requirements are consistent with those in the Security Rule and the proposals in this NPRM, we decline to propose that compliance with FISMA requirements would be a comparable alternative to compliance with the proposals in this NPRM. Instead, we believe that FISMA requirements complement the Security Rule and the proposed requirements and will facilitate the ability of regulated entities that are also subject to FISMA to fulfill their compliance with the HIPAA Rules. Modifications to the Definition of Information System The Department considered proposing additional modifications to the definition of information system. The Security Rule currently defines the term information system as an interconnected set of information resources under the same direct management control that shares common functionality and includes hardware, software, information, data, applications, communications, and people. [994]

We recognize that small and rural health care providers may have needs and capabilities that differ from those of other regulated entities. For example, small health care providers and rural health care providers are often located at a greater distance from other health care providers. [293] It may be more challenging for them to attract and retain clinicians and administrative support staff. [294] They also face difficulty attracting and retaining security experts and must make difficult decisions regarding investments in competing priorities. [295] Often, preparation for security incidents or other occurrences that adversely affect the confidentiality, integrity, or availability of ePHI is neglected in favor of other priorities, putting small and rural health care providers at greater risk for such an occurrence. [296] We continue to believe that it is just as important for small and rural health care providers to implement strong security measures as it is for larger health care providers and other categories of regulated entities. According to experts, Cybercriminals go after small businesses, especially those in the healthcare industry, (printed page 919) because they are easy targets. [297] In 2017, 93 percent of small rural and critical access hospitals and 86 percent of physician offices relied on health IT to inform their clinical practice. [298] And yet, small health care providers are less likely than a larger organization to even have a designated security or compliance officer. [299] Smaller practices and rural and community facilities also may be more likely to rely on older technologies that are no longer supported by security patches and updates, including medical devices such as insulin pumps and pacemakers in which inaccuracies or errors could affect patient safety. [300] Thus, small health care providers are at the greatest risk of a breach. [. .] Smaller, rural practice settings are especially high-risk target areas for a breach. [301] According to an expert who speaks to and works with health care providers on IT services and cybersecurity, small health care providers are more susceptible because they do not have a lot of the tools and security measures necessary to protect themselves. [302] For example, a critical access hospital in Colorado recovered from a cyberattack in 2019, but it required an incredible amount of staff time, many months of recovery efforts, and an enormous financial outlay to restore systems and prevent another attack. [303] In fact, the hospital estimates that it took a full year of a staff person's time to complete the recovery and protect the organization for the future. [304] These costs do not include the multiple ransoms paid to the attackers after the first set of keys

(17) Maintain all facilities, personnel, and equipment involved in CMMC activities that are in scope of their CMMC Level 2 assessment and comply with all security requirements and procedures as prescribed by the Accreditation Body. (18) Upload into the CMMC instantiation of eMASS assessment data compliant with the CMMC assessment data standard as set forth in eMASS CMMC Assessment Import Templates on the CMMC eMASS website: <https://cmmc.emass.apps.mil> . [1] (19) Issue certificates of assessment to OSCs in accordance with the certification requirements set forth in § 170.17. (20) Address all OSC appeals arising from CMMC Level 2 assessment activities. Any appeal not resolved by the C3PAO will elevate to the Accreditation Body for final determination. (21) Submit assessment appeals, review records, and decision results of assessment appeals to DoD using the CMMC instantiation of eMASS. § 170.10 CMMC Assessor and Instructor Certification Organization (CAICO). (a) Roles and responsibilities. The CAICO is responsible for training, testing, authorizing, certifying, and recertifying CMMC assessors, instructors, and related professionals. Only the CAICO may make decisions relating to examination certifications, including the granting, maintaining, recertifying, expanding, and reducing the scope of certification, and suspending or withdrawing certification in accordance with current ISO/IEC 17024:2012 (incorporated by reference, see § 170.2). At any given point in time, there will be only one CAICO for the DoD CMMC Program. (b) Requirements. The CAICO shall: (1) Comply with the Accreditation Body policies for Conflict of Interest, Code of Professional Conduct, and Ethics set forth in § 170.8(b)(17); and achieve and maintain full compliance with ISO/IEC 17024:2012 within 25 months of registration. If ISO/IEC 17024:2012 is revised or superseded, the CAICO shall achieve full compliance with the updated standard within 12 months of the date of revision. (2) Provide all documentation and records in English. (3) Train, test, certify, and recertify CCAs, CCIs, and CCPs in accordance with the requirements of this section. (4) The CAICO's certification examinations must be certified under ISO/IEC 17024:2012, or subsequent revisions, by a recognized U.S.-based accreditor who is not a member of the CMMC Accreditation Body and complies with ISO/IEC 17011:2017, or subsequent revisions. (5) Establish quality control policies and procedures for the generation of training products, instruction, and testing materials. (6) Oversee development, administration, and management pertaining to the quality of training and examination materials for CMMC assessor and instructor certification and recertification. (7) Establish and publish an authorization and certification appeals process to receive, evaluate, and make decisions on complaints and appeals in accordance with ISO/IEC 17024:2012, or subsequent revisions.

DFARS 252.204-7020 (NIST SP 800-171 DoD Assessment Requirements) Requires contractors to have current NIST SP 800-171 DoD Assessment for Medium and High assessment levels. Flow-down requirements: DFARS 252.204-7020 includes flow-down provisions requiring prime contractors to include the clause in subcontracts where CUI will be processed, stored, or transmitted. Subcontractors must meet the same security requirements as the prime.

(1) Comply with the Accreditation Body policies for Conflict of Interest, Code of Professional Conduct, and Ethics set forth in § 170.8(b)(17); and achieve and maintain ISO/IEC 17024(E) accreditation within 12 months of December 16, 2024. (2) Provide all documentation and records in English. (3) Train, test, and designate PIs in accordance with the requirements of this section. Train, test, certify, and recertify CCPs, CCAs, and CCIs in accordance with the requirements of this section. (printed page 83224) (4) Ensure the instructor and assessor certification examinations are certified under ISO/IEC 17024:2012(E) (incorporated by reference, see § 170.2), by a recognized US-based accreditor who is not a member of the CMMC Accreditation Body. The US-based accreditor must be a signatory to International Laboratory Accreditation Cooperation (ILAC) or relevant International Accreditation Forum (IAF) Mutual Recognition Arrangement (MRA) and must operate in accordance with ISO/IEC 17011:2017(E) (incorporated by reference, see § 170.2). (5) Establish quality control policies and procedures for the generation of training products, instruction, and testing materials. (6) Oversee development, administration, and management pertaining to the quality of training and examination materials for CMMC assessor and instructor certification and recertification. (7) Establish and publish an authorization and certification appeals process to receive, evaluate, and make decisions on complaints and appeals in accordance with ISO/IEC 17024:2012(E) (incorporated by reference, see § 170.2). (8) Address all appeals arising from the CCA, CCI, and CCP authorizations and certifications process through use of internal processes in accordance with ISO/IEC 17024:2012(E) (incorporated by reference, see § 170.2). (9) Maintain records for a period of six (6) years of all procedures, processes, and actions related to

fulfillment of the requirements set forth in this section and provide the Accreditation Body access to those records. (10) Provide the Accreditation Body information about the authorization and accreditation status of assessors, instructors, training community, and publishing partners. (11) Ensure separation of duties between individuals involved in testing activities, training activities, and certification activities. (12) Safeguard and require any CAICO training support service providers, as applicable, to safeguard the confidentiality of applicant, candidate, and certificate-holder information and ensure the overall security of the certification process. (13) Ensure that all PII is encrypted and protected in all CAICO information systems and databases and those of any CAICO training support service providers. (14) Ensure the security of assessor and instructor examinations and the fair and credible administration of examinations.

CMMC does not require implementation of any additional security protection requirements beyond those identified in current FAR clause 52.204-21 and in NIST SP 800-171 R2 for CMMC Levels 1 and Level 2, respectively. CMMC Level 3 requirements are new and based upon NIST SP 800-172 Feb2021. Steps Taken To Minimize Additional Cost of Credit The DoD is not a covered agency under 5 U.S.C. 604 . E. Public Law 96-511, Paperwork Reduction Act (44 U.S.C. Chapter 35) Sections of this rule contain information collection requirements. As required by the Paperwork Reduction Act (44 U.S.C. Chapter 35), DoD has submitted information collection packages to the Office of Management and Budget for review and approval. The titles and proposed OMB control numbers are as follows. Cybersecurity Maturity Model Certification (CMMC) Enterprise Mission Assurance Support-Service (eMASS) Instantiation Information Collection (OMB control number 0704-0676). Cybersecurity Maturity Model Certification (CMMC) Program Reporting and Recordkeeping Requirements Information Collection (OMB Control Number 0704-0677). In the proposed rule, DoD invited comments on these information collection requirements and the paperwork burden associated with this rule. Five comments were received on the information clearance packages that were not applicable to the information collection requirements; however, the comments were applicable to other aspects of the rule, and they are addressed in the comments section of this preamble. There were no changes to paperwork burden included in the proposed rule that published December 26, 2023 (88 FR 89058) based on public comments received. To review these collections including all background materials please visit at <https://www.reginfo.gov/public/do/PRAMain> and use the search function to enter either the title of the collection or the OMB Control Number. F. Executive Order 13132 , Federalism Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a final rule that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has federalism implications. This final rule will not have a substantial effect on State and local governments. G. Executive Order 13175 , Consultation and Coordination With Indian Tribal Governments Executive Order 13175 establishes certain requirements that an agency must meet when it promulgates a final rule that imposes substantial direct compliance costs on one or more Indian Tribes, preempts Tribal law, or effects the distribution of power and responsibilities between the Federal Government and Indian Tribes. This final rule will not have a substantial effect on Indian Tribal governments. List of Subjects in 32 CFR Part 170 Certification CMMC CMMC Levels CMMC Program Contracts Controlled unclassified information Cybersecurity Federal contract information Government procurement Incorporation by reference Accordingly, the Department of Defense adds 32 CFR part 170

When providing cryptographic key services under the contract, paragraph (j) of the clause 52.239-YY requires contractors to provide the agency with applicable key material and services; however, the Government reserves the right to implement and operate its own cryptographic key services under the contract. Operational Technology Equipment List. Paragraph (k) of the clause 52.239-YY requires contractors to develop and maintain a list of the physical location of all operational technology equipment included within the boundary for the non-cloud FIS and provide a copy to the Government, upon request. While the proposed rule does not specify a format for the operational technology equipment list, contractors must ensure that the list includes enough information about the equipment to positively locate and track any movement of the equipment during contract performance, including details on password protection and the ability for remote access to the equipment. Binding Operational Directives and Emergency Directives. Paragraph (l) of clause 52.239-YY advises that contractors must comply with Binding Operational Directives (BODs) and Emergency Directives (EDs) issued by CISA that have specific applicability to a FIS used or operated by a contractor. A list of BODs and EDs can be found at <https://www.cisa.gov/directives> . Occasionally, a BOD or ED with an explicit applicability to a FIS used or operated by a contractor will not need to apply to a contract. In such situations, the contracting officer will identify, in paragraph (l)(2) of the

clause, any such BODs or EDs that are not applicable to the contract. Indemnification. Paragraph (m) of the clause 52.239-YY indemnifies the Government from any liability that arises out of the performance of the contract and is incurred because of the contractor's introduction of certain information or matter into Government data or the contractor's unauthorized disclosure of certain information or material. The paragraph serves as a waiver of defense to change the analysis from negligence, which is the defense, to strict liability, which doesn't allow for a defense. The paragraph also provides terms and requirements in the event of a claim or suit against the Government for such an unauthorized disclosure or introduction of data or information. The proposed text was taken from industry terms of service agreements for cloud services providers. Subcontracts. Paragraph (n) of the clause 52.239-YY advises contractors that the substance of the clause must be included in any subcontracts issued under the contract that are for services to develop, implement, operate, or maintain a FIS using non-cloud computing services. Prohibition on IoT Devices. The rule also implements a portion of the Internet of Things Cybersecurity Improvement Act of 2020 (Pub. L. 116-207

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Health and Human Services Food and Drug Administration [Docket No. FDA-2023-N-3636] AGENCY: Food and Drug Administration, HHS. ACTION: Notice; request for comment. SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of an information technology (IT) strategic plan entitled the FDA Information Technology Strategy and a request for comment on this IT Strategy. As part of our User Fee Program commitments and Omnibus Bill requirements, FDA will develop and publish an FDA Data and Technology Strategic Plan by September 29, 2023. This plan will define and shape the future course of FDA's data and technology capabilities, building on the existing FDA Modernization Framework. The plan will also integrate Agency and center strategies. DATES: Submit either electronic or written comments on the Strategy by October 30, 2023, to ensure that the Agency considers your comments on this Strategy for future iterations of the IT Strategy. ADDRESSES: You may submit comments as follows: (printed page 64436) Electronic Submissions Submit electronic comments in the following way: Federal eRulemaking Portal: <https://www.regulations.gov> . Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov> . If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see Written/Paper Submissions and Instructions). Written/Paper Submissions Submit written/paper submissions as follows: Mail/Hand Delivery/Courier (for written/paper submissions): Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

(iii) Minimum identifying data on logs, receipts, and destruction certificates will include the NATO reference number, short title, date of the document, classification, and serial copy numbers. Logs will reflect the short title, unclassified subject, and distribution of the documents. (iv) Receipts are required for all NATO classified documents except NATO CONFIDENTIAL. (v) Inventories will be conducted annually of all COSMIC TOP SECRET, NATO SECRET, and ATOMAL documents. (vi) Accountability records for ATOMAL documents will be retained for 10 years after transfer or destruction of the ATOMAL document. Destruction certificates will be retained for 10 years after destruction of the related ATOMAL documents. (19) Security violations and loss, compromise, or possible compromise. The contractor will immediately report the loss, compromise, or suspected loss or compromise, as well as any other security violations involving NATO classified information to the CSA. (20) Extracting from NATO documents. Permission to extract from a COSMIC TOP SECRET or ATOMAL document will be obtained from the CUSR. (i) If extracts of NATO information are included in a U.S. document prepared for a non-NATO contract, the document will be marked with U.S.

classification markings. The caveat, "THIS DOCUMENT CONTAINS NATO (level of classification) INFORMATION" also will be marked on the front cover or first page of the document. Additionally, each paragraph or portion containing the NATO information will be marked with the appropriate NATO classification, abbreviated in parentheses (e.g., "NS" for NATO SECRET) preceding the portion or paragraph. Declassification and downgrading instructions shall indicate that the NATO information is exempt from declassification or downgrading without the prior consent of NATO, in the absence of other originator instructions, citing the reason "Foreign Government Information." (ii) The declassification or downgrading of NATO information in a U.S. document requires the approval of the originating NATO activity. Requests will be submitted to the CUSR for NATO contracts, through the GCA for U.S. contracts, and through the CSA for non-NATO contracts awarded by a NATO member nation.

(21) Release of U.S. information to NATO. (i) Release of U.S. classified or export-controlled information to NATO requires an export authorization or other written disclosure authorization. When a document containing U.S. classified information is being prepared for NATO, the appropriate NATO classification markings will be applied to the document. (A) Documents containing U.S. classified information and U.S. classified documents that are authorized for release to NATO will be marked on the cover or first page "THIS DOCUMENT CONTAINS U.S. CLASSIFIED INFORMATION. THE INFORMATION IN THIS DOCUMENT HAS BEEN AUTHORIZED FOR RELEASE TO (cite the NATO organization) BY (cite the applicable license or other written authority)."

Phase 1: Planning and preparing for the self-assessment: \$14,426 A director (MGMT5) for 32 hours (\$190.52/hr x 32hrs = \$6,097) An external service provider (ESP) for 32 hours (\$260.28/hr x 32hrs = \$8,329) Phase 2: Conducting the self-assessment: \$15,542 A director (MGMT5) for 16 hours (\$190.52/hr x 16hrs = \$3,048) An external service provider (ESP) for 48 hours (\$260.28/hr x 48hrs = \$12,493) Phase 3: Reporting of self-assessment results into SPRS: \$2,851 A director (MGMT5) for 4 hours (\$190.52/hr x 4hrs = \$762) An external service provider (ESP) for 8 hours (\$260.28/hr x 8hrs = \$2,082) A staff IT specialist (IT4-SB) for 0.08 hours (\$86.24/hr x 0.08hrs = \$7) Affirmation: initial affirmation post assessment: \$ 1,459 Reaffirmations: It is estimated that the costs to reaffirm a Level 2 self-assessment annually is \$1,459 (three-year costs to reaffirm a Level 2 self-assessment annually is \$4,377, or \$1,459 x 3): A director (MGMT5) for 4 hours (\$190.52/hr x 4hrs = \$762) A staff IT specialist (IT4-SB) for 8.08 hours (\$86.24/hr x 8.08hrs = \$697) The Level 2 self-assessment and affirmations cost burden will be addressed as part of the 48 CFR part 204 CMMC Acquisition rule. Summary: The following is the annual small entities total cost summary for Level 2 self-assessments and affirmations over a ten-year period: (Example calculation, Year 2: (*\$34,277 self-assessment per entity x 101 entities) + (\$1,459 annual affirmation per entity x 20 entities) = \$3,491,193) All Entities Summary The following is a summary of the cost to all entities regardless of size for Level 2 self-assessments and affirmations over a ten-year period: (printed page 83185) CMMC Level 2 Certification Assessment and Affirmation Costs Other Than Small Entities Nonrecurring and recurring engineering costs: There are no nonrecurring or recurring engineering costs associated with Level 2 certification assessment since it is assumed the contractor or subcontractor has implemented the NIST SP 800-171 R2 security requirements. Assessment and Initial Affirmation Costs: It is estimated that the cost to support a Level 2 certification assessment and annual affirmation for an "other than small" entity is \$112,345. The three-year cost is \$117,768 (as summarized in 4.1.2, table 9), and includes a triennial assessment + affirmation, plus two additional annual affirmations (\$112,345 + \$2,712 + \$2,712, with a minor rounding difference.) Phase 1: Planning and preparing for the certification assessment: \$26,264 A director (MGMT5) for 32 hours (\$190.52/hr x 32hrs = \$6,097) A manager (MGMT2) for 64 hours (\$95.96/hr x 64hrs = \$6,141) A staff IT specialist (IT4) for 72 hours (\$97.49/hr x 72hrs = \$7,019) A senior IT specialist (IT3) for 40 hours (\$81.96/hr x 40hrs = \$3,278) An IT specialist (IT2) for 58 hours (\$54.27/hr x 58hrs = \$3,148) An associate IT specialist (IT1) for 16 hours (\$36.32/hr x 16hrs = \$581) Phase 2: Conducting the certification assessment: \$28,600 A director (MGMT5) for 32 hours (\$190.52/hr x 32hrs = \$6,097)

(c) A computer matching agreement (CMA) shall be prepared by the Component, consistent with the requirements of § 310.53 of this subpart and submitted to the DPO. If the CMA satisfies the requirements of the Privacy Act (5 U.S.C. 552a) and OMB Matching Guidelines (54 FR 25818 (June 19, 1989)), as well as this subpart, it shall be forwarded to the Defense Data Integrity Board (DIB) for approval or disapproval. (1) If the CMA is approved by the DIB, the DPO shall prepare and forward a report to both Houses of Congress and to OMB as required by, and consistent with, OMB Circular A-130, "Management of Federal Information Resources," February 8, 1996, as amended. Congress and OMB shall have 40 days to review and comment on the proposed match. Any comments

received must be resolved before matching can take place. (2) If the CMA is approved by the DIB, the DPO shall prepare and forward a match notice as required by OMB Circular A-130, "Management of Federal Information Resources," February 8, 1996, as amended, for publication in the Federal Register. The public shall be given 30 days to comment on the proposed match. Any comments received must be resolved before matching can take place. § 310.53 Computer matching agreements (CMAs). (a) If a match is to be conducted internally within DoD, a memorandum of understanding (MOU) shall be prepared. It shall contain the same elements as a CMA, except as otherwise indicated in paragraph (b)(4)(ii) of this section. (b) A CMA shall contain the following elements: (1) Purpose. Why the match is being proposed and what will be achieved by conducting the match. (2) Legal authority. What is the Federal or state statutory or regulatory basis for conducting the match. The Privacy Act does not constitute independent authority for matching. Other legal authority shall be identified. (3) Justification and expected results. Explain why computer matching as opposed to some other administrative means is being proposed and what the expected results will be, including a specific estimate of any savings (see paragraph (b)(13) of this section). (4) Records description. Identify: (i) The system of records or non-Federal records. For DoD systems of records, provide the Federal Register citation for the system notice; (ii) The specific routine use in the system notice if records are to be disclosed outside the Department of Defense (see § 310.22(c)). If records are disclosed within the Department of Defense for an internal match, disclosures are permitted pursuant to paragraph (a) of § 310.22. (iii) The number of records involved; (iv) The data elements to be included in the match; (v) The projected start and completion dates of the match. CMAs remain in effect for 18 months but can be renewed for an additional 12 months provided: (A) The match will be conducted without any change, and (B) Each party to the match certifies in writing that the program has been conducted in compliance with the CMA or MOU. (vi) How frequently will the records be matched. (5)

(Response) FDA understands the comments' concerns about protecting the confidentiality of nonpublic information. If a person wishes to create separate records that do not contain certain confidential information, the person may do so, as long as the records are created at the time the food is received or released and the records contain the information required by the regulations. In addition, section 306 of the Bioterrorism Act excludes many types of confidential data from the record requirements: Recipes for food (see § 1.328 for the definition of recipe), (printed page 71608) financial data, pricing data, personnel data, research data, and sales data (other than shipment data regarding sales). Section 306 of the Bioterrorism Act, however, does not allow other types of confidential data to be withheld from FDA even if they are confidential. The laws governing FDA's activities, however, require it to protect certain trade secret and confidential information. See responses to comments 74 and 154 of this document. Further, because timely information is critical to a tracing investigation, records and other information must be made available to FDA as soon as possible, not to exceed 24 hours from the time of a request (§ 1.361 of this final rule). If the provision of information and records to FDA is delayed so that information can be redacted, the information and records may not have been provided as soon as possible. (Comment 154) Comments ask that FDA take steps to maintain the confidentiality of the information it receives. One comment asks that FDA develop and inform the public of procedural safeguards it will follow to obtain the information needed without jeopardizing the confidentiality of business information. Two comments ask that FDA provide guidance about its information disclosure procedures. Other comments ask how FDA will ensure the confidentiality of sensitive business information. Comments ask that FDA provide for special procedures to safeguard the confidentiality of the identities of flavors and spices and other secret ingredients in a recipe. Two comments request that FDA issue a regulation and another comment suggests that FDA issue an interim final regulation concerning the statutory requirement under section 414(c) of the FD&C Act to prevent unauthorized disclosure of any trade secret or confidential information. A comment asks that FDA provide a paragraph in a regulation requiring that FDA maintain the confidentiality of nonpublic information. That comment expresses concern about information FDA might receive from an "unaffected source," "incorrectly implicated sources" in the distribution chain, or the identity of a food company that was the victim of "food contamination in premeditated form." A comment asks that FDA amend its public information regulations to provide that information obtained under the records access authority is exempt from disclosure under FOIA.

(1) Make available to the individual to whom the record pertains all disclosure accountings except when: (i) The disclosure has been made to a law enforcement activity under paragraph (g) of § 310.22 and the law enforcement activity has requested that disclosure not be made; or (ii) The

system of records has been exempted from the requirement to furnish the disclosure accounting under the provisions of § 310.26(b). (2) If disclosure accountings are not maintained with the record and the individual requests access to the accounting, prepare a listing of all disclosures (see paragraph (b) of this section) and provide this to the individual upon request. Subpart F-Exemptions § 310.26 Use and establishment of exemptions. (a) Types of exemptions. (1) There are three types of exemptions permitted by the Privacy Act (5 U.S.C. 552a). (i) An access exemption that exempts records compiled in reasonable anticipation of a civil action or proceeding from the access provisions of the Act. (ii) General exemptions that authorize the exemption of a system of records from all but certain specifically identified provisions of the Act (see Appendix D). (iii) Specific exemptions that allow a system of records to be exempted only from certain designated provisions of the Act (see Appendix D). (2) Nothing in the Act permits exemption of any system of records from all provisions of the Act. (b) Establishing exemptions. (1) The access exemption is self-executing. It does not require an implementing rule to be effective. (2) Neither a general nor a specific exemption is established automatically for any system of records. The Heads of the DoD Components maintaining the system of records must make a determination whether the system is one for which an exemption properly may be claimed and then propose and establish an exemption rule for the system. No system of records within the Department of Defense shall be considered exempted until the Head of the Component has approved the exemption and an exemption rule has been published as a final rule in the Federal Register (See § 310.30(e).) (3) Only the Head of the DoD Component or an authorized designee may claim an exemption for a system of records. (4) A system of records is considered exempt only from those provision of the Privacy Act (5 U.S.C. 552a) that are identified specifically in the Component exemption rule for the system and that are authorized by the Privacy Act. (5) To establish an exemption rule, see § 310.31. (c) Blanket exemption for classified material. (1) Component rules shall include a blanket exemption under 5 U.S.C. 552a(k)(1) of the Privacy Act from the access provisions (5 U.S.C. 552a(d)) and the notification of access procedures (5 U.S.C. 522a(e)(4)(H)) of the Act for all classified material in any systems of records maintained.

The Department identified ten categories of quantifiable costs arising from these proposals that would apply to all regulated entities: (1) conducting a Security Rule compliance audit; (2) obtaining written verification from their business associates or subcontractors that the business associates or subcontractors, respectively, have conducted the required verification of compliance with technical safeguards; (3) notifying other regulated entities when workforce members' access to ePHI is terminated; (4) completing network segmentation; (5) disabling ports and removing extraneous software; (6) deploying MFA; (7) deploying penetration testing; (8) updating policies and procedures; (9) updating workforce training programs; and (10) revising business associate agreements. Additionally, group health plans would be required to update plan documents to require health plan sponsors' compliance with the administrative, physical, and technical safeguards according to the Security Rule and notification of group health plans when health plan sponsors activate their contingency plan. Business associates would have additional obligations to verify compliance with technical safeguards and provide it in writing to covered entities (and subcontractors to business associates) and to notify covered entities upon activation of their contingency plans. Finally, although plan sponsors are not directly subject to the HIPAA Rules, by virtue of the plan document requirements, the Department estimates that certain group health plan sponsors (e.g., employers that provide group health benefits) would likely incur some quantifiable costs to improve safeguards for their electronic information systems that affect the confidentiality, integrity, or availability of ePHI and to notify group health plans upon activation of plan sponsors' contingency plan. The Department estimates that the first-year costs attributable to this proposed rule total approximately \$9 billion. These costs are associated with regulated entities and health plan sponsors engaging in the regulatory actions described above. For years two through five, estimated annual costs of approximately \$6 billion are attributable to costs of recurring compliance activities. Table 1 reports the present value and annualized estimates of the costs of this proposed rule covering a 5-year time horizon. Using a 2 percent discount rate, the Department estimates that this proposed rule would result in annualized costs of \$6.8 billion for regulated entities and health plan sponsors combined. Table 1-Accounting Table, Costs of the Proposed Rule, \$ Billions

Costs	Primary estimate	Year	dollars	Discount rate	Period
covered	Present Value	\$34	2023	Undiscounted	2026-2030
	Present Value	32	2023	2%	2026-2030
	Annualized	7	2023	2%	2026-2030

a Figures are rounded.

After an initial incident report, the Government and the DIB participant may voluntarily share

additional information that is determined to be relevant to a reported incident, including information regarding forensic analyses, mitigation and remediation, and cyber intrusion damage assessments. (d) Cyber intrusion damage assessment. Following analysis of a cyber incident, DC3/DCISE may provide information relevant to the potential or known compromise of DoD acquisition program information to the Office of the Secretary of Defense's Damage Assessment Management Office (OSD DAMO) for a cyber intrusion damage assessment. The Government may provide DIB participants with information regarding the damage assessment. (e) DIB participant attribution information. The Government acknowledges that information shared by the DIB participants under this program may include extremely sensitive proprietary, commercial, or operational information that is not customarily shared outside of the company, and that the unauthorized use or disclosure of such information could cause substantial competitive harm to the DIB participant that reported that information. The Government shall take reasonable steps to protect against the unauthorized use or release of such information (e.g., attribution information and other nonpublic information) received from a DIB participant or derived from such information provided by a DIB participant, including applicable procedures pursuant to paragraph (h) of this section. The Government will restrict its internal use and disclosure of attribution information to only Government personnel and Government support contractors that are bound by appropriate confidentiality obligations and restrictions relating to the handling of this sensitive information and are engaged in lawfully authorized activities. (f) Non-attribution information. The Government may share non-attribution information that was provided by a DIB participant (or derived from information provided by a DIB participant) with other DIB participants in the DIB CS/IA program, and may share such information throughout the Government (including with Government support contractors that are bound by appropriate confidentiality obligations) for cyber security and information assurance purposes for the protection of Government information or information systems. (g) Electronic media. Electronic media/files provided by DIB participants to DC3 under paragraphs (b), (c) and (d) of this section are maintained by the digital and multimedia forensics laboratory at DC3, which implements specialized handling procedures to maintain its accreditation as a digital and multimedia forensics laboratory. DC3 will maintain, control, and dispose of all electronic media/files provided by DIB participants to DC3 in accordance with established DoD policies and procedures. (h) Freedom of Information Act (FOIA).

3.5.6 | Attribute Review ... 3.5.6 Attribute Review Assigning one or more attributes to a subject indirectly grants the subject capabilities to perform various operations on system objects.

DFARS 252.204-7020 (NIST SP 800-171 DoD Assessment Requirements) Requires contractors to have current NIST SP 800-171 DoD Assessment for Medium and High assessment levels. DFARS 252.204-7020 works in conjunction with the CMMC program. While 252.204-7020 establishes the contractual requirement, CMMC (under 32 CFR Part 170) provides the assessment framework. Phase 1 began November 10, 2025, with Phase 2 (C3PAO certification requirements) scheduled for November 10, 2026.

These transition provisions would apply only to the requirement to amend contracts or other arrangements with business associates, and they would not affect any other compliance obligations under the Security Rule. For example, beginning on the compliance date of the final rule, assuming a final rule is published and that it is finalized as proposed, a business associate would be required to implement and document its implementation of the administrative, physical, and technical safeguards required by a revised Security Rule, except with respect to 45 CFR 164.308(b) and 164.314(a), even if the business associate's contract with the covered entity [876] has not yet been amended. Given the possibility of a similar burden on group health plans and plan sponsors to update plan documents by the compliance date, the Department is considering, but not proposing, a similar transition provision for plan documents. We are not proposing such provisions at this time because, unlike business associates, plan sponsors do not have independent obligations under the Security Rule. Instead, the obligations of plan sponsors are based entirely on the content of the plan documents. Accordingly, if the plan documents are not updated, plan sponsors are not obligated to comply with the requirements of the Security Rule because they are not regulated entities. In particular, the Department is considering, but not proposing at this time, adding a new paragraph (d) introductory text under 45 CFR 164.318, with the heading "Standard: Effect of prior plan documents for group health plans," stating that notwithstanding any other provisions of the subpart, a group health plan may allow a plan sponsor to create, receive, maintain, or transmit electronic protected health information pursuant to a written plan document with such group health plan that does not comply with § 164.314(b), only in accordance with paragraph (d)(1). The Department is also considering adding a new paragraph (d)(1) under 45 CFR 164.318, with the heading "Implementation specification: Plan documents for group health plans," stating that the requirements of paragraph (b) apply to the plan document between a group health plan and a plan sponsor in the same manner as such requirements apply to written contracts or other arrangements between a covered entity and a business associate. Similarly, the Department is considering, but not proposing at this time, adding a new paragraph (d)(2) under 45 CFR 164.318, with the heading "Group health plan responsibilities," stating that nothing in the section shall alter the requirements of a group health plan or plan sponsor to comply with the applicable provisions of the part other than § 164.314(b).

3. Request for Comment The Department requests comment on the foregoing proposals, including any benefits, drawbacks, or unintended consequences. We also request comment on the following considerations in particular:

According to Cryptographic Key Management Workshop Summary -- June 8-9, 2009, 2.1.4 The Future of IT Security and Privacy, Dr. George O. Strawn, NSF: 2.1.4 The Future of IT Security and Privacy, Dr. George O. Strawn, NSF Keynote Speaker: Dr. George Strawn is the National Science Foundation's Chief Information Officer (CIO), where he guides the agency in the development and design of innovative information technology. Since joining the NSF in 1991, Dr. Strawn has served as the Executive Officer of Computer and Information Science and Engineering (CISE) and as the Director of the CISE Division of Advanced Networking Infrastructure and Research. He was the Program Director of the NSFNET, which became the first national DS-3 Internet backbone network. - In computer technology we keep moving faster and faster. We have seen an improvement of price-performance in computer technology by a factor of nearly one million in the past 30 years. - Many NSF Internet applications need security, including email, project funds management, travel, proposal submission and proposal evaluation. - If true security is required on today's Internet, a user must follow one of three laws: Don't buy a computer, Don't turn it on, or Don't attach it to a network. - NSF needs better integrated cryptography in its sensitive applications. Currently, NSF doesn't use PKI because of cost and complexity, but does use identity management, including identifying users and visitors, additional authentication of NSF users, and authorization of NSF users to systems and data. - NSF

security policy has been continually modified in accordance with new problems: we encrypt in https, we seldom do anything that requires un-proven methodologies for the first time, we follow all government rules, and we want to be told that something new is mandatory in order to justify a new budget item. - NSF now combines information management with security management. It has a strict security awareness program. Its visitor network was separated from its internal NSF user network, and all social security numbers in the system are encrypted.

Written comments and recommendations on the information collection should be sent to Ms. Jasmeet Seehra at the Office of Management and Budget, DoD Desk Officer, Room 10102, New Executive Office Building, Washington, DC 20503, with a copy to the Director, DIB CS/IA Program Office, at the Office of the DoD Chief Information Officer, 6000 Defense Pentagon, Attn: DIB CS/IA Program Office, Washington, DC 20301, or email at DIB.CS/IA.Reg@osd.mil . Comments can be received from 30 to 60 days after the date of this notice, but comments to OMB will be most useful if received by OMB within 30 days after the date of this notice. You may also submit comments, identified by docket number and title, by the following method: Federal Rulemaking Portal: <http://www.regulations.gov> . Follow the instructions for submitting comments. Instructions: All submissions received must include the agency name, docket number and title for this Federal Register document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information. To request more information on this information collection or to obtain a copy of the proposal and associated collection instruments, please write to Director, DIB CS/IA Program Office, at Office of the DoD Chief Information Officer, Attn: DIB CS/IA Program Office, 6000 Defense Pentagon, Washington, DC 20301. Executive Order 13132 , ·Federalism· It has been certified that 32 CFR part 236 does not have federalism implications, as set forth in Executive Order 13132 . This rule does not have substantial direct effects on: (a) The States; (b) The relationship between the National Government and the States; or (c) The distribution of power and responsibilities among the various levels of Government. List of Subjects in 32 CFR Part 236 Contracts Security measures Accordingly 32 CFR part 236 is added to read as follows: PART 236·DEPARTMENT OF DEFENSE (DOD)-DEFENSE INDUSTRIAL BASE (DIB) VOLUNTARY CYBER SECURITY AND INFORMATION ASSURANCE (CS/IA) ACTIVITIES 236.1 Purpose. 236.2 Definitions. 236.3 Policy. 236.4 Procedures. 236.5 Cyber security information sharing. 236.6 General provisions. 236.7 DIB participant eligibility requirements. Authority: 10 U.S.C. 2224 ; 44 U.S.C. 3506 ; 44 U.S.C. 3544 . §·236.1 Purpose. Cyber threats to DIB unclassified information systems represent an unacceptable risk of compromise of DoD information and pose an imminent threat to U.S. national security and economic security interests. DoD's voluntary DIB CS/IA program enhances and supplements DIB participants' capabilities to safeguard DoD information that resides on, or transits, DIB unclassified information systems. §·236.2 Definitions. As used in this part: (a) Attribution information

means a person who has a favorable determination of eligibility for access to classified information, has signed an approved nondisclosure agreement, and has a need-to-know. Branch office means an office of an entity which is located somewhere other than the entity's main office location. A branch office is simply another location of the same legal business entity, and is still involved in the business activities of the entity. CCIPP means security sharing of classified information under a designated critical infrastructure protection program with such authorized individuals and organizations as determined by the Secretary of Homeland Security. CDC means a subset of contractors cleared under the NISP who have classified contracts with the DoD. Certification means comprehensive evaluation of an information system component that establishes the extent to which a particular design and implementation meets a set of specified security requirements. Classification guide means a document issued by an authorized original classifier that identifies the elements of information regarding a specific subject that must be classified and prescribes the level and duration of classification and appropriate declassification instructions. Classified contract means any contract, license, agreement, or grant requiring access to classified information by a contractor and its (printed page 83314) employees for performance. A contract is referred to in this rule as a ·classified contract· even when the contract document and the contract provisions are not classified. The requirements prescribed for a ·classified contract· also are applicable to all phases of precontract, license or grant activity, including solicitations (bids, quotations, and proposals), precontract negotiations, post-contract activity, or other government contracting activity (GCA) programs or projects which require access to classified information by a contractor. Classified covered information system means an information system

that is owned or operated by or for a cleared defense contractor and that processes, stores, or transmits information created by or for the DoD with respect to which such contractor is required to apply enhanced protection (e.g., classified information). A classified covered information system is a type of covered network consistent with the requirements of Section 941 of Public Law 112-239 and 10 U.S.C. 391 . Classified information means information that has been determined, pursuant to E.O. 13526 , or any predecessor or successor order, and the AEA of 1954, as amended, to require protection against unauthorized disclosure in the interest of national security and which has been so designated. The term includes NSI, RD, and FRD. Classified meetings means a conference, seminar, symposium, exhibit, convention, training course, or other such gathering during which classified information is disclosed. Classified visit

All affirmations shall be completed in SPRS. The Department will verify submission of the affirmation in SPRS to ensure compliance with CMMC solicitation or contract requirements. (1) CMMC Level 1 Self-Assessment. At the completion of a self-assessment and annually thereafter, the affirming official shall submit a CMMC affirmation attesting to continuing compliance with all CMMC Level 1 security requirements. (2) CMMC Level 2 Self-Assessment. At the completion of a self-assessment and annually thereafter, the affirming official shall submit a CMMC affirmation attesting to continuing compliance with all CMMC Level 2 security requirements. An affirmation shall also be submitted at the completion of a POA&M Closeout assessment. (3) CMMC Level 2 Certification Assessment. At the completion of a C3PAO assessment and annually thereafter, the affirming official shall submit a CMMC affirmation attesting to continuing compliance with all CMMC Level 2 security requirements. An affirmation shall also be submitted at the completion of a POA&M Closeout assessment. (4) CMMC Level 3 Certification Assessment. At the completion of a DCMA DIBCAC assessment and annually thereafter, the affirming official shall submit a CMMC affirmation attesting to continuing compliance with all CMMC Level 3 security requirements. This requirement is in addition to the ongoing requirement for Level 2 affirmation. An affirmation shall also be submitted at the completion of a POA&M Closeout assessment. §-170.23 Application to subcontractors. (a) Procedures. CMMC Level requirements apply to prime contractors and subcontractors throughout the supply chain at all tiers that will process, store, or transmit FCI or CUI on contractor information systems in the performance of the contract or subcontract. Prime contractors shall comply and shall require subcontractor compliance throughout the supply chain at all tiers with the applicable CMMC level for each subcontract as follows: (1) If a subcontractor will only process, store, or transmit FCI (and not CUI) in performance of the contract, then CMMC Level 1 Self-Assessment is required for the subcontractor. (2) If a subcontractor will process, store, or transmit CUI in performance of the subcontract, CMMC Level 2 Self-Assessment is the minimum requirement for the subcontractor. (3) If a subcontractor will process, store, or transmit CUI in performance of the subcontract and the Prime contractor has a requirement of Level 2 Certification Assessment, then CMMC Level 2 Certification Assessment is the minimum requirement for the subcontractor. (4) If a subcontractor will process, store, or transmit CUI in performance of the subcontract and the Prime contractor has a requirement of Level 3 Certification Assessment, then CMMC Level 2 Certification Assessment is the minimum requirement for the subcontractor. (b) [Reserved]. §-170.24 CMMC Scoring Methodology. (a) General.

NIST Special Publication 800-37 Revision 2 Risk Management Framework for Information Systems and Organizations A System Life Cycle Approach for Security and Privacy JOINT TASK FORCE This publication is available free of charge from: <https://doi.org/10.6028/NIST.SP.800-37r2> This publication contains comprehensive updates to the Risk Management Framework . The updates include an alignment with the constructs in the NIST Cybersecurity Framework; the integration of privacy risk management processes; an alignment with system life cycle security engineering processes; and the incorporation of supply chain risk management processes. Organizations can use the frameworks and processes in a complementary manner within the RMF to effectively manage security and privacy risks to organizational operations and assets, individuals, other organizations, and the Nation. Revision 2 includes a set of organization-wide RMF tasks that are designed to prepare information system owners to conduct system-level risk management activities. The intent is to increase the effectiveness, efficiency, and cost-effectiveness of the RMF by establishing a closer connection to the organization's missions and business functions and improving the communications among senior leaders, managers, and operational personnel.

3.2.2 Internet-based Attacks Though all networked or distributed applications are vulnerable to

internet-based attacks, microservices-based applications are more vulnerable to this type of attacks due to the following: - Unlike a monolithic application that exposes a smaller set of IP-addressable remote procedure call interfaces, a microservices architecture will almost always expose a larger set of IP-addressable remote procedure call interfaces.

3.1.22 Weaknesses that Affect Files and Directories CWE-632) Description Weaknesses in this category affect file or directory resources [§6.

(2) A privacy interest may exist in personal information even though the information has been disclosed at some place and time. This is known as the concept of practical obscurity. For example, information that was once publicly known (a court-martial trial 40 years ago) may no longer be in the public's eye and has faded from memory. In this case, the privacy interest in this type of situation may have increased over time, the public interest may have decreased over time, and therefore an agency can now withhold the once public information. (3) Examples of other files containing personal information similar to that contained in personnel and medical files include: (i) Those files compiled to evaluate or adjudicate the suitability of candidates for civilian employment or membership in the Armed Forces, and the eligibility of individuals (civilian, military, or contractor employees) for security clearances or for access to particularly sensitive classified information. (ii) Files containing reports, records, and other material pertaining to personnel matters in which administrative action, including disciplinary action may be taken. (4) On November 9, 2001, subsequent to the President declaring a national emergency, the DA&M issued a memorandum authorizing the DoD Components to withhold lists of personally identifying information of DoD personnel, to include active duty military personnel, civilian employees, contractors, members of the National Guard and Reserves, and military dependents. Additionally, personally identifying information of DoD military and civilian personnel who are assigned to overseas, sensitive, or routinely deployable, units is exempt from release under Exemption 3, with section 130b of 10 U.S.C. as the withholding statute. Names and duty addresses (postal and/or e-mail) published in telephone directories, organizational charts, rosters, and similar materials for personnel are considered -lists of personally identifying information;- and therefore qualify for withholding under Exemption 6 (and Exemption 3 if applicable). (5) Home addresses, telephone numbers, and private e-mail addresses are normally protected by this exemption. This includes lists of home addressees and military quarters' addressees that do not include the occupants' names. (6) This exemption shall not be used in an attempt to protect the privacy of a deceased person. It may be used to protect the privacy of the deceased person's surviving family members if disclosure would rekindle grief, anguish, pain, embarrassment, or even disruption of peace of mind of surviving family members. In such situations, the DoD Components shall balance the surviving family members' privacy interests and the public's interest to determine its releasability.

The reduced benefits from extending the compliance period by 6 months for each person subject to the final rule are a twofold increase in the number of outbreak victims relative to the baseline in the first year only. Baseline benefits reduce the impact of 15 percent to 18 percent of outbreaks and eliminate the problem of prematurely terminated investigations because of poor records quality (i.e., about 10 percent of the total number of traceback investigations estimated from FDA outbreak investigation information). Extending the compliance dates by 6 months ranks sixth in the reductions in benefits relative to the baseline. We estimate that allowing transporters to comply with this final rule by complying with existing requirements (e.g., records already required by FMCSA) will have a negligible impact on the benefits relative to that from the more comprehensive requirements of the proposal. Option 7 in table 16 of this document incorporates a 24-hour access provision, 6, 12, and 24 month retention requirements, extension of the compliance dates, and adjusted recordkeeping requirements for transporters based on existing requirements. In table 18 of this document, the costs and benefits of the final rule are compared with those from the adjusted comprehensive coverage of option 7 in table 16 of this document. Table 16. Costs and Reductions in Food Safety Benefits for Changes Based on Comments Policy Option (in Terms of the Baseline) Cost (7% Discount) Cost (3% Discount) Reduction in Benefits Relative to the Baseline Baseline 1 : Proposed rule except requirement for all records to contain lot codes is relaxed. \$4.0 billion \$5.27 billion (printed page 71643) (1) Baseline except existing interstate transporter requirements are sufficient. \$3.78 billion \$4.97 billion No reduction 2 1 (2) Baseline except retention of 6, 12, and 24 months per NIST standards \$4.0 billion \$5.27 billion Negligible reduction 2 (3) Baseline except food contact entities are excluded. 3 \$3.92 billion \$5.16 billion Exclude 37,000 facilities near the top of supply chain. Low risk of contamination and low

risk of loss of the paper trail. 3 (4) Baseline except compliance dates are extended by 6 months. \$3.73 billion \$5.10 billion An estimated one-time, two-fold increase in the number of victims compared with the baseline in the first year only. 4 (5) Baseline except foreign facilities are excluded. \$3.23 billion \$4.26 billion Exclude 225,000 facilities near the beginning of the supply chain. Very high cost of enforcement and access. 5 (6) Baseline except relax records access from 4 and 8 hours, to 24 hours. \$3.74 billion \$4.95 billion Adds a maximum of about 5 days to the time for preventive action during an outbreak. 6 (7) Adjusted comprehensive coverage \$2.59 billion \$3.57 billion Incorporates all policy options and adjusted numbers of facilities 1

(iii) If the request for access pertains to a record controlled and maintained by another Federal agency, but in the temporary custody of the NGB, the records are the property of the originating Component. Access to these records is controlled by the system notice and rules for the originating component/agency. Such requests shall be referred to the originating component/agency and the requestor will be notified in writing of the referral and contact information for the component/agency. (5) The Chief of the OIP will use the following procedures for processing any recommended denials of access: (i) The specific reason for denial cited by the System Manager will be evaluated and a recommendation will be presented to the denial authority. (ii) If the request for access is denied, a written letter will be sent to the requestor using procedures outlined in 32 CFR part 310, subpart D . The requestor will be advised they have 60 calendar days to appeal the decision to deny access. Appeals should be sent to: NGB Chief Counsel, 1636 Defense Pentagon, Room 1D164, Washington DC 20301-1636. The requester must provide proof of identity or a sworn declaration with their appeal, as outlined in 32 CFR part 310, subpart D . (iii) If the request for access should be granted, the access request will be directed back to the System Manager to process. (6) The Chief Counsel will use the following procedures for any appeals received: (i) The Chief Counsel will notify the Chief of the OIP that an appeal has been received and will request the administrative record of the initial denial. (ii) The Chief of the OIP will provide an exact copy of all records from the initial denial to the Chief Counsel within 10 working days. (iii) The Chief Counsel will review the appeal and make a final determination on whether to grant or deny the appeal. (A) If the appellate authority denies the appeal, he or she will provide a formal written notification to the requestor using the procedures outlined in 32 CFR part 310, subpart D and will provide a copy of the response to the Chief of the OIP. (B) If the appellate authority grants the appeal, he or she will notify the Chief of the OIP and the Directorate that recommended the denial that the individual is being given access to the record. The Chief Counsel will provide a subsequent notification to the requestor advising that his or her appeal has been granted, and will provide the requestor access to his or her record. (iv) All appeals should be processed within 30 working days after receipt by the Chief Counsel. If the Chief Counsel determines that a fair and equitable review cannot be made within that time, the individual shall be informed in writing of the reasons for the delay and of the approximate date the review is expected to be completed. (7) There is no requirement that an individual be given access to records that are not in a group of records that meet the definition of a SOR in 5 U.S.C. 552a .

Definitions have been added for: Affirming Official, Assessment objective, Asset, CMMC security requirement, CMMC Status, DoD Assessment Methodology, Enduring Exception, Operational plan of action, Personally Identifiable Information, Security Protection Data (SPD), and Temporary deficiency. Some definitions were also changed to source from NIST documentation instead of Committee on National Security Systems (CNSS) Instruction No. 4009. Background A. Statement of Need for This Rule The Department of Defense (DoD) requires defense contractors to protect FCI and CUI. To verify contractor and subcontractor implementation of DoD's cybersecurity information protection requirements, the Department developed the Cybersecurity Maturity Model Certification (CMMC) Program as a means of assessing and verifying (printed page 83169) adequate protection of contractor information systems that process, store, or transmit either FCI or CUI. The CMMC Program is intended to: (1) align cybersecurity requirements to the sensitivity of unclassified information to be protected, (2) add a self-assessment element to affirm implementation of applicable cybersecurity requirements, (3) add a certification element to verify implementation of cybersecurity requirements, and (4) add an affirmation to attest to continued compliance with assessed requirements. As part of the program, DoD also intends to provide supporting resources and training to the DIB, to help support companies who are working to achieve the required CMMC Status. The CMMC Program provides for assessment at three levels, starting with basic safeguarding of FCI at CMMC Level 1, moving to the broad protection of CUI at CMMC Level 2, and culminating with higher-level protection of CUI against risk from Advanced Persistent Threats (APTs) at CMMC Level 3. The

CMMC Program addresses DoD's need to protect FCI and CUI during the acquisition and sustainment of products and services from the DIB. This effort is instrumental in establishing cybersecurity as a foundation for DoD acquisitions. Although DoD contract requirements to provide adequate security for covered defense information (reflected in DFARS clause 252.204-7012) predate CMMC by many years, a verification requirement for the handling of CUI to assess a contractor or subcontractor's implementation of those required information security controls is new with the CMMC Program. The theft of intellectual property and sensitive information from all U.S. industrial sectors from malicious cyber activity threatens economic security and national security. The Council of Economic Advisers estimates that malicious cyber activity cost the U.S. economy between \$57 billion and \$109 billion in 2016. [24] The Center for Strategic and International Studies estimates that the total global cost of cybercrime was as high as \$600 billion in 2017. [25]

means a generic name for a computerized system that is capable of gathering and processing data and applying operational controls over long distances. Typical uses include power transmission and distribution and pipeline systems. SCADA was designed for the unique communication challenges (e.g., delays, data integrity) posed by the various media that must be used, such as phone lines, microwave, and satellite. Usually shared rather than dedicated, as defined in NIST SP 800-82r3 (incorporated by reference, see § 170.2). System Security Plan (SSP) means the formal document that provides an overview of the security requirements for an information system or an information security program and describes the security controls in place or planned for meeting those requirements. The system security plan describes the system components that are included within the system, the environment in which the system operates, how the security requirements are implemented, and the relationships with or connections to other systems, as defined in NIST SP 800-53 R5 (incorporated by reference, see § 170.2). Temporary deficiency means a condition where remediation of a discovered deficiency is feasible, and a known fix is available or is in process. (printed page 83220) The deficiency must be documented in an operational plan of action. A temporary deficiency is not based on an 'in progress' initial implementation of a CMMC security requirement but arises after implementation. A temporary deficiency may apply during the initial implementation of a security requirement if, during roll-out, specific issues with a very limited subset of equipment is discovered that must be separately addressed. There is no standard duration for which a temporary deficiency may be active. For example, FIPS-validated cryptography that requires a patch and the patched version is no longer the validated version may be a temporary deficiency. (CMMC-custom term) Test Equipment means hardware and/or associated IT components used in the testing of products, system components, and contract deliverables. (CMMC-custom term) User means an individual, or (system) process acting on behalf of an individual, authorized to access a system, as defined in NIST SP 800-53 R5 (incorporated by reference, see § 170.2). § 170.5 Policy.

, and the standards for the administrative safeguards under 45 CFR 164.308(a) . We also propose to clarify that regulated entities would be required to implement all of the administrative safeguards of the Security Rule to protect the confidentiality, integrity, or availability of all ePHI that they create, receive, maintain, or transmit. Thus, when read together, proposed 45 CFR 164.308(a) and 164.316(a) would require that a regulated entity implement and document, in writing, its implementation of the administrative safeguards required by the Security Rule. These requirements set the baseline for administrative safeguards. Nothing in this NPRM would prevent a regulated entity from implementing additional administrative safeguards, provided that those additional safeguards do not conflict with any requirements in the Security Rule. The proposed changes are discussed in greater detail below. c. Section 164.308(a)(1)(i)-Standard: Technology Asset Inventory We propose to modify 45 CFR 164.308(a)(1) by elevating to standard-level status the existing implementation specifications for the standard for security management process at 45 CFR 164.308(a)(1)(ii)(A) through (D) , and deleting the existing standard. Doing so would highlight the importance of these elements and permit us to add implementation specifications that detail our expectations for compliance with those elements. We believe that providing more specificity in our requirements would help regulated entities better understand their compliance responsibilities for (printed page 937) safeguarding ePHI. These proposals are consistent with current guidance, as described below. In place of the existing standard for security management process, we propose a standard at 45 CFR 164.308(a)(1)(i) that would require a regulated entity to conduct and maintain an accurate and thorough written technology asset inventory and a network map of its electronic information systems and all technology assets that may affect the confidentiality, integrity, or availability of ePHI. The inventory forms the foundation for a fulsome and accurate risk analysis. A regulated entity must identify its information systems that create, receive, maintain, or transmit

ePHI and all technology assets, as we propose to define them in 45 CFR 164.304, that may affect ePHI in such information systems in order to secure them. Regulated entities cannot understand the risks to the confidentiality, integrity, and availability of their ePHI without a complete understanding of these assets. We believe that this proposal would clarify compliance expectations and provide increased protections for the confidentiality, integrity, and availability of ePHI. Consistent with practices previously highlighted in guidance, regulated entities would be required by this proposal to conduct and maintain an accurate and thorough written inventory of technology assets.

For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. The Act defines "small entities" as (1) a proprietary firm meeting the size standards of the SBA, (2) a nonprofit organization that is not dominant in its field, and (3) a small government jurisdiction of less than 50,000 population. The Department has determined that roughly 90 percent or more of all health care providers meet the SBA size standard for a small business as shown in table 4 or are a nonprofit organization. Therefore, the Department estimates that there would be 740,348 small entities affected by the proposals in this proposed rule. [999] The SBA size standard for health care providers ranges between a maximum of \$9 million and \$47 million in annual receipts, depending upon the type of entity, as shown in table 4, above. [1000] With respect to health insurers, the SBA size standard is a maximum of \$47 million in annual receipts, and for pharmacy benefits and clearinghouses it is \$45.5 million. [1001] While some insurers are classified as nonprofit, it is possible they are dominant in their market. For example, a number of Blue Cross/Blue Shield insurers are organized as nonprofit entities; and yet, they dominate the health insurance market in the States where they are licensed. [1002] With respect to business associates, they provide a wide range of services for covered entities, including computer infrastructure, clearinghouse activities, leased office equipment, and professional services, such as legal, accounting, business planning, and marketing. The SBA size thresholds for these industries ranges from \$15.5 million for lawyers to \$47 million for clearinghouses. [1003] For the reasons stated below, the Department does not expect that the cost of compliance would be significant for small entities. Nor does the Department expect that the cost of compliance would fall disproportionately on small entities. Although many of the regulated entities affected by the proposals in this proposed rule are small entities, they would not bear a disproportionate cost burden compared to the other entities subject to the rule. The projected total costs are discussed in detail in the RIA. The Department does not view this as a substantial burden because the result of the changes would be annualized costs per regulated entity of approximately \$1,235 [= \$2.3 billion [1004] /1,822,600 regulated entities]. The per-entity costs represent the costs per establishment. As a result, smaller entities' costs are lower because they have fewer establishments. Larger regulated entities (i.e., firms) that have multiple facilities (i.e.,

, Sections (c)(3) and (4); (d)(1) through (d)(5); (e)(1) through (e)(3); (e)(5); (f)(1) through (f)(5); (g)(1) through (g)(5); and (h) of the Act. (ii) Authority. 5 U.S.C. 552a(j)(2) . (iii) Reasons. The Defense Protective Service is the law enforcement body for the jurisdiction of the Pentagon and immediate environs. The nature of certain records created and maintained by the DPS requires exemption from access provisions of the Privacy Act of 1974. The general exemption, 5 U.S.C. 552a(j)(2) , is invoked to protect ongoing investigations and to protect from access, criminal investigation information contained in this record system, so as not to jeopardize any subsequent judicial or administrative process taken as a result of information contained in the file. (2) System identifier and name. JS006.CND, Department of Defense Counternarcotics C4I System. (i) Exemption. Portions of this system that fall within 5 U.S.C. 552a(j)(2) are exempt from the following provisions of 5 U.S.C. 552a , section (c)(3) and (4); (d)(1) through (d)(5); (e)(1) through (e)(3); (e)(4)(G) and (e)(4)(H); (e)(5); (f)(1) through (f)(5); (g)(1) through (g)(5) of the Act. (ii) Authority. 5 U.S.C. 552a(j)(2) . (iii) Reasons. (A) From subsection (c)(3) because the release of accounting of disclosure would inform a subject that he or she is under investigation. This information would provide considerable advantage to the subject in providing him or her with knowledge concerning the nature of the investigation and the coordinated investigative efforts and techniques employed by the cooperating agencies. (printed page 14803) This would greatly impede USSOUTHCOM's criminal law enforcement. (B) For subsections (c)(4) and (d) because notification would alert a subject to the fact that an investigation of that individual is taking place, and might weaken the on-going investigation, reveal investigatory techniques, and place confidential informants in jeopardy. (C) From subsections (e)(4)(G) and (H) because this system of records is exempt from the access provisions of subsection (d) pursuant to subsection (j). (D) From

subsection (f) because the agency's rules are inapplicable to those portions of the system that are exempt and would place the burden on the agency of either confirming or denying the existence of a record pertaining to a requesting individual might in itself provide an answer to that individual relating to an on-going criminal investigation. The conduct of a successful investigation leading to the indictment of a criminal offender precludes the applicability of established agency rules relating to verification of record, disclosure of the record to that individual, and record amendment procedures for this record system.

The intent of the rule is for use of the DD Form 254 for each specific contractual requirement requiring access to classified information. While the NISS website does not currently link to the DD Form 254 repository, Defense Counterintelligence and Security Agency will evaluate that capability during future assessment of requirements.

3. Support for the Rule Comment: Two respondents acknowledged that streamlining the DD Form 254 for electronic submission via the National Industrial Security Program (NISP) Contracts Classification System is beneficial as well as clarification of the SAM requirements. Response: The Government acknowledges the benefits with establishment of the rule to provide streamlined submission process procedures for use of the DD Form 254 through the PIIIE, to enable businesses to submit an electronic form once, instead of repeated paper submissions.

4. Paperwork Reduction Act Applicability Comment: One respondent conveyed concerns regarding the Paperwork Reduction Act burdens associated with the use of DD Form 254. Response: The Paperwork Reduction Act (44 U.S.C. chapter 35) applies; however, the proposed changes to the FAR do not impose additional information collection requirements to the paperwork burden previously approved under the Office of Management and Budget (OMB) Control Number 0704-0567, entitled "Department of Defense Contract Security Classification Specification".

5. Out of Scope Comment: One respondent commented on a variety of topics unrelated to the rule. Response: Comments are out of scope.

C. Other Changes There were minor administrative revisions to the format of the provision FAR 52.204-16, Commercial and Government Entity Code Reporting, and the clause FAR 52.204-18, Commercial and Government Entity Code Maintenance, including deleting use of the alternates at FAR 52.204-16(g) and FAR 52.204-18(f), incorporating the paragraphs at FAR 52.204-16(g) and FAR 52.204-18(f) into the base clause for clarity. Additionally, there were minor clarifying edits to the FAR text at FAR 4.402(d)(1) and (2), FAR 4.403(c)(1), and 52.204-16(b) and (g). As a result of conforming changes, revisions to FAR 4.1804 will no longer be required.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT) and for Commercial Items, Including Commercially Available Off-the-Shelf (COTS) Items This rule does not create any new provisions or clauses, nor does it change the applicability of any existing provisions or clauses included in solicitations and contracts valued at or below the SAT, or for commercial items, including COTS items.

IV. Executive Orders 12866 and 13563 E.O.s 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563

(Comment 175) A few comments point out that the burden for maintaining records is proportionately similar for large transporter companies and small independent transporters. Therefore, according to the comments, the relative regulatory burden for small, independent transporters is no greater than for large companies. The comments contend that all carriers, regardless of the size of the company, should be required to comply with the same requirements on the same timetable. (Response) As stated previously, the Bioterrorism Act specifically states that, in issuing these regulations, the Secretary shall take the size of a business into account. FDA believes it is appropriate to give small and very small businesses additional time to come into compliance with the regulations.

IV. Analysis of Economic Impacts-Final Regulatory Impact Analysis FDA has examined the economic implications of this final rule as required by Executive Order 12866 . Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). Executive Order 12866 classifies a rule as significant if it meets any one of a number of specified conditions, including: Having an annual effect on the economy of \$100 million, adversely affecting a sector of the economy in a material way, adversely affecting competition, or adversely affecting jobs. A regulation is also considered a significant regulatory action if it raises novel legal or policy issues. FDA has determined that this final rule is an economically significant regulatory action as defined by Executive Order 12866 . This final regulatory impact analysis reflects changes made in the regulation from the proposed rule to the

final rule, as well as changes in estimates in response to comments. It also includes responses to comments on the preliminary regulatory impact analysis (PRIA) (see 68 FR 25188). Where there were no changes in the estimates provided in the PRIA, the estimates are summarized here. Interested persons are directed to the text of the PRIA for a fuller explanation of the estimates over which there were no significant comments or changes. As noted in the previous section of this preamble, FDA received 212 submissions in response to the proposed rule, which raised over 200 issues. We continue with the discussion of the comments and FDA's responses to those comments using the same presentation as in section III of this document, focusing here on the comments FDA received on the PRIA. Accordingly, the word 'Comment' again will appear in parenthesis before the description of the comment, and the word 'Response' will appear in parenthesis before FDA's response. A. Summary of the Costs and Benefits of the Final Rule

3.1.2 | Test Results... 3.1.2 Test Results Figure D-31 shows the remote connection being established through the Cisco AnyConnect VPN application through which a browser is used to access the ConsoleWorks web interface (Figure D-32). 3.1.24 - PI Interface for SNMP ReadOnly version 1.

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Health and Human Services Food and Drug Administration [Docket No. FDA-2014-N-1697] AGENCY: Food and Drug Administration, HHS. ACTION: Notice of a Privacy Act system of records. SUMMARY: In accordance with the requirements of the Privacy Act of 1974 (the Privacy Act) and the Food and Drug Administration's (FDA or the Agency) regulations for the protection of privacy, FDA is publishing notice of a Privacy Act system of records entitled, 'FDA Commissioning of State and Local Officials, HHS/FDA/ORA' System No. 09-10-0022. FDA is deleting the System of Records Notice (SORN) for 'FDA Credential Holder File, HHS/FDA/OC' System No. 09-10-0003, because the records covered by that SORN are now covered by this new SORN and by existing personnel records SORNs. The new system of records will contain information about State and local officials who have applied for an FDA commission that would allow them to assist FDA with its regulatory compliance and enforcement efforts. FDA will use the records in this system to assess qualifications of commissioning candidates, initiate background investigations, record the status of applications, and track the status of commissioned officials. DATES: Effective Date: The new system of records will be effective on December 8, 2014 with the exception of the routine uses. The routine uses will be effective on January 22, 2015. Submit either electronic or written comments by January 22, 2015. ADDRESSES: You may submit comments by any of the following methods: Electronic Submissions Submit electronic comments in the following way: Federal eRulemaking Portal: <http://www.regulations.gov> . Follow the instructions for submitting comments. Written Submissions Submit written submissions in the following ways: Mail/Hand delivery/Courier (for paper submissions): Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852. Instructions: All submissions received must include the Docket No. FDA-2014-N-1697 for this notice. All comments received may be posted without change to <http://www.regulations.gov> , including any personal information provided. For additional information on submitting comments, see the 'Comments' heading of the SUPPLEMENTARY INFORMATION section of this document. Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>

: The Bioterrorism Act contains a provision authorizing the Secretary to establish requirements regarding the establishment and maintenance of records by persons who manufacture, process, pack, transport, distribute, receive, hold, or import food which are needed to allow the Secretary to identify the immediate previous sources and immediate subsequent recipients of food, including its packaging, in order to address credible threats of serious adverse health consequence or death to humans or animals. Description of Respondents : Persons that manufacture, process, pack, hold, receive, distribute, transport, or import food in the United States are required to establish and maintain records, including persons that engage in both interstate and intrastate commerce. FDA received several comments about the hourly burden imposed by the rule on respondents. (Comment 222) One comment states that the cumulative effect of the regulation is a staggering amount of required paperwork that needs to be organized and made available. (Response) This comment is not directly responding to any specific request for comments but is a general comment. The duplication of records

is unnecessary as long as existing records contain all of the required information. In this analysis we use the FDA small business model to calculate the effects on small businesses using the difference between revenues and variable costs as the metric. We incorporated both the one-time costs and the recurring costs to compute the effects on small businesses. The effects were computed for firms in the dietary supplements industry, candy manufacturing, and the ready-to-eat food manufacturing industry, including firms that manufacture breakfast cereals, beverages, canned foods, baked items and breads, and dressings and sauces. While these firms do not represent every category of food establishment covered by this final rule, they do reflect a large number of firms in the food industry, including manufacturers, input suppliers, and distributors. FDA assumes that the cost and revenue structures of firms not explicitly included in the computation of the model do not differ substantially from those that are included. Consistent with FDA's assumption that the rule will require only small changes to current recordkeeping practices, the findings from the small business model indicate that virtually no small businesses will incur negative cash flows as a result of this rule. The percentages of firms predicted to incur negative cash flows are range from 0.2 percent to a high of 1.9 percent for the ready-to-eat food manufacturing industry. These findings strongly suggest that very few firms, if any, will be driven from business as a result of this rule. In the Unfunded Mandates section of the PRIA, we also consider the impacts of the proposal on food prices and conclude that any effect would be negligible.

This section provides further guidance on what type of information is expected for a specific requirement or set of requirements from Annex B and the additional requirements listed in Section 3.2. All of the requirement statements are organized into appropriately named and numbered subsections (e.g., 1.2 - Security Levels, 2.1 - Purpose or Use). Each subsection identifies the applicable requirements and provides any clarifying and explanatory notes.

(Response) Although the comment states that 3 hours is too low an estimate, the comment did not indicate how the learning cost estimates as a whole, or any of the component cost estimates, can be improved. FDA explicitly incorporates the costs of searching, learning, and comprehending the rule in the PRIA. Learning cost estimates are composed of costs for searching for a copy of the requirements, and reading and understanding them. Because of the approximate nature of the calculation, FDA rounds up to the nearest half hour to 3 1/2 hours for the time required for reading

and comprehending the requirements of this final rule for all English reading users. Although the cost of viewing the explanatory video was not explicitly included in the PRIA, such a viewing was assumed to reduce the burden from other searching and learning activities. Consequently, in the analysis of the final rule, FDA maintains the learning costs estimates used in the PRIA. 9. Specific Sector Cost Estimates a. Transportation and warehouse sector . (Comment 205) At least one comment states that trucking companies already maintain the required records to comply with another Federal regulation and therefore additional Federal requirements would be duplicative. (Response) FDA has included several options in this final rule for transporters to comply with their obligations to establish and maintain records under this final rule. One option is for transporters to keep some of the records currently required by the FMCSA regulations as of the date of publication of this final rule. The FMCSA regulations already require interstate transporters to establish and maintain transportation records, and we assume that interstate transporters who already comply with the FMCSA recordkeeping requirements will choose to comply with this final rule by maintaining such records. However, the FMCSA regulations cover only interstate common carriers, while this regulation covers all persons who transport food, including intrastate carriers. Moreover, domestic air carriers, and interstate transporters of low-value packages may not be required to comply with FMCSA regulations. Consequently, as a result of this final rule, intrastate carriers, intrastate shipments by interstate carriers, domestic air cargo carriers, and transporters of low-value packages may incur recordkeeping costs, in addition to learning costs, as a result of this final rule. To estimate the costs incurred by intrastate carriers, domestic air cargo carriers, and transporters of low value (printed page 71638)

(b) Nine types of records may be withheld in whole or in part from public disclosure unless otherwise prescribed by law. In addition, a discretionary release of a record to one requester shall prevent the withholding of the same record under a FOIA exemption if the record is subsequently requested by someone else. However, a FOIA exemption may be invoked to withhold information that is similar or related that has been the subject of a discretionary release. (c) In applying exemptions, the identity of the requester and the purpose for which the record is sought are irrelevant, with the exception that an exemption may not be invoked where the particular interest to be protected is the requester's interest. (d) The DoD Components may have a situation where, in responding to a FOIA request, admitting the existence or nonexistence of a record would itself reveal information protected from release by one of the 9 Exemptions. In this situation, the DoD Component shall neither confirm nor deny the existence or nonexistence of the requested record. This is commonly called a ·Glomar· response (U.S. Attorney General Memorandum), and the appropriate exemption must be cited in the response. This situation most commonly arises with Exemptions 1, 6, and 7; however, it could arise with other exemptions. A ·refusal to confirm or deny· response must be used consistently, not only when a record exists, but also when a record does not exist. If not used consistently, the pattern of a ·no record· response when a record does not exist, and a ·refusal to confirm or deny· when a record does exist, will itself disclose exempt information. §.286.14 Applying the FOIA exemptions. The 9 types of exempted records and procedures for applying them are as follows: (a) Exemption 1. Pursuant to 5 U.S.C. 552(b)(1) , records properly and currently classified in the interest of national defense or foreign policy, as specifically authorized under the criteria established by an existing Executive Order establishing classification criteria and implemented by regulation, such as DoD 5200.1-R, (printed page 71854) are exempt from disclosure. If the responsive information is not classified at the time of the FOIA request, a classification review may be undertaken to determine whether the information should be classified. The procedures in DoD 5200.1-R apply in this situation. If the information qualifies as Exemption 1 information, there is no discretion regarding its release. The requester will be advised as to which sections of the Executive Order apply in determining the information classified. In addition, Exemption 1 shall be invoked when the following situations are apparent:

Records are only exempt from pertinent provisions of 5 U.S.C. 552a to the extent such provisions have been identified and an exemption claimed for the original record and the purposes underlying the exemption for the original record still pertain to the record which is now contained in this system of records. In general, the exemptions were claimed in order to protect properly classified information relating to national defense and foreign policy, to avoid interference during the conduct of criminal, civil, or administrative actions or investigations, to ensure protective services provided to the President and others are not compromised, to protect records used solely as statistical records, to protect the identity of confidential sources incident to Federal employment, military service, contract, and security clearance determinations, to preserve the confidentiality

and integrity of Federal testing materials, and to safeguard evaluation materials used for military promotions when furnished by a confidential source. The exemption rule for the original records will identify the specific reasons why the records may be exempt from specific provisions of 5 U.S.C. 552a . (4) System identifier and name. A0027-1 DAJA, General Legal Files. (i) Exemption. (A) Information specifically authorized to be classified under E.O. 12958 , as implemented by DoD 5200.1-R, may be exempt pursuant to 5 U.S.C. 552a(k)(1) . (B) Investigatory material compiled for law enforcement purposes, other than material within the scope of subsection 5 U.S.C. 552a(j)(2) , may be exempt pursuant to 5 U.S.C. 552a(k)(2) . However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of such information, the individual will be provided access to such information except to the extent that disclosure would reveal the identity of a confidential source. (C) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. (D) Testing or examination material used solely to determine individual qualifications for appointment or promotion in the Federal service may be exempt pursuant to 5 U.S.C. 552a(k)(6) , if the disclosure would compromise the objectivity or fairness of the test or examination process. (E) Evaluation material used to determine potential for promotion in the Military Services may be exempt pursuant to 5 U.S.C. 552a(k)(7) , but only to the extent that the disclosure of such material would reveal the identity of a confidential source. (F) Therefore, portions of this system of records may be exempt pursuant to 5 U.S.C. 552a(k)(1) through (k) (7) from subsections 5 U.S.C. 552a(c)(3)

(DFAS). Address requests to any DFAS regional office or to Headquarters, DFAS. For Headquarters, DFAS, records, or if there is uncertainty as to which DFAS region may have the records, address requests to: Defense Finance and Accounting Service, DFAS-HAC/DE, Corporate Communications, 6760 East Irvington Place, Denver, CO 80279-8000. Addresses for DFAS regional office FOIA Requester Service Centers are located at <http://www.dfas.mil> . AP2.2.9. Defense Information Systems Agency (DISA). DISA records may be requested from any DISA field activity or from its Headquarters. DoD Field Activity And Combatant Command Addresses Although the below FOIA Requester Service Centers are OSD Components for the purposes of the FOIA, these Centers respond directly to the public on initial requests. Accordingly, initial requests should be sent to the addresses indicated. AP2.3.1. DoD TRICARE Management Activity.

, would require a regulated entity to create copies of ePHI in a manner that ensures that such copies are no more than 48 hours older than the ePHI maintained in the regulated entity's relevant electronic information systems and in accordance with the policies and procedures required by

proposed 45 CFR 164.308(a)(13)(ii)(B). The second, 45 CFR 164.312(i)(2)(ii), would require a regulated entity to deploy technical controls that, in real-time, monitor, and alert workforce members about, any failures and error conditions of the backups required by the first implementation specification. The third, 45 CFR 164.312(i)(2)(iii), would require a regulated entity to deploy technical controls that record the success, failure, and any error conditions of backups required. The fourth, 45 CFR 164.312(i)(2)(iv), would require a regulated entity to test the effectiveness of its backups and document the results at least monthly. Specifically, a regulated entity would be required to restore a representative sample of backed up ePHI (after the ePHI is backed up as required by paragraph (i)(2)(i)) and document the results of such test restorations at least monthly. Such tests should include verifying regulated entity's ability to access ePHI from a remote location. These activities are included in NIST guidance for Security Rule compliance, [816] which directs regulated entities to consider the following questions: Is the frequency of backups appropriate for the environment? Are backup logs reviewed and data restoration tests conducted to ensure the integrity of data backups? Is at least one copy of the data backup stored offline to protect against corruption due to ransomware or other similar attacks? The potential need for these requirements also has been indicated through the rising number of ransomware attacks and the high number of individuals affected in such incidents. The Department believes these new implementation specifications, if finalized, would provide additional instruction for regulated entities about conducting data backups and enhance the ability of regulated entities to avoid costly work stoppages and interruptions in the delivery of health care when data becomes unavailable because of a disaster, security incident, or other emergency. We believe enhanced measures for data backup would reduce the need to pay ransom to hackers to recover compromised data. k. Section 164.312(j)-Standard: Information Systems Backup and Recovery The Department also proposes to add a new standard for backup and recovery of relevant electronic information systems at proposed 45 CFR 164.312(j)

- Authority and Purpose (AP); - Accountability, Audit, and Risk Management (AR); - Data Quality and Integrity (DI); - Data Minimization and Retention (DM); - Individual Participation and Redress (IP); - Security (SE); - Transparency (TR); and, - Use Limitation (UL).

The following asset categories are part of the Level 2 CMMC Assessment Scope: · CUI Assets · Security Protection Assets · Contractor Risk Managed Assets · Specialized Assets Additional Guidance on Level 2 Scoping CMMC Assessment Scope · Level 2 | Version 2.13 9 Separation Techniques Separation is a system architecture design concept that can provide physical/logical isolation of assets that process, transmit, or store CUI from assets not involved with CUI. Effective separation involves logically or physically separating assets and is required only for Out-of-Scope Assets. By separating assets, the CMMC Assessment Scope can be limited. Effective separation for CMMC follows the guidance in NIST SP 800-171 Rev 2, which states: If nonfederal organization s designate specific system component s for the processing, storage, or transmission of CUI, the organization s may limit the scope of the security requirements by isolating the designated system component s in a separate CUI security domain. Isolation can be achieved by applying architectural and design concept s (e.g., implementing subnetworks with firewalls or other boundary protection devices and using information flow control mechanisms). Security domains may employ physical separation, logical separation, or a combination of both. This approach can provide adequate security for the CUI and avoid increasing the organization's security posture to a level beyond that which it requires for protecting its missions, operations, and assets. Logical separation occurs when data transfer between physically connected assets (wired or wireless) is prevented by non-physical means such as software or network assets (e.g., firewall, routers, VPNs, VLANs). Physical separation occurs when assets have no connection (wired or wireless). Data can only be transferred manually (e.g., USB drive). Self-assessments and certification assessments may be valid for a defined CMMC Assessment Scope as outlined in 32 CFR § 170.19 CMMC Scoping. A new assessment is required if there are significant architectural or boundary changes to the previous CMMC Assessment Scope. Examples include, but are not limited to, expansions of networks or mergers and acquisitions. Operational changes within a CMMC Assessment Scope, such as adding or subtracting resources within the existing assessment boundary that follow the existing SSP, do not require a new assessment, but rather may be covered by annual affirmations to the continuing compliance with requirements. External Service Provider Considerations An External Service Provider (ESP) can be within the OSA's scope of CMMC requirements if it meets CUI Asset and/or Security Protection Asset criteria. To be considered an ESP, data (specifically CUI or Security Protection Data, e.g., log data, configuration data) must reside on the ESP assets as set forth in

32 CFR § 170.19(c)(2). Special considerations for an OSA using an ESP include the following: · The use of an ESP, its relationship to the OSA, and the services provided need to be documented in the OSA's SSP and described in the ESP's service description and customer responsibility matrix (CRM), which describes the responsibilities of the OSA and ESP with respect to the services provided. · Evaluate the ESP's CRM where the provider identifies security requirement objectives that are the provider's responsibility and security requirement objectives that are the OSA's responsibility.

Others expressed concern that sharing certain artifacts during the assessment process or permitting assessors to retain them would create vulnerability. In addition, commenters asked whether security protections are required for documents held due to the artifact retention requirements. One commenter asked how CMMC assessment scores, or affirmation information will be protected, and whether the CMMC program office will share this information outside of DoD. Another suggested that C3PAOs should not be required to retain any OSC provided materials. One commenter misinterpreted the supplemental hashing guide as requiring use of the MS PowerShell script with the SHA256 algorithm. The commenter also stated it would be more efficient to specify a single hash be provided for combined artifacts rather than requiring separate hash values for each artifact. They recommended deletion of the hashing requirement. Another commenter suggested requiring OSCs to generate hashes for artifacts as part of a Level 2 self-assessment. One comment also asked whether hashing is required for Level 3 artifacts. One comment asked how long OSAs must retain artifacts following an assessment. Some comments expressed concern that C3PAOs that receive or retain OSA artifacts identified as CUI would be required to undergo assessment by both the DIBCAC and another C3PAO. Four commenters objected to the 6-year artifact retention requirement for C3PAOs and requested reduction to 1 year. Three commenters asked whether self-assessors at level 1 or level 2 must also retain supporting artifacts for 6 years. Two commenters recommended revised wording of CMMC Level 3 requirements to provide greater clarity about artifact retention and integrity. One commenter requested edits to the description of SSP content, advocating for deletion of references to organizational policies and procedures in place to comply with NIST SP 800-171 R2. The recommended edits also changed attribution of the requirement to create an SSP to reflect DFARS clause 252.204-7020 rather than DFARS clause 252.204-7012. This commenter also suggested additional wording to specify that the OSA need not define roles and responsibilities of security personnel in the SSP but may do so in ancillary documents. Response:

Data breaches caused by current and former workforce members are a recurring issue across many industries, including the health care industry. Effective identity and access management policies and controls are essential to reduce the risks posed by these types of insider threats. Identity and access management can include many processes, but, most commonly, it would include the processes by which appropriate access to data is granted and terminated by creating and managing user accounts. Ensuring that user accounts are terminated and in a timely manner so that former workforce members do not have access to data, is one important way identity and access management can help reduce risks posed by insider threats. Additionally, effective termination procedures also reduce the risk that inactive user accounts (e.g., user accounts that are not being used or are inactive but are not fully terminated or disabled) could be used by a current or former workforce member with malicious motives to get access to ePHI. The Department's guidance also offers tips to prevent unauthorized access to PHI by former workforce members, such as having standard procedures of all action items to be completed when an individual leaves. [557] Guidance that we issued in 2019 further explains that security is a dynamic process. [558] Good security practices entail continuous awareness, assessment, and action in the face of changing circumstances. The information users can and should be allowed to access may change over time; organizations should recognize this in their policies and procedures and in their implementation of those policies and procedures. For example, if a user is promoted, demoted, or transfers to a different department, a user's need to access data may change. In such situations, the user's data access privileges should be re-evaluated and, as needed, modified to match the new role, if needed. [559] As described in other HHS guidance, these procedures should also address the complexity of the organization and the sophistication of its relevant electronic information systems. [560] NIST guidance provides additional descriptions of key activities and sample questions for regulated entities to consider when implementing this standard and associated implementation specifications. [561] Regulated entities should establish a standard set of procedures that should be followed to recover access control devices (e.g., identification badges, keys, access cards) when employment ends and, likewise, they should timely deactivate computer access (e.g., disable user IDs and passwords) and facility access (e.g., change facility security codes/PINs). Sample questions for

implementation include the following: Are there separate procedures for voluntary termination (e.g., retirement, promotion, transfer, change of employment) versus involuntary termination (e.g.,

AC.L2-3.1.15 · Privileged Remote Access CMMC Assessment Guide · Level 2 | Version 2.13 47

AC.L2-3.1.15 · PRIVILEGED REMOTE ACCESS Authorize remote execution of privileged commands and remote access to security-relevant information. ASSESSMENT OBJECTIVES [NIST SP 800-171A]40

Determine if: [a] privileged commands authorized for remote execution are identified; [b] security-relevant information authorized to be accessed remotely is identified; [c] the execution of the identified privileged commands via remote access is authorized; and [d] access to the identified security-relevant information via remote access is authorized. POTENTIAL ASSESSMENT METHODS AND OBJECTS [NIST SP 800-171A]40 Examine [SELECT FROM: Access control policy; procedures addressing remote access to the system; system configuration settings and associated documentation; system security plan; system audit logs and records; other relevant documents or records].

Interview [SELECT FROM: System or network administrators; personnel with information security responsibilities]. Test [SELECT FROM: Mechanisms implementing remote access management].

DISCUSSION [NIST SP 800-171 REV. 2]41 A privileged command is a human- initiated (interactively or via a process operating on behalf of the human) command executed on a system involving the control, monitoring, or administration of the system including security functions and associated security-relevant information. Security-relevant information is any information within the system that can potentially impact the operation of security functions or the provision of security services in a manner that could result in failure to enforce the system security policy or maintain isolation of code and data. Privileged commands give individuals the ability to execute sensitive, security-critical, or security-relevant system functions. Controlling such access from remote locations helps to ensure that unauthorized individuals are not able to execute such commands freely with the potential to do serious or catastrophic damage to 40 NIST SP 800-171A, p. 15. 41 NIST SP 800-171 Rev. 2, p. 14.

DFARS 252.204-7020 (NIST SP 800-171 DoD Assessment Requirements) Requires contractors to have current NIST SP 800-171 DoD Assessment for Medium and High assessment levels. Contractors should review the full text of DFARS 252.204-7020 in conjunction with their contracting officer and legal counsel to ensure full compliance. The clause should be read alongside the CMMC requirements at 32 CFR Part 170.

The Department of Defense published the proposed rule, on December 26, 2023 (88 FR 89058). Approximately 361 public submissions were received in response to the publication. Some comments were beyond the scope of the CMMC Program and are described but not addressed in this final rule. The majority of comments received were relevant and are summarized in the discussion and analysis section here. Additional comments were received in response to the CMMC supplemental documents published concurrently with the rule; the discussion and analysis of those comments is located at www.regulations.gov . Some comments received lacked relevance to the rule's content, which is limited to specific CMMC program requirements codified in the 32 CFR part 170 CMMC Program rule, responses for those comments are not provided. Any contractual requirements related to the CMMC Program rule will be implemented in the DFARS, as needed, which may result in revisions to the DFARS clause 252.204-7021, CMMC Requirements. DoD will address comments regarding the DFARS clause 252.204-7021 in a separate 48 CFR part 204CMM C Acquisition rulemaking. 1. Extension of the Public Comment Period Comment: DoD received requests from industry associations for an extension of the 60-day public comment period on the CMMC Proposed Rule that the Office of the Federal Register published on 26 December 2023. The length of extensions requested ranged from 30-60 days. Commenters argued that the proposed rule was initially published following a holiday, or more time was needed for associations to fully review member comments about the CMMC Proposed Rule prior to submitting. In addition, they argued that other rules pertaining to cyber incident reporting obligations and security of Federal Information Systems had also been published for public comment, which created a need for additional review time. Response: The DoD CIO denied requests for an extension of the 60-day public comment period. The DoD provided regular communication to the public through the DoD CMMC website and updates in the semiannual Unified Agenda in preparation for publication of the CMMC Proposed Rule to initiate the 60-day public comment period. The Department has an urgent need to improve DIB cybersecurity by further enforcing compliance with security requirements that were to be implemented by the DIB as soon as possible but not later than December 2017. 2. The CUI Program a. CUI Program Guidance Comment: Many comments were submitted related

to the NARA CUI policies or the DoD CUI Program, and while relevant for understanding CMMC requirements, those are separate policies or programs beyond the scope of the CMMC program or this rule. However, several comments recommended that the CMMC rule be revised to address them.

The estimated annual burden for a company to apply to the program or for a participating company to update POC information is \$36.31, with a total annual cost to all participants of \$319,498.67 at peak program participation. This calculation is based on 8,000 participants submitting an average of one application per year and 10% of the population (800 participants) submitting an update each year, with 20 minutes of labor per submission, at a cost of \$108.92 per hour ($\$36.31 (\$108.92 \times 1/3 \text{ hours}) \times 8,800 \text{ events} = \$319,498.67$). There is an estimated annual burden projected at \$544.60 for defense contractors voluntarily sharing cyber threat information. This is based on a defense contractor electing to submit an average of five informational reports per year with two hours of labor per voluntary submission, at a cost of \$108.92 per hour ($\$108.92 \times 2 \text{ hours each} = \$217.84 \times 5 \text{ reports} = \$1,089.20$). It is estimated that 1% of the newly eligible population will elect to join the DIB CS Program annually, which currently has approximately 1,000 participants, with program growth plateauing at 10% of the population by Year 9. The table below shows the costs to industry to voluntarily sharing cyber threat information over a 9-year period. If, in the first year of the program expanding there are 980 participants and 800 new participants join the program, there will be a total of 1,780 participants. Assuming each participant responds five times, this totals 8,900 annual responses times \$217.84 per response and will equal \$1,938,776 in total annual cost to participants, which is covered in information collection 0704-0489.

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7	Year 8	Year 9
DIB CS Participants	1,780	2,580	3,380	4,180	4,980	5,780	6,580	7,380	8,000
Voluntary Reports Received	8,900	12,900	16,900	20,900	24,900	28,900	32,900	36,900	40,000
Annual Cost	\$1,938,776	\$2,810,136	\$3,681,496	\$4,552,856	\$5,424,216	\$6,295,576	\$7,166,936	\$8,038,296	\$8,713,600

In addition, DIB CS Program participants may choose to attend meetings in conjunction with the DIB CS Program. All new participants are invited to attend an orientation session and all existing participants are invited to attend meetings on a quarterly basis. If a defense contractor chooses to send an employee to a day-long meeting each quarter, the defense contractor would incur a cost of \$1,742 ($\$108.92 \times 8 \text{ hours} = \$871.36 \times 4 \text{ meetings} = \$3,485.44$). (printed page 27835)

Costs to the Government The DoD has identified general areas of costs related to the operation of this program. First, DoD incurs costs to implement this program operationally by responding to inquiries, processing application submissions and collecting, sharing, and managing POC information for program administration and management purposes. Second, DoD incurs costs to collect, analyze, and disseminate threat information.

(Response) FDA agrees that the use of warnings to the public about specific products is important. Indeed, FDA has used this approach many times. Nonetheless, records will ensure that FDA can perform trace forward to remove the problem food from the market and traceback to identify the source of the problem. These recordkeeping requirements will also enable FDA to identify the problem food more specifically and, thus, FDA can target its public warnings on the specific problematic food.

(Comment 6) A few comments request that the agency add a "pipeline provision" that allows the use of NA (not available) in place of information where ingredient records were not maintained. The comments state that many ongoing processing operations will have some ingredients on site that have been purchased and housed in facilities for some time prior to the implementation of these regulations. In these cases, it would be a significant manpower burden (or perhaps not possible at all) to obtain or attempt to recreate all the required information on the source of those ingredients. The comments note that these ingredients have been used in food production without incident and it would be unlikely they would be involved in an act of terrorism. (Response) There is no requirement to establish and maintain records for food ingredients you received before the compliance date of these regulations. Under that scenario, however, you must establish and maintain records of that food when you release it after the compliance date of the regulations. For example, if a commercial bread bakery receives flour, eggs, and salt before the compliance date of this final rule, it does not need to keep records of the immediate previous source of when it received that food. Once the bakery uses these ingredients to bake the bread and releases the bread to nonconsumers after the compliance date of the rule, the bakery must keep the records required by § 1.1345 of this final rule regarding the immediate subsequent recipients of the bread. (Comment 7) One comment recommends the use of United Code Council standards, a system of globally recognized and implemented standards that enables traceability of products and identification of trading parties/recipients, through all locations of the supply chain. (Response) FDA does not agree. The

agency has determined that the least burdensome way of issuing the recordkeeping requirements is to specify the information that must be contained in the records, but not the format in which the records are kept. Indeed, the agency received numerous comments that argued that covered entities should be allowed to use existing records and systems.

DoD's phased implementation of the CMMC Status requirements is described in §.170.3(e). Once CMMC requirements have been implemented in the DFARS, the solicitation and resulting contract will identify the specific CMMC Status required for that procurement. Selection of a CMMC Status will be based upon careful consideration of market research and the likelihood of a robust competitive market of prospective offerors capable of meeting the requirement. In some scenarios, DoD may elect to waive application of CMMC Status requirements to a particular procurement. In such cases, the solicitation will not include a CMMC Status requirement. Such waivers may be requested and approved by the Department in accordance with DoD's internal policies and procedures. For a DoD solicitation or contract that does include CMMC requirements, including those for the acquisition of commercial items (except those exclusively COTS items) valued at greater than the micro-purchase threshold, contracting officers will not make award, or exercise an option on a contract, if the offeror or contractor does not meet the requirements for the required CMMC Status. Furthermore, CMMC requirements are required to flow down to subcontractors as prescribed in the solicitation and resulting contract at all tiers, commensurate with the sensitivity of the unclassified information flowed down to each subcontractor.

B. Legal Authority 5 U.S.C. 301 authorizes the head of an Executive department or military department to prescribe regulations for the government of his or her department, the conduct of its employees, the distribution and performance of its business, and the custody, use, and preservation of its records, papers, and property (www.govinfo.gov/content/pkg/USCODE-2009-title5/pdf/USCODE-2009-title5-partI-chap3-sec301.pdf). Section 1648 of the National Defense Authorization Act for Fiscal Year 2020 (Pub. L. 116-92) [27] directs the Secretary of Defense to develop a consistent, comprehensive framework to enhance cybersecurity for the U.S. Defense Industrial Base (DIB). The CMMC Program is an important part of this framework.

C. Community Impact This final rule impacts all prospective and actual DoD contractors and subcontractors that are handling or will handle DoD information that meets the standards for FCI or CUI on a contractor information system during performance of the DoD contract or subcontract. This final rule also impacts all companies who are performing or will perform accreditation, training, certification, or assessment functions in connection with implementation of the CMMC Program.

D. Regulatory History

FIPS 199 defines security categories for information systems based on potential impact on organizations, assets, or individuals should there be a breach of security—that is, a loss of confidentiality, integrity, or availability. FIPS 199 security categories can play an important part in defining information system boundaries by partitioning the agency's information systems according to the criticality or sensitivity of the information and information systems and the importance of those systems in accomplishing the agency's mission. This is particularly important when there are various FIPS 199 impact levels contained in one information system. The FIPS 199 requirement to secure an information FIPS 200 provides seventeen minimum security requirements for federal information and information systems. The requirements represent a broad-based, balanced information security program that addresses the management, operational, and technical aspects of protecting the confidentiality, integrity, and availability of federal information and information systems. An agency must meet the minimum security requirements in this standard by applying security controls selected in accordance with NIST SP 800-53 and the designated impact levels of the information systems. An agency has the flexibility to tailor the security control baseline in accordance with the terms and conditions set forth in the standard. Tailoring activities include: (i) the application of scoping guidance; (ii) the specification of compensating controls; and (iii) the specification of agency-defined parameters in the security controls, where allowed. The system security plan should document all tailoring activities.

From the NIST SP 800-172 Rev 3 Final Public Draft: 03.13.13E Port and Input/Output Device Access 1997 [Section (one): Physically; Logically] disable or remove [Assignment: organization-defined connection ports or input/output devices] on the following systems or system components: [Assignment: organization-defined systems or system components].

DISCUSSION Connection ports include Universal Serial Bus (USB), Thunderbolt, and Firewire (IEEE 1394). Input/output (I/O) devices include optical drives (e.g., compact disc and digital versatile disc drives), printers, and network attached storage devices. Disabling or removing such connection ports and I/O devices

helps prevent the exfiltration of information from systems and the introduction of malicious code from those ports or devices. Physically disabling or removing ports and/or

(Comment 215) Several comments suggest that the recordkeeping requirements are so onerous that compliance periods should be extended to as many as 7 years. (Response) In the PRIA, FDA assumed that the recordkeeping provisions required a limited amount of additional information over current business practices. Comments suggest that this may not be true for certain provisions. In the final rule, we have relaxed some of the more costly provisions, such as the requirement for records to contain lot code information for all persons subject to the final rule, and we have relaxed the records access requirement to 24 hours. We have also revised the requirements applicable to transporters so that they have multiple options for complying with the final rule. These modifications should reduce the costs of compliance for small businesses. In addition, we have extended the compliance dates of the final rule by 6 months to 12, 18, and 24 months for large, small, and very small businesses. The extension should further reduce the costs of compliance with the final rule because the costs of the required changes in records quality and records access fall as compliance time increases. Moreover, given the purpose of the Bioterrorism Act, FDA believes a 7-year compliance period is excessive. (Comment 216) One comment states that large carriers account for only 0.28 percent of all carriers and that 0.28 percent of all carriers should not be unfairly burdened to comply with regulations 1 year before the rest. Another comment states that across-the-board compliance dates of 18 months better serves the purposes of the Bioterrorism Act, because it reflects the large volume of food that moves through big business. (Response) The Regulatory Flexibility Act requires that special consideration be given to small businesses when such flexibility does not compromise the efficacy of the regulation. In the PRIA, FDA considered several other potential flexibility options and found that the policy of staggering the compliance dates and exempting very small retailers were the only ones that did not appreciably compromise the effectiveness of the regulation. (Comment 217) Several comments state that large businesses would likely pass the costs of the regulation on to smaller firms. In addition, the proposed regulatory flexibility from staggered compliance dates would largely be ineffective, because large businesses will require their small suppliers to comply with the regulation to ensure their own compliance. Another comment suggests extending the compliance dates to 18 months for large businesses and 36 months to small businesses but acknowledged that staggering compliance dates would complicate business practices.

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Defense Defense Acquisition Regulations System [Docket Number DARS-2020-0004; OMB Control Number 0704-0225] AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD). ACTION: Notice. SUMMARY: The Defense Acquisition Regulations System has submitted to OMB for clearance, the following proposed revision and extension of a collection of information under the provisions of the Paperwork Reduction Act. DATES: DoD will consider all comments received by June 29, 2020. SUPPLEMENTARY INFORMATION: Title and OMB Number: Defense Federal Acquisition Regulation Supplement (DFARS), Part 204, Administrative Matters and Related Clause at 252.204; OMB Control Number 0704-0225. Type of Request: Revision and extension. Affected Public: Businesses or other for-profit and not-for profit institutions. Respondent's Obligation: Required to obtain or retain benefits. Number of Respondents: 545. Responses per Respondent: Approximately 5.57. Annual Responses: 3,036. Average Burden per Response: Approximately 3 hours. Annual Burden Hours: 9,108. Reporting Frequency: On occasion. Needs and Uses: DFARS 204.404-70(a) prescribes use of DFARS Clause 252.204-7000, Disclosure of Information, in contracts that require the contractor to access or generate unclassified information that may be sensitive and inappropriate for release to the public. The clause requires the contractor to obtain approval of the contracting officer before release of any unclassified contract-related information outside the contractor's organization, unless the information is already in the public domain. In requesting this approval, the contractor must identify the specific information to be released, the medium to be used, and the purpose for the release. Upon receipt of a contractor's request, the

Government reviews the information provided by the contractor to determine if it is sensitive or otherwise inappropriate for release for the stated purpose. Comments and recommendations on the proposed information collection should be sent to Ms. Jasmeet Sehra, DoD Desk Officer, at Oira_submission@omb.eop.gov. Please identify the proposed information collection by DoD Desk Officer and the Docket ID number and title of the information collection. You may also submit comments, identified by docket number and title, by the following method: Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments. DoD Clearance Officer:

DFARS 252.204-7008 (Compliance with Safeguarding CDI Controls) Requires offerors to represent that they will implement NIST SP 800-171 security requirements. DFARS 252.204-7008 works in conjunction with the CMMC program. While 252.204-7008 establishes the contractual requirement, CMMC (under 32 CFR Part 170) provides the assessment framework. Phase 1 began November 10, 2025, with Phase 2 (C3PAO certification requirements) scheduled for November 10, 2026.

3.1.3 of [1]) shall be generated using the pseudorandom key generation method specified in Algorithm 10' in Section 7.

Identify the system safeguards; for example, storage in safes, vaults, locked cabinets or rooms, use of guards, visitor controls, personnel screening, computer systems software, and so on. Describe safeguards fully without compromising system security. (n) Retention and Disposal. State how long AR 25-400-2 requires the activity to maintain the records. Indicate when or if the records may be transferred to a Federal Records Center and how long the record stays there. Specify when the Records Center sends the record to the National Archives or destroys it. Indicate how the records may be destroyed. (o) System Manager(s) and Address: List the position title and duty address of the system manager. For decentralized systems, show the locations, the position, or duty title of each category of officials responsible for any segment of the system. (p) Notification Procedures: List the title and duty address of the official authorized to tell requesters if their records are in the system. Specify the information a requester must submit; for example, full name, military status, SSN, date of birth, or proof of identity, and so on. (q) Record Access Procedures: Explain how individuals may arrange to access their records. Include the titles or categories of officials who may assist; for example, the system manager. (r) Contesting Records Procedures: The standard language to use is 'The Army's rules for accessing records, and for contesting contents and appealing initial agency determinations are contained in Army Regulation 25-71; 32 CFR part 505 ; or may be obtained from the system manager.' (s) Record Source Categories: Show categories of individuals or other information sources for the system. Do not list confidential sources protected by 5 U.S.C. 552a(k)(2) , (k)(5), or (k)(7). (t) Exemptions Claimed for the System: Specifically list any approved exemption including the subsection in the Act. When a system has no approved exemption, write 'none' under this heading. Appendix G to Part 505 Management Control Evaluation Checklist (a) Function. The function covered by this checklist is DA Privacy Act Program. (b) Purpose. The purpose of this checklist is to assist Denial Authorities and Activity Program Coordinators in evaluating the key management controls listed below. This checklist is not intended to cover all controls. (printed page 46070) (c) Instructions. Answer should be based on the actual testing of key management controls (e.g., document analysis, direct observation, sampling, simulation, other). Answers that indicate deficiencies should be explained and corrective action indicated in supporting documentation. These management controls must be evaluated at least once every five years. Certificate of this evaluation has been conducted and should be accomplished on DA Form 11-2-R (Management Control Evaluation Certification Statement). Test Questions a. Is a Privacy Act Program established and implemented in your organization?

(n) Retention and Disposal. State how long AR 25-400-2 requires the activity to maintain the records. Indicate when or if the records may be transferred to a Federal Records Center and how long the record stays there. Specify when the Records Center sends the record to the National Archives or destroys it. Indicate how the records may be destroyed. (o) System Manager(s) and Address: List the position title and duty address of the system manager. For decentralized systems, show the locations, the position, or duty title of each category of officials responsible for any segment of the system. (p) Notification Procedures: List the title and duty address of the official authorized to tell requesters if their records are in the system. Specify the information a requester must submit; for example, full name, military status, SSN, date of birth, or proof of identity, and so on. (q) Record Access Procedures: Explain how individuals may arrange to access their records.

Include the titles or categories of officials who may assist; for example, the system manager. (r) Contesting Records Procedures: The standard language to use is "The Army's rules for accessing records, and for contesting contents and appealing initial agency determinations are contained in Army Regulation 25-71; 32 CFR part 505 ; or may be obtained from the system manager." (s) Record Source Categories: Show categories of individuals or other information sources for the system. Do not list confidential sources protected by 5 U.S.C. 552a(k)(2) , (k)(5), or (k)(7). (t) Exemptions Claimed for the System: Specifically list any approved exemption including the subsection in the Act. When a system has no approved exemption, write "none" under this heading. (printed page 24512) Appendix G to Part 505-Management Control Evaluation Checklist (a) Function. The function covered by this checklist is DA Privacy Act Program. (b) Purpose. The purpose of this checklist is to assist Denial Authorities and Activity Program Coordinators in evaluating the key management controls listed below. This checklist is not intended to cover all controls. (c) Instructions. Answer should be based on the actual testing of key management controls (e.g., document analysis, direct observation, sampling, simulation, other). Answers that indicate deficiencies should be explained and corrective action indicated in supporting documentation. These management controls must be evaluated at least once every five years. Certificate of this evaluation has been conducted and should be accomplished on DA Form 11-2-R (Management Control Evaluation Certification Statement). Test Questions. a. Is a Privacy Act Program established and implemented in your organization? b. Is an individual appointed to implement the Privacy Act requirements?

This rule promotes uniformity in the DoD Privacy Program across the entire Department and provides notice of DoD's privacy procedures as well as other privacy protections to the public with no increase in costs on the public. This streamlined rule addresses Department procedures concerning notification of, access to, and amendment of records covered by the Privacy Act, as well as requests for accounting of disclosures of such records. It also addresses exemptions from provisions of the Privacy Act and incorporates all Department exemption rules. The following sections of the previous rule have also been removed: Subpart A: §-310.1 Reissuance, §-310.3 Applicability and scope, §-310.5 Policy, §-310.6 Responsibilities, §-310.8 Rules of Conduct, and §-310.9 Privacy boards and office, composition and responsibilities; Subpart B-System of Records; Subpart C-Collecting Personal Information; Subpart E-Disclosure of Personal Information to Other Agencies and Third Parties; Subpart G-Publication Requirements; Subpart H-Training Requirements; Subpart I-Reports; Subpart J-Inspections; Subpart K-Privacy Act Violations (portions of this section can now be found in the current §-310.8);, Subpart L-Computer Matching Program Procedures; and all of Appendices A-H. These sections largely consist of internal policy guidance to DoD personnel and are more appropriately addressed in DoD 5400.11-R, "Department of Defense Privacy Program," available at <http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodm/540011r.pdf> . To the extent that existing provisions of DoD 5400.11-R conflict with current OMB guidance or this updated Part 310, OMB guidance and this Part shall control. This rule also incorporates into §-310.13 the final version of the exemption rule first published on October 17, 2018 (83 FR 52317 ; docket DOD-2018-OS-0075-0001) as an interim final rule, claiming certain Privacy Act exemptions for the Personnel Vetting Records System (83 FR 52420) Authority: The Privacy Act, 5 U.S.C. 552a , requires each agency that maintains a system of records to promulgate rules, pursuant to notice and public comment according to 5 U.S.C. 552a(f) "Agency Rules." Expected Cost Savings DoD currently has 20 other separate component-level privacy rules. Following publication of this final rule, DoD will repeal all component-level privacy rules. This rulemaking will reduce costs and time for the public by consolidating the requirements for requests for access to and amendment of DoD information.

esses at the organization level. In addition, it establishes responsibility and accountability for the controls implemented within an organization's information systems and inherited by those systems. assess; authorization to operate; authorization to use; authorizing official; categorize; common control; common control authorization; common control provider; continuous monitoring; control assessor; control baseline; cybersecurity framework profile; hybrid control; information owner or steward; information security; monitor; ongoing authorization; plan of action and milestones; privacy; privacy assessment report; privacy control; privacy plan; privacy risk; risk assessment; risk executive function; risk management; risk management framework; security; security assessment report; security control; security engineering; security plan; security risk; senior agency information security officer; senior agency official for privacy; supply chain risk management; system development life cycle; system owner; system privacy officer; system security officer; system-specific control.

Nonrecurring Engineering Costs: Estimates consist of hardware, software, and the associated labor to implement the same. Costs associated with implementing the requirements defined in FAR 52.204-21 and NIST SP 800-171 Rev 2 are assumed to have been implemented and, therefore, are not accounted for in this cost estimate. As such, these costs only appear in CMMC Level 3. If nonrecurring engineering costs are referenced, they are only accounted for as a one-time occurrence and are reflected in the year of the initial assessment. Recurring Engineering Costs: Estimates consist of annually recurring fees and associated labor for technology refresh. Costs associated with implementing the requirements defined in FAR 52.204-21 and NIST SP 800-171 Rev 2 are assumed to have been implemented and, therefore, are not accounted for in this cost estimate. As such, these costs only appear in CMMC Level 3. Assessment Costs: Estimates consist of activities for pre-assessment preparations (which includes gathering and/or developing evidence that the assessment objectives for each requirement have been satisfied), conducting and/or participating in the actual assessment, and completion of any post-assessment work. Assessment costs are represented by notional phases. Assessment costs assume the company passes the assessment on the first attempt (conditional with an allowable POA&M or final). Each phase includes an estimate of hours to conduct the assessment activities including: (printed page 89107) (c) Labor Hour Estimates for a Company (and any ESP Support) To Prepare for and Participate in the Assessment (d) C3PAO Cost Estimates for Companies Pursuing a Certification Labor hour estimates for certified or authorized assessors to work with the small business to conduct the actual assessment. (e) Assessment Costs Broken Down Into Phases Phase 1: Planning and preparing for the assessment. Phase 2: Conducting the assessment (self or C3PAO). Phase 3: Reporting of Assessment Results. Phase 4: POA&M Closeout (for CMMC Level 3 only, where allowed, if applicable). CMMC allows a limited open Plan of Action and Milestones (POA&M) for a period of 180 days to remediate the POA&M, see 32 CFR 170.21 . Affirmations: Estimates consist of costs for a contractor or subcontractor to submit to SPRS an initial affirmation of compliance that the contractor information system is compliant with and will maintain compliance with the requirements of the applicable CMMC Level. If POA&Ms are allowed, an affirmation must be submitted with the POA&M closeout. With the exception of Small Entities for Level 1 and Level 2, it is assumed the task requires the same labor categories and estimated hours as the final reporting phase of the assessment. The categories and rates used for estimating purposes were compiled by subject matter experts based on comparable industry data and are defined in the table. (c) Cost Analysis/Estimates by CMMC Level CMMC Level 1 Self-Assessment and Affirmation Costs for Small Business Entities

), which states that, in any action to enforce the FD&C Act's requirements respecting foods, drugs, devices, and cosmetics, any necessary connection with interstate commerce is presumed. Likewise, this outcome is consistent with Congress's goal in enacting the Bioterrorism Act, because the potential harm from bioterrorist attacks or other food-related emergencies can be great, whether or not the food moves from one State to another. The usefulness of recordkeeping also can be significant in food emergencies where interstate shipment has not occurred. 3. Foreign Facilities (Comment 25) Several comments assert that FDA lacks the statutory authority to apply the recordkeeping and records inspection provisions of the Bioterrorism Act to foreign facilities. According to the comments, section 306 of the Bioterrorism Act does not indicate, expressly or by inference, that Congress intended the provisions of that section to apply to overseas persons or facilities. They also contend that nothing in the legislative history of the Bioterrorism Act indicates Congress intended that section 306 of the Bioterrorism Act should apply to foreign facilities. The comments point out that there is a longstanding presumption in the law that legislation does not apply outside the borders of the United States, unless Congress clearly and expressly states such an intent. The comments state that, under governing case law, FDA may not infer legislative intent to give a statute extraterritorial reach. A few comments indicated that FDA failed to provide legal justification for applying the regulation to foreign facilities. The comments pointed out that FDA's stated belief that this was the most efficient and effective strategy for obtaining needed information on food from foreign countries cannot overcome the clear indications that Congress did not intend section 306 of the Bioterrorism Act to apply to foreign entities. One comment suggests that FDA clarify that the recordkeeping requirements do not apply outside of the United States, but serve only as a guideline to facilitate a rapid response through cooperation at intergovernment and international industry levels. One comment states that it has been acknowledged in the context of recent CBP initiatives that CBP has no jurisdiction in foreign countries. The comment notes that, consequently, mutual agreements on cooperation between CBP and some foreign governments have been reached to address together their shared security objectives.

Comments suggested that FDA pursue a similar approach for safety and security of foods.

(2) OSCs must submit an affirmation of compliance into SPRS, as specified in paragraph (a)(2) of this section. (c) Procedures. (1) Assessment. The CMMC Level 3 Certification Assessment process includes: (i) CMMC Level 2 Final Certification Assessment. CMMC Level 2 Final Certification Assessment must be obtained for information systems within the Level 3 CMMC Assessment Scope prior to assessment against the CMMC Level 3 security requirements of NIST SP 800-172A (incorporated by reference, see § 170.2). The OSC must have a CMMC Level 2 Final Certification Assessment for the same scope as the Level 3 assessment. Asset requirements differ for each CMMC Level. Scoping differences are set forth in § 170.19(e). (ii) CMMC Level 3 Certification Assessment. DCMA DIBCAC will perform an assessment of the CMMC Level 3 security requirements in accordance with NIST SP 800-172A for information systems within the Level 3 CMMC Assessment Scope, determined in accordance with § 170.19(d). The assessment will be scored in accordance with the CMMC Scoring Methodology set forth in § 170.24 and final results are subsequently communicated to the OSC through a CMMC Assessment Findings Report. In the execution of the CMMC Level 3 Certification Assessment, DCMA DIBCAC may perform checks of CMMC Level 2 security requirements in accordance with CMMC Level 3 scoping. If DCMA DIBCAC identifies that a Level 2 security requirement is NOT MET, the Level 3 assessment process may be placed on hold or terminated. (2) Security requirement re-evaluation. A security requirement under assessment that is NOT MET may be re-evaluated during the course of the assessment and for 10 business days following the active assessment period if all of the following conditions exist: (i) Additional evidence is available to demonstrate the security requirement has been MET; (ii) The additional evidence does not materially impact previously assessed security requirements; and (iii) The CMMC Assessment Findings Report has not been delivered. (3) POA&M. If a POA&M exists after the initial assessment, a POA&M closeout assessment will be performed by DCMA DIBCAC when all remaining security requirements have been implemented. The POA&M closeout assessment must be performed within the 180-day closeout period to achieve the assessment requirement for Final Certification. Additional guidance is located in § 170.21 and in the guidance document listed in paragraph (a) of appendix A to this part. (4) Artifact retention and integrity.

The NATO has a registry system for the receipt and distribution of NATO documents within each NATO member nation. The central distribution point for the United States is the CUSR now located at 9301 Chapek Road, Building 1458, Fort Belvoir, Virginia 22060. (i) The CUSR establishes sub registries at USG organizations for further distribution and control of NATO documents. Sub registries may establish control points at contractor facilities. (ii) COSMIC TOP SECRET, NATO SECRET, and all ATOMAL documents will be transferred through the registry system. NATO CONFIDENTIAL documents provided as part of NATO infrastructure contracts will be transmitted via government channels in compliance with paragraph (d) in this section. (15) Hand carrying. NATO SECRET and NATO CONFIDENTIAL documents may be hand carried across international borders if authorized by the GCA. The courier will be issued a NATO Courier Certificate by the CSA. When hand carrying is authorized, the documents will be delivered to a U.S. organization at NATO, which will transfer them to the intended NATO recipient. (16) Reproduction. Reproductions of COSMIC TOP SECRET and COSMIC TOP SECRET ATOMAL information will be performed by the responsible Registry. The reproduction of NATO SECRET and CONFIDENTIAL documents may be authorized to meet contractual requirements unless reproduction is prohibited by the contracting entity. Copies of COSMIC TOP SECRET, NATO SECRET, and ATOMAL documents will be serially numbered and controlled and accounted for in the same manner as the original. (17) Disposition. (i) Generally, all NATO classified documents will be returned to the contracting activity that provided them on completion of the contract. Documents provided in connection with an invitation to bid also will be returned immediately if the bid is not accepted or submitted. (ii) NATO classified documents may also be destroyed when permitted. COSMIC TOP SECRET and COSMIC TOP SECRET ATOMAL documents will be destroyed by the registry that provided the documents. (A) Destruction certificates are required for all NATO classified documents except NATO CONFIDENTIAL. (B) The destruction of COSMIC TOP SECRET, NATO SECRET, and all ATOMAL documents must be witnessed. (18) Accountability records. Logs, receipts, and destruction certificates are required for NATO classified information. Records for NATO documents will be maintained separately from records of non-NATO documents (methods such as separate drawers of a container). (i) COSMIC TOP SECRET and all ATOMAL documents will be recorded on logs maintained separately from other NATO logs and will be assigned unique serial control numbers. (ii) Additionally, disclosure records bearing the name and signature of each person who has access are required for all COSMIC TOP SECRET, COSMIC TOP SECRET ATOMAL, and all other ATOMAL or NATO classified documents to which special access limitations have been applied.

Several respondents commented on the need for the rule to specify relevant supply chain risk management (SCRM) standards, controls, etc. One respondent stated that while it does not suggest DoD explicitly endorse one set of controls over another, industry does need some guidance beyond maintain controls. There must be consistency in the call out of the relevant SCRM standards and ratings in solicitations so as not to create an unnecessary administrative burden for contractors to select suppliers and subcontractors based on a moving target of standards and ratings.

Notwithstanding making a reference to the Regulatory Flexibility Act on page 69269 in the narrative of the Federal Register document that the rule recognizes the need for information technology contractors to implement appropriate safeguards and countermeasures to minimize supply chain risk, one respondent commented that the interim rule does not provide any guidance about what metric will be applied to its products, services, and business models. The respondent further stated that the rule requires contractors to maintain controls in the provision of supplies and services to the Government to minimize supply chain risk but does not provide any guidance to contractors or Government contracting officers as to the type of controls to be maintained to meet this requirement, recommending that DoD issue additional guidance that uses existing and proposed global, consensus-based standards. One respondent commented that the absence of what standard DoD will use to evaluate supply chain risks is likely to increase the time and cost of pursuing and performing Government contracts. Response: The final rule removes the language requiring contractors to (printed page 67247) maintain controls and now states that the contractor shall mitigate supply chain risk in the provision of supplies and services to the Government. This change was made because the DFARS cannot identify specific standards or controls as this would be up to each requiring activity to identify if any standards or controls are necessary particular to the risks and risk tolerance that would apply to each procurement. DoD continues to work with industry to identify risk management best practices and promulgate best practice documents for consideration.

f. Verification/Inspection Comment: One respondent commented that suppliers should meet the requirement to provide supply chain security verification by documentation, suggesting that all levels of the supply chain Government, prime contractors, subcontractors, and parts suppliers should be in compliance with supply chain integrity requirements and have records and production locations available for inspection if necessary. Response: The practices, documentation, and information suggested in the comment are important tools in protecting against supply chain risk. However, these suggestions do not comply with the legislative requirements to implement section 806.

5. Process

a. General Comment:

that would be associated with the proposed standard for patch management. The proposed implementation specification for policies and procedures at proposed paragraph (a)(4)(ii)(A) would require a regulated entity to establish written policies and procedures for identifying, prioritizing, acquiring, installing, evaluating, and verifying the timely installation of patches, updates, and upgrades throughout its electronic information systems that create, receive, maintain, or transmit ePHI or that otherwise affect the confidentiality, integrity, or availability of ePHI.

Under the proposed implementation specification for maintenance at proposed paragraph (a)(4)(ii)(B), a regulated entity would be required to review its patch management written policies and procedures at least once every 12 months and modify them as reasonable and appropriate based on that review.

The proposed implementation specification for application at proposed paragraph (a)(4)(ii)(C) would require a regulated entity to patch, update, and upgrade the configurations of its relevant electronic information systems in accordance with its written policies and procedures and based on the results of: the regulated entity's risk analysis that would be required by proposed 45 CFR 164.308(a)(2), the vulnerability scans that would be required under proposed 45 CFR 164.312(h)(2)(i), the monitoring of authoritative sources that would be required under proposed 45 CFR 164.312(h)(2)(ii), and penetration tests proposed at 45 CFR 164.312(h)(2)(iii). The proposal would require that such actions be taken within a reasonable and appropriate period of time, except to the extent that an exception in proposed paragraph (h)(2)(ii)(D) applies.

Specifically, a reasonable and appropriate period of time to patch, update, or upgrade the configuration of a relevant electronic information system would be within 15 calendar days of identifying the need to address a critical risk where a patch, update, or upgrade is available; or, where a patch, update, or upgrade is not available, within 15 calendar days of a patch, update, or upgrade becoming available. The proposal would require that, within 30 calendar days of identifying the need to address a high risk, [498] a regulated entity patch, update, or upgrade the configuration of a relevant electronic information system where a patch, update, or upgrade is available; or, where a patch, update, or upgrade is not available, within 30 calendar days of a

patch, update, or upgrade becoming available. For all other patches, updates, or upgrades to the configurations of relevant electronic information systems, a reasonable and appropriate period of time would be determined by the regulated entity's written policies and procedures for identifying, prioritizing, acquiring, installing, evaluating, and verifying the timely installation of patches, updates, and upgrades.

program management, review of security controls, risk management, security awareness training and education (including specific training course and awareness materials), and security planning, including OCR's enforcement of the HIPAA Security and Privacy rules; techniques for developing risk assessments and contingency planning; breach notification; the security of health devices; and security considerations for the use of new media and wireless technologies in healthcare environments.

Control EQ-1: be easy to integrate | Provide a Mechanism for Verifying Software Release Integrity (PS.2): Help software acquirers ensure that the software they acquire is legitimate and has not been tampered with. | 5.2.1 Secure CD Pipeline -Case Study (GitOps) | The following SSC security tasks should be applied when creating configuration data prior to deployment, capturing all data pertaining to a particular release, modifying software during runtime, and performing monitoring operations: · GitOps-REQ-2: Package managers that facilitate GitOps should preserve all data on the packages that were released, including the version numbers of all modules, all associated configuration files, and other metadata as appropriate for the software operational environment. | Archive and Protect Each Software Release (PS.3): Preserve software releases in order to help identify, analyze, and eliminate vulnerabilities discovered in the software after release.

Many individual considerations for cybersecurity and privacy were discussed. One consistent point of discussion was the scope and scale of data needed to make immersive technologies function. Specifically, the community highlighted that the context in which data processing takes place and privacy and cybersecurity risks arise (i.e., immersive worlds powered by granular biometric, spatial, and behavioral/emotional data) is unique to immersive technologies. Privacy and cybersecurity impacts may be amplified by immersive technologies due to the nature and scale of data processing. Novel types of data processing activities include biometrics for uses other than identity management, real-time spatial mapping, and the The community recommended several areas related to immersive technologies that could benefit from additional standardization efforts. Usability is a hurdle for hardware and software standards (e.g., ways to manage multiple accounts within the same device). Identity standards for immersive tech could be helpful to address this. Standards for trustworthy AI (e.g., watermarking and other content authentication) would be welcomed.

(b) FIPS PUB 201-3, titled ·Personal Identity Verification (PIV) of Federal Employees and Contractors· establishes a standard for a PIV system that meets the control and security objectives of Homeland Security Presidential Directive-12. It is based on secure and reliable forms of identity credentials issued by the Federal Government to its employees and contractors. These credentials are used by mechanisms that authenticate individuals who require access to federally controlled facilities, information systems, and applications. This Standard addresses requirements for initial identity proofing, infrastructure to support interoperability of identity credentials, and accreditation of organizations and processes issuing PIV credentials. This document is incorporated by reference as a source for definitions. (c) NIST SP 800-37, revision 2, titled ·Risk Management Framework for Information Systems and Organizations: A System Life Cycle Approach for Security and Privacy· describes the Risk Management Framework (RMF) and provides guidelines for applying the RMF to information systems and organizations. The RMF provides a disciplined, structured, and flexible process for managing security and privacy risk that includes information security categorization; control selection, implementation, and assessment; system and common control authorizations; and continuous monitoring. The RMF includes activities to prepare organizations to execute the framework at appropriate risk management levels. The RMF also promotes near real-time risk management and ongoing information system and common control authorization through the implementation of continuous monitoring processes; provides senior leaders and executives with the necessary information to make efficient, cost-effective, risk management decisions about the systems supporting their missions and business functions; and incorporates security and privacy into the system development life cycle. Executing the RMF tasks links essential risk management processes at the system level to risk management processes at the organization level. In addition, it establishes responsibility and

accountability for the controls implemented within an organization's information systems and inherited by those systems. This document is incorporated by reference as a source for definitions. (d) NIST SP 800-39, titled "Managing Information Security Risk: Organization, Mission, and Information System View" provides guidance for an integrated, organization-wide program for managing information security risk to organizational operations (i.e.,

While the Department disagrees with the court's interpretation that merely requiring employees to sign an agreement to encrypt portable devices is sufficient to comply with its Security Rule obligations to implement a mechanism to encrypt and decrypt ePHI, the Department believes that additional clarity is warranted to ensure that regulated entities understand their obligation to have encryption mechanisms in place and deployed throughout the regulated entity's enterprise to ensure the confidentiality, integrity, and availability of ePHI. Several technical safeguards currently require regulated entities to implement a "mechanism" as part of complying with the associated standard. Given that written policies and procedures alone are insufficient to protect ePHI, and the misinterpretation of what it means to implement a mechanism also could lead to inadequate protection of ePHI, the Department believes that the Security Rule must be revised, consistent with its statutory mandate, as discussed in greater detail above. D. It Is Reasonable and Appropriate To Strengthen the Security Rule To Address the Changes in the Health Care Environment and Clarify the Compliance Obligations of Regulated Entities 1. Congress and the Department Anticipated That Security Standards Safeguards Would Evolve To Address Changes in the Health Care Environment By requiring that regulated entities maintain reasonable and appropriate safeguards to protect against reasonably anticipated threats or hazards or unauthorized uses or disclosures of ePHI, Congress clearly anticipated that the administrative, physical, and technical safeguards implemented to protect the security of ePHI would need to change in response to changes in the environment in which health care is provided. [261] As the health care environment and the operations of regulated entities evolve, so must the protections for ePHI and the information systems used to create, receive, maintain, or transmit it. For example, regulated entities must be expected to adopt safeguards that address new risks to the security of ePHI, such as those posed by maintaining ePHI in the cloud; the connection of medical devices and other technology to networks; and the connection of information systems used to create, receive, maintain, or transmit ePHI to the same networks as those do not perform such activities. After all, it is reasonable to anticipate that there will be new threats or hazards to ePHI or efforts by unauthorized persons to use or disclose such ePHI in an increasingly connected environment.

As part of standing up version 1 of the CMMC Program, the Department of Defense published a DFARS interim final rule, "Assessing Contractor Implementation of Cybersecurity Requirements" in the Federal Register on September 29, 2020 (85 FR 61505). The Department received approximately 750 comments on the DFARS interim final rule pertaining to elements of the CMMC Program that are now being addressed in this rule. Those comments are summarized and addressed in the discussion and analysis. In addition to comments on elements of the CMMC Program, DoD also received comments on the associated DFARS text, solicitation provisions, and contract clauses relating to the CMMC Program. The CMMC Program requirements proposed in this rule will be implemented in the DFARS, as needed, which may result in changes to current DoD solicitation provisions and contract clauses relating to DoD's cybersecurity protection requirements, including DFARS clause 252.204-7021, CMMC Requirements. DoD will address comments regarding the DFARS clause 252.204-7021 in a separate 48 CFR rulemaking. 1. Service Providers Comment: Multiple commenters asked about applicability of the CMMC Program to a variety of service providers. One commenter requested clarification regarding how CUI controls apply to internet Service Providers and their globally sourced service support because of the prohibition of foreign dissemination for CUI. Two commenters suggested that common carrier telecommunications (often termed as Plain-Old-Telephone-Services (POTS)) and similar commercial services (cloud services, external service providers) should be treated as commercial off-the-shelf (COTS), and so excluded from CMMC certification requirements. One commenter expressed concerns about the impact of the rule on the telecom industry. One commenter recommended that, to limit the burden of CMMC implementation, contractors providing commercial services to support COTS items, such as technical support for software, should receive the same exceptions as other COTS contracts. Response: The CMMC Program will result in cybersecurity protection and assessment requirements for defense contractors and subcontractors. CMMC Level requirements will apply only if a defense contractor or subcontractor handles FCI or CUI on its own contractor information systems. If so, then under CMMC, the contractor or subcontractor will be required to comply with the cybersecurity protection and assessment requirements associated with the appropriate Level. As such, CMMC Level

requirements will not apply to internet Service Providers or other telecommunications service providers (i.e., common carriers), unless those entities themselves are or intend to become defense contractors or subcontractors. In addition, there is no general prohibition of foreign dissemination for CUI, although certain CUI may be subject to export restrictions. Commercial item determinations per 48 CFR 15

One commenter presumed that only U.S.-based Cloud Service Providers (CSPs) may become FedRAMP authorized, and asserted a need to authorize or accredit foreign-based CSPs that foreign DIB contractors might use while still achieving CMMC compliance. Another asked how foreign small businesses can comply with CMMC without access to U.S. approved CSPs. One commenter asked for guidance on how to get foreign products and services, such as encryption and decryption mechanisms, approved for use in information systems that require CMMC assessment. One commenter suggested that the CMMC program permit assessment by C3PAOs and assessors accredited in accordance with other ISO/IEC standards than those identified in this rule. They cited ISO/IEC 27001 or 9901 as suitable alternate ISO/IEC standards. Response: The DoD declines to delay CMMC Program implementation for non-U.S. organizations. International businesses will not receive special accommodations because the CMMC Program's phased implementation will impact both U.S. and non-U.S. defense contractors equally. The implementation plan described in the rule does not promote or prioritize certification assessments of any contractor over any other contractor. All companies, regardless of location or nationality, will have access to any authorized C3PAO. The rule does not preclude non-U.S. citizens or foreign-owned C3PAOs from operating in the U.S. Additionally, U.S. owned C3PAOs may operate in a foreign nation. As stated in the rule, C3PAOs must meet the criteria in §.170.9. Non-U.S. organizations and employees that meet all the requirements in §§.170.9 and 170.11 will not be prohibited from operating as a C3PAO within the U.S. or abroad. A list of authorized C3PAOs is available on the current CMMC AB marketplace. DoD does not concur with the recommendation to delete §.170.9(b)(5) content identifying FOCI requirements. Those details for complying with FOCI are necessary for understanding the requirement. Some commenters noted differences between the rule content and information on the CMMC AB website. The CMMC AB is part of the public and had no access to advance information prior to publication of the proposed rule. The rule takes precedence in the event of any discrepancy with CMMC AB materials. The document `Career Pathway Certified Assessor 612', dated 2020, has been replaced by a regularly updated DoD Cyberspace Workforce Framework which may be found at <https://public.cyber.mil/dcwf-work-role/security-control-assessor/> . Intermediate and Advanced Foundational Qualification Options in the DoD Cyberspace Workforce Framework's Security Control Assessor (612) Work Role are available to foreign nationals. The rule has been updated to reflect this reference update.

The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the Nation-s measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology. ITL-s responsibilities include the development of management, administrative, technical, and physical standards and guidelines for the cost-effective security and privacy of other than national security-related information in Federal information systems.

.....

(i) One safeguard plan is the development and use of a Privacy Impact Assessment (PIA) mandated by

the E-Gov Act of 2002, Section 208. The Office of Management and Budget specifically directs that a PIA be conducted, reviewed, and published for all new or significantly altered information in identifiable form collected from or about the members of the public. The PIA describes the appropriate administrative, technical, and physical safeguards for new automated systems. This will assist in the protection against any anticipated threats or hazards to the security or integrity of data, which could result in substantial harm, embarrassment, inconvenience, or unfairness to any individual on whom information is maintained. Contact your local Information Officer for guidance on conducting a PIA. (ii) The development of appropriate safeguards must be tailored to the requirements of the system as well as other factors, such as the system environment, location, and accessibility. § 505.4 Collecting personal information. (a) General provisions. (1) Employees will collect personal information to the greatest extent practicable directly from the subject of the record. This is especially critical, if the information may result in adverse determinations about an individual's rights, benefits, and privileges under federal programs (See 5 U.S.C. 552a(e)(2)). (2) It is unlawful for any Federal, State, or local government agency to deny anyone a legal right, benefit, or privilege provided by law for refusing to give their SSN unless the law requires disclosure, or a law or regulation adopted before January 1, 1975, required the SSN or if DA uses the SSN to verify a person's identity in a system of records established and in use before that date. Executive Order 9397 (issued prior to January 1, 1975) authorizes the Army to solicit and use the SSN as a numerical identifier for individuals in most federal records systems. However, the SSN should only be collected as needed to perform official duties. Executive Order 9397 does not mandate the solicitation of SSNs from Army personnel as a means of identification.

Back to Citation 48. ·A person needs to enter the information into SPRS, which should only take five minutes. Back to Citation 49. ·DoD utilized subject matter expertise from Defense Pricing and Contracting (DPC) and DCMA DIBCAC to estimate the Nonrecurring and Recurring Engineering Costs. Back to Citation 50. ·Costs for closing out POA&Ms are included at Level 3 because the requirement to implement a subset of NIST SP 800-172 Feb2021 security requirements is new with the CMMC rule. These costs are not included at Level 2 because the implementation of all NIST SP 800-171 R2 security requirements are already required. Back to Citation 51. ·Costs for closing out POA&Ms are included at Level 3 because the requirement to implement a subset of NIST SP 800-172 Feb2021 security requirements is new with the CMMC rule. These costs are not included at Level 2 because the implementation of all NIST SP 800-171 R2 security requirements is already required. Back to Citation 52. ·Nonrecurring engineering costs were first incurred in FY20. The cost has inflation applied to put the value in 2023 base year (BY) dollars. Back to Citation 53. ·The cost for the recurring engineering cost is based on the costs incurred in FY20 and FY21. The values for Year 1 (FY20) and Year 2 (FY21) are actual historic values that have inflation applied to them to put them in base year 2023 dollars. Every proceeding years' recurring engineering cost is based on the average of the two historic actual values. Back to Citation 63. ·Again, it is assumed that that DIB contractors and subcontractors have already implemented the 15 basic safeguarding requirements in FAR clause 52.204-21. Back to Citation 64. ·An external service provider is assumed to be an Information Assurance Specialist Level 7 with an hourly rate of \$260. Back to Citation

No longer draft, coordinate and submit proposed national interest determinations (NIDs) for access to proscribed information for the small number of U.S. contractors with NTIB ownership operating under an SSA. There will be a small cost savings because DoD Components (i.e., Departments of the Army, Navy and Air Force, DARPA, DIA, NSA, NRO, NSA and assorted smaller organizations) will no longer have to take an estimated 40 hours a year to draft, coordinate and submit NIDs for the small

number of U.S. contractors with NTIB ownership operating under an SSA. There will be minimal administrative changes to the DoD information system to remove the NID requirement for the small number of NTIB covered entities. DoD already must evaluate any changes submitted to FOCI information for U.S. cleared legal entities under its security cognizance which would include a determination if one of these cleared legal entities remains a covered NTIB entity. On average, DoD receives an estimated one FOCI changed condition report annually from an NTIB covered cleared legal entity. An estimated 10 government personnel with an estimated labor rate of a GS11 step 5 would save 40 hours in year 1 through year 20. These assumptions imply costs saving of approximately \$28 thousand each year. e. Update training materials, job aids and associated tools for U.S. cleared legal entities and USG agencies on these changes to the NISPOM. CSAs will have to update existing training materials and products used by U.S. cleared legal entities and USG agencies so that they have all needed information on the changes being implemented in this NISPOM rule. Examples of those training materials and products range from online or in person training, job aids and web tools. DoD provides NISP training materials to the largest population, to include USG agencies and U.S. cleared legal entities, and estimates the time impact in year one is 1,128 hours for each of six individuals to update all the training materials with 564 hours in year two and 282 hours each year for maintenance of those materials in year 3 through year 20. The labor rate for those 6 personnel is estimated to be a GS13 step 5. These assumptions imply costs of \$0.67 million in year one; \$0.34 million in year 2; and \$0.17 million in each year 3 through 20. C. Total Costs/Cost Savings In summary the estimated public and USG costs/cost savings are (1) present value costs of \$150.26 million and annualized costs of \$10.52 million for the public; and, (2) present value cost of \$10.82 million and annualized costs of \$0.76 million for the USG. Throughout, labor rates are adjusted upward by 100% to account for overhead and benefits. Benefits Following the September 2013 Navy Yard shooting, the President directed the Office of Management and Budget (OMB) to lead a review of suitability and security clearance procedures for Federal employees and contractors (see

(g) Persons who manufacture, process, pack, transport, distribute, receive, hold, or import food in the United States that is within the exclusive jurisdiction of the U.S. Department of Agriculture (USDA) under the Federal Meat Inspection Act (21 U.S.C. 601 et seq.), the Poultry Products Inspection Act (21 U.S.C. 451 et seq.), or the Egg Products Inspection Act (21 U.S.C. 1031 et seq.) are excluded from all of the requirements in this subpart with respect to that food while it is under the exclusive jurisdiction of USDA. (h) Foreign persons, except for foreign persons who transport food in the United States, are excluded from all of the requirements of this subpart. (i) Persons who manufacture, process, pack, transport, distribute, receive, hold, or import food are subject to §§ 1.361 and 1.363 with respect to its packaging (the outer packaging of food that bears the label and does not contact the food). All other persons who manufacture, process, pack, transport, distribute, receive, hold, or import packaging are excluded from all of the requirements of this subpart. (j) Persons who manufacture, process, pack, transport, distribute, receive, hold, or import food contact substances other than the finished container that directly contacts food are excluded from all of the requirements of this subpart, except §§ 1.361 and 1.363. (k) Persons who place food directly in contact with its finished container are subject to all of the requirements of this subpart as to the finished container that directly contacts that food. All other persons who manufacture, process, pack, transport, distribute, receive, hold, or import the finished container that directly contacts the food are excluded from the requirements of this subpart as to the finished container, except §§ 1.361 and 1.363. (l) Nonprofit food establishments are excluded from all of the requirements in this subpart, except §§ 1.361 and 1.363. (m) Persons who manufacture, process, pack, transport, distribute, receive, hold, or import food for personal consumption are excluded from all of the requirements of this subpart. (n) Persons who receive or hold food on behalf of specific individual consumers and who are not also parties to the transaction and who are not in the business of distributing food are excluded from all of the requirements of this subpart.

§ 1.328 What definitions apply to this subpart? The definitions of terms in section 201 of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 321) apply to such terms when used in this subpart. In addition, for the purposes of this subpart: Act means the Federal Food, Drug, and Cosmetic Act. Farm means a facility in one general physical location devoted to the growing and harvesting of crops, the raising of animals (including seafood), or both. Washing, trimming of outer leaves, and cooling produce are considered part of harvesting. The term ·farm· includes:

A Registered Provider Organization (RPO) and a C3PAO serve different roles in the CMMC ecosystem:

****RPO (Registered Provider Organization)**:** - Provides consulting and preparation services - Helps organizations implement NIST SP 800-171 controls - Assists with SSP development, gap analysis, and remediation - Cannot conduct official CMMC certification assessments - May employ Registered Practitioners (RPs)

****C3PAO (Third-Party Assessment Organization)**:** - Conducts official CMMC Level 2 certification assessments - Cannot provide consulting services to the same organization they assess (conflict of interest) - Employs Certified CMMC Assessors (CCAs) - Assessment results submitted to Cyber AB for certification

Organizations typically engage an RPO first for preparation, then a separate C3PAO for the assessment.

(2) If the title of the specific official is unknown, such as for a local system, specify the local commander or office head as the systems manager. (3) For geographically separated or organizationally decentralized activities for which individuals may deal directly with officials at each location in exercising their rights, list the position or duty title of each category of officials responsible for the system or a segment thereof. (4) Do not include business or duty addresses if they are listed in the Component address directory. (l) Notification Procedures. (1) Describe how an individual may determine if there are records pertaining to him or her in the system. The procedural rules may be cited, but include a brief procedural description of the needed data. Provide sufficient information in the notice to allow an individual to exercise his or her rights without referral to the formal rules. (2) As a minimum, the caption shall include: (i) The official title (normally the system manager) and official address to which the request is to be directed. (ii) The specific information required to determine if there is a record of the individual in the system. (iii) Identification of the offices through which the individual may obtain notification; and (iv) A description of any proof of identity required. (see § 310.17(c)). (3) When appropriate, the individual may be referred to a Component official who shall provide this information to him or her. (m) Record Access Procedures. (1) Describe how an individual can gain access to the records pertaining to him or her in the system. The procedural rules may be cited, but include a brief procedural description of the needed data. Provide sufficient information in the notice to allow an individual to exercise his or her rights without referral to the formal rules.

(2) As a minimum, the caption shall include: (i) The official title (normally the system manager) and official address to which the request is to be directed. (ii) A description of any proof of identity required. (see §310.17(c)). (iii) When appropriate, the individual may be referred to a Component official who shall provide the records to him or her. (n) Contesting Record Procedures. (1) Describe how an individual may contest the content of a record pertaining to him or her in the system. (2) The detailed procedures for contesting a record need not be identified if the Component procedural rules are readily available to the public. (For example, The Office of the Secretary of Defense rules for contesting contents are contained in 32 CFR 311 .) All Component procedural rules are set forth at a Departmental public Web site (<http://www.defenselink.mil/privacy/cfr-rules.html>). (3) The individual may also be referred to the system manager to determine these procedures. (o) Record Source Categories. (1) Describe where (the individual, other Component documentation, other Federal agencies, etc) the information contained in the system was obtained.

CIS Control 17 Incident Response Management Establish a program to develop and maintain an incident response capability (e.g., policies, plans, procedures, defined roles, training, and communications) to prepare, detect, and quickly respond to an attack. A comprehensive cybersecurity program includes protections, detections, response, and recovery capabilities. Often, the final two get overlooked in immature enterprises, or the response technique to compromised systems is just to re-image them to original state, and move on. The primary goal of incident response is to identify threats on the enterprise, respond to them before they can spread, and remediate them before they can cause harm. Without understanding the full scope of an incident, how it happened, and what can be done to prevent it from happening again, defenders will just be in a perpetual whack-a-mole pattern. We cannot expect our protections to be effective 100% of the time. When an incident occurs, if an enterprise does not have a documented plan even with good people it is almost impossible to know the right investigative procedures, reporting, data collection, management responsibility, legal protocols, and communications strategy that will allow the enterprise to successfully understand, manage, and recover. Along with detection, containment, and eradication, communication to stakeholders is key. If we are to reduce the probability of material impact due to a cyber event, the enterprise's leadership must know what potential impact there could be, so that they can help prioritize remediation or restoration decisions that best support the enterprise. These business decisions could be based on regulatory compliance, disclosure rules, service-level agreements with partners or customers, revenue, or mission impacts. Dwell time from when an attack happens to when it is identified can be days, weeks, or months. The longer the attacker is in the enterprise's infrastructure, the more embedded they become and they will develop more ways to maintain persistent access for when they are eventually discovered. With the rise of ransomware, which is a stable moneymaker for attackers, this dwell time is critical, especially with modern tactics of stealing data before encrypting it for ransom.

AT.L2-3.2.2 Role-Based Training CMMC Assessment Guide Level 2 | Version 2.13 68 AT.L2-3.2.2
 ROLE-BASED TRAINING Ensure that personnel are trained to carry out their assigned information security-related duties and responsibilities. ASSESSMENT OBJECTIVES [NIST SP 800-171A]58 Determine if: [a] information security-related duties, roles, and responsibilities are defined; [b] information security-related duties, roles, and responsibilities are assigned to designated personnel; and [c] personnel are adequately trained to carry out their assigned information security-related duties, roles, and responsibilities. POTENTIAL ASSESSMENT METHODS AND OBJECTS [NIST SP 800-171A]58 Examine [SELECT FROM: Security awareness and training policy; procedures addressing security training implementation; codes of federal regulations; security training curriculum; security training materials; system security plan; training records; other relevant documents or records]. Interview [SELECT FROM: Personnel with responsibilities for role-based security training; personnel with assigned system security roles and responsibilities; personnel with responsibilities for security awareness training; personnel with information security responsibilities; personnel representing the general system user community]. Test [SELECT FROM: Mechanisms managing role-based security training; mechanisms managing security awareness training]. DISCUSSION [NIST SP 800-171 REV. 2]59 Organizations determine the content and frequency of security training based on the assigned duties, roles, and responsibilities of individuals and the security requirements of organizations and the systems to which personnel have authorized access. In addition, organizations provide system developers, enterprise architects, security architects, acquisition/procurement officials, software developers, system developers, systems integrators, system/network administrators, personnel conducting configuration management and auditing activities, personnel performing independent verification and 58 NIST SP 800-171A, pp. 19-20. 59

A TCP approved by the CSA will be developed and implemented by those entities cleared under a VT, PA, SSA and SCA and when otherwise deemed appropriate by the CSA. The TCP will prescribe all security measures determined necessary to reasonably prevent the possibility of access by non-U.S. citizen employees and visitors to information for which they are not authorized. The TCP will also prescribe measures designed to assure that access by non-U.S. citizens is strictly limited to only that specific information for which appropriate USG disclosure authorization has been obtained, e.g., an approved export license or technical assistance agreement. Unique badging, escort, segregated work area, security indoctrination schemes, and other measures will be included, as appropriate. (2) Electronic communications plan (ECP). The contractor will develop and implement an ECP, subject to CSA approval, tailored to the contractor's operations to verify that electronic controls are in place for clear technical and logical separation of electronic communications and networks between the contractor, the foreign interest, and its affiliates. The purpose is to prevent the unauthorized disclosure of classified information to the foreign parent or its affiliates. The contractor will include in the ECP a detailed network description and configuration diagram that clearly delineates which networks will be shared and which will be protected from access by the foreign parent or its affiliates. The network description will address firewalls, remote administration, monitoring, maintenance, and separate email servers, as appropriate. (3) Affiliated operations plan. There may be circumstances when the parties to a transaction propose in the FOCI action plan that the U.S. contractor provides certain services for the foreign interest or enters into arrangements with the foreign interest, or the foreign interest provides services for or enters into arrangements with the U.S. contractor. In such circumstances, the contractor will document a plan, subject to CSA approval, outlining the entity's consolidated policies and procedures regarding the control of affiliated operations, regardless of whether such endeavors are administrative, operational, or commercial, performed directly or through third-party service providers, within the entity, or among any of the entity's controlled entities, or the foreign interest and its affiliates. (4) Facilities location plan. When a contractor is potentially collocated with or in close proximity to its foreign parent or an affiliate, the contractor will prepare a facilities location plan to assist the CSA in determining if the contractor is collocated or if the close proximity can be allowed under the FOCI mitigation plan. A U.S. entity generally cannot be collocated with the foreign parent or affiliate, i.e., at the same address or in the same location. (i) Annual review and certification. (1) Annual review.

3.2.2 | Attribute Accuracy ... 3.2.2 Attribute Accuracy Given the broad spectrum of entities that will interoperate with each other, synonyms of attribute definitions are inevitable. 3.2.2, focuses on the semantic accuracy of attribute values.

Control AM-6: ed in a single authorization boundary to ensure accountability. For systems processing PII, the privacy and security programs collaborate to develop a common understanding of authorization boundaries. To conduct effective risk assessments and select appropriate controls, privacy and security programs provide a clear and consistent understanding of what constitutes the authorization boundary. Understanding the authorization boundary and what will occur beyond it may influence controls selected and how they are implemented. For example, if a function of the system includes sharing PII externally, robust encryption controls may be selected for PII transmitted from the system. Similarly, for systems either partially or wholly managed, maintained, or operated by external providers, an agreement clearly describing authorization boundaries ensures accountability. Privacy and security programs collaborate with providers to develop a common understanding of authorization boundaries. Formal agreements with external providers (e.g. contracts) may be used to delineate what constitutes authorization boundaries. Understanding such boundaries facilitates the selection of appropriate controls to manage supply chain risk. References: [SP 800-18]; [SP 800-39] (System Level); [SP 800-47]; [SP 800-64]; [SP 800-160 v1] (System Requirements Definition Process); [NIST CSF] (Core [Identify Function]). ## INFORMATION TYPES TASK P-12 Identify the types of information to be processed, stored, and transmitted by the system. Potential Inputs: System design documentation; assets to be protected; mission/business process information; system design documentation. Expected Outputs: A list of information types for the system. Primary Responsibility: System Owner; Information Owner or Steward. Supporting Role: Mission or Business Owner; System Security Officer; System Privacy Officer. 66 System Development Life Cycle Phase: New - Initiation (concept/requirements definition).

In addition, the CMMC Program relies upon free market influences of supply and demand to propel implementation. Specifically, the Department does not control which defense contractors aspire to compete for which business opportunities, nor does it control access to the assessment services offered by C3PAOs. OSAs may elect to complete a self-assessment or pursue a certification assessment at any time after issuance of the rule, in an effort to distinguish themselves as competitive for efforts that require an ability to adequately protect CUI. For that reason, the number of CMMC assessments for unique entities per level per year may vary significantly from the assumptions used in generating the cost estimate. The estimates represent the best estimates at this time based on internal expertise and public feedback. DoD utilized historical metrics gathered for the CMMC 1.0 Program and subject matter expertise from Defense Pricing and Contracting (DPC) and DCMA DIBCAC to estimate the number of entities by type and by assessment level for this analysis. The following (printed page 89085) table summarizes the estimated profile used in this analysis. DoD is planning for a phased roll-out of each assessment level across 7 years with the entity numbers reaching a maximum by Year 4 as shown in the tables. The target of Year 4 was selected based on the projected capacity of the CMMC Ecosystem to grow to efficiently support the entities in the pipeline. For modeling efficiency, a similar roll-out is assumed regardless of entity size or assessment level. It is assumed that by year 7 the maximum number of entities is reached. Beyond year 7, the number of entities entering and exiting are expected to net to zero. The following tables reflect the number of new entities in each year and for each level. (printed page 89086) Public Costs Summary of Impacted Awardee Entities According to data available in the Electronic Data Access system for fiscal years (FYs) 2019, 2020, and 2021, DoD awards an average of 1,366,262 contracts and orders per year that contain DFARS clause 252.204-7012, to 31,338 unique awardees, of which 683,718 awards (50%) are made to 23,475 small entities (75%). [29] Public Cost Analysis The following is a summary of the estimated Public costs CMMC 2.0 for other than small [30] entities, per assessment of a contractor information system, at the required periodicity for each CMMC level. The following is a summary of the estimated Public costs CMMC 2.0 for Small Entities, per assessment of each contractor information system, estimated at one per entity, at the required periodicity for each CMMC level. (printed page 89087) The total estimated Public (large and small entities) costs associated with this rule, calculated for a 20-year horizon in 2023 dollars at a 7 percent and 3 percent discount rate, per OMB guidance, is provided as follows: Assumptions In estimating the Public costs, DoD considered applicable nonrecurring engineering costs, recurring engineering costs,

. We adjusted the contributions by large and very small facilities to traceback performance to reflect the substantially different quantities of food each facility size is responsible for. While the number of very small facilities accounts for a large fraction of the total number of facilities, the quantity of food for which these facilities are responsible is relatively small. Consequently, estimates of the contributions to traceback performance should reflect the lower likelihoods of investigative visits at very small businesses. For options that differentiate between coverage by facility size, we used estimates of the quantities of food passing through very small establishments and the quantities of food passing through all other sized establishments to scale each sector's contribution to traceback performance. In this way we were able to estimate the contribution by very small size establishments and other size establishments to traceback performance for each sector. We used U.S. Census data (Ref. 17) to estimate the percentage of the total number of food establishments that are very small, as well as their revenues, by sector and report them in the chart below. The fraction of the total number of facilities that are very small ranges from an estimated 73 percent of convenience outlets to 90 percent of transporters. In contrast, the percentage of total convenience store revenues from very small facilities is an estimated 18 percent, while very small transporters are responsible for an estimated 16 percent of total revenues from that sector. Table 11. The percentage of very small food establishments that make up each sector and the percentage of the total sector's food for which they are responsible

Sector	% of Establishments That Are Very Small	% of Food Sector Revenue From Very Small Establishments
Manufacturers	77	15
Wholesalers	81	14
Transporters	90	16
Grocery outlets	88	18
Convenience outlets	73	18
Importers	82	14
Mixed-type facilities	82	15

Source: U.S. Census, 1997 Economic Census. In addition to a lower probability of an investigative visit at very small compared with other size facilities, records quality or records access times might also be different for very small and other size facilities. However, conversations with FDA investigative personnel revealed that there are no differences in records quality or records access times across business sizes. Consequently, we estimate the duration of an investigative visit to be the same for very small and other size businesses. 12. Estimating the

Benefits When Selected Sectors Are Excluded

(A) From subsection (c)(3) because the release of the disclosure accounting would permit the subject of a criminal investigation or matter under investigation to obtain valuable information concerning the nature of that investigation which will present a serious impediment to law enforcement. (B) From subsection (d), because access to the records contained in this system would inform the subject of a criminal investigation of the existence of that investigation, provide the subject of the investigation with information that might enable him to avoid detection or apprehension, and would present a serious impediment to law enforcement. (C) From subsection (e)(1) because in the course of criminal investigations, information is often obtained concerning the violation of laws or civil obligations of others not relating to an active case or matter. In the interests of effective law enforcement, it is necessary that this valuable information be retained since it can aid in establishing patterns of activity and provide valuable leads for other agencies and future cases that may be brought. (D) From subsections (e)(4)(G) and (e)(4)(H) because portions of this system of records have been exempted from the access provisions of subsection (d), making these subsections not applicable. (E) From subsection (e)(4)(I) because the identity of specific sources must be withheld in order to protect the confidentiality of the sources of criminal and other law enforcement information. This exemption is further necessary to protect the privacy and physical safety of witnesses and informants. (F) From subsection (f) because portions of this system of records have been exempted from the access provisions of subsection (d). (29) System identifier and name. A0600-20 DCSG-1, Sexual Assault (SADMS) and Sexual Harassment (SHARP) Program Records. (i) Exemption. This system of records is a compilation of information from other Department of Defense/Army systems of records. To the extent that copies of exempt records from those other systems of records are entered into this system of records, the Army G-1 hereby claims the same exemptions for the records from those other systems. (ii) Authority. 5 U.S.C. 552a(j)(2) , and (k)(1) through (k)(7) . (iii) Reasons. Records are only exempt from pertinent provisions of 5 U.S.C. 552a

.implement and .deploy, we propose to replace the requirement for a regulated entity to implement procedures with a requirement to deploy technical controls. Also, consistent with our proposals to clarify that a regulated entity's obligations to ensure the confidentiality, integrity, and availability extend to all of its relevant electronic information systems, we propose to clarify that the regulated entity is to deploy technical controls to verify that a person seeking access to the regulated entity's relevant electronic information systems is the one claimed. The Department also proposes to modify the existing standard to clarify that a regulated entity would be required to deploy technical controls to verify that a technology asset seeking access to the regulated entity's relevant electronic information systems is the one claimed. Thus, the proposed standard for authentication would require a regulated entity to deploy technical controls to verify that a person or technology asset seeking access to ePHI and/or the regulated entity's relevant electronic information systems is, in fact, the person or technology asset that the person or asset claims to be. We also propose to remove the reference to an entity because entity is included within the definition of person. The Department proposes four implementation specifications under this standard. Consistent with NCVHS' recommendation to eliminate the use of default passwords, the proposed implementation specification for information access management policies at proposed 45 CFR 164.312(f)(2)(i) would require a regulated entity to deploy technical controls in accordance with its information access management policies and procedures, including technical controls that require users to adopt unique passwords. [773] Among other things, this proposal would ensure that regulated entities change default passwords. Such unique passwords would be required to be consistent with current recommendations of authoritative sources. The Department does not propose to define authoritative sources and defers to best practices for setting and maintaining passwords of sufficient strength to ensure the confidentiality, integrity, and availability of ePHI. Under this proposal, a regulated entity would need to require its workforce members to change any default passwords to unique passwords that are consistent with current authoritative source recommendations for unique passwords, as well as prevent the sharing of passwords among workforce members. Default passwords, typically factory-set passwords, may be discovered in common product documentation and used by attackers to gain access to relevant electronic information systems. [774] Thus, the Department believes that it is crucial for the security of ePHI that a regulated entity eliminate the use of default passwords.

. Privacy Impact Assessments are required for all information systems and electronic collections

that collect, maintain, use, or disseminate personally identifiable information about members of the public (this includes contractors and family members), under Public Law 107-347, Section 208 of the E-Government Act of 2002. DoD Instruction 5400.16, entitled Department of Defense Privacy Impact Assessment (PIA) (Available at <http://www.dtic.mil/whs/directives/corres/pdf/540016p.pdf>), provides additional requirements for PIAs, including a requirement to write a PIA on any information systems or electronic collection of PII on Federal personnel. Protected Health Information (PHI). Any information about health status, provision of health care, or payment for health care that can be linked to a specific individual. Record. Any item, collection, or grouping of information about an individual that is maintained by an agency, including, but not limited to, the individual's his education, financial transactions, medical history, and criminal or employment history and that contains his name, or the identifying number, symbol, or other identifying particular assigned to the individual, such as a finger or voice print or a photograph (As defined by 5 U.S.C. 552a). Relevance. Limitation to only those elements of information that clearly bear of the determination(s) for which the records are intended. Routine Use. The disclosure of a record outside the DoD for a use that is compatible with the purpose for which the information was collected and maintained by the DoD. The routine use must be included in the published system notice for the SOR involved. The DoD Blanket Routine Uses, found in 32 CFR part 310, Appendix C are applicable to all SORNs published by DoD. System Manager. The official who is responsible for managing a SOR, including policies and procedures to operate and safeguard it. Local System Managers operate record systems or are responsible for the records that are maintained in decentralized locations but are covered by a SORN published by another DoD activity or a Government-Wide SORN. System of Records (SOR). A group of any records under the control of any agency from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual. System of Records Notice (SORN). The official public notice published in the FR of the existence and content of the SOR. As required by 5 U.S.C. 552a and 32 CFR part 310, Appendix E. The notice shall include: (1) The name and location of the system, (2) The categories of individuals on whom records are maintained in the system, (3) The categories of records maintained in the system, (4) Each routine use of the records contained in the system, including the categories of users and the purpose of such use, (5) The policies and practices of the agency regarding storage, retrievability, access controls, retention, and disposal of the records,

CMVP Validation Authority Updates to ISO/IEC 24759 CMVP Validation Authority Updates to ISO/IEC 24759 Calis A (2023) Cryptographic Module Validation Program (CMVP)-Approved Sensitive Security Parameter Generation and Establishment Methods: CMVP Validation Authority Updates to ISO/IEC 24759. (National Institute of Standards and Technology, Gaithersburg, MD), NIST Special Publication (SP) NIST SP 800-140Dr2. <https://doi.org/10.6028/NIST.SP.800-140Dr2>

ng program. CSD also invites public and private organizations to submit their information security practices for consideration to be included in the list of practices maintained on the Web site. Policies and procedures may be submitted to NIST in any area of information security, including accreditation, audit trails, authorization of processing, budget planning and justification, certification, contingency planning, data integrity, disaster planning, documentation, hardware and system maintenance, identification and authentication, incident handling and response, life cycle, network security, personnel security, physical and environmental protection, production input/output controls, security policy, program management, review of security controls, risk management, security awareness training and education (to include specific course and awareness materials) and security planning. Current participants include Computer Associates, the Internet Security Task Force, Microsoft, the SANS Institute, the Carnegie Mellon University CERT Coordination Center, the American Bankers Association, Ars Technica and EDUCAUSE. This area added twelve practices in the past year bringing the total number of listings to twenty.

for submitting electronic comments. Attachments should be in Microsoft Word or Portable Document Format (PDF). Regular, Express, or Overnight Mail: You may mail written comments to the following address only: U.S. Department of Health and Human Services, Office for Civil Rights, Attention: HIPAA Security Rule NPRM, Hubert H. Humphrey Building, Room 509F, 200 Independence Avenue SW, Washington, DC 20201. Please allow sufficient time for mailed comments to be timely received in the event of delivery or security delays. Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted. Inspection of Public Comments: All comments received by the accepted methods and due date specified above may be posted without change

to content to <https://www.regulations.gov> , which may include personal information provided about the commenter, and such posting may occur after the closing of the comment period. However, the Department may redact certain non-substantive content from comments or attachments to comments before posting, including: threats, hate speech, profanity, sensitive health information, graphic images, promotional materials, copyrighted materials, or individually identifiable information about a third-party individual other than the commenter. In addition, comments or material designated as confidential or not to be disclosed to the public will not be accepted. Comments may be redacted or rejected as described above without notice to the commenter, and the Department will not consider in rulemaking any redacted or rejected content that would not be made available to the public as part of the administrative record. Docket: For complete access to background documents, the plain-language summary of the proposed rule of not more than 100 words in length required by the Providing Accountability Through Transparency Act of 2023, or posted comments, go to <https://www.regulations.gov> and search for Docket ID number HHS-OCR-0945-AA22. Tribal consultation meeting: To participate in the Tribal consultation meeting, you must register in advance at <https://hhs.gov.zoomgov.com/join/registration/vJltdOyhrjgoHxJWMDxozrxT98yXyCO3lks> . FOR FURTHER INFORMATION CONTACT: Marissa Gordon-Nguyen at (202) 240-3110 or (800) 537-7697 (TDD), or by email at OCRPrivacy@hhs.gov . SUPPLEMENTARY INFORMATION:

CIS Safeguard 13.7 · Deploy a Host-Based Intrusion Prevention Solution Deploy a host-based intrusion prevention solution on enterprise assets, where appropriate and/or supported. Example implementations include use of an Endpoint Detection and Response (EDR) client or host-based IPS agent. Implementation Groups: 3 Asset Type: devices Security Function: protect Parent Control: Network Monitoring and Defense

(14) Maintain appropriate administrative technical and physical safeguards to ensure records are protected from unauthorized alteration or disclosure. (b) Safeguard personal information . (1) Privacy Act data will be afforded reasonable safeguards to prevent inadvertent or unauthorized disclosure of records during processing, storage, transmission, and disposal. (2) Personal information should never be placed on shared drives that are accessed by groups of individuals unless each person has an ·official need to know· the information in the performance of official duties. (printed page 46055) (3) Safeguarding methods must strike a balance between the sensitivity of the data, need for accuracy and reliability for operations, general security of the area, and cost of the safeguards. In some situations, a password may be enough protection for an automated system with a log-on protocol. For additional guidance on safeguarding personal information in automated records see AR 380-67, The Department of the Army Personnel Security Program. (c) Conveying privacy protected data electronically via e-mail and the World Wide Web. (1) Unencrypted electronic transmission of privacy protected data makes the Army vulnerable to information interception which can cause serious harm to the individual and the accomplishment of the Army's mission. (2) The Privacy Act requires that appropriate technical safeguards be established, based on the media (e.g. , paper, electronic) involved, to ensure the security of the records and to prevent compromise or misuse during transfer. (3) Privacy Web sites and hosted systems with privacy-protected data will employ secure sockets layers (SSL) and Public Key Infrastructure (PKI) encryption certificates or other DoD-approved commercially available certificates for server authentication and client/server authentication. Individuals who transmit data containing personally identifiable information over e-mail will employ PKI or other DoD-approved certificates. (4) When sending Privacy Act protected information within the Army using encrypted or dedicated lines, ensure that: (i) There is an ·official need to know· for each addressee (including ·cc· addressees); and (ii) The Privacy Act protected information is marked For Official Use Only (FOUO) to inform the recipient of limitations on further dissemination. For example, add FOUO to the beginning of an e-mail message, along with the following language: ·This contains FOR OFFICIAL USE ONLY (FOUO) information which is protected under the Privacy Act of 1974 and AR 340-21, The Army Privacy Program. Do not further disseminate this information without the permission of the sender.· (iii) Do not indiscriminately apply this statement. Use it only in situations when actually transmitting protected Privacy Act information. (iv) For additional information about marking documents ·FOUO· review AR 25-55, Chapter IV.

The CMMC proposed rule was published in the Federal Register on December 26, 2023, to initiate the mandatory 60-day public review and comment period for this rule and the supporting documents that ended on 26 February 2024. From the volume of comments received on the CMMC rule documents, from or concerning Small Businesses, the following significant issues were raised. 1. Cost. Some comments

identified that the proposed rule does not address how the CMMC Program will be funded, or how the costs of certification and compliance will be shared between the DoD and the contractors. This may raise questions about the affordability and sustainability of the CMMC program, especially for small businesses. Commenters suggested that the DoD conduct and publish a comprehensive cost assessment for each level of CMMC certification and explore ways to reduce the financial burden on the contractors, such as providing incentives, subsidies, loans, grants, tax credits or reimbursements. Several comments presented the opinion that the cost estimates in the preamble/rule did not adequately address all possible costs to become compliant with regulations and attain a certification i.e., ongoing Recurring Engineering and Non-Recurring Engineering costs. Others commented that the mandate to comply with requirements, attain verification of compliance, and the inability to recoup costs prior to completing compliance will be barriers to entry and will drive many small businesses out of the DoD market. Concern was also expressed regarding the cost of failing an assessment and not being able to recoup costs fast enough, through increased Overhead and G&A [General and Administrative] rates. Another concern was raised that IR&D [Independent Research and Development] spending will be negatively impacted due to the diversion of funds to Cybersecurity compliance. Some shared concerns about the potential for overmarking CUI data, that will drive a higher than necessary demand for CMMC certification and create an overburdened Ecosystem, thereby preventing timely certification and incentivizing price gouging by assessors. Several suggested that the Government regulate the prices for assessment services. Many commenters also suggested the DoD needed to find ways to reduce the financial burdens on small businesses through direct payment for compliance, tax incentives, increased profits, or increased flexibility to comply with requirements, i.e., by reducing requirements for small businesses or providing more time to comply after contract award. Commenters also felt the handling of CUI by small businesses was too difficult, and recommended prime contractors should be responsible for handling all CUI. If a small business needs CUI to execute its work, the prime or the Government should provide an environment for the small business to complete its work. DoD Response.

Organizations can employ full -device encryption or container -based encryption to protect the confidentiality of CUI on mobile devices and computing platforms . Container-based encryption provides a more fine-grained approach to the encryption of data and information including encrypting selected data structures such as files, records, or fields. FURTHER DISCUSSION Ensure CUI is encrypted on all mobile devices and mobile computing platforms that process, store, or transmit CUI including smartphones, tablets, and e-readers. 48 NIST SP 800-171A, p. 17. 49 NIST SP 800-171 Rev. 2, p. 15.

DMDC 15 DoD, Armed Services Military Accession Testing. (i) Exemption. Testing or examination material used solely to determine individual qualifications for appointment or promotion in the Federal service or military service may be exempt pursuant to 5 U.S.C. 552a(k)(6) , if the disclosure would compromise the objectivity or fairness of the test or examination process. Therefore, portions of the system of records may be exempt pursuant to 5 U.S.C. 552a(d) . (ii) Authority. 5 U.S.C. 552a(k)(6) . (iii) Reasons. (A) An exemption is required for those portions of the Skill Qualification Test system pertaining to individual item responses and scoring keys to preclude compromise of the test and to ensure fairness and objectivity of the evaluation system. (B) From subsection (d)(1) when access to those portions of the Skill Qualification Test records would reveal the individual item responses and scoring keys. Disclosure of the individual item responses and scoring keys will compromise the objectivity and fairness of the test as well as the validity of future tests resulting in the Department being unable to use the testing battery as an individual assessment tool. (17) System identifier and name. DMDC 11, Investigative Records Repository. (i) Exemption. (A) Investigative material compiled for law enforcement purposes may be exempt pursuant to 5 U.S.C. 552a(k)(2) . However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of such information, the individual will be provided access to such information except to the extent that disclosure would reveal the identity of a confidential source. (B) Records maintained in connection with providing protective services to the President and other individuals under 18 U.S.C. 3506 , may be exempt pursuant to 5 U.S.C. 552a(k)(3) . (C) Investigative material compiled solely for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, military service, Federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. (D) Any portion of this system that falls under the provisions of 5 U.S.C. 552a(k)(2) ,

(k)(3), or (k)(5) may be exempt from the following subsections of 5 U.S.C. 552(c)(3), (d), (e)(1), (e)(4)(G), (H), and (I), and (f). (ii) Authority. 5 U.S.C. 552a(k)(2), (k)(3), or (k)(5). (iii) Reasons.

(a) The Office of the Department of Defense Chief Information Officer (DoD CIO) Office of the Deputy CIO for Cybersecurity (DoD CIO(CS)) provides oversight of the CMMC Program and is responsible for establishing CMMC assessment, accreditation, and training requirements as well as developing and updating CMMC Program policies and implementing guidance. The CMMC PMO is responsible for the granting and revocation of the validity status of the appropriate CMMC certification level, which officially resides within SPRS based on inputs from the OSA, C3PAO, and or DCMA DIBCAC. (b) The CMMC PMO is responsible for investigating and acting upon indications that an active CMMC Self-Assessment, described in §§ 170.15 and 170.16, or CMMC Certification Assessment, described in §§ 170.17 and 170.18, has been called into question. Indications that may trigger investigative evaluations include, but are not limited to, reports from the CMMC Accreditation Body, a C3PAO, or anyone knowledgeable of the security processes and activities of the OSA. Investigative evaluations include, but are not limited to, reviewing pertinent assessment information and exercising the right to require a DCMA DIBCAC assessment of the OSA, as provided for under the DFARS clauses 252.204-7012 and 252.204-7020 (48 CFR 252.204-7012 and 252.204-7020). (c) If the investigative results show that adherence to the provisions of this rule have not been achieved or maintained, the CMMC PMO may revoke the validity status of the appropriate existing CMMC Self-Assessment(s) or CMMC Final Certification Assessment(s). § 170.7 DCMA DIBCAC. (a) In support of the CMMC Program, DoD intends that the DCMA DIBCAC assessors performing Level 3 assessments will: (1) Complete CMMC Level 2 and Level 3 training. (2) Conduct CMMC Level 3 Certification Assessments and upload assessment results into the CMMC instantiation of eMASS. (3) Issue CMMC Level 3 Certification Assessment certificates. (4) Conduct CMMC Level 2 assessments of the Accreditation Body and prospective C3PAOs information systems that process, store, and/or transmit CUI. (5) Create and maintain a process for assessors to collect the list of assessment artifacts to include artifact names, their return values of the hashing algorithm, the hashing algorithm used, and upload that data into the CMMC instantiation of eMASS. (6) As authorized and in accordance with all legal requirements, enter and track, OSC appeals and updated results arising from CMMC Level 3 Certification Assessment activities into the CMMC instantiation of eMASS. (7) Retain all records in accordance with DCMA-MAN 4501-04. (b) [Reserved]. Subpart C-CMMC Assessment and Certification Ecosystem § 170.8 Accreditation Body. (a) Roles and responsibilities.

Advanced Encryption Standard (AES) Subcategory: Cryptography In 2000, NIST announced the selection of the Rijndael block cipher family as the winner of the Advanced Encryption Standard (AES) competition. Block ciphers are the foundation for many cryptographic services, especially those that provide assurance of the confidentiality of data.

One commenter recommended administrative edits to identify CMMC levels at a particular place in the pre-amble description of the program. The preamble is not part of the official regulation. In addition to background and overview information about the proposed or final rule, the preamble includes responses to all comments received during the public comment period on the proposed rule. The certification requirements are in subpart D, §§ 170.15 through 170.18. c. Alternate Implementation Timelines Comment: Several commenters suggested that DoD abandon CMMC requirements in favor of simply continuing to rely upon self-assessments, or else allowing contractors to comply with DFARS clause 252.204-7012 requirements absent any assessment (self-conducted or third-party). Of those recommending self-assessment, two commenters limited the suggestion only to companies that self-certified as small businesses and one further recommended that DoD pay for certification assessment of all small businesses. One such commenter based their opinion on an interpretation that text in NIST SP 800-171 R2 identifies the requirements as a model for self-assessment. Another commenter made no suggestion to change assessment requirements, other than to implement them post-award, rather than pre-award. One comment expressed doubt in the ability of the ecosystem to scale sufficiently to meet the demand for C3PAO assessments and assessor training. One commenter suggested the rule be revised to eliminate POA&Ms but expand the period during which deficiencies can be reassessed from within 10 days of initial assessment to 60 days for those prospective contractors. Another commenter suggested varying timelines for POA&Ms based on a variety of criteria, including how many DoD contracts are held. Response: The DoD declined to accept the risk associated with implementing CMMC solely as a post-award requirement. When contracts require contractors to process, store, or transmit CUI, DoD requires that they be compliant with DFARS

clause 252.204-7012 and competent to adequately safeguard CUI from the beginning of the period of performance. DoD declines the recommendation to require primes to assume the cost of CMMC for their subcontractors. Arrangements between contractors and subcontractors are negotiated directly between those parties. The DoD does not accept the recommendation to eliminate or change the criteria for POA&Ms or the timeline allowed to remediate open POA&M items. The 180-day period allowed for POA&Ms and the determination of which weighted practices can be placed on a POA&M was a risk-based decision. The determination considers the relative risk DoD is willing to accept when a particular practice is not met and the amount of risk the DoD is willing to accept for those security practices that go ·NOT MET· for an extended period.

- The first column defines the capability. Note that Figure 1, which is located in Appendix A, indicates how the capability relates to the risk mitigation areas and challenges defined in NISTIR 8228, Considerations for Managing Internet of Things (IoT) Cybersecurity and Privacy Risks [3]. - The second column provides a numbered list of common elements of that capability-elements an organization seeking to implement the core baseline often (but not always) would use in order to achieve the capability. (Note: the elements are not intended to be comprehensive, nor are they in any particular order.) - The third column explains the rationale for needing the capability and its common elements to be included in the core baseline. - The last column lists IoT reference examples that indicate existing sources of IoT device cybersecurity guidance specifying a similar or related capability. Because the table only covers the basics of the capabilities, the references can be invaluable for understanding each capability in more detail and learning how to implement each capability in a reasonable manner.

There were no changes from the proposed rule as a result of the public comments received. There were minor editorial changes made to the proposed rule, see Section C below.

B. Analysis of Public Comments

1. Commercial and Government Entity (CAGE) Code Reporting Comment: Two respondents expressed concern regarding the use of ·Unique CAGE code·; stating that in some instances a facility will have multiple locations with the same CAGE codes. Clarification of the term ·unique· CAGE code was requested. Response: In accordance with the National Industrial Security Program Operating Manual (NISPOM) DoD 5220.22-M and FAR 52.204-16(g), each contractor and subcontractor location of performance listed on a DD Form 254 is required to have a unique CAGE code; and registration in the System for Award Management (SAM) is not required for contractor and subcontractor performance locations solely for the purposes of the DD Form 254. FAR 52.204-16, Commercial and Government Entity (CAGE) Code Reporting, as prescribed at FAR 4.1804(a), is amended to add paragraph (g) to require subcontractors requiring access to classified information under a contract to be identified with a CAGE code on the DD Form 254. Contractors shall ensure that a subcontractor requiring access to classified information provide its CAGE code with its name and location address or otherwise include it prominently in the proposal. In addition, each location of subcontractor performance must be listed on the DD Form 254 and is required to reflect a corresponding unique CAGE code for each listed location unless the work is being performed at a Government facility, in (printed page 40062) which case the agency location code shall be used. The CAGE code must be for that name and location address. The CAGE code is required prior to award. Each listed location must have a unique CAGE code classifying only a single location. Comment: Two respondents opposed the removal of the current CAGE code requirement and stressed the continued need to not increase risk of sharing classified information with an uncleared facility or one where the clearance is no longer active or authorized. Response: The rule does not decrease the security professional's ability to verify security clearance and safeguarding levels as directed by NISPOM via the National Industrial Security System (NISS). The rule will require electronic submission of the DD Form 254, Contract Security Classification Specification.

2. DD Form 254 Comment: Two respondents recommended submission of the DD Form 254 by company name with an ·option· to file by CAGE code and if possible link the form to the website for storage and potential reuse to avoid uploading as part of an application ·process· via the contractor's tools and processes for DD Form 254 submission. Response:

The CMMC Program validates implementation of DoD's required cyber protection standards for companies in the DIB. Furthermore, this rule benefits the efficient functioning of the economy and private markets for all sizes of companies, including the smallest, most vulnerable companies, by: (1) protecting DoD from the loss of FCI and CUI; (2) promoting improvements in cybersecurity and accountability across DoD supply chains; (3) promoting continued innovation by helping to prevent significant loss of revenue, benefits, and jobs to the companies involved in developing those

innovations for DoD; (4) promoting U.S. technical advantage and superiority; and (5) improving the safeguarding of competitive advantages and protections for proprietary information and capabilities through requirements flow-down throughout the defense contractor supply chain. (b) Costs A Regulatory Impact Analysis (RIA) that includes a detailed discussion and explanation about the assumptions and methodology used to estimate the cost of this regulatory action is available at www.regulations.gov (search for ·DoD-2023-OS-0063· click ·Open Docket· and view ·Supporting Documents·). The total estimated Public (large and small entities) and Government costs associated with this rule, calculated in over a 20-year horizon in 2023 dollars at a 7 percent discount rate and a 3 percent discount rate are provided as follows: The following shows the estimated number of small entities [54] anticipated to pursue compliance or certification, at each CMMC level, over a phased implementation. These estimates were generated based upon prior year procurement data. (printed page 89105) The following is a summary of the estimated public costs of CMMC for small entities, per assessment of each contractor information system, at the required periodicity for each CMMC level. The following estimates are Small Entity Public and Government costs for CMMC requirements calculated over a 20-year horizon in 2023 dollars at a 7 percent discount rate. (printed page 89106) (4) Small Business Entities Impacted This rule will impact small businesses that do business with the Department of Defense as a prime or subcontractor, except for contracts or orders that are exclusively for COTS items or valued at or below the micro-purchase threshold. According to the Federal Procurement Data System (FPDS) there is an annual average of 30,145 unique small business contractors in DoD: FY 2019 (31,189), FY 2020 (29,166), FY 2021 (27,427) and FY 2022 (32,798). Cost Assumptions and Analysis for CMMC 2.0 Complete details on CMMC requirements and associated costs, savings, and benefits of this rule are provided in the Regulatory Impact Analysis referenced in the Preamble. Key components of CMMC Program requirements are described in 32 CFR Subpart D . (a) Comparison to CMMC 1.0 Cost Analysis Public comment feedback on CMMC 1.0 indicated that cost estimates were too low. CMMC 2.0 cost estimates account for that feedback with the following improvements:

Access to equipment and information by DoD personnel. (i) The CDC will allow, upon request by DoD personnel, access by DoD personnel to additional equipment or information of the CDC that is necessary to conduct forensic analysis of reportable cyber incidents in addition to any analysis conducted by the CDC. (ii) The CDC is only required to provide DoD access to equipment or information to determine whether information created by or for DoD in connection with any DoD program was successfully exfiltrated from a CDC's network or information system, and what information was exfiltrated from the CDC's network or information system. (g) Reports to ISOO. (1) Contractors will report instances of redundant or duplicative security review and audit activity by the CSAs to the Director, ISOO, for resolution. (2) Contractors will report instances of CSAs duplicating processing to determine an entity's eligibility for access to classified information when there is an existing determination of an entity's eligibility for access to classified information by another CSA. §·117.9 Entity eligibility determination for access to classified information. (a) General. This section applies to all contractors with entity eligibility determinations, except as provided in §·117.22 for entity eligibility determinations for participation in the CCIPP under the cognizance of DHS. (1) Prior to the entity being granted an entity eligibility determination for access to classified information, the responsible CSA must have determined that: (i) The entity is eligible for access to classified information to meet a legitimate USG or foreign government need. (ii) Access is consistent with national security interests. (2) The CSA will provide guidance on processing entity eligibility determinations for entity access to classified information. (3) The determination of entity eligibility for access is separate from the determination of a classified (printed page 83326) information safeguarding capability (see §·117.15). (4) Neither the contractor nor its employees will be permitted access to classified information until the CSA has made an entity eligibility determination (e.g., issued an FCL). (5) The requirement for a favorable entity eligibility determination (also referred to in some instances as an FCL) for a prime contractor includes instances where all access to classified information will be limited to subcontractors. A prime contractor must have a favorable entity eligibility determination at the same or higher classification level as its subcontractors. (6) Contractors are eligible for storage of classified material in connection with a legitimate USG or foreign government requirement if they have a favorable entity eligibility determination and a classified information safeguarding capability approved by the CSA. (7) An entity eligibility determination is valid for access to classified information at the same or lower classification level.

(13) Disclosure to the Merit Systems Protection Board Routine Use. A record from a system of records maintained by a DOD component may be disclosed as a routine use to the Merit Systems Protection Board, including the Office of the Special Counsel for the purpose of litigation, including administrative procedures, appeals, special studies of the civil service and other merit systems, review of Office of Personnel Management or component rules and regulations, investigation of alleged or possible prohibited personnel practices, including administrative proceedings involving any individual subject of a DOD investigation, and such other functions, promulgated in 5 U.S.C. sections 1205 and 1206, or as may be authorized by law. (14) Counterintelligence Purposes Routine Use. A record from a system of records maintained by a DOD component may be disclosed as a routine use outside the DOD or the U.S. Government for the purpose of counterintelligence activities authorized by U.S. Law or Executive Order or for the purpose of enforcing laws, which protect the national security of the United States. Appendix E to Part 505-Litigation Status Sheet (a) Case Number: The number used by a DA activity for reference purposes; Requester; (b) Document Title or Description: Indicates the nature of the case, such as ·Denial of access·, ·Refusal to amend·, ·Incorrect records·, or other violations of the Act (specify); (c) Litigation: Date complaint filed, Court, and Case File Number; (d) Defendants: DOD component and individual; (e) Remarks: Brief explanation of what the case is about; (f) Court action: Court's finding and disciplinary action (if applicable); and (g) Appeal (If applicable): Date complaint filed, court, case File Number, court's finding, disciplinary action (if applicable). Appendix F to Part 505-Example of a System of Records Notice (a) Additional information and guidance on Privacy Act system of records notices are found in DA PAM 25-51. The following elements comprise a Privacy Act system of records notice for publication in the Federal Register: (b) System Identifier: A0025-55 AHRC·DA FOIA/P Office assigns the notice number, for example, A0025-55, where ·A· indicates ·Army·, the next number represents the publication series number related to the subject matter, and the final letter group shows the system manager's command. In this case, it would be U.S. Army Human Resources Command. (c) System Name: Use a short, specific, plain language title that identifies the system's general purpose (limited to 55 characters). (d) System Location: Specify the address of the primary system and any decentralized elements, including automated data systems with a central computer facility and input or output terminals at separate locations. Use street address, 2-letter state abbreviations and 9-digit ZIP Codes. Spell out office names. Do not use office symbols.

The Department would expect this proposed exception to be applicable for a limited period of time and only when encryption is infeasible. As noted above, the proposed exception to encryption would narrowly apply only when a regulated entity's relevant electronic information system is adversely affected by the emergency or other occurrence. The proposed exception would no longer be applicable at such time encryption becomes feasible, regardless of whether the emergency or other occurrence continues. The fourth proposed set of exceptions at proposed 45 CFR 164.312(b)(3)(iv) would be for ePHI that is created, received, maintained, or transmitted by a medical device (i.e., a ·device· within the meaning of section 201(h) of the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. 321(h)) that is authorized by the FDA for marketing. We propose three separate exceptions for devices that are authorized by the FDA for marketing pursuant to: a submission received before March 29, 2023; a submission received on or after March 29, 2023, where the device is no longer supported by its manufacturer; or a submission received on or after March 29, 2023, where the device is supported by its manufacturer. Where a device has been authorized by the FDA for marketing pursuant to a submission received before March 29, 2023, we propose that the exception at proposed 45 CFR 164.312(b)(3)(iv)(A) would be available only where the regulated entity deploys in a timely manner any updates or patches required or recommended by the manufacturer of the device. We also propose a similar exception at proposed 45 CFR 164.312(b)(3)(iv)(B) for devices authorized by the FDA for marketing pursuant to a submission received on or (printed page 970) after March 29, 2023, where the device is no longer supported by its manufacturer, provided that the regulated entity has deployed any updates or patches required or recommended by the manufacturer. We recognize that, to comply with this proposal, some regulated entities may incur costs for replacing legacy medical devices (i.e., medical devices that cannot be reasonably protected against current cybersecurity threats). [742] We also recognize that legacy devices can pose significant risks to the confidentiality, integrity, and availability of ePHI. [743]

(Comment 135) One comment states that records should be retained for 2 years from the date they are created, and not for 2 years from the date of shipment of the product. The comment points out that wine may be shipped several years after it has been manufactured, and that establishing the timeframe from the date of shipment of the product would be an unwarranted burden. One comment

suggests that the minimum record retention periods should be stated as time from the date of production, e.g., a minimum of 2 years after the date of production of the food, except perishables, and a minimum of 1 year after the date of production for perishables. (Response) FDA does not agree with the comment's suggestion, as this will not ensure that FDA has access to the requisite records at the time of a traceback investigation. Often, a traceback begins after consumers become sickened or die. In the comment's example, if the wine was adulterated and presented a threat of serious adverse health consequences or death to humans, FDA may not know this until the wine has been consumed, i.e., after the product was released by the manufacturer into commerce and consumers became seriously ill. If the record retention period began at the time of production, but the wine was aged at the manufacturer's facility 2 years before distribution into commerce, the record retention period would have expired before the wine entered commerce. In the final rule, FDA retains the requirement that records required under subpart J must be established at the time food is received or released and maintained from that time until the end of the time period specified in § 1.360 of this final rule. (Comment 136) One comment notes that mechanisms for keeping records updated have not been established. The comment asked what should be done if a record's 2-year deadline expires, e.g., is there a requirement to open a new record? (Response) The final rule does not mandate specific mechanisms, systems, or processes for establishing and maintaining the required records, only the information that must be kept. The record retention period is from the time the food is received or released. Persons are not required to update, modify, or transfer information in a record to a new record after the end of the required retention period.

Below, the Department provides the basis for its estimated quantifiable costs resulting from the proposed changes to specific provisions of the Security Rule. Many of the estimates are based on assumptions formed through OCR's experience with compliance and enforcement and accounts from stakeholders. For each cost, the Department provides its main estimate, as well as additional high and low estimates for some costs to account for any uncertainty in the compliance approach of regulated entities. All estimates in this section are based on subject matter expertise. The Department requests information or data points from commenters to further refine its estimates and assumptions.

a. Costs Associated With Conducting a Security Rule Compliance Audit The Department estimates that all regulated entities would need to conduct a Security Rule Compliance Audit because this would be a new requirement under proposed 45 CFR 164.308(a)(14). Although some regulated entities have mistakenly conducted such an audit in lieu of a risk analysis, the Department believes that costs for the compliance audit as a separate requirement should be attributed to the proposed changes in the NPRM. Further, because this would be an annual requirement, the Department is including this as a recurring cost. The Department estimates that regulated entities would need an average of 2 hours of labor by an information systems analyst to conduct the compliance audit, based on the assumption that regulated entities have already documented Security Rule compliance activities as currently required. This would result in total estimated costs of \$437,205,288 [= 1,822,600 regulated entities × 2 hours × \$119.94]. The respective low and high estimates would be 0.25 and 2.5 hours of information systems analyst labor, resulting in respective total estimated costs of \$54,650,661 [= 1,822,600 regulated entities × 0.25 hours × \$119.94] and \$546,506,610 [= 1,822,600 regulated entities × 2.5 hours × \$119.94]. (printed page 998)

b. Estimated Costs From Adding a Requirement for Business Associates to Analyze Compliance With Technical Safeguards For proposed 45 CFR 164.308(b)

(d) DA PAM 25-51, The Army Privacy Program-System of Records Notices and Exemption Rules. (e) DOD Directive 5400.11, Department of Defense Privacy Program. (f) DOD 5400.11-R, Department of Defense Privacy Program. (g) AR 25-2, Information Assurance. (h) AR 25-400-2, The Army Records Information Management System (ARIMS). (i) AR 27-10, Military Justice. (j) AR 40-66, Medical Record Administration and Health Care Documentation. (k) AR 60-20 and AFR 147-14, Army and Air Force Exchange Service Operating Policies. (l) AR 190-45, Law Enforcement Reporting. (m) AR 195-2, Criminal Investigation Activities. (n) AR 380-5, Department of Army Information Security Program. (o) DOD Directive 5400-7, DOD Freedom of Information Act (FOIA) Program. (q) DOD 5400.7-R, DOD Freedom of Information Program. (r) DOD 6025.18-R, DOD Health Information Privacy Regulation (HIPAA). (s) U.S. Department of Justice, Freedom of Information Act Guide and Privacy Act Overview. (t) Office of Secretary of Defense memorandum, dated July 15, 2005, subject: Notifying Individuals when Personal Information is Lost, Stolen, or Compromised located at <http://www.army.mil/ciog6/referencs/policy/dos/OSDprivateinfo.pdf>. Appendix B to Part 505-Denial Authorities for Records Under Their Authority (Formerly Access and Amendment Refusal Authorities) (a) The Administrative Assistant to the Secretary of the Army is authorized to act for

the Secretary of the Army on requests for all records maintained by the Office of the Secretary of the Army and its serviced activities, as well as requests requiring the personal attention of the Secretary of the Army. This also includes civilian Equal Employment Opportunity (EEO) actions. (See DCS, G-1 for Military Equal Opportunity (EO) actions). The Administrative Assistant to the Secretary of the Army has delegated this authority to the Chief Attorney, OAASA (See DCS, G1 for Military Equal Opportunity (EO) actions). (b) The Assistant Secretary of the Army (Financial Management and Comptroller) is authorized to act on requests for finance and accounting records. Requests for CONUS finance and accounting records should be referred to the Defense Finance and Accounting Service (DFAS). The Chief Attorney, OAASA, acts on requests for non-finance and accounting records of the Assistant Secretary of the Army (Financial Management and Comptroller). (c) The Assistant Secretary of the Army (Acquisition, Logistics, & Technology) is authorized to act on requests for procurement records other than those under the purview of the Chief of Engineers and the Commander, U.S. Army Materiel Command. The Chief Attorney, OAASA, acts on requests for non-procurement records of the Assistant Secretary of the Army (Acquisition, Logistics and Technology).

As specified in the rule, IoT, IIoT, and OT, are Specialized Assets, and all requirements associated with Specialized Assets apply to any equipment that processes, stores, or transmits CUI but is unable to be fully secured. The description of Internet of Things (IoT) in the level 2 and level 3 Scoping Guides is consistent with the definition of IOT in § 170.4 and is defined in NIST SP 800-172A Mar2022. Scoping Guide text also provides examples to help clarify what types of devices may be IoT. The definition of (printed page 83162) OT is from NIST SP 800-60 V2R1 and the definition of ICS is from NIST SP 800-82r3. Requests for revisions to these definitions should be addressed to NIST. OSAs determine the asset categories and assessment scope based on how and where they will process, store, and transmit FCI and CUI. The DoD declined to comment on individual use cases included in the comments. e. Program and Security Requirements Comment: Two comments asked for a definition of 'Security Requirements' while another asked for the DoD to define the term 'CMMC Program requirements' in the rule. Three comments addressed concerns with the CMMC security practices numbering scheme in §§ 170.14(c)(i). One comment requested clarification on what constitutes a 'priority' program. Another commenter stated the term 'all applicable CMMC security requirements' is ambiguous and many OSAs will only attest to fulfilling the FAR 52.204-21 or NIST SP 800-171 R2 security requirements. The commenter felt this could lead to a significant disconnect at CMMC Level 2 since Level 2 includes security requirements associated with the use of ESPs, as defined in DFARS clause 252.204-7012 paragraphs (e.g., para (b)(2)(ii)(D)) and the DoD CIO FedRAMP Equivalency memorandum. Response: CMMC Program requirements are all the requirements codified in the 32 CFR part 170 CMMC Program rule. The term 'CMMC Security Requirements' is defined in § 170.14(c). The CMMC supplemental guidance documents add clarity; however, they are not authoritative and the rule itself takes precedence. The CMMC numbering scheme in the rule is a key element of the model that must pull together the independent numbering schemes of FAR clause 52.204-21 (for Level 1), NIST SP 800-171 R2 (for Level 2), and NIST SP 800-172 Feb2021 (for Level 3). For the CMMC Program, the numbering scheme must also identify the domain and CMMC Level of each security requirement. The term 'priority program' is not used in the rule; therefore, no definition of this term is needed. A commenter incorrectly associated CMMC Program requirements as CMMC security requirements. To address potential confusion, the rule was updated to define 'CMMC security requirements' as the 15 Level 1 FAR requirements, the 110 NIST SP 800-171 R2 requirements, and the 24 selected NIST SP 800-172 Feb2021 requirements. f. OSA and OSC Comment: Several comments requested clarification of the terms OSA and OSC. One recommended combining them into a single term. Response:

(d) The CMMC Program balances the need to safeguard FCI and CUI and the requirement to share information appropriately with defense contractors in order to develop capabilities for the DoD. The CMMC Program is designed to ensure implementation of cybersecurity practices for defense contractors and to provide DoD with increased assurance that FCI and CUI information will be adequately safeguarded when residing on or transiting contractor information systems. (e) This part creates no right or benefit, substantive or procedural, enforceable by law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person. § 170.2 Incorporation by Reference. Certain material is incorporated by reference into this part with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51 . Material approved for (printed page 89119) incorporation by reference (IBR) is available for inspection at the Department of Defense (DoD) and at the National Archives and Records Administration (NARA). Please direct media

inquires to the National Institute of Standards and Technology's Office of Public and Business Affairs at (301) 975-6478. SUPPLEMENTARY INFORMATION: The Internet has become vitally important to U.S. innovation, prosperity, education, civic activity and cultural life as well as aspects of our national security. A top priority of the Department of Commerce is to ensure that the Internet remains an open and trusted infrastructure, both for commercial entities and individuals. In pursuit of this priority, the Department has created an Internet Policy Task Force whose mission is to identify leading policy challenges and to recommend possible solutions. The Task Force leverages expertise across many bureaus at the Department, including those responsible for cybersecurity standards and best practices, information and communications policy, international trade, intellectual property, business advocacy and export control. This Notice of Inquiry is one in a series of inquiries from the Task Force. Other reviews examine information privacy, global free flow of information on the Internet, and online copyright protection issues. The Task Force may explore additional areas in the future. The Task Force's cybersecurity work aims to identify public policies and private-sector norms that can: (1) Promote conduct by firms and consumers that collectively will sustain growth in the Internet economy and improve the level of security of the infrastructure and online environment that support it; (2) enhance individual and collaborative efforts by those actors who are in the best position to assist firms and their customers in addressing cybersecurity challenges; (3) improve the ability of firms and consumers to keep pace with ever-evolving cybersecurity risks; and (4) promote individual privacy and civil liberties. Public policies and private-sector practices that promote innovation and enhance cybersecurity will help assure that the Internet remains fertile ground for an expanding range of beneficial commercial and consumer activity. Internet Growth and Evolving Cybersecurity Challenges: The Internet allows users to gather, store, process, and transfer vast amounts of data, including proprietary and sensitive business, transactional, and personal data. At the same time that businesses and consumers rely more and more on such capabilities, cybersecurity risks continue to plague the Internet economy, and it seems highly unlikely that all risks will ever be completely eliminated. (printed page 44217)

IA.L2-3.5.1 · Identification [CUI Data] CMMC Assessment Guide · Level 2 | Version 2.13 112
 Identification and Authentication (IA) IA.L2-3.5.1 · IDENTIFICATION [CUI DATA] Identify system users, processes acting on behalf of users, and devices. ASSESSMENT OBJECTIVES [NIST SP 800-171A]98 Determine if: [a] system users are identified; [b] processes acting on behalf of users are identified; and [c] devices accessing the system are identified. POTENTIAL ASSESSMENT METHODS AND OBJECTS [NIST SP 800-171A]98 Examine [SELECT FROM: Identification and authentication policy; procedures addressing user identification and authentication; system security plan, system design documentation; system configuration settings and associated documentation; system audit logs and records; list of system accounts; other relevant documents or records]. Interview [SELECT FROM: Personnel with system operations responsibilities; personnel with information security responsibilities; system or network administrators; personnel with account management responsibilities; system developers]. Test [SELECT FROM: Organizational processes for uniquely identifying and authenticating users; mechanisms supporting or implementing identification and authentication capability]. DISCUSSION [NIST SP 800-171 REV. 2]99 Common device identifiers include media access control (MAC), Internet Protocol (IP) addresses, or device -unique token identifiers . Management of individual identifiers is not applicable to shared system accounts . Typically, individual identifiers are the user names associated with the system accounts assigned to those individuals . Organizations may require unique identification of individuals in group accounts or for detailed accountability of individual activity. In addition, this requirement addresses individual identifiers that are not necessarily associated with system accounts . Organizational devices requiring 98 NIST SP 800-171A, p. 31. 99 NIST SP 800-171 Rev. 2, p. 23.

(Response) FDA agrees in part with the comments. The final rule has been revised from the proposal. The final rule provides five alternatives for transporters to meet their obligation to establish and maintain records. First, transporters can meet the requirements of this final rule by keeping the records listed in §1.352(a) of this final rule. Second, transporters can meet the requirements of this final rule by keeping the records listed in §1.352(b) of this final rule, which are included within the current requirements for roadway interstate transporters under FMCSA regulations as of the date of publication of this final rule (49 CFR 373.101 and 373.103). Third, transporters can meet the requirements of this final rule by keeping the records listed in §1.352(c) of this final rule, which are included within the current requirements for rail and water interstate transporters under STB regulations as of the date of publication of this final rule (49 CFR 1035.1

and 1035.2). Fourth, transporters can meet the requirements of this final rule by keeping the records listed in § 1.352(d) of this final rule, which are included with the current requirements for international air transporters under the Warsaw Convention. Fifth, transporters can meet the requirements of this final rule by entering into an agreement with a nontransporter immediate previous source in the United States or a nontransporter immediate subsequent recipient in the United States to keep records for them. Such agreements must (printed page 71594) contain the elements specified in § 1.352(e) of this final rule. Failure by the immediate previous source or immediate subsequent recipient who enters into an agreement under § 1.352(c) of this final rule to keep such records is a prohibited act under § 1.363 of this final rule. FDA notes that the FMCSA and STB regulations only apply to interstate transporters, and this final rule applies to both interstate and intrastate transporters. Intrastate transporters will be subject to the requirements of this final rule because FDA has determined that imposing such requirements on intrastate transporters comports with the Constitution, and these requirements are necessary to allow FDA to identify the immediate previous sources and immediate subsequent recipients of food in order to address credible threats of serious adverse health consequences or death. Intrastate transporters can meet this obligation by complying with either § 1.352(a), (b), (c), (d), or (e) of this final rule. As a practical matter, because the final rule's requirements for interstate shipments can be satisfied by existing records relating to interstate shipments, the final rule only establishes new requirements for (1) intrastate transporters ; and (2) intrastate shipments conveyed by interstate transporters

c. DFARS provision 252.239-7009, Representation of Use of Cloud Computing, requires contractors to report that they ·anticipate· or ·do not anticipate· utilizing cloud computing service in performance of the resultant contract. The representation will notify contracting officers of the applicability of the cloud computing requirements at DFARS clause 252.239-7010 of the contract. d. DFARS clause 252.239-7010, Cloud Computing Services, requires reporting of cyber incidents that occur when DoD is purchasing cloud computing services. These DFARS provisions and clauses facilitate mandatory cyber incident reporting requirements in accordance with statutory regulations. When reports are submitted, DoD will analyze the reported information for cyber threats and vulnerabilities in order to develop response measures as well as improve U.S. Government

understanding of advanced cyber threat activity. In addition, the security requirements in NIST SP 800-171 are specifically tailored for use in protecting sensitive information residing in contractor information systems and generally reduce the burden placed on contractors by eliminating Federal-centric processes and requirements. The information provided will inform DoD in assessing the overall risk to DoD covered defense information on unclassified contractor systems and networks. Comments and recommendations on the proposed information collection should be sent to Ms. Susan Minson, DoD Desk Officer, at Oira_submission@omb.eop.gov . Please identify the proposed information collection by DoD Desk Officer and the Docket ID number and title of the information collection. You may also submit comments, identified by docket number and title, by the following method: Federal eRulemaking Portal: <https://www.regulations.gov> . Follow the instructions for submitting comments. DoD Clearance Officer : Ms. Angela Duncan. Requests for copies of the information collection proposal should be sent to Ms. Duncan at whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil . Jennifer D. Johnson, Editor/Publisher, Defense Acquisition Regulations System. [FR Doc. 2022-18769 Filed 8-30-22; 8:45 am] BILLING CODE 5001-06-P

Assessment scores must be reported to the Department via SPRS. SPRS scores must be submitted by the time of contract award and not be more than three years old. DFARS clause 252.204-7020 notifies contractors that DoD reserves the right to conduct a higher-level assessment of contractors' cybersecurity compliance, and contractors must give DoD assessors full access to their facilities, systems, and personnel. Further, DFARS clause 252.204-7020 complements DFARS clause 252.204-7012's flow down requirements by holding contractors responsible for confirming their subcontractors have SPRS scores on file prior to awarding them contracts. DFARS clause 252.204-7021 paves the way for rollout of the CMMC Program. Once CMMC is implemented, the required CMMC Level and assessment type will be specified in the solicitation and resulting contract. Contractors handling FCI or CUI will be required to meet the CMMC requirement specified in the contract. DFARS clause 252.204-7021 also stipulates contractors will be responsible for flowing down the CMMC requirements to their subcontractors. CFR Part 170-Additional Requirements for Defense Contractors and Subcontractors Discussed in This Final Rule When this 32 CFR part 170 CMMC Program rule and the complementary 48 CFR part 204 CMMC Acquisition rule are finalized and following a phased implementation plan, solicitations and resulting defense contracts involving the processing, storing, or transmitting of FCI or CUI on a non-Federal system will, unless waived, have a CMMC level and assessment type requirement that a contractor must meet to be eligible for a contract award. The four phases of the implementation plan add CMMC level requirements incrementally, starting in Phase 1 with self-assessments, and ending in Phase 4, which represents full implementation of program requirements. The DoD elected to base the phase-in plan on the level and type of assessment to provide time to train the necessary number of assessors, and to allow companies time to understand and implement CMMC requirements. Details of each phase are addressed in (printed page 83095) §.170.3(e). In Phases 2 and 3, DoD will implement CMMC Level 2 and Level 3 certification requirements, respectively. At full implementation (Phase 4), DoD will include CMMC requirements in all applicable DoD contracts and option periods on contracts awarded after the beginning of Phase 4. Table 1 defines the requirements for each CMMC level and assessment type. Table 1.CMMC Level and Assessment Requirements CMMC status Source & number of security reqts. Assessment reqts. Plan of action & milestones (POA&M) reqts. Affirmation reqts. Level 1 (Self) · 15 required by FAR clause 52.204-21 · Conducted by Organization Seeking Assessment (OSA) annually · Results entered into SPRS (or its successor capability). · Not permitted · After each assessment. · Entered into SPRS. Level 2 (Self) · 110 NIST SP 800-171 R2 required by DFARS clause 252.204-7012

The notation and terminology for the state are described in Sec. 3.1. The step mappings are specified in Sec. 3.2. The KECCAKp permutations, including the round function Rnd, are specified in Sec. 3.3. The relationship of the KECCAKp permutations to the KECCAKf permutations that were defined for KECCAK in [8] is described in Sec. 3.4.

2. The UFS also stores application information collected when the fee remitter (submitter) creates coversheets in order to pay user fees. This information includes the type of application, waiver and exemption status, and SBD number. 3. The UFS stores fee processing information including: Billing details; adjustments to invoices including credit and debit memos; and receipt information including date, mode, and amount of payment. AUTHORITY FOR MAINTENANCE OF THE SYSTEM: 21 U.S.C. 371 , 379 , 379e , 379h , 379h-1 , 379j , 379j-12 , 379j-21 , 379j-31 , 387s , and 393(d)(2) ; 42 U.S.C. 263b(r)(1) ; 5 U.S.C. 301 , 552 ; and 44 U.S.C. 3101 . PURPOSE(S): FDA personnel and any contractors assisting them will use information in the system, on a need-to-know

basis, for the following purposes: 1. To assess and collect user fees. 2. To provide an electronic payment and receipt mechanism that is integrated with the U.S. Department of Treasury's <http://www.Pay.gov> Web site and the various FDA Centers. 3. To provide Web-based capabilities including transactional inquiries and information on payment status. 4. To facilitate debt collection activities in accordance with the Debt Collection Improvement Act of 1996 and the HHS regulations for claims collections (45 CFR Part 30). ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM INCLUDING THE PURPOSES OF SUCH USES AND CATEGORIES OF USERS: Permitted disclosures include those made in accordance with routine uses that are listed in the notice of the system of records. 5 U.S.C. 552a(b)(3) . The Privacy Act defines 'routine use' as 'with respect to the disclosure of a record, the use of such record for a purpose which is compatible with the purpose for which it was collected.' See also FDA's Privacy Act regulations, defining 'routine use' as 'use outside the Department of Health and Human Services that is compatible with the purpose for which the records were collected and described in the [System of Records] notice * * * . 21 CFR 21.20(b)(5) . (printed page 67822) Records in this system that contain information about record subjects and nonsubjects (such as FDA employees who operate the system) may be disclosed to recipients outside HHS in accordance with the following routine uses: 1. Records may be disclosed to appropriate Federal Agencies and Department contractors that have a need to know the information for the purpose of assisting the Department's efforts to respond to a suspected or confirmed breach of the security or confidentiality of information maintained in this system of records. 2. In the event HHS deems it desirable or necessary, in determining whether particular records are required to be disclosed under the FOIA, disclosure may be made to the DOJ for the purpose of obtaining its advice.

(ii) In determining whether an automated system is a system of records that is subject to this part, retrieval policies and practices shall be evaluated. If DoD Component policy is to retrieve personal information by the name or other unique personal identifier, it is a system of records. If DoD Component policy prohibits retrieval by name or other identifier, but the actual practice of the Component is to retrieve information by name or identifier, even if done infrequently, it is a system of records. (2) If records are retrieved by name or personal identifier, a system notice must be submitted in accordance with § 310.33. (3) If records are not retrieved by name or personal identifier but then are rearranged in such a manner that they are retrieved by name or personal identifier, a new systems notice must be submitted in accordance with § 310.33. (4) If records in a system of records are rearranged so that retrieval is no longer by name or other personal identifier, the records are no longer subject to this part and the system notice for the records shall be deleted in accordance with § 310.34. (c) Relevance and necessity. Information or records about an individual shall only be maintained in a system of records that is relevant and necessary to accomplish a DoD Component purpose required by a Federal statute or an Executive Order. (d) Authority to establish systems of records. Identify the specific statute or the Executive Order that authorizes maintaining personal information in each system of records. The existence of a statute or Executive Order mandating the maintenance of a system of records does not abrogate the responsibility to ensure that the information in the system of records is relevant and necessary. If a statute or Executive Order does not expressly direct the creation of a system of records, but the establishment of a system of records is necessary in order to discharge the requirements of the statute or Executive Order, the statute or Executive Order shall be cited as authority. (e) Exercise of First Amendment rights. (1) Do not maintain any records describing how an individual exercises his or her rights guaranteed by the First Amendment of the U.S. Constitution except when: (i) Expressly authorized by Federal statute; (ii) Expressly authorized by the individual; or (iii) Maintenance of the information is pertinent to and within the scope of an authorized law enforcement activity. (2) First Amendment rights include, but are not limited to, freedom of religion, freedom of political beliefs, freedom of speech, freedom of the press, the right to assemble, and the right to petition. (f) System Manager's evaluation. (1) Evaluate the information to be included in each new system before establishing the system and evaluate periodically the information contained in

each existing system of records for relevancy and necessity. Such a review shall also occur when a system notice alteration or amendment is prepared (see § 310.33 and § 310.34).

Adding ·as amended,· after · Public Law 110-181 ·,· ii. Removing ·section 159.5 of this part· and adding in its place ·§ 159.5·. b. In paragraph (b): i. Removing ·Geographic Combatant Commanders· and adding in its place ·Combatant Commanders (CCDRs) with geographic Areas of Responsibility (AORs)·. ii. Redesignating footnotes 4 and 5 as footnotes 1 and 2. c. In paragraph (c): i. Removing ·geographic Combatant Commander· and adding in its place ·CCDR for the applicable geographic AOR· wherever it appears. ii. Adding ·(COM)· after ·the relevant Chief of Mission· in the first sentence. iii. Removing ·Chief of Mission· and adding in its place ·COM· in the second sentence. 6. Revise § 159.5 to read as follows: § 159.5 Responsibilities. (a) The Under Secretary of Defense for Personnel and Readiness (USD(P&R)) will provide Department-wide policies on the total force manpower mix and labor sourcing, consistent with U.S. law, the FAR, the DFARS, and other applicable Federal policy documents, especially with respect to contracted services and restrictions on functions that contractors may and may not perform. The USD(P&R) will ensure that policies specifically address circumstances where use of PSCs would be inherently governmental or where CCDRs with geographic AORs would need to assess where performance of the function by PSCs or total reliance on PSCs would constitute an unacceptable risk. (b) The Deputy Assistant Secretary of Defense for Logistics (DASD(Logistics)), under the authority, direction, and control of the Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)) and through the Assistant Secretary of Defense for Sustainment, monitors the registering, processing, and accounting of PSC personnel in areas of contingency operations, humanitarian or peace operations, or other military operations or exercises. (c) The Principal Director, Defense Pricing and Contracting (DPC), under the authority, direction, and control of the USD(A&S) and through the Assistant Secretary of Defense for Acquisition, ensures that the DFARS and (when appropriate, in consultation with the other members of the FAR Council) the FAR, provides appropriate guidance and publishes contracting requirements pursuant to this part and section 862 of Public Law 110-181 . (d) The CJCS shall ensure that joint doctrine is consistent with the principles established by DoD Directive 3020.49, ·Program Management for the Planning and Execution of Operational Contract Support· (available at <https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodd/302049d.pdf?ver=fgxC1kzBqeIV4KpOv9pDTw%3d%3d>); DoD Instruction 3020.41, DoD Directive 5210.56, ·Arming and the Use of Force· (available at <https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodd/521056p.PDF?ver=Plvlb3eh t0obgolnD0UCEw%3d%3d>); and this part.

DCMA DIBCAC submits assessment appeals, review records, and decision results of assessment appeals using the CMMC instantiation of eMASS as addressed in § 170.7(a)(2) and (6) of this part. Additional information collection reporting and recordkeeping requirements for this part include: OSCs prepare for assessment based on NIST guidelines as addressed in § 170.18. DCMA DIBCAC conducts assessment based on NIST guidelines as addressed in § 170.18. This is an assessment to validate implementation of 24 selected security requirements from NIST SP 800-172. OSCs may have a POA&M at CMMC Level 3 as addressed in § 170.21(a)(3). DCMA DIBCAC must perform a POA&M closeout assessment. OSCs may submit appeals to DCMA DIBCAC as addressed in § 170.7(a)(6). OSCs must retain artifacts used as evidence for the assessment for the duration of the validity period of the certificate of assessment, and at minimum, for six (6) years from the date of certification assessment as addressed in § 170.18(c)(4). DCMA DIBCAC maintains records for a period of six years of monitoring, education, training, technical knowledge, skills, experience, and authorization of each member of its personnel involved in inspection activities and working papers generated from Level 3 Certification Assessments. The public and government respondent burden and labor cost for the information collection reporting and recordkeeping requirements under the CMMC Level 3 Certification Assessment are as follows: Note: This respondent burden and labor cost does not include the requirement for the OSC to upload the affirmation in SPRS (addressed in Title 48 acquisition rule and ICR). (printed page 89116) (printed page 89117) Part B: Respondent Costs Other Than Burden Hour Costs Non-Recurring and Recurring Engineering estimated costs are included for Level 3 Certification Assessments. Non-recurring Engineering reflects a one-time cost consisting of hardware, software, and the associated labor to implement the same. Recurring Engineering reflects annually recurring fees and associated labor for technology refresh. The estimated amounts are average annual amounts for the entity types indicated. Part C: Operational and Maintenance Costs Government operational and maintenance costs include the estimate to develop the operational CMMC instantiation of eMASS. The estimated average annual amount is \$2,731,861. Estimation of Total Public and Government Burden and Cost Needs and Uses: The CMMC Program provides for the assessment

of contractor and subcontractor implementation of DoD cybersecurity requirements for contractor information systems and enhances the protection of FCI and CUI within the DoD supply chain. The CMMC Program will be implemented in DFARS to incorporate CMMC Program requirements into defense contracts and subcontracts. Affected Public: Businesses or other for-profit or not-for-profit entities. Frequency: On occasion. Commenter's Obligation: Voluntary. OMB Desk Officer:

. A CMMC Level 2 assessment must be conducted for each OSC information system that will be used in the execution of the contract that will process, store, or transmit CUI. CMMC Level 3 Certification Assessment Receipt of a CMMC Level 2 Final Certification Assessment for information systems within the Level 3 CMMC Assessment Scope is a prerequisite for a CMMC Level 3 Certification Assessment. A CMMC Level 3 Certification Assessment, conducted by DCMA Defense Industrial Base Cybersecurity Assessment Center (DIBCAC), verifies that an OSC has implemented the CMMC Level 3 security requirements to protect CUI as specified in 32 CFR 170.14(c)(4). A CMMC Level 3 Certification Assessment must be conducted for each OSC information system that will be used in the execution of the contract that will process, store, or transmit CUI. Impact and Cost Analysis of CMMC 2.0 Summary of Impact Public comment feedback on CMMC 1.0 indicated that cost estimates were too low. CMMC 2.0 cost estimates account for that feedback with the following improvements: Allowance for outsourced IT services Increased total time for the contractor to prepare for the assessment, including limited time for learning the reporting and affirmation processes Allowance for use of consulting firms to assist with the assessment process Time for a senior level manager to review the assessment and affirmation before submitting the results in SPRS Updated government and contractor labor rates that include applicable burden costs As a result, some CMMC 2.0 costs may be higher than those included in CMMC 1.0. The CMMC 2.0 impact analysis includes estimated costs for implementation of CMMC 2.0 requirements across Level 1, Level 2, and Level 3 for the Public (small and other than small entities, including the CMMC Ecosystem as set forth in 32 CFR Subpart C) and the Government. In summary, the total estimated Public and Government costs associated with this rule, calculated for a 20-year horizon in 2023 dollars at a 7 percent discount rate and a 3 percent discount rate are provided as follows: Estimating the number of CMMC assessments for unique entities per level per year is complicated by the fact that companies may serve as a prime contractor on one effort but a subcontractor on others, and may also enter into subcontract agreements with more than one prime contractor for various opportunities.

DFARS 252.204-7021 (Cybersecurity Maturity Model Certification Requirements) Requires CMMC certification at the level specified in the contract, effective Phase 1 November 10, 2025. Non-compliance with 252.204-7021 can result in: loss of contract eligibility, termination for cause, False Claims Act liability (if contractor misrepresented compliance status), suspension or debarment from future DoD contracting, and in cases involving CUI spillage or breach, potential civil or criminal penalties.

CIS Safeguard 13.9 · Deploy Port-Level Access Control Deploy port-level access control. Port-level access control utilizes 802.1x, or similar network access control protocols, such as certificates, and may incorporate user and/or device authentication. Implementation Groups: 3 Asset Type: devices Security Function: protect Parent Control: Network Monitoring and Defense

; docket DOD-2018-OS-0075-0001) that claimed certain Privacy Act exemptions for the Personnel Vetting Records System. The Personnel Vetting Records System contains records that support DoD in conducting end-to-end personnel security, suitability, fitness, and credentialing processes, including submission of applications and questionnaires, investigations, adjudications, and continuous vetting activities. DoD developed the information technology capabilities that contribute to the Personnel Vetting Records System to support background investigation processes pursuant to Executive Order 13467 , as amended, and Section 925 of the National Defense Authorization Act for Fiscal Year 2018. The interim final exemption rule for this records system resulted in amendment to and some slight restructuring of § 310.30 (addressing DoD-wide exemptions) of the previous DoD Privacy Program regulation. DoD is incorporating the final version of the exemption rule into this DoD Privacy Program final rule in Section 310.13, which corresponds to § 310.30 of the previous DoD Privacy Program regulation. Additionally, DoD is correcting a clerical error that appeared in § 310.13 of the interim final rule publication concerning the DUSDI 01-DoD, ·Department of Defense (DoD) Insider Threat Management and Analysis Center (DITMAC) and DoD Component Insider Threat Records System. Section 310.13(a)(1)(ii) inaccurately listed authority pursuant to 5 U.S.C. 552a(k)(3) rather than 5 U.S.C. 552a(k)(4) . This final rule accurately reflects the (k)(4)

exemption in § 310.13(e)(1)(ii). During further internal review, it was also discovered that three existing exemption rules were inadvertently omitted from the proposed rule's Subpart C, Exemption Rules. These exemption rules have been included in the final revision of part 310, without amendment, in order to consolidate and streamline existing DoD regulations, and are as follows: Section 310.15: (35) System identifier and name: Army A0600-20-SAMR, Soldiers Equal Opportunity Investigative Files; § 310.16: (24) System identifier and name: N05800-2, Professional Responsibility Files and (25) System identifier and name: NM03800-1, Naval Global Maritime, Foreign Counterterrorism and Counter Intelligence Operation Records. These exemption rules were previously promulgated in accordance with the requirements of 5 U.S.C. 553(b)(1), (2), and (3), (c) and (e) and published in parts 505 and 701. Finally, minor edits were also made to § 310.3 to clarify that individuals may also request to be notified whether a system of records contains records pertaining to them and consistent with the aforementioned restructuring concerning DoD-wide exemptions to § 310.13(b)(1) to clarify the scope and applicability of an exemption when information is provided by confidential sources. Public Comments Received on the DoD Privacy Program Rule As previously referenced, on Thursday, September 13, 2018 (83 FR 46542

Id allow installation or execution. | | 3) Gain Foothold | The attacker has gained entry to the assessment object and achieves enough compromise to gain a foothold, but without persistence. Examples include: unauthorized user successfully logs in with authorized credentials; browser exploit code successfully executed in memory and initiates call back; person gains unauthorized access to server room. | Block Foothold: Reduce number of devices susceptible to compromise due to unauthorized software being allowed to execute. | | 4) Gain Persistence | The attack has gained a foothold on the object and now achieves persistence. Examples include: malware installed on host that survives reboot or log off; basic input/output system (BIOS) or kernel modified; new/privileged account created for unauthorized user; unauthorized person issued credentials/allowed access; unauthorized personnel added to access control list (ACL) for server room. | Block Persistence/Prevent: Stop or delay compromise of devices by restricting software installation. Block Persistence/Detect: Reduce amount of time that malicious or compromised software is installed or remains active before detection and removal. | | 6) Achieve Attack Objective | The attacker achieves an objective. Loss of confidentiality, integrity, or availability of data or system capability. Examples include: exfiltration of files; modification of database entries; deletion of file or application; denial of service; disclosure of personally identifiable information (PII). | Restore required and authorized software as needed, after being removed or altered by attackers, contingency (disk failure), or by mistake. |

Server administrators are system architects responsible for the overall design, implementation, and maintenance of a server. Network administrators are responsible for the overall design, implementation, and maintenance of a network. Security administrators are dedicated to performing information security functions for servers and other hosts, as well as networks. Organizations that have a dedicated information security team usually have security administrators. On a daily basis, server, network, and security administrators contend with the security requirements of the specific systems for which they are responsible. Security issues and solutions can originate from either outside (e.g., security patches and fixes from the manufacturer or computer security incident response teams) or within the organization (e.g., the security office). The administrators are responsible for the following activities associated with servers: -

GLYPH<c=31;font=/MIJOHI+Webdings> Anti-malware software, such as antivirus software, anti-spyware software, and rootkit detectors, to protect the local OS from malware and to detect and eradicate any infections that occur. 20 Examples of when anti-malware software would be helpful include a system administrator bringing infected media to the server and a network service worm contacting the server and infecting it. - GLYPH<c=31;font=/MIJOHI+Webdings> Host-based intrusion detection and prevention software (IDPS), to detect attacks performed against the server, including DoS attacks. For example, one form of host-based IDPS, file integrity checking software, can identify changes to critical system files. 20 Additional information on anti-malware software is available from NIST SP 800-83, Guide to Malware Incident Prevention and Handling (<http://csrc.nist.gov/publications/PubsSPs.html>).

(4) Requests for information recommended for denial will be forwarded to the appropriate Denial Authority, along with a copy of the records and justification for withholding the record. At the same time, notify the requester of the referral to the Denial Authority for action. All documents or portions thereof determined to be releasable to the requester will be released to the requester

before forwarding the case to the Denial Authority. (5) Within 30 working days, the Denial Authority will provide the following notification to the requester in writing if the decision is to deny the requester access to the information. (6) Included in the notification will be: (i) Denying Official's name, position title, and business address; (ii) Date of the denial; (iii) The specific reason for the denial, citing the appropriate subsections of the Privacy Act, the Freedom of Information Act, AR 25-55, The Department of the Army Freedom of Information Act Program and this part; and (iv) The individual's right to administratively appeal the denial within 60 calendar days of the mailing date of the notice, through the Denial Authority, to the Office of the General Counsel, Secretary of the Army, 104 Army Pentagon, Washington, DC 20310-0104. (7) The appeal must be in writing and the requester should provide a copy of the denial letter and a statement of their reasons for seeking review. (8) For denials made by the DA when the record is maintained in a Government-wide system of records, an individual's request for further review must be addressed to each of the appropriate government Privacy Act offices listed in the Privacy Act system of records notices. For a current listing of Government-wide Privacy Act system of records notices see the Defense Privacy Office's Web site <http://www.defenselink.mil/privacy> or DA PAM 25-51. (j) No records determinations. (1) Since a no record response may be considered an adverse determination, the Denial Authority must make the final determination that no records exist. The originating agency shall notify the requester that an initial determination has been made that there are no responsive records, however the final determination will be made by the Denial Authority. A no records certificate must accompany a no records determination that is forwarded to the Denial Authority. (2) The Denial Authority must provide the requester with appeal rights. (k) Referral of requests.

Access to NATO classified information requires a final determination that an individual is eligible for access to classified information at the equivalent level. (7) NATO briefings. Before having access to NATO classified information, the contractor will give employees a NATO security briefing that covers the requirements of this section and the consequences of negligent handling of NATO classified information. A representative of the CSA will give the initial briefing to the contractor. The contractor must conduct annual refresher briefings. (i) When access to NATO classified information is no longer required, the contractor will debrief the employees. The employees will sign a certificate stating that they have been briefed or debriefed, as applicable, and acknowledge their responsibility for safeguarding NATO information. (ii) The contractor will maintain certificates for two years for NATO SECRET and CONFIDENTIAL, and three years for COSMIC TOP SECRET and all ATOMAL information. The contractor will maintain a record of all NATO briefings and debriefings in the CSA-designated database. (8) Access to NATO classified information by foreign nationals. Foreign nationals of non-NATO nations may have access to NATO classified information only with the consent of the NATO Office of Security and the contracting activity. (i) Requests will be submitted to the Central U.S. Registry (CUSR). (ii) Access to NATO classified information may be permitted for citizens of NATO member nations, provided a NATO security clearance certificate is provided by their government and they have been briefed. (9) Subcontracting for NATO contracts. The contractor will obtain prior written approval from the NATO contracting activity and a NATO FSCC must be issued prior to awarding the subcontract. The contractor will forward the request for approval through the CSA. (10) Preparing and marking NATO documents. All classified documents created by a U.S. contractor will be portion-marked. Any portion extracted from a NATO document that is not portion marked, must be assigned the classification that is assigned to the NATO document. (i) All U.S.-originated NATO classified documents will bear an assigned reference number and date on the first page. The reference numbers will be assigned as follows: (A) The first element will be the abbreviation for the name of the contractor. (B) The second element will be the abbreviation for the highest classification followed by a hyphen and the 4-digit sequence number for the document within that classification that has been generated for the applicable calendar year. (C) The third element will be the year; e.g., MM/NS-0013/17. (ii) COSMIC TOP SECRET, NATO SECRET, and ATOMAL documents will bear the reference number on each page and a copy number on the cover or first page. (A) Copies of NATO documents will be serially numbered. (B) Pages will be numbered.

Analysis of costs to meet CMMC requirements is provided in the regulatory impact analysis for this rule. The CMMC rule does not make any change to cost allowability as defined in the FAR 31.201-2 Determining Allowability. Verifying compliance with applicable security requirements may increase cost and is necessary for the protection of DoD CUI. With the revised CMMC, the DoD has streamlined requirements to align directly to NIST guidelines and has eliminated unique security practices to ease the burden on smaller companies. DoD must enforce CMMC requirements uniformly across the

Defense Industrial Base for all contractors and subcontractors who process, store, or transmit CUI. The value of information (and impact of its loss) does not diminish when the information moves to contractors and subcontractors. The DoD declines to speculate about how OSCs and C3PAOs negotiate mutually acceptable terms and conditions for assessment agreements. The DoD declined to modify the estimates, which are intended to be representative and to inform rulemaking.

b. Disproportionate Cost Burden Comment: Many comments emphasized the importance of small business to the DoD contracting environment and expressed the concern that increased cost burden on small companies will result in an anti-competitive barrier to entry. Specifically, commenters state the lack of in-house security resources, inability to amortize costs, upfront costs to comply with CMMC Level 1 and 2 without guaranteed contracts, keeping pace with requirements changes, paying market rates for C3PAO assessments, and obtaining perfect compliance with requirement or assessment objectives may not be affordable or may cause unacceptable enterprise disruption. One comment asserted that the DoD is not considering additional costs to small- and medium-sized businesses (SMBs) for ongoing compliance. One comment stated the cost of entry for a new SMB may be insurmountable even with cost recovery. One comment suggested right-sizing CMMC by tailoring security requirements based on business size and number of employees. Additionally, one comment asserted that small businesses would be unfairly punished while large, legacy primes would lobby and get waivers. Two comments noted that CMMC will increase costs, perhaps doubling annual IT and security spending, ultimately passing the cost to customers, the government and the taxpayer and asked how the DoD plans to deal with price increases from subcontractors and primes. One comment suggested the DoD pay contractor employees to learn to cyber defend rather than pay auditor assessment costs. Response:

anti-virus product quarantines a suspicious file that matches the signature of malicious software. - Compensating : Apply one or more cybersecurity controls to adjust for a weakness in another control. Example: alarms on a server room door audibly notify nearby personnel when an emergency exit push bar has been used, thereby compensating for a physical access control that has been bypassed.

Guidelines on PDA Forensics ## Guidelines on PDA Forensics Personal Digital Assistants (PDAs) are a relatively recent phenomenon, not usually covered in classical computer forensics. This guide attempts to bridge that gap by providing an in-depth look into PDAs and explaining the technologies involved and their relationship to forensic procedures. It covers three families of devices Pocket PC, Palm OS, and Linux-based PDAs - and the characteristics of their associated operating system. This guide also discusses procedures for the preservation, acquisition, examination, analysis, and reporting of digital information present on PDAs, as well as available forensic software tools that support those activities.

(i) Completing and submitting Standard Form (SF) 328 (www.gsa.gov/reference/forms/certificate-pertaining-to-foreign-interests), Certificate Pertaining to Foreign Interests, upon request from DCSA and undergo a National Security Review with regards to the protection of controlled unclassified information based on the factors identified in 32 CFR 117.11(b) using the procedures outlined in 32 CFR 117.11(c) . (ii) Receiving a non-disqualifying eligibility determination from the CMMC PMO resulting from the FOCI risk assessment in order to proceed to a DCMA DIBCAC CMMC Level 2 assessment, as part of the authorization and accreditation process set forth in paragraph (b)(6) of this section. (iii) Reporting any change to the information provided on its SF 328 by resubmitting the SF 328 to DCSA within 15 business days of the change being effective. A disqualifying eligibility determination, based on the results of the change, will result in the C3PAO losing its authorization or accreditation. (6) Undergo a Level 2 certification assessment meeting all requirements for a Final Level 2 (C3PAO) in accordance with the procedures specified in § 170.17(a)(1) and (c), with the following exceptions: (i) The assessment will be conducted by DCMA DIBCAC. (ii) The assessment will not result in a CMMC Status of Level 2 (C3PAO) nor receive a Certificate of CMMC Status. (7) Provide all documentation and records in English. (8) Submit pre-assessment and planning material, final assessment reports, and CMMC certificates of assessment into the CMMC instantiation of eMASS. (9) Unless disposition is otherwise authorized by the CMMC PMO, maintain all assessment related records for a period of six (6) years. Such records include any materials generated by the C3PAO in the course of an assessment, any working papers generated from Level 2 certification assessments; and materials relating to monitoring, education, training, technical knowledge, skills, experience, and authorization of all personnel involved in assessment activities; contractual agreements with OSCs; and organizations for whom consulting services were provided. (10) Provide any requested audit information, including any out-of-cycle from ISO/IEC 17020:2012(E) requirements, to the Accreditation Body. (11) Ensure that all personally identifiable

information (PII) is encrypted and protected in all C3PAO information systems and databases. (12)
 Meet the requirements for Assessment Team composition. An Assessment Team must include at least two people: a Lead CCA, as defined in § 170.11(b)(10), and at least one other CCA. Additional CCAs and CCPs may also participate on an Assessment Team.

 RISK MANAGEMENT FRAMEWORK FOR INFORMATION SYSTEMS AND ORGANIZATIONS A System Life Cycle Approach for Security and Privacy

APPENDIX E PAGE 134 This publication is available free of charge from:
<https://doi.org/10.6028/NIST.SP.800-37r2> TABLE E-5: ASSESSMENT TASKS, RESPONSIBILITIES, AND SUPPORTING ROLES

RMF TASKS	PRIMARY RESPONSIBILITY	SUPPORTING ROLES
TASK A-1 Assessor Selection	Select the appropriate assessor or assessment team for the type of control assessment to be conducted.	· Authorizing Official or Authorizing Official Designated Representative · Chief Information Officer · Senior Agency Information Security Officer · Senior Agency Official for Privacy
TASK A-2 Assessment Plan	Develop, review, and approve plans to assess implemented controls.	· Authorizing Official or Authorizing Official Designated Representative · Control Assessor · Senior Agency Information Security Officer · Senior Agency Official for Privacy
TASK A-3 Control Assessments	Assess the controls in accordance with the assessment procedures described in assessment plans.	· System Owner · Common Control Provider · Information Owner or Steward · System Security Officer · System Privacy Officer
TASK A-4 Assessment Reports	Prepare the assessment reports documenting the findings and recommendations from the control assessments.	· Control Assessor · System Owner · Common Control Provider · System Security Officer · System Privacy Officer
TASK A-5 Remediation Actions	Conduct initial remediation actions on the controls and reassess remediated controls.	· System Owner · Common Control Provider · Control Assessor · Authorizing Official or Authorizing Official Designated Representative · Senior Agency Information Security Officer · Senior Agency Official for Privacy · Senior Accountable Official for Risk Management or Risk Executive (Function) · Information Owner or Steward · Systems Security Engineer · Privacy Engineer · System Security Officer · System Privacy Officer

is not a significant regulatory action. The rule does not: (1) Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy; a section of the economy; productivity; competition; jobs; the environment; public health or safety; or State, local, or tribal governments or communities; (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another Agency; (printed page 24125) (3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in these Executive Orders. Unfunded Mandates Reform Act (Sec. 202, Pub. L. 104-4) It has been certified that this rule does not contain a Federal mandate that may result in the expenditure by State, local and tribal governments, in aggregate, or by the private sector, of \$100 million or more in any one year. Public Law 96-354, ·Regulatory Flexibility Act· (5 U.S.C. 601) It has been certified that this rule is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. Public Law 96-511, ·Paperwork Reduction Act· (44 U.S.C. Chapter 35) It has been certified that this rule does not impose reporting or recordkeeping requirements under the Paperwork Reduction Act of 1995. Executive Order 13132 , ·Federalism· It has been certified that this rule does not have federalism implications, as set forth in Executive Order 13132 . This rule does not have substantial direct effects on: (1) The States; (2) The relationship between the National Government and the States; or (3) The distribution of power and responsibilities among the various levels of Government. List of Subjects in 32 CFR Part 329 Privacy Accordingly, 32 CFR part 329 is proposed to be added to read as follows: PART 329-NATIONAL GUARD BUREAU PRIVACY PROGRAM 329.1 Purpose. 329.2 Applicability. 329.3 Definitions. 329.4 Policy. 329.5 Responsibilities. 329.6 Procedures. 329.7 Exemptions. Authority: Pub. L. 93-579, 88 Stat. 1986 (5 U.S.C. 552a). § 329.1

Purpose. This part implements the policies and procedures outlined in 5 U.S.C. 552a, Office of Management and Budget (OMB) Circular No. A-130, and 32 CFR part 310. This part provides the responsibilities, guidance, and procedures for the National Guard Bureau (NGB) to comply with Federal and DoD Privacy requirements. § 329.2 Applicability. (a) This part applies to the NGB and the records under the custody and control of the Chief, NGB, as defined by DoD Directive (DoDD) 5105.77, entitled 'National Guard Bureau' (Available at <http://www.dtic.mil/whs/directives/corres/pdf/510577p.pdf>).

(A) From subsection (c)(3) because it will enable the Department to conduct certain investigations and relay law enforcement information without compromise of the information, protection of investigative techniques and efforts employed, and identities of confidential sources who might not otherwise come forward and who furnished information under an express promise that the sources' identity would be held in confidence (or prior to the effective date of the Act, under an implied promise). (B) From subsections (e)(1), (e)(4), (G), (H), and (I) because it will provide protection against notification of investigatory material including certain reciprocal investigations and counterintelligence information, which might alert a subject to the fact that an investigation of that individual is taking place, and the disclosure of which would weaken the on-going investigation, reveal investigatory techniques, and place confidential informants in jeopardy who furnished information under an express promise that the source's identity would be held in confidence (or prior to the effective (printed page 14807) date of the Act, under an implied promise). (C) From subsections (d) and (f) because requiring OSD to grant access to records and agency rules for access and amendment of records would unfairly impede the agency's investigation of allegations of unlawful activities. To require OSD to confirm or deny the existence of a record pertaining to a requesting individual may in itself provide an answer to that individual relating to an on-going investigation. The investigation of possible unlawful activities would be jeopardized by agency rules requiring verification of record, disclosure of the record to the subject, and record amendment procedures. (18) System identifier and name. DMDC 12 DoD, Joint Personnel Adjudication System (JPAS). (i) Exemption. Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, military service, Federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5), but only to the extent that such material would reveal the identity of a confidential source. (ii) Authority. 5 U.S.C. 552a(k)(5). (iii) Reasons.

CMMC Program final rule). The CMMC instantiation of eMASS electronically transfers certification results to SPRS. For Level 1 and 2 self-assessments, OSAs upload their assessment data directly into SPRS. Use of the CMMC instantiation of eMASS provides DoD visibility into the cybersecurity posture of the defense contractor supply chain and is the mechanism to generate reports on the health of the CMMC Ecosystem. SPRS is DoD's authoritative source for supplier and product performance information. Use of this electronic system to collect CMMC information eliminates the need for contractors to respond directly to multiple DoD requiring activities. SPRS serves as a single repository for Government access to CMMC assessment results. Modifications to information collections in SPRS will be addressed in the 48 CFR part 204 CMMC Acquisition final rule. Non-Duplication The information obtained through this collection is unique and is not already available for use or adaptation from another cleared source. Burden on Small Businesses For Level 1 and 2 self-assessments, OSAs must report annually and triennially, respectively. Level 2 and Level 3 certification assessments must be conducted every three years by a C3PAO or DCMA DIBCAC, respectively. At all levels, an annual affirmation is required. In all cases, the burden applied to small business is the minimum consistent with applicable laws, Executive orders, regulations, and prudent business practices. A C3PAO, although not a defense contractor, may also be a small business. Efforts to minimize the burden on C3PAOs include the electronic collection of data using the CMMC instantiation of eMASS and providing Microsoft Excel spreadsheet templates. Less Frequent Collection CMMC certifications last up to three years. The assessment frequency for each level was determined by the DoD based on the sensitivity of information processed, stored, or transmitted by the OSA at each level. DoD Program Managers use the CMMC information in SPRS to confirm the validity status of an OSA's CMMC self-assessment or certification assessment prior to contract award. Rather than taking a contract-by-contract approach to securing Federal Contract Information (FCI) and Controlled Unclassified Information (CUI), the OSA may obtain multiple contracts with a single CMMC self-assessment or certification assessment, thereby reducing the cost to both DoD and industry. Consultation and Public Comments The Department consulted with members of the DIB Sector Coordinating Council (SCC), and government organizations including the DCMA DIBCAC and the Missile Defense Agency in determining

what data to collect in the CMMC instantiation of eMASS. The 60-Day Federal Register notice information is included in the preamble of the 32 CFR part 170 CMMC Program final rule for public comment.

A domestic or international business seeking a contract that contains DFARS clause 252.204-7012, and using a cloud service provider to process, store, or transmit covered defense information in performance of that DoD contract, must ensure that the CSP meets FedRAMP authorization or equivalency requirements. As the FedRAMP program and FedRAMP equivalency are available to international organizations, foreign entities do not need to develop their own FedRAMP program. FedRAMP authorization or equivalency is also available to small businesses. The DoD leverages the FedRAMP program to implement requirements for the adoption of secure cloud services across the Federal Government and provide a standardized approach to security and risk assessment for cloud technologies. Export controlled goods and ITAR are outside the scope of the 32 CFR part 170 CMMC Program rule. The process for identifying specific products or services that may meet NIST security requirements is beyond the scope of this rule. CMMC program requirements are unrelated to evaluation or approval of encryption or decryption products manufactured by foreign information security companies. DoD considered many alternatives before deciding upon the current CMMC structure. Alternative methods of assessment have proven inadequate and necessitated the establishment of CMMC. DoD declines to accept the recommendation of an alternate path to C3PAO accreditation. (printed page 83150) 27. Impact to Small Businesses a. Funding the CMMC Program Comment: One comment asserted that the rule does not address CMMC program funding, affordability, and sustainability. They recommended the DoD conduct and publish a comprehensive cost assessment for each level of CMMC certification and explore ways to reduce the financial burden on contractors. Response: DoD included an analysis of costs to meet CMMC requirements in the regulatory impact analysis for this rule. As described in the estimate included with the rule, the major cost categories for compliance with CMMC requirements are anticipated to include costs for completing a self-assessment (e.g., Level 1 or 2); costs to prepare for and undergo C3PAO assessment (Level 2); costs required to implement the Level 3 security requirements and for preparing to undergo DCMA DIBCAC assessment (Level 3). All of these except the market costs of a C3PAO are controlled by the organization seeking assessment. Market forces of supply and demand will determine C3PAO pricing for CMMC Level 2 certification assessments.

The Department quantitatively analyzes and monetizes the effect that this proposed rule would have on the actions of regulated entities to: conduct a Security Rule compliance audit; provide or obtain verification of business associates' compliance with technical safeguards; notify other regulated entities when workforce members' access to ePHI is altered or terminated; notify covered entities or business associates, as applicable, upon activation of a contingency plan; complete network segmentation; disable unused ports and remove extraneous software; deploy MFA and penetration testing; update health plan documents; update policies and procedures; update workforce training; and revise business associate agreements. The Department also quantitatively analyzes the effects on group health plan sponsors for ensuring that safeguards for their relevant electronic information systems meet Security Rule standards and notifying group health plans upon activation of the plan sponsors' contingency plans. Additionally, the Department quantitatively analyzes the benefits of the proposed modifications to regulated entities due to an expected reduction in costs of remediation of breaches and risk of breaches by regulated entities. The Department analyzes the remaining benefits and costs qualitatively because many of the proposed modifications are clarifications of existing requirements and predicting other concrete actions that such a diverse scope of regulated entities might take in response to this rule is inherently uncertain. Analytic Assumptions The Department bases its assumptions for calculating estimated costs and benefits on several publicly available datasets, including data from the U.S. Census Bureau (·Census·), the U.S. Department of Labor's (DOL) Bureau of Labor Statistics, the Small Business Administration (SBA), and the Department's Centers for Medicare & (printed page 995) Medicaid Services (CMS) and Agency for Healthcare Research and Quality (AHRQ). For the purposes of this analysis, the Department assumes that employee benefits plus indirect costs equal approximately 100 percent of pre-tax wages and adjusts the hourly wage rates by multiplying by two, for a fully loaded hourly wage rate. The Department adopts this as the estimate of the hourly value of time for changes in time use for on-the-job activities.

According to Blockchain for Access Control Systems, Executive Summary: Executive Summary Access control is concerned with determining the allowed activities of legitimate users and mediating every

attempt by a user to access a resource in the system. The objectives of an access control system are often described in terms of protecting system resources against inappropriate or undesired user access. From a business perspective, this objective could just as well be described in terms of the optimal sharing of information. As current information systems and network architectures evolve to be more lightweight, pervasive, and interactive - such as the cloud and Internet of Things (IoT) - there is need for an access control mechanism to support the requirements of decentralization, scalability, and trust for accessing objects, all of which are challenging for traditional mechanisms. Blockchains are tamper-evident and tamper-resistant cryptographically linked blocks of data (which create digital ledgers) implemented in a distributed fashion (i.e., without a central repository) and usually without a central authority (i.e., a bank, company, or government). It uses replicated, shared, and synchronized digital blocks between the users of a private or public distributed computer network located in different sites or organizations. Blockchain can be utilized for access control systems as a trustable alternative for a single entity/organization or a member of a large-scale system to enforce access control policies. The robust, distributed nature of blockchain technology can overcome the limitations of traditional access control systems in a decentralized and efficient way.

, (d), (e)(1), (e)(4)(G), (e)(4)(H), (e)(4)(I) and (f). (ii) Authority. 5 U.S.C. 552a(k)(2) , (k)(4), and (k)(5). (iii) Reasons. (A) From subsection (c)(3) because the release of the disclosure accounting would place the subject of an investigation on notice that they are under investigation and provide them with significant information concerning the nature of the investigation, thus resulting in a serious impediment to law enforcement investigations. (B) From subsections (d) and (f) because providing access to records of a civil or administrative investigation and the right to contest the contents of those records and force changes to be made to the information contained therein would seriously interfere with and thwart the orderly and unbiased conduct of the investigation and impede case preparation. Providing access rights normally afforded under the Privacy Act would provide the subject with valuable information that would allow interference with or compromise of witnesses or render witnesses reluctant to cooperate; lead to suppression, alteration, or destruction of evidence; enable individuals to conceal their wrongdoing or mislead the course of the investigation; and result in the secreting of or other disposition of assets that would make them difficult or impossible to reach in order to satisfy any Government claim growing out of the investigation or proceeding. (C) From subsection (e)(1) because it is not always possible to detect the relevance or necessity of each piece of information in the early stages of an investigation. In some cases, it is only after the information is evaluated in light of other evidence that its relevance and necessity will be clear. (D) From subsections (e)(4)(G) and (H) because there is no necessity for such publication since the system of records will be exempt from the underlying duties to provide notification about and access to information in the system and to make amendments to and corrections of the information in the system. (E) From subsection (e)(4)(I) because to the extent that this provision is construed to require more detailed disclosure than the broad, generic information currently published in the system notice, an exemption from this provision is necessary to protect the confidentiality of sources of information and to protect privacy and physical safety of witnesses and informants. NSA will, nevertheless, continue to publish such a notice in broad generic terms, as is its current practice. (4) System identifier and name. GNSA 04, Military Reserve Personnel Data Base. (i) Exemption. (A) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. (B) Therefore, portions of this system may be exempt pursuant to

By design, the Security Rule sets a national floor for the security measures that regulated entities are required to implement to protect the confidentiality, integrity, and availability of ePHI. In 2003, the Department opted to frame the standards in terms that were as generic as possible and in a manner that enabled the standards to be met through various approaches or technologies to ensure that regulated entities had the flexibility to determine how best to protect the confidentiality, integrity, and availability of ePHI based on their specific circumstances. [262] When we extended the Security Rule in 2013 to directly apply to business associates in accordance with the HITECH Act, [263] the Department acknowledged that some business associates might not have engaged in the formal administrative safeguards required by the Security Rule, and we made it clear that business associates would be expected to do so going forward. [264] Despite the changes

in the health care environment between 2003 and 2013, the Department made minimal changes to the Security Rule at that time because we believed that the compliance obligations of regulated entities were clear and well-understood. In fact, when a commenter recommended that the Department remove the addressable designation from the Security Rule because it leads to ambiguity in the rule's application, we declined to do so at that time because we were concerned that it would reduce the rule's scalability and flexibility. [265] However, as we noted in 2003, the rule's flexibility of approach is primarily provided for in paragraph (b)(2) of 45 CFR 164.306 and in the standards themselves. [266] The addressability feature merely provided an added level of flexibility [267] in a way that the Department now believes is inadequate to ensure that regulated entities implement reasonable and appropriate security safeguards.

DFARS 252.204-7008 (Compliance with Safeguarding CDI Controls) Requires offerors to represent that they will implement NIST SP 800-171 security requirements. Non-compliance with 252.204-7008 can result in: loss of contract eligibility, termination for cause, False Claims Act liability (if contractor misrepresented compliance status), suspension or debarment from future DoD contracting, and in cases involving CUI spillage or breach, potential civil or criminal penalties.

According to ISCSMA_ An Information Security Continuous Monitoring Program Assessment, 4.2 ScoreSummary Worksheet: 4.2 ScoreSummary Worksheet The ScoreSummary worksheet in the principal assessment workbook, shown in Figure 25, provides the same view-based scoring output as shown in Figure 21 for assessment files. The scores in Figure 21 are based on a single workbook that contains a set of judgments for a single level, while the scores in Figure 25 are based on the consolidated judgments for the entire organization.

There are 954 Direct Health and Medical Insurance Carrier firms out of a total 5,822 Insurance Carrier firms, such that health and medical insurance firms make up approximately 16.4 percent of insurance firms [= 954/5,822]. [948] Also, according to Census data, there are 2,506 Third Party Administration of Insurance and Pension Funds firms and 8,375 establishments. This category also includes clearinghouses. The Department assumes that 16.4 percent of these firms service health and medical insurance because that is equivalent to the share of insurance firms that are health and medical. As a result, the Department estimates that 411 firms categorized as Third Party Administrators are affected by the proposals in this NPRM [= 2,506 × .164]. Similarly, the Department estimates that 1,374 associated establishments would be affected by the proposals in this NPRM [= 8,375 total establishments × .164]. Most of these are business associates. Based on data from the Department's HIPAA audits and experience administering the HIPAA Rules, we are aware of approximately 36 clearinghouses. See table 4 below. There were 56,289 community pharmacies, including 19,261 pharmacy and drug store firms, operating in the U.S. in 2023. [949] Small pharmacies generally use pharmacy services administration organizations (PSAOs) to provide administrative services, such as conducting negotiations. Based on information from industry, the Department estimates that the proposed rule would affect fewer than 10 PSAOs and we include this within the estimated 1 million business associates affected by the proposals in this NPRM. [950] The Department assumes that (printed page 996) costs affecting pharmacies are incurred at each pharmacy and drug store establishment and each PSAO. Table 4-Estimated Number, Type, and Size Threshold of Covered Entities

Covered Entities	NAICS code	Type of entity	Firms	Establishments
Small business administration (SBA) size threshold c (million)	524114	Health and Medical Insurance Carriers	954	5,552
	\$47 524292	Clearinghouses	a 36	36
	47 622	Hospitals	3,095	7,465
	47 446110	Pharmacies	b 31,671	56,289
	37.5 6211-6213	Office of Drs. & Other Professionals	429,476	527,951
	9-16 6215	Medical Diagnostic Laboratories & Imaging	8,714	19,477
	19-41.5 6214	Outpatient Care	26,084	54,642
	19-47 6219	Other Ambulatory Care	10,547	16,114
	20.5-40 623	Skilled Nursing & Residential Facilities	42,421	95,175
	16-34 6216	Home Health Agencies	27,433	38,040
	19 532283	Home Health Equipment Rental	488	1,859
	41	Total	580,919	822,600

a This North American Industry Classification System (NAICS) category includes clearinghouses and is titled Third Party Administration of Insurance and Pension Funds. The number of clearinghouses is based on the Department's research. b Number of pharmacies is taken from industry statistics. c See Table of Small Business Size Standards, U.S. Small Business Administration (Mar. 17, 2023), https://www.sba.gov/sites/sbagov/files/2023-06/2023-06-Table%20of%20Size%20Standards_Effective%20March%2017%2C%202023%20%282%29.pdf.

(7) Inspector General investigative files and action request/complaint files (records in system notice A0021-1 SAIG, Inspector General Records) have been exempted from the amendment provisions of

the Privacy Act. Requests to amend these reports will be considered under AR 20-1 by The Inspector General. Action by the The Inspector General will constitute final action on behalf of the Secretary of the Army under that regulation. (8) Other records that are exempt from the amendment provisions of the Privacy Act are listed in the applicable PA system of records notices. (c) Amendment procedures. (1) Requests to amend records should be addressed to the custodian or system manager of the records. The request must reasonably describe the records to be amended and the changes sought (e.g. , deletion, addition, or amendment). The burden of proof is on the requester. The system manager or records custodian will provide the individual with a written acknowledgment of the request within 10 working days and will make a final response within 30 working days of the date the request was received. The acknowledgment must clearly identify the request and inform the individual that final action will be forthcoming within 30 working days. (2) Records for which amendment is sought must be reviewed by the proper system manager or custodian for accuracy, relevance, timeliness, and completeness. (3) If the amendment is appropriate, the system manager or custodian will physically amend the records accordingly. The requester will be notified of such action. (4) If the amendment is not warranted, the request and all relevant documents, including reasons for not amending, will be forwarded to the proper Denial Authority within 10 working days to ensure that the 30 day time limit for the final response is met. In addition, the requester will be notified of the referral. (5) Based on the documentation provided, the Denial Authority will either amend the records and notify the requester and the custodian of the records of all actions taken, or deny the request. If the records are amended, those who have received the records in the past will receive notice of the amendment. (6) If the Denial Authority determines that the amendment is not warranted, he or she will provide the requester and the custodian of the records reason(s) for not amending. In addition, the Denial Authority will send the requester an explanation regarding his or her right to seek further review by the DA Privacy Act Review Board, through the Denial Authority, and the right to file a concise ·Statement of Disagreement· to append to the individual's records. (i) On receipt of a request for further review by the Privacy Act Review Board, the Denial Authority will append any additional records or background information that substantiates the refusal or renders the case complete; (ii) Within 5 working days of receipt, forward the appeal to the DA Privacy Act Review Board; and

One comment noted the terms ·data·, ·technical data·, and ·information· are used synonymously throughout the rule and supplemental documents. They also noted that neither NARA's CUI Registry nor the NIST SP 800-171 R2 define the word ·information· and asserted this was a major oversight by NARA ISOO, the CUI Program Executive Agent. The commenter requested this rule adopt the term ·Information· throughout the rule and only use ·data· when specifically intended based on its definition. Another commenter requested the term ·Technical Data· be replaced with the term ·Information·. Response: As a commenter stated, both the CUI program and NIST use the term ·information·. Suggestions that the DoD work with NARA or NIST to define this term are outside the scope of this rule. Within this rule, data generally refers to individual facts, such as those submitted to eMASS or SPRS; however, data and information may be used interchangeably. DoD declined to make requested administrative edits because they would not result in a substantive change. j. Source Materials Incorporated by Reference Comment: Four comments asked for clarification of those documents incorporated by reference, or the specific versions of documents referenced in the rule. Response: The DoD declined to incorporate by reference the Department's role as data owner. NIST SP 800-53 R5 was incorporated by reference only for use with applicable definitions because it provided the latest definitions available. The OSA is responsible for determining its CMMC Assessment Scope and its relationship to security domains. Assets are out-of-scope when (printed page 83163) they are physically or logically separated from the assessment scope. Contractor Risk Managed Assets are only applicable within the OSA's assessment scope. Table 3 to §170.19(c)(1) is used to identify the asset categories within the assessment scope and the associated requirements for each asset category. Contractor's risk-based security policies, procedures, and practices are not used to define the scope of the assessment, they are descriptive of the types of documents an assessor will use to meet the CMMC assessment requirements. To ensure the source of every definition is accounted for, the terms in §170.4 either cite a reference or are designated as CMMC-custom using the notation ·(CMMC-custom term)·. The rule has been updated to eliminate the CNSS Glossary definitions and replaced them with appropriate NIST definitions. k. Miscellaneous Other Terms, References and Notations Comment: Three comments asked about references to the DoD Manual 8570, ·Information Assurance Workforce Improvement Program·, and one asked if the references should be replaced by the newer DoD Manual 8140. One commenter suggested DoD add an enhanced definition of ·Security Domain· domain to the glossary.

§ 286.25 Collection of fees and fee rates. (a) Collection of fees. Collection of fees will be made at the time of providing the documents to the requester or recipient when the requester specifically states the costs involved shall be acceptable or acceptable up to a specified limit that covers the anticipated costs. (b) Fees for search time. (1) Manual search fees. This table shows FOIA hourly processing fees. Type Grade Hourly rate (\$) Clerical E9/GS8 and below/NSPS pay band 1 27.00 Professional O1-O6/W01-05/GS9-GS15/NSPS pay bands 2 and 3 53.00 Executive O7/GS16/SES and above 108.00 Contractor 53.00 (2) Computer search. Fee assessments for computer search consists of 2 parts; individual time (hereafter referred to as human time), and machine time. (i) Human time. Human time is all the time spent by humans performing the necessary tasks to prepare the job for a machine to execute the run command. This includes the time spent to create a program to extract specific fields out of a database. If execution of a run requires monitoring by a human, that human time may be also assessed as computer search. The terms programmer/operator shall not be limited to the traditional programmers or operators. Rather, the terms shall be interpreted in their broadest sense to incorporate any human involved in performing the computer job (e.g., technician, administrative support, operator, programmer, database administrator, or action officer). (ii) Machine time. Machine time involves only direct costs of the Central Processing Unit (CPU), input/output devices, and memory capacity used in the actual computer configuration. Only this CPU rate shall be charged. No other machine related costs shall be charged. In situations where the capability does not exist to calculate CPU time, no machine costs can be passed on to the requester. When CPU calculations are not available, only human time costs shall be assessed to requesters. Should the DoD Components lease computers, the services charged by the lessor shall not be passed to the requester under the FOIA. (c) Duplication. This table shows duplication costs. (printed page 71866) Type Cost per page (cents) Pre-Printed material 02. Office copy 15. Microfiche 25. Computer copies (tapes, discs or printouts) Actual cost of duplicating the tape, disc or printout (includes operator's time and cost of the medium). (d) Review Fees. See paragraph (b)(1) of this section. (e) Audiovisual documentary materials. Search costs are computed as for any other record. Duplication cost is the actual direct cost of reproducing the material, including the wage of the person doing the work. If the duplication is performed by a contractor, then the actual cost charged to the government by the contractor is passed on to the requester. Audiovisual materials provided to a requester need not be in reproducible format or quality. (f) Other records.

(1) Includes: (i) All products of data compilation made or received by an agency of the U.S. Government under Federal law in connection with the transaction of public business and in DoD possession and control at the time the search in response to a FOIA request is made. Examples include books, papers, maps, photographs, machine-readable materials inclusive of those in electronic form or format, and other documentary materials, regardless of physical form or characteristics. (ii) Research data produced under a Federal grant used by the Federal Government in developing an agency action that has the force and effect of law (Office of Management and Budget Circular (OMB) A-110). (2) Does not include: (i) Objects or articles, such as structures, furniture, vehicles, and equipment, whatever their historical or evidentiary value. (ii) Anything that is not a tangible or documentary record, such as an individual's memory or an oral communication. (iii) Personal records of an individual not subject to agency creation or retention requirements, created and maintained primarily for the convenience of an agency employee and not distributed to other agency employees for their official use. Personal papers fall into three categories: (A) Those created before entering Government service. (B) Private materials brought into, created, or received in the office that were not created or received in the course of transacting Government business. (C) Work-related personal papers that are not used in the transaction of Government business. (iv) A record that is not in the possession and control of the Department of Defense when the search is conducted in response to a FOIA request. (There is no obligation to create, compile, or obtain a record to satisfy a FOIA request.) Appellate authority. The Head of the DoD Component, or designee, having jurisdiction to review and possibly reverse or amend any adverse determination by an IDA. Direct costs. Those expenditures the DoD Component makes in searching for, reviewing, and duplicating documents to respond to a FOIA request. Direct costs include, for example, the salary of the employee performing the work (the basic rate of pay plus 16 percent of that rate to cover benefits) and the costs of operating duplicating machinery. (These factors have been included in the fee rates prescribed at § 286.25. Not included in direct costs are overhead expenses such as the cost of space, heating, or lighting the facility in which the records are stored. Electronic records. Records (including e-mail) created, stored, and

retrievable by electronic means. Federal agency. Defined in 5 U.S.C. 551(1) and 552(f)(1). (A Federal agency cannot make FOIA requests.) FOIA office. The DoD Component office that receives FOIA requests from and responds directly to the public. FOIA public liaison. Defined in E.O. 13392. FOIA request.

CIS Control 16 · Application Software Security Manage the security life cycle of in-house developed, hosted, or acquired software to prevent, detect, and remediate security weaknesses before they can impact the enterprise. Applications provide a human-friendly interface to allow users to access and manage data in a way that is aligned to business functions. They also minimize the need for users to deal directly with complex (and potentially error-prone) system functions, like logging into a database to insert or modify files. Enterprises use applications to manage their most sensitive data and control access to system resources, and so an attacker can use the application itself to compromise the data, instead of an elaborate network and system hacking sequence, attempting to bypass network security controls and sensors. This is why protecting user credentials (specifically application credentials), defined in CIS Control 6, is so important. Applications provide a human-friendly interface to allow users to access and manage data in a way that is aligned to business functions. They also minimize the need for users to deal directly with complex (and potentially error-prone) system functions, like logging into a database to insert or modify files. Enterprises use applications to manage their most sensitive data and control access to system resources, and so an attacker can use the application itself to compromise the data, instead of an elaborate network and system hacking sequence, attempting to bypass network security controls and sensors. This is why protecting user credentials (specifically application credentials), defined in CIS Control 6, is so important. Lacking credentials, application flaws are the attack vector of choice. However, today's applications are developed, operated, and maintained in a highly complex, diverse, and dynamic environment. Applications run on multiple platforms; web, mobile, cloud, etc., with application architectures that are more complex than legacy client-server or database-web server structures. Development life cycles have become shorter, transitioning from months or years in long waterfall methodologies, to DevOps cycles with frequent code updates. Also, applications are rarely created from scratch, and are often assembled from a complex mix of development frameworks, libraries, existing code, and new code. There are also modern and evolving data protection regulations dealing with user privacy. These may require compliance to regional or sector-specific data protection requirements. These factors make traditional approaches to security, like control (of processes, code sources, run-time environment, etc.), inspection, and testing, much more challenging. Also, the risk that an application vulnerability introduces might not be understood, except in a specific operational setting or context. Application vulnerabilities can be present for many reasons; insecure design, insecure infrastructure, coding mistakes, weak authentication, and failure to test for unusual or unexpected conditions. Attackers can exploit specific vulnerabilities, including buffer overflows, exposure to Structured Query Language (SQL) injection, cross-site scripting, cross-site request forgery, and click-jacking of code to gain access to sensitive data, or take control over vulnerable assets within the infrastructure as a launching point for further attacks. Applications and websites can also be used to harvest credentials, data, or attempt to install malware onto the users who access them. Finally, it is now more common to acquire Software as a Service (SaaS) platforms, where software is developed and managed entirely through a third-party. These might be hosted anywhere in the world. This brings challenges to enterprises who need to know what risks they are accepting with using these platforms; and they often do not have visibility into the development and application security practices of these platforms. Some of these SaaS platforms allow for customizing of their interfaces and databases. Enterprises who extend these applications should follow this CIS Control, similar to if they were doing ground-up customer development.

From the NIST SP 800-172 Rev 3 Final Public Draft: · Cyber resiliency: The ability to anticipate, withstand, recover from, and adapt to adverse conditions, stresses, attacks, or compromises on systems that use or are enabled by cyber resources. Cyber resiliency is intended to enable organizational missions or business objectives that depend on cyber resources to be achieved in a contested cyber environment. This strategy recognizes that the APT may find ways to compromise established defenses despite the best safeguards implemented by organizations. When this occurs, organizations must have access to additional safeguards to detect, outmaneuver, confuse, deceive, mislead, and impede the adversary—that is, removing the adversary's tactical advantage and protecting the organization's critical programs and high value assets.

(1) If the CSA determines the parent must be processed for an entity eligibility determination, then the parent must have an entity eligibility determination at the same or higher level as the subsidiary. (2) When a parent and subsidiary or multiple cleared subsidiaries are collocated, a formal written agreement to use common security services may be executed by the entities, subject to the approval of the CSA. (k) Joint ventures. A joint venture may be granted eligibility for access to classified information if it meets the eligibility requirements in paragraph (c) of this section, including: (1) The joint venture must be established as a legal business entity (e.g. limited liability company, corporation, or partnership). A joint venture established by contract that is not also established as a legal business entity is not eligible for an entity eligibility determination. (2) The business entity operating as a joint venture must have been awarded a classified contract or sponsored by a GCA or prime contractor for an entity eligibility determination in advance of a potential award for which the business entity has bid pursuant to paragraph (c) of this section. (3) The business entity operating as a joint venture must have an employee or employees appointed as security officials or KMP pursuant to § 117.7(b). (l) Consultants. The responsible CSA will determine when there is a need for self-employed consultants requiring access to classified information to be considered for an entity eligibility determination. (m) Limited entity eligibility determination (Non-FOCI). (1) The applicable CSA may choose to allow a GCA to request limited entity eligibility determinations for a single, narrowly defined contract, agreement, or circumstance and specific to the requesting GCA's classified information. This is not the same as a limited entity eligibility determination in situations involving FOCI, when the FOCI is not mitigated or negated. (i) Limited entity eligibility determinations (or FCLs) involving FOCI will be processed in accordance with § 117.11(e). (ii) This paragraph (paragraph (m) of this section) applies to limited entity eligibility determinations for purposes other than FOCI mitigation in accordance with 32 CFR part 2004 . Additional guidance may be provided by the responsible CSA. (2) An entity must be sponsored for a limited entity eligibility determination by a GCA in accordance with the sponsorship requirements contained in paragraph (c) of this section. The contractor should be aware that the sponsorship request from the GCA to the CSA must also include: (i) Description of the compelling need for the limited entity eligibility determination that is in accordance with U.S. national security interests. (ii) Specific reason(s) or rationale for limiting the entity eligibility determination. (iii) The GCA's formal acknowledgement and acceptance of the risk associated with this rationale.

983. For this analysis, a record is the ePHI of one individual. Back to Citation 984. See Annual Report to Congress on Breaches of Unsecured Protected Health Information for Calendar Year 2022, supra note 213, p. 9 (2023); December 2023 Healthcare Data Breach Report, supra note 960 . Back to Citation 985. The break-even calculations presented here only include regulated entities because breach data is not available for health plan sponsors. Including sponsors and assuming they have the same rate of breaches would result in a similar break-even point in terms of percent decrease from baseline. Back to Citation 986. Cybersecurity Performance Goals, supra note 18. Back to Citation 987. Id. Back to Citation 988. (d) Nondefense agencies that have industrial security services agreements with DoD, and DoD components, shall use the DD Form 254, Contract Security Classification Specification, to provide security classification guidance to U.S. contractors, and subcontractors as applicable, requiring access to information classified as "Confidential", "Secret", or "Top Secret". (1) Provided that the data submittal is unclassified, the DD Form 254 shall be completed electronically in the NISP Contract Classification System (NCCS), which is accessible via the Procurement Integrated Enterprise Environment (PIEE) at <https://wawf.eb.mil> . Nondefense agencies with an existing DD Form 254 information system may use that system. (2)(i) A contractor, or subcontractor (if applicable), requiring access to classified information under a contract shall be identified with a Commercial and Government Entity (CAGE) code on the DD Form 254 (see subpart 4.18 for information on obtaining and validating CAGE codes). (ii) Each location of contractor or subcontractor performance listed on the DD Form 254 is required to reflect a corresponding unique CAGE code for each listed location unless the work is being performed at a Government facility, in which case the agency location code shall be used. Each subcontractor location requiring access to classified information must be listed on the DD Form 254. (iii) Contractor and subcontractor performance locations listed on the DD Form 254 are not required to be separately registered in the System for Award Management (SAM) solely for the purposes of a DD Form 254 (see subpart 4.11 for information on registering in SAM). * * * *

* 5. Amend section 4.403 by removing from paragraph (c) introductory text "contract as follows" and adding "contract as identified in the requirement documentation as follows" in its place, and revising paragraph (c)(1) to read as follows: 4.403 Responsibilities of contracting officers. * * * * (c) * * * (1) Nondefense agencies that have industrial security services agreements with DoD, and DoD components, shall use the Contract Security Classification Specification, DD Form 254. The contracting officer, or authorized agency representative, is the approving official for the DD Form 254 associated with the prime contract and shall ensure the DD Form 254 is properly prepared, distributed by and coordinated with requirements and security personnel in accordance with agency procedures, see 4.402(d)(1). * * * * 4.1801 [Amended] 6. Amend section 4.1801 by removing the defined term "Commercial and Government Entity (CAGE) code". PART 52 SOLICITATION PROVISIONS AND CONTRACT CLAUSES 7. Amend section 52.204-16 by: a. Revising the date of the provision; b. Removing from the end of paragraph (a)(1) "entity; or" and adding "entity by unique location; or" in its place; c. Revising paragraph (b); d. In paragraph (c)(2) removing the word "offeror" and adding "Offeror" in its places; e. Revising paragraph (e); and f. Adding paragraph (g).

- SP 800-137A, Assessing Information Security Continuous Monitoring Programs [1] - The NIST Cybersecurity Framework (CSF) 2.0 [2] - SP 800-30r1 (Revision 1), Guide for Conducting Risk Assessments [3] - SP 800-37r2, Risk Management Framework for Information Security Systems and Organizations: A System Life Cycle Approach for Security and Privacy [4] - SP 800-161r1, Cybersecurity Supply Chain Risk Management Practices for Systems and Organizations [5] - Internal Report (IR) 8286, Identifying and Estimating Cybersecurity Risk for Enterprise Risk Management (ERM) [6] Data from various sources (e.g., vulnerability scans, incident logs, and compliance assessments) can be aggregated to help executives understand information security. Summarizing measurement findings and metrics into concise reports facilitates efficient communication. Regularly reporting on measurement and assessment results fosters transparency, promotes accountability for meeting performance targets, and encourages continuous improvements. Sharing findings with executives demonstrates the organization's commitment to its information security posture. Stakeholder interests may be determined through multiple venues, such as interviews, brainstorming sessions, mission statement reviews, in-house knowledge, and existing findings from risk assessments. There may also be laws and regulations that the organization may need to consider. Input from those who interact with individual systems and existing system-level data will provide targeted insight into the measurement needs of an organization. Ideally, stakeholder interests will be reviewed periodically during the ongoing work of the information security measurement program.

(F) From subsection (e)(3) because the requirement that individuals supplying information be provided with a form stating the requirements of subsection (e)(3) would constitute a serious impediment to law enforcement in that it could compromise the existence of a confidential investigation, reveal the identity of confidential sources of information and endanger the life and physical safety of confidential informants. (G) From subsections (e)(4)(G) and (e)(4)(H) because portions of this system of records have been exempted from the access provisions of subsection (d), making these subsections not applicable. (H) From subsection (e)(4)(I) because the identity of specific sources must be withheld in order to protect the confidentiality of the sources of criminal and other law enforcement information. This exemption is further necessary to protect the privacy and physical safety of witnesses and informants. (I) From subsection (e)(8) because the individual notice requirements of subsection (e)(8) could present a serious impediment to law enforcement as this could interfere with the ability to issue search authorizations and could reveal investigative techniques and procedures. (J) From subsection (f) because portions of this system of records have been exempted from the access provisions of subsection (d). (K) From subsection (g) because portions of this system of records are compiled for law enforcement purposes and have been exempted from the access provisions of subsections (d) and (f). (21) System identifier and name. A0340-21 OAA, Privacy Case Files. (i) Exemption. During the processing of a Privacy Act request (which may include access requests, amendment requests, and requests for review for (printed page 14756) initial denials of such requests), exempt materials from other systems of records may in turn become part of the case record in this system. To the extent that copies of exempt records from those 'other' systems of records are entered into this system, the Department of the Army hereby claims the same exemptions. (ii) Authority. 5 U.S.C. 552a(j)(2) , and (k)(1) through (k)(7) . (iii) Reasons. Records are only exempt from pertinent provisions of 5 U.S.C. 552a

Amend section 4.1801 by removing the term 'Commercial and Government Entity (CAGE) code'. 7. Amend section 4.1802 by revising the paragraph (a) introductory text to read as follows: 4.1802 Policy (a) Commercial and Government Entity (CAGE) code. * * * * * 8. Amend section 4.1804 by revising paragraphs (a) and (c) to read as follows: 4.1804 Solicitation provisions and contract clause. (a)(1) Insert the provision at 52.204-16, Commercial and Government Entity Code Reporting, in all solicitations that include: (i) 52.204-6, Unique Entity Identifier; or (ii) 52.204-7, System for Award Management. (2) Use the provision with its Alternate I when the clause 52.204-2, Security Requirements, is used. * * * * * (c) (1) Insert the clause at 52.204-18, Commercial and Government Entity Code Maintenance in all solicitations and contracts when the solicitation contains the provision at 52.204-16, Commercial and Government Entity Code Reporting. (2) Use the clause with its Alternate I when the provision 52.204-16, Commercial and Government Entity Code Reporting, is used with its Alternate I. * * * * * PART 52-SOLICITATION PROVISIONS AND CONTRACT CLAUSES 9. Amend section 52.204-16 by: a. Revising the date of the provision; b. Removing from the end of paragraph (a)(1) 'entity; or' and adding 'entity by unique location; or' in its place; c. Revising paragraph (b) and (c)(1); d. Removing from paragraph (c)(2) 'offeror' twice and adding 'Offeror' in their places, respectively; e. Removing from paragraph (c)(3) 'NSPA' and adding 'NATO Support and Procurement Agency (NSPA)' in its place; f. Removing from paragraph

(e) ·Code· three times and adding ·code· in their places, respectively; and g. Adding an Alternate I. The revisions and addition read as follows: 52.204-16 Commercial and Government Entity Code Reporting. * * * * * Commercial and Government Entity Code Reporting ([DATE]) * * * *

* (b) The Offeror shall provide its CAGE code with its offer with its name and address or otherwise include it prominently in its proposal. The CAGE code must be for that name and address. Insert the word ·CAGE· before the number. The CAGE code is required prior to award. (c) * * * (1) Registration in the System for Award Management (SAM) at www.sam.gov . If the Offeror is located in the United States or its outlying areas and does not already have a CAGE code assigned, the Defense Logistics Agency (DLA) Commercial and Government Entity (CAGE) Branch will assign a CAGE code as a part of the SAM registration process. SAM registrants located outside the United States and its outlying areas shall obtain a North Atlantic Treaty Organization (NATO) CAGE (NCAGE) code prior to registration in SAM (see paragraph (c)(3) of this provision). * * * * * Alternate I ([DATE]). As prescribed at 4.1804(a), add the following additional paragraph (g).

The resulting tailored baseline set of security controls and the supporting rationale for the selection decisions (including any information system use restrictions required by organizations) are documented in system security plans. Documenting significant risk management decisions in the security control selection process is imperative so that authorizing officials have access to necessary information to make informed authorization decisions for organizational information systems, as demonstrated in Figure 3.

As another example, based on OCR's investigation experience, some regulated entities are not developing and implementing compliant response plans for security incidents, including those that are breaches of unsecured ePHI under the Breach Notification Rule. Section 164.308(a)(6)(i) establishes the standard that requires regulated entities to implement policies and procedures to address security incidents, while 45 CFR 164.308(a)(6)(ii) includes the implementation specifications for that standard. This requirement, included in the 2003 Final Rule, aligns with the NIST Cybersecurity Framework version 2.0 requirement for incident management. [254] Similarly, NIST Cybersecurity Framework version 1.1 recommended the execution and maintenance of response processes and procedures to ensure response to detected cybersecurity incidents. [255] And yet, when OCR investigates the circumstances surrounding breach reports, OCR continues to find evidence that regulated entities have not implemented policies and procedures to detect and respond to security incidents, leading to significant time lapses between a ·successful· security incident [256] and discovery of, and response to, the security incident. [257] Thus, based on the OCR's experience investigating and enforcing the Security Rule, the Department believes that many regulated entities would benefit from additional instruction in regulatory text regarding their compliance obligations to determine how to select security (printed page 916) measures that are reasonable and appropriate for their circumstances. We are also concerned that recent caselaw has not accurately set forth the steps regulated entities must take to adequately protect the confidentiality, integrity, and availability of ePHI, as required by the statute. Specifically, in the *University of Texas M.D. Anderson Cancer Center v. HHS* (· M.D. Anderson ·), the U.S. Court of Appeals for the Fifth Circuit held, among other things, that the Security Rule does not say anything about how effective a mechanism for encryption must be, nor does it require that an encryption mechanism provide ·bulletproof protection· of all systems containing ePHI. [258] Thus, under the court's interpretation, a regulated entity can meet its obligations under the Security Rule concerning encryption and decryption of ePHI by implementing a mechanism to do so, without regard for the effectiveness of the implementation. [259] Additionally, the court noted that the requirement for ·a mechanism· does not ·prohibit a [regulated] entity from creating `a mechanism' by directing employees to sign an [agreement] that requires the encryption of portable devices.· [260]

Three comments recommended that the DoD or CMMC PMO have a role in the assessment appeals process. Of these, one cited the DFARS clause 252.204-7012 clause as precedent for DoD CIO to render final decisions. Some commenters suggested the CMMC AB relationship to C3PAOs would bias any decisions they may make, and that final appeal authority is an inherently governmental risk acceptance decision. One comment suggested that the DIBCAC or other DoD entity render final appeals decisions or take responsibility for certifying OSCs. They also asked for the C3PAOs to be released from liability for reasonable assessment judgments. Two comments asked whether the only means to appeal a CMMC AB final decision is through litigation. Another comment asked who could escalate an appeal to the CMMC AB. One comment requested the rule include more requirements for the C3PAO appeals process,

including that the process be time bound and address disputes related to perceived assessor errors, malfeasance, and unethical conduct, while another comment requested a simpler appeals process. One comment requested clarification as to how the OSC interfaces with the C3PAO for appeals purposes. One comment asked if there was a process to challenge C3PAOs' findings of non-compliance if additional requirements are applied from an assessment guide that are not included in the source standard. One comment asked how to dispute the specific CMMC level included in a solicitation. Response: Requirements for CMMC Conditional certification assessments for each level are defined in §§ 170.16 through 170.18. Section 170.6(e) describes indications that may trigger investigative evaluations of an OSA's CMMC Status. The DoD has revised the rule throughout to delete the term 'revocation' and to clarify that the DoD reserves its right to conduct a DCMA DIBCAC assessment of the OSA, as permitted under DFARS clause 252.204-7012 and DFARS clause 252.204-7020. If the results of a subsequent DIBCAC assessment show that adherence to provisions of this rule have not been achieved or maintained, the DIBCAC results take precedence over any pre-existing CMMC self-assessment(s) or Final certification assessment(s) and will result in SPRS reflecting that the OSA is not in compliance (i.e., lacks a current Certificate of CMMC Status). There are no additional requirements or checks on self-assessments to ensure that OSAs maintain the SSP and conduct self-assessments correctly, beyond those identified in the rule.

, by clarifying that procedures must be written. We also propose to redesignate the implementation specification for testing and revision procedures as paragraph (a)(13)(ii)(F) and to clarify that procedures for testing and revising of the required contingency plans must be established in writing. We propose to require a regulated entity to review and implement its procedures for testing contingency plans at least once every 12 months, to document the results of such tests, and to modify those plans as reasonable and appropriate based on the results of those tests. p. Section 164.308(a)(14) Standard: Compliance Audit The final standard we propose under 45 CFR 164.308(a) is a new standard for compliance audits at proposed 45 CFR 164.308(a)(14) . For this proposed standard, the Department proposes to require regulated entities to perform and document an audit of their compliance with each standard and implementation specification of the Security Rule at least once every 12 months. While the Security Rule does not currently require regulated entities to conduct internal or third-party compliance audits, such activities are important components of a robust cybersecurity program. The Government Accountability Office has published guidance on conducting cybersecurity performance audits for Federal agencies. [612] Audits are typically conducted independently from information security management, and the function generally reports to the governing body of the regulated entity. This independence can provide an objective view of the regulated entity's policies and practices. According to the Institute of Internal Auditors, an internal audit provides '[i]ndependent and objective assurance and advice on all matters related to the achievement of objectives.' [613] An internal audit may be conducted by a business associate of a covered entity or a subcontractor of a business associate. These activities provide regulated entities with confidence in the effectiveness of their risk management plan. Thus, we believe that this proposal would aid a regulated entity in ensuring compliance with the Security Rule, and ultimately, protecting ePHI. We do not propose to specify whether the compliance audit should be performed by the regulated entity or an external party. [614] (printed page 956) q. Section 164.308(b)(1) and (2) Standard: Business Associate Contracts and Other Arrangements Vendor management and identification of risks in a supply chain are essential to controlling the introduction of new threats and risks to a regulated entity. [615] NIST guidance explains that regulated entities, are permitted to include more stringent cybersecurity measures in business associate agreements than those required by the Security Rule. [616] Such requirements would need to be agreed upon by both parties to the business associate agreement. [617]

ionally, there was an Inspectors General panel briefing on FISMA implementation and a panel of Chief Information Security Officers discussing their experiences with the accreditation process. The membership of the Board consists of 12 individuals and a Chairperson. The Director of NIST approves membership appointments and appoints the Chairperson. Each Board member serves for a four-year term. The Board's membership draws from experience at all levels of information security and privacy work. The members' careers cover government, industry, and academia. Members have worked in the Executive and Legislative branches of the federal government, civil service, senior executive service, the military, some of the largest corporations worldwide, small and medium-size businesses, and some of the top universities in the nation. The members' experience, likewise, covers a broad spectrum of activities including many different engineering disciplines, computer programming, systems analysis, mathematics, management positions, information technology auditing, legal experience, an extensive history of professional publications, and professional journalism. Members have worked (and in many cases, continue to work in their full-time jobs) on the development and evolution of some of the most important pieces of information security and privacy legislation in the federal government, including the Privacy Act of 1974, the Computer Security Act of 1987, the E-Government Act (including FISMA), and numerous e-government services and initiatives.

The Protect Function supports the ability to limit or contain the impact of a potential cybersecurity event. Examples of outcome Categories within this Function include: Access Control; Awareness and Training; Data Security; Information Protection Processes and Procedures; Maintenance; and Protective Technology.

- Risk Management Process - Organizational cybersecurity risk management practices are not formalized, and risk is managed in an ad hoc and sometimes reactive manner. Prioritization of cybersecurity activities may not be directly informed by organizational risk objectives, the threat environment, or business/mission requirements.
- Integrated Risk Management Program - There is limited awareness of cybersecurity risk at the organizational level and an organization-wide approach to managing cybersecurity risk has not been established. The organization implements cybersecurity risk management on an irregular, case-by-case basis due to varied experience or information gained from outside sources. The organization may not have processes that enable cybersecurity information to be shared within the organization.
- External Participation - An organization may not have the processes in place to participate in coordination or collaboration with other entities.
- Risk Management Process - Risk management practices are approved by management but may not be established as organizational-wide policy. Prioritization of cybersecurity activities is directly informed by organizational risk objectives, the threat environment, or business/mission requirements.
- Integrated Risk Management Program - There is an awareness of cybersecurity risk at the organizational level but an organization-wide approach to managing cybersecurity risk has not been established. Risk-informed, management-approved processes and procedures are defined and implemented, and staff has adequate resources to perform their cybersecurity duties.

about addressable implementation specifications and the notable changes in the environment in which health care is provided, we are concerned that some regulated entities proceed as if compliance with an addressable implementation specification is optional and that where there is an addressable implementation specification, that compliance with the relevant standard is also optional. That interpretation is incorrect and weakens the cybersecurity posture of regulated entities. We believe that compliance with the implementation specifications currently designated as addressable is not and should not be optional, particularly in light of the shift to an interconnected and cloud-based environment and a significant increase in the number of breaches of unsecured PHI from both internal and external actors, regardless of the regulated entity's specific circumstances. Thus, we believe that it is necessary to strengthen the Security Rule to reflect the changes in the health care environment and the evolution of (printed page 918) technology and to underscore that compliance with all of our proposals, if finalized, is required.

3. A Strengthened Security Rule Would Continue To Be Flexible and Scalable While Providing Regulated Entities With Greater Clarity

The Security Rule's fundamental flexibility and scalability generally would remain should the proposals in this NPRM be adopted. However, we are proposing to reduce that flexibility to better strengthen protections and address the changed nature of the environment in which health care is provided. The Department is also proposing in this NPRM to strengthen the Security Rule by providing greater clarity regarding the nature of its flexibility and scalability and the Department's expectations, as requested by regulated entities and other stakeholders. In fact, in response to a request for information published in 2022, [284] several commenters urged the Department to propose regulations that establish a single set of clear standards for regulated entities, raise the

floor for security requirements and expectations, and encourage regulated entities to safeguard ePHI while maintaining flexibility and scalability. Commenters also encouraged the Department to rely on commonly available, non-proprietary frameworks that allow regulated entities to adopt critical security measures. We believe that our proposals are consistent with those recommendations. Under the proposal, regulated entities would retain the ability to determine the security measures that are reasonable and appropriate to fulfill the required standards and implementation specifications, taking into consideration the factors listed at proposed 45 CFR 164.306(b)(2). In fact, the NPRM, if adopted as proposed, would add to the rule's flexibility and scalability by adding a new factor for regulated entities to consider when determining the reasonable and appropriate security measures. [285]

Failure to adopt these basic cybersecurity requirements can have a substantial financial impact on a business. There have been many analyses regarding the cost of cybersecurity incidents and the estimates vary widely. In order to establish a defensible set of cost and loss data that is suitable for the analysis of cybersecurity incident costs in the Federal sector, the Cyber Security and Infrastructure Security Agency (CISA) Office of the Chief Economist (OCE), in the Department of Homeland Security, reviewed a broad range of cyber cost and loss studies and presented an analysis of the per-incident, aggregate, and scenario-based estimates of cyber loss. On October 26, 2020, the CISA (printed page 4282) OCE released a report with the results of their analyses and a summary of per-incident loss estimates available in the most widely cited published research, commercial datasets, and industry reports. OCE estimated the median cost of a cybersecurity incident cited in the surveyed publications ranged from \$0.5 to \$1.6 million. The maximum cost per incident cited ranged from \$11.7 million to greater than \$1 billion. The CISA OCE acknowledges in its report that the differences in the assumptions, approaches to data collection, and specific incidents included in the datasets for the above sources result in a high degree of variability among the loss estimates. [1]

3. Increased Protection of Sensitive Information Given the potential financial impacts a CUI incident may have on companies and individuals, it is imperative that Federal contractors who are entrusted with sensitive information in the performance of Government contracts adopt the basic cybersecurity hygiene requirements outlined in this rule. This increased baseline of cybersecurity hygiene across Federal contractors will reduce the number of incidents that have the potential to place sensitive information at risk and pose serious threats to individuals, Federal operations and assets, and the contractors themselves. For the remaining incidents that may occur, the requirement for contractors to report suspected or confirmed CUI incidents within 8 hours, unless a different time period is required for a specific category of CUI or a Federally-controlled facility, will allow the Federal Government to have appropriate situational awareness, quickly respond to the incident, and reduce the impact of the event.

C. Public Costs The total estimated public costs associated with this FAR rule in billions over a 10-year period are as follows: Public cost Undiscounted 2 Percent Present Value \$17.63 \$15.89 Annualized 1.76 1.77 Undiscounted public costs (in billions) by year over the 10-year period are summarized as follows: Year 1 Year 2 Year 3 Year 4 Year 5 Year 6 Year 7 Year 8 Year 9 Year 10 \$2.28 \$1.71 \$1.71 \$1.71 \$1.71 \$1.71 \$1.71 \$1.71 \$1.71 \$1.71

Subcontractors will also notify their prime contractors if they make any reports to their CSA in accordance with the provisions of paragraphs (c)(7) through (c)(10) of this section. (d) Reports of loss, compromise, or suspected compromise. The contractor will report any loss, compromise, or suspected compromise of classified information, U.S. or foreign, to the CSA in accordance with paragraph (d)(1) through (d)(3) of this section. Each CSA may provide additional guidance concerning the reporting time period. If the contractor is located on a USG facility, the contractor will submit the report to the CSA and to the head of the USG facility. (1) Preliminary inquiry. Immediately upon receipt of a security violation report involving classified information, the contractor will initiate a preliminary (printed page 83325) inquiry to ascertain all of the circumstances surrounding the presumed loss, compromise, or suspected compromise, including validation of the classification of the information. (2) Initial report. If the contractor's preliminary inquiry confirms that a loss, compromise, or suspected compromise of any classified information occurred, the contractor will promptly submit an initial report of the incident unless otherwise notified by the CSA. (3) Final report. When the investigation has been completed, the contractor will submit a final report to the CSA which, in turn, will follow CSA procedures to notify the applicable GCA. The report will include: (i) Material and relevant information that was not included in the initial report. (ii) The full name and social security number of the individual or individuals primarily responsible for the incident, including a record of prior loss, compromise,

or suspected compromise for which the individual had been determined responsible. (iii) A statement of the corrective action taken to preclude a recurrence. (iv) Disciplinary action taken against the responsible individual or individuals, if any. (v) Specific reasons for reaching the conclusion that loss, compromise, or suspected compromise occurred or did not occur. (4) Employee information in compromise cases. When requested by the CSA, the contractor will report information concerning an employee or other individual, determined to be responsible for the incident, when the information is needed by the CSA for the loss, compromise, or suspected compromise of classified information. (e) Individual culpability reports. Contractors will establish and enforce policies that provide for appropriate administrative or disciplinary actions taken against employees who violate the requirements of this rule. (1) Contractors will establish a system to manage and track information regarding employees with eligibility for access to classified information who violate the requirements of this rule in order to be able to identify patterns of negligence or carelessness, or to identify a potential insider threat.

DoD received several comments on § 117.7, to include that a facility security officer (FSO) should be a U.S. citizen with no exceptions; and the text was updated accordingly in 117.7(b). The text clarifies that the only exception for U.S. citizenship may apply to the Senior Management Official or Insider Threat Program Senior Official if the entity has a limited entity eligibility determination due to foreign ownership, control, or influence. Two commenters observed that § 117.7(h)(1)(i) did not include the frequency of security review cycles. DoD is accepting this change and has modified § 117.7(h)(1)(i) to reflect security reviews will only occur once every 12 months unless special circumstances exist, to include addressing security vulnerabilities found during a previous security review. Another commenter expressed concern the final rule allowed a CSA to conduct unannounced reviews at its discretion without any specific guidelines. Based on this comment, DoD has proposed to update § 117.7(h)(1)(ii)(A) to clarify unannounced security reviews will be conducted only if there is a possibility of the imminent loss or compromise of classified information. Eligibility Determinations DoD received several comments on eligibility determinations in § 117.10, to include a request for clarification on the system of record for personnel security clearances, clarification of requirements for current investigations, reinvestigation, and continuous evaluation requirements, definition of what is considered a break in access and break in employment, and the process for requesting and granting an extension if a temporary eligibility determination goes beyond a year. DoD is not proposing any changes based on these comments as clarification to contractors under DoD cognizance will be provided when applicable via ISLs. National Interest Determination (NID) Requirements DoD received comments on the changes to the NID requirements for a covered National Technology and Industrial Base (NTIB) entity based on section 842 of Public Law 115-232 included in § 117.11. Commenters asked for clarification on which specific entities fall under section 842 of Public Law 115-232 and recommended that NIDs be eliminated completely. The final NISPOM rule reflects language taken directly from section 842 of Public Law 115-232, which includes eliminating a NID requirement for U.S.-cleared companies owned by Australia, Canada, and the United Kingdom. DoD is not making any changes based on these comments as DoD is unable to eliminate NIDs, since the provisions for NID requirements are driven by 32 CFR part 2004, National Industrial Security Program, and not this rule. There has been no change to the NID requirements in 32 CFR part 2004 outside of section 842 Public Law 115-232. Safeguarding

From the NIST SP 800-172 Rev 3 Final Public Draft: NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 Table 3. Effects of cyber resiliency techniques on adversarial threat events 3159 INTENDED EFFECT IMPACT ON RISK EXPECTED RESULTS Redirect (includes deter, divert, and deceive): Direct threat events away from defender-chosen resources. Reduce the likelihood of occurrence and (to a lesser extent) the likelihood of impact. · The adversary's efforts cease. · The adversary actions are mistargeted or misinformed. Deter Discourage the adversary from undertaking further activities by instilling fear (e.g., of attribution or retribution) or doubt that those activities would achieve their intended effects (e.g., that targets exist). Reduce the likelihood of occurrence

3.4.1 | Requisitos de la red para admitir una ZTA... 3.4.1 Requisitos de la red para admitir una ZTA

IA.L2-3.5.4 · REPLAY-RESISTANT AUTHENTICATION Employ replay -resistant authentication mechanisms for network access to privileged and non-privileged accounts. ASSESSMENT OBJECTIVES [NIST SP 800-171A]104 Determine if: [a] replay-resistant authentication mechanisms are implemented for network account access to privileged and non-privileged accounts. POTENTIAL ASSESSMENT METHODS AND OBJECTS [NIST SP 800-171A]104 Examine [SELECT FROM: Identification and authentication policy; procedures addressing user identification and authentication; system security plan; system design documentation; system configuration settings and associated documentation; system audit logs and records; list of privileged system accounts; other relevant documents or records]. Interview [SELECT FROM: Personnel with system operations responsibilities; personnel with account management responsibilities; personnel with information security responsibilities; system or network administrators; system developers]. Test [SELECT FROM: Mechanisms supporting or implementing identification and authentication capability or replay resistant authentication mechanisms]. DISCUSSION [NIST SP 800-171 REV. 2]

The number of assessments over the phase-in period were estimated using data from the Electronic Data Access system for the contracts containing DFARS clause 252.204-7012 in fiscal years 2019, 2020, and 2021, as well as data calculated for the initial CMMC Program. This data was used in combination with an expected growth factor to estimate DoD contracts and orders in the future. Data also showed the number of awards that were made to small entities and other than small entities. The resulting estimate was phased in over 7 years to allow the ecosystem to grow and accommodate an increasing number of assessments. The assumptions and analysis of costs are provided in the regulatory impact analysis for this rule and are explained in depth. One of the assumptions is that Non-Small Entities have a team of full-time cybersecurity professionals on staff while Small Entities do not. The assumptions reflect Small Entities will likely obtain support from External Service Providers and have a staff member submit affirmations and SPRS scores for self-assessments (when applicable). DoD included an analysis of costs to meet CMMC requirements in the regulatory impact analysis for this rule. As described in the estimate included with the rule, the major cost categories for compliance with CMMC requirements are anticipated to include costs for completing a self-assessment (e.g., Level 1 or 2); costs to prepare for and undergo C3PAO assessment (Level 2); costs required to implement the Level 3 security requirements and for preparing to undergo DCMA DIBCAC assessment (Level 3). Market forces of supply and demand will determine C3PAO pricing for CMMC Level 2 certification assessments. The CMMC rule does not make any change to cost allowability as defined in the FAR 31.201-2, Determining Allowability. As addressed in the Assumptions section of the Regulatory Impact Analysis (RIA), the cost estimates for CMMC Levels 1 and 2 are based only on the assessment, certification, and affirmation activities that a defense contractor, subcontractor, or ecosystem member must take to allow DoD to verify implementation of the relevant underlying security requirements. For CMMC Level 3, cost estimates to implement applicable security requirements are included as they are a new addition to current security protection requirements. Section H costs of existing/past contracts do not apply. CCP and CCA certification costs are set by the CAICO and are market driven. The hours used in the cost estimations are based on estimates by subject matter experts. The 417.83 hours per response questioned by the commentor ties to C3PAO reporting and recordkeeping requirements for Level 2 certification assessment on small entities as identified in table 36, not Level 1 or table 39 as stated in the comment.

Compliance challenges observed through OCR's enforcement activities suggest that regulated entities would benefit from an expanded standard to provide more details on compliance expectations. Investigations of reported breaches of unsecured PHI discussed above as examples of risk analysis failures also identified a potential failure by the regulated entities to conduct appropriate information system activity review. [536] In an investigation involving a large health care provider, the ePHI of more than 12,000 patients was sold to an identity theft ring by employees who, for six months, inappropriately accessed patient account information. [537] Compliance with the requirement to implement procedures to regularly review records of activity in relevant electronic information systems, such as audit logs, access reports, and security incident tracking, could have identified and mitigated these disclosures. [538] Similarly, a business associate experienced an intrusion into its systems that it failed to notice for over 20 months. Eventually, the ePHI of more than 200,000 individuals associated with several covered entities was encrypted in a ransomware cyberattack. [539] Among other factors, OCR's investigation indicated that the business associate potentially failed to implement procedures for regularly reviewing records of activity in its relevant electronic information system, such as audit logs, access reports, and security incident tracking reports. [540] Consistent with previously issued guidance and based

on OCR's enforcement experience, the Department proposes to elevate the existing implementation specification for information system activity review to a standard and to redesignate it as proposed 45 CFR 164.308(a)(7)(i). The purpose of the proposal is to impose specific requirements on a regulated entity to review the activity occurring in its relevant electronic information systems, including the activity occurring in the components of such systems. By virtue of these proposed requirements, we would specify actions that a regulated entity is required to take to ensure that only appropriate users access ePHI and that it responds quickly to any suspicious activity in its relevant electronic information systems, including in components thereof, such as workstations that connect to or otherwise access its relevant electronic information systems. We also propose to revise the language to provide regulated entities with additional direction regarding their review of suspicious activities. The proposed standard, if adopted, would require a regulated entity to implement written policies and procedures for regularly reviewing (printed page 947) records of activity in its relevant electronic information systems. The Department proposes five implementation specifications for the proposed standard for information system activity review. The proposed implementation specification for policies and procedures at proposed 45 CFR 164.308(a)(7)(ii)(A)

Data used to estimate the numbers of illnesses, contaminating agents, and outbreak durations are taken from FDA information documenting investigations monitored by the agency from 2000-2003 (Ref. 2). The investigation information is drawn from multiple, non-standardized sources that irregularly document different aspects of investigations. The number of investigations reported in the table is not exhaustive; more investigations may be documented elsewhere. Moreover, it is possible that the information does not perfectly reflect the universe of FDA outbreak investigations because the methods for its collection and distribution are non-standardized. Nevertheless, we believe the information is sufficiently accurate, and that the list of outbreaks is sufficiently exhaustive for purposes of estimating the benefits from the recordkeeping final rule. The outbreak duration is calculated as the time between the first and last illness, and the sizes of the outbreaks are calculated as the numbers of known illnesses attributed to an outbreak. The charts that follow depict the sizes and durations of the outbreaks from 2000 to 2003 as estimated from FDA outbreak investigation data. (printed page 71617) (printed page 71618) The next diagram combines information from the two preceding diagrams and depicts the cumulative distribution by outbreak duration of the percent of all onsets of illnesses. The horizontal axis in the following diagram gives the number of days that outbreaks lasted, and the vertical axis gives the fraction of all illnesses that occurred during outbreaks of a given duration. The diagram shows that approximately 80 percent of illnesses were from outbreaks that lasted for 33 or fewer days, and 20 percent of all illnesses were from outbreaks that lasted more than 33 days. (printed page 71619) Estimates of the durations and magnitudes of outbreaks based on FDA outbreak investigation information may overestimate the true average outbreak magnitudes and durations. The outbreaks monitored by FDA may be the most difficult to investigate because they involve interstate commerce (so illnesses are geographically dispersed), and may sicken a greater number of people. Consequently, the duration and magnitudes of the outbreaks may be longer and more severe than the average duration and magnitude of all investigations, which includes investigations at the local level in addition to the national level. However, as indicated earlier, the estimates presented here are based on food safety considerations and may understate the benefits of this final rule when the possibility of bioterrorism (food security) is considered. 4. The Total Number of Illnesses

For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked, and identified, as confidential, if submitted as detailed in Instructions. Instructions: All submissions received must include the Docket No. FDA-2023-N-3636 for FDA IT Strategy. Received comments will be placed in the docket and, except for those submitted as Confidential Submissions, publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240-402-7500. Confidential Submissions-To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION. The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not

wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as **confidential**. Any information marked as **confidential** will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf>. Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the **Search** box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240-402-7500. Submit written requests for single copies of this IT strategy to the Office of Digital Transformation, Food and Drug Administration, FDA Library, 5630 Fishers Lane, Rm. 1087, Rockville, MD 20857. Send one self-addressed adhesive label to assist that office in processing your request or include a Fax number to which the strategy may be sent. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the draft strategy. **FOR FURTHER INFORMATION CONTACT:** Casi Alexander, Office of Digital Transformation, Food and Drug Administration, FDA Library, 5630 Fishers Lane, Rm. 1087, Rockville, MD 20857, 240-402-5171, email: Casi.Alexander@fda.hhs.gov. **SUPPLEMENTARY INFORMATION:** I. Background

SC.L2-3.13.7 · Split Tunneling CMMC Assessment Guide · Level 2 | Version 2.13 226 **FURTHER DISCUSSION** Split tunneling for a remote user utilizes two connections: accessing resources on the internal network via a VPN and simultaneously accessing an external network such as a public network or the internet. Split tunneling presents a potential opportunity where an open unencrypted connection from a public network could allow an adversary to access resources on internal network. As a mitigation strategy, the split tunneling setting should be disabled on all devices so that all traffic, including traffic for external networks or the internet, goes through the VPN. Example You are a system administrator responsible for configuring the network to prevent remote users from using split tunneling. You review the configuration of remote user laptops. You discover that remote users are able to access files, email, database and other services through the VPN connection while also being able to print and access resources on their local network. You change the configuration settings for all company computers to disable split tunneling [a]. You test a laptop that has had the new hardening procedures applied and verify that all traffic from the laptop is now routed through the VPN connection. **Potential Assessment Considerations** · Does the system prevent remote devices that have established connections (e.g., remote laptops) with the system from communicating outside that communications path with resources on uncontrolled/unauthorized networks [a]? **KEY REFERENCES** · NIST SP 800-171 Rev. 2 3.13.7

We estimate that the U.S. Government receives approximately 48 contractor incident reports each year. According to OSD subject matter experts on contractors performing private security functions, it takes approximately 30 minutes for the U.S. Government to receive, review, and analyze the information for each incident reported by a contractor. Based on our assessment, the complexity of the work is equivalent to that of a GS-11, step 5. See the rate calculation below. The estimated annual cost to the U.S. Government for receiving, reviewing, analyzing, and forwarding the information submitted by the contractor is as follows: Estimation of Federal Government Burden Hours: OMB Control Number 0704-0549 Number of responses (a) 48 Hours per response (b) .5 Estimated hours (number of responses multiplied hours per response) 24 Cost per hour (c) \$45 Annual Federal Government burden (estimated hours multiplied by cost per hour) \$1,080 The hourly rate was calculated by adding an overhead factor of 36.25 percent (taken from OMB Memo M-08-13, which provides standard cost factors for agency use) to the calendar year 2019 Office of Personnel Management rate for the Rest of the United States for a GS-11, step 5; \$33.24. Labor rate calculation: Cost per hour GS-11, step 5 as follows \$33.24 OMB burden @36.25% 12.05 Total 45.29 Total Rounded to nearest whole dollar 45.00 A. Executive Order 12866, **Regulatory Planning and Review** and Executive Order 13563, **Improving Regulation and Regulatory Review**. These Executive orders direct agencies to assess all costs, benefits, and available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). These Executive orders emphasize the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has been designated a **non-significant regulatory action** under section 3(f) of Executive Order 12866. B. Congressional Review Act (5 U.S.C. 801 et seq.) Pursuant to the

Congressional Review Act, this rule has not been designated a major rule, as defined by 5 U.S.C. 804(2). C. Public Law 96-354, 'Regulatory Flexibility Act' (5 U.S.C. 601) The Under Secretary of Defense for Acquisition and Sustainment certified that this rule is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. Therefore, the Regulatory Flexibility Act, as amended, does not require us to prepare a regulatory flexibility analysis. D. Sec. 202, Public Law 104-4 , 'Unfunded Mandates Reform Act' Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1532

AU.L2-3.3.6 · Reduction & Reporting CMMC Assessment Guide · Level 2 | Version 2.13 83
AU.L2-3.3.6 · REDUCTION & REPORTING Provide audit record reduction and report generation to support on- demand analysis and reporting. ASSESSMENT OBJECTIVES [NIST SP 800-171A]72 Determine if: [a] an audit record reduction capability that supports on-demand analysis is provided; and [b] a report generation capability that supports on-demand reporting is provided. POTENTIAL ASSESSMENT METHODS AND OBJECTS [NIST SP 800-171A]72 Examine [SELECT FROM: Audit and accountability policy; procedures addressing audit record reduction and report generation; system design documentation; system security plan; system configuration settings and associated documentation; audit record reduction, review, analysis, and reporting tools; system audit logs and records; other relevant documents or records]. Interview [SELECT FROM: Personnel with audit record reduction and report generation responsibilities; personnel with information security responsibilities]. Test [SELECT FROM: Audit record reduction and report generation capability]. DISCUSSION [NIST SP 800-171 REV. 2]

(5) Based on the documentation provided, the Denial Authority will either amend the records and notify the requester and the custodian of the records of all actions taken, or deny the request. If the records are amended, those who have received the records in the past will receive notice of the amendment. (6) If the Denial Authority determines that the amendment is not warranted, he or she will provide the requester and the custodian of the records reason(s) for not amending. In addition, the Denial Authority will send the requester an explanation regarding his or her right to seek further review by the DA Privacy Act Review Board, through the Denial Authority, and the right to file a concise 'Statement of Disagreement' to append to the individual's records. (i) On receipt of a request for further review by the Privacy Act Review Board, the Denial Authority will append any additional records or background information that substantiates the refusal or renders the case complete; (ii) Within 5 working days of receipt, forward the appeal to the DA Privacy Act Review Board; and (iii) Append the servicing Judge Advocate's legal review, including a determination that the Privacy Act Review Board packet is complete. (d) DA Privacy Act Review Board. (1) The DA Privacy Act Review Board acts on behalf of the Secretary of the Army in deciding appeals of the appropriate Denial Authority's refusal to amend records. (2) The Board will process an appeal within 30 working days of its receipt. The General Counsel may authorize an additional 30 days when unusual circumstances and good cause so warrant. (3) The Board membership consists of the following principal members, comprised of three voting and two non-voting members, or their delegates. (4) Three voting members include: (i) Administrative Assistant to the Secretary of the Army (AASA) who acts as the Chairman of the Board; (printed page 46062) (ii) The Judge Advocate General; and (iii) The Chief, DA Freedom of Information and Privacy Division, U.S. Army Records Management and Declassification Agency. (5) In addition, two non-voting members include: (i) The Chief Attorney, OAASA (or designee) who serves as the legal advisor and will be present at all Board sessions to provide legal advice as required; and (ii) Recording Secretary provided by the Office of the Administrative Assistant to the Secretary of the Army. (e) DA Privacy Act Review Board meetings. (1) The meeting of the Board requires the presence of all five members or their designated representatives. Other non-voting members with subject matter expertise may participate in a meeting of the Board, at the discretion of the Chairman. (2) Majority vote of the voting members is required to make a final determination on a request before the Board.

(k) NIST SP 800-172, titled 'Enhanced Security Requirements for Protecting Controlled Unclassified Information: A Supplement to NIST Special Publication 800-171,' February 2021 (NIST SP 800-172 Feb2021), provides Federal agencies with recommended enhanced security requirements for protecting the confidentiality of CUI: (1) when the information is resident in nonfederal systems and organizations; (2) when the nonfederal organization is not collecting or maintaining information on behalf of a Federal agency or using or operating a system on behalf of an agency; and (3) where there are no specific safeguarding requirements for protecting the confidentiality of CUI prescribed by the authorizing law, regulation, or government-wide policy for the CUI category listed in the CUI

Registry. The enhanced requirements apply only to components of nonfederal systems that process, store, or transmit CUI or that provide security protection for such components when the designated CUI is associated with a critical program or high value asset. The enhanced requirements supplement the basic and derived security requirements in NIST SP 800-171 R2 and are intended for use by Federal agencies in contractual vehicles or other agreements established between those agencies and nonfederal organizations. This document is incorporated by reference as a foundational source for security requirements. (l) NIST SP 800-172A, titled "Assessing Enhanced Security (printed page 83099) Requirements for Controlled Unclassified Information," March 2022 (NIST SP 800-172A Mar2022), provides Federal agencies and nonfederal organizations with assessment procedures that can be used to carry out assessments of the requirements in NIST SP 800-172 Feb2021. The assessment procedures are flexible and can be tailored to the needs of organizations and assessors. Assessments can be conducted as (1) self-assessments; (2) independent, third-party assessments; or (3) government-sponsored assessments. The assessments can be conducted with varying degrees of rigor based on customer-defined depth and coverage attributes. The findings and evidence produced during the assessments can be used to facilitate risk-based decisions by organizations related to the CUI enhanced security requirements. This document is incorporated by reference as a foundational source for definitions and assessment. (m) ISO/IEC 17011:2017(E), titled "Conformity assessment-Requirements for accreditation bodies accrediting conformity assessment bodies," Second edition, November 2017 (ISO/IEC 17011:2017(E)), specifies requirements for the competence, consistent operation and impartiality of accreditation bodies assessing and accrediting conformity assessment bodies. This document is incorporated by reference as a source for requirements on the CMMC Ecosystem.

A DA official or employee may be found guilty of a misdemeanor and fined not more than \$5,000 for willfully-

- (i) Disclosing individually identifiable personal information to one not entitled to the information;
- (ii) Requesting or obtaining information from another's record under false pretenses;
- or (iii) Maintaining a system of records without first meeting the public notice requirements of the Act.

(b) Litigation Status Sheet. (1) When a complaint citing the Privacy Act is filed in a U.S. District Court against the Department of the Army, an Army Component, a DA Official, or any Army employee, the responsible system manager will promptly notify the Army Litigation Division, 901 North Stuart Street, Arlington, VA 22203-1837. (2) The Litigation Status Sheet at appendix E of this part provides a standard format for this notification. At a minimum, the initial notification will have items (a) through (f) provided. (3) A revised Litigation Status Sheet must be provided at each stage of the litigation. (4) When a court renders a formal opinion or judgment, copies must be provided to the Defense Privacy Office by the Army Litigation Division. (c) Administrative Remedies-Privacy Act complaints. (1) The installation level Privacy Act Officer is responsible for processing Privacy Act complaints or allegations of Privacy Act violations. Guidance should be sought from the local Staff Judge Advocate and coordination made with the system manager to assist in the resolution of Privacy Act complaints. The local Privacy Act officer is responsible for-

- (i) Reviewing allegations of Privacy Act violations and the evidence provided by the complainants;
- (ii) Making an initial assessment as to the validity of the complaint, and taking appropriate corrective action;
- (iii) Coordinating with the local Staff Judge Advocate to determine whether a more formal investigation such as a commander's inquiry or an AR 15-6 investigation is appropriate; and
- (iv) Ensuring the decision at the local level from either the Privacy Act Officer or other individual who directed a more formal investigation is provided to the complainant in writing.

(2) The decision at the local level may be appealed to the next higher command level Privacy Act Officer. (3) A legal review from the next higher command level Privacy Act Officer's servicing Staff Judge Advocate is required prior to action on the appeal. § 505.13 Computer Matching Agreement Program. (a) General provisions. (1) Pursuant to the Privacy Act and this part, DA records may be subject to computer matching, i.e., the computer comparison of automated systems of records. (2) There are two specific kinds of Matching Programs covered by the Privacy Act-

- (i) Matches using records from Federal personnel or payroll systems of records; and
- (ii) Matches involving Federal benefit programs to accomplish one or more of the following purposes-

- (A) To determine eligibility for a Federal benefit;
- (B) To comply with benefit program requirements; and

Extending the compliance dates and broadening the scope of foods subject to the limited 1-year records retention period relative to the baseline are all provisions in the final rule. Cost savings from extending the compliance dates by 6 months relative to the baseline result from reductions in inventory losses and discounts in the costs realized when incurred 6 additional months into the future. These cost savings are approximately \$271 million relative to the baseline with a 7-percent discount rate, and \$163 million with a 3 percent discount rate. Adopting retention requirements based on NIST definitions based on shelf life is not assumed to increase costs, but will reduce the benefits by a negligible amount. Throughout the analysis, we have estimated costs based on the number of facilities, and assume that this number, whenever used, approximately reflects the number of persons covered by the regulation. The revised number of facilities covered by the final rule is estimated to be 707,672 (including persons who manufacture, process, pack, transport, distribute, receive, hold, or import food, and foreign based transporters that transport food in the United States). Learning costs are assumed to be incurred by all facilities and persons 2 years following enactment of this final rule and are computed by multiplying the number of facilities by the cost of learning per facility. Based on details outlined in the proposed rule, learning costs are computed using a \$25.10 wage rate and 4.5 hours spent learning for Internet users (approximately 71 percent, and 5.5 hours spent learning for non-Internet users). The total learning costs are computed to be \$85,082,000. Records redesign costs are assumed to be incurred by approximately 101,153 large and small firms 2 years following issuance of this final rule and by 222,316 very small firms after 3 years following issuance of this final rule. Persons who manufacture, process, pack, transport, distribute, receive, hold, or import the finished container that contacts food, and foreign based transporters that transport food in the United States are assumed not to incur records redesign costs. In this analysis, FDA assumed that all sizes of firms will bear the \$1,365 per-firm records redesign cost estimate that was used in the proposal as the most likely records redesign cost for small and very small firms. The redesign costs are \$53,508,000 after the second year and \$151,731,000 after the third year following issuance of this regulation. FDA assumes the additional records maintenance costs to be incurred by 110,081 large and small facilities 2 years following issuance of this final rule and by 379,493 facilities after 3 years and for all subsequent years following issuance of the final rule. Persons who (printed page 71642)

The Federal Cybersecurity Awareness Workforce ## The Federal Cybersecurity Awareness Workforce

Organizational cybersecurity awareness (hereafter shortened to 'security awareness') programs may experience a number of challenges, including lack of funding and staff with the appropriate knowledge and skills to manage an effective program. While prior surveys and research have examined programs in the private sector, there is little understanding of whether these findings also apply within the U.S. government. To address this gap and better understand the needs, challenges, practices, and necessary competencies of federal security awareness teams and programs, NIST conducted a research study that leveraged both qualitative and quantitative methodologies. This companion document to NISTIR 8420 'Federal Cybersecurity Awareness Programs: A Mixed Methods Research Study' reports on a subset of study results focused on identifying the current job classifications, roles, and desired knowledge and skills for security awareness professionals within the federal government. Insights gained from these results are informing guidance and other initiatives to aid federal organizations in building security awareness teams with the appropriate competencies. While focused on the U.S. government, findings may also have implications for organizational security awareness professionals in other sectors.

(iii) The CFIUS review and the DSS industrial security review for FOCI are separate processes subject to independent authorities, with different time constraints and considerations. However, CFIUS may not mitigate national security risks that are adequately addressed by other provisions of law. (iv) If the NISP process has not begun or has not been completed prior to the submission of a CFIUS notice, DSS will review, adjudicate, and mitigate FOCI on a priority basis. DSS will provide all relevant information to the OUSD(I) Security Directorate specifically, for any transaction undergoing concurrent CFIUS and DSS reviews. (A) By the 10th calendar day after the CFIUS review period begins DSS will advise the OUSD (AT&L) Manufacturing and Industrial Base Policy (MIBP) CFIUS Team electronically, with a copy to the OUSD(I) Security Directorate, of the U.S. company's FCL status (e.g., no FCL, FCL in process, TS/S/C FCL). (B) For contractors or U.S. companies in process for an FCL, DSS will provide the following input in a signed memorandum with rationale included to the Director, Security, OUSD(I) Security Directorate on or before the suspense date established by the MIBP CFIUS Team: (1) Basic identification information about the contractor, to include name, address, and commercial and government entity code. (2) FCL level. (3) Identification of current classified contracts, to include identification of GCAs and any requirement for access to proscribed information. (4) The nature and status of any discussions DSS has had with the contractor or the foreign interest regarding proposed FOCI mitigation measures. (5) Whether DSS requires additional time beyond the established MIBP CFIUS team suspense date to determine and recommend to the OUSD(I) Security Directorate whether the proposed FOCI mitigation is sufficient to address risks within the scope of DSS's FOCI authorities. (6) Identification of any known security issues (e.g., marginal or unsatisfactory security rating, unresolved counterintelligence concerns, alleged export violations). (v) If it appears that an agreement cannot be reached on material terms of a FOCI action plan, or if the U.S. company subject to the proposed transaction fails to comply with the FOCI reporting requirements of DoD 5220.22-M, DSS may recommend additional time through the OUSD(I) Security Directorate to resolve any national security issues related to FOCI mitigation. (printed page 19478)

Based on the information above, the total annual estimated cost for 28 contractors that design, develop, operate, or maintain a non-cloud FIS to comply with the requirement for a continuous monitoring strategy in year one is approximately \$408,000 (28 contractors * 160 hours * \$91.10). The cost of the continuous monitoring strategy accounts for the time needed to analyze, develop, and document a strategy or review an existing strategy and make revisions, and prepare and submit the strategy to the Government. 5. Develop and Maintain a List of Operational Technology Equipment Paragraph (k) of the new clause 52.239-YY requires all contractors that develop, implement, operate, or maintain a FIS using non-cloud computing services to develop and maintain a list of the physical location and other pertinent data on all of the operational technology (OT) equipment included within the boundary of the FIS. Contractors must provide the Government with a copy of the current and/or historical lists, upon request. All 28 contractors awarded a contract involving a non-cloud FIS will be required to develop, submit, and maintain a list of OT equipment. The Government estimates that a contractor will expend approximately 80 hours developing the list in year one, and 40 hours updating and maintaining the list each year thereafter. Using an average loaded wage rate of \$91.10 for FIS occupations, the annual estimated cost for a contractor that operates or maintains a non-cloud FIS to develop a list of OT equipment is approximately \$7,300 (80 hours * \$91.10), and approximately \$3,600 to maintain the list thereafter. It is estimated that the Government will

annually request 6 (20 percent * 28 contractors) contractors provide a copy of the OT equipment list to the Government. It is estimated that a contractor will spend one hour preparing and submitting the list to the Government. Using an average loaded wage rate of \$91.10 for FIS occupations, the total annual estimated cost for contractors to submit the OT equipment lists to the Government is approximately \$550 (6 contractors * 1 hours * \$91.10). Based on the discussion above, the total annual estimated cost for 28 contractors that develop, implement, operate, or maintain a non-cloud FIS to develop the required OT equipment list in year one is approximately \$204,000 (28 contractors * 80 hours * \$91.10), and approximately \$102,000 (28 contractors * 40 hours * \$91.10) each following year to maintain the list annually. The cost accounts for the time needed to identify the requisite equipment, gather the required data, and document or update the information. 6. Binding Operational Directives and Emergency Directives

(g) The Auditor General is authorized to act on requests for records relating to audits done by the U.S. Army Audit Agency under AR 10-2. This includes requests for related records developed by the Audit Agency. (h) The Director of the Army Staff is authorized to act on requests for all records of the Chief of Staff and its Field Operating Agencies. The Director of the Army Staff has delegated this authority to the Chief Attorney and Legal Services Directorate, U.S. Army Resources & Programs Agency (See The Judge Advocate General for the General Officer Management Office actions). The Chief Attorney and Legal Services Director, U.S. Army Resources & Programs Agency acts on requests for records of the Chief of Staff and its Field Operating Agencies (See The Judge Advocate General for the General Officer Management Office actions). (i) The Deputy Chief of Staff, G-3/5/7 is authorized to act on requests for records relating to International Affairs policy, planning, integration and assessments, strategy formulation, force development, individual and unit training policy, strategic and tactical command and control systems, nuclear and chemical matters, use of DA forces. (j) The Deputy Chief of Staff, G-8 is authorized to act on requests for records relating to programming, material integration and externally directed reviews. (k) The Deputy Chief of Staff, G-1 is authorized to act on the following records: Personnel board records, Equal Opportunity (military) and sexual harassment, health promotions, physical fitness and well-being, command and leadership policy records, HIV and suicide policy, substance abuse programs except for individual treatment records which are the responsibility of the Surgeon General, retiree benefits, services, and programs (excluding individual personnel records of retired military personnel, which are the responsibility of the U.S. Army Human Resources Command-St. Louis), DA dealings with Veterans Affairs, U.S. Soldier's and Airmen's Home; all retention, promotion, and separation records; all military education records including records related to the removal or suspension from a military school or class; Junior Reserve Officer Training Corps (JROTC) and Senior Reserve Officer Training Corps (SROTC) records; SROTC instructor records; U.S. Military Academy Cadet Records; recruiting and MOS policy issues, personnel travel and transportation entitlements, military strength and statistics, The Army Librarian, demographics, and Manprint. (l) The Deputy Chief of Staff, G-4 is authorized to act on requests for records relating to DA logistical requirements and determinations, policy concerning materiel maintenance and use, equipment standards, and logistical readiness. (m) The Chief of Engineers is authorized to act on requests for records involving civil works, military construction, engineer procurement, and ecology; and the records of the U.S. Army Engineer divisions, districts, laboratories, and field operating agencies.

- Risk Management Guidelines: Work began on SP 800-53 Revision 5, Security and Privacy Controls for Systems and Organizations, with a pre-draft call for comments, adjudication of those comments, and coordination with our JTF partners. SP 800-53 provides organizations with the security and privacy controls necessary to appropriately strengthen their systems and the environments in which those systems operate, and provides a process for selecting the appropriate controls, which contributes to systems that are resilient in the face of attacks and other threats and protect an individual's privacy. The implementation of SP 800-53, SP 800-37, Guide for Applying the Risk Management Framework to Federal Information Systems, and SP 800-137, Information Security Continuous Monitoring for Federal Information Systems and Organizations, provides organizations with near real-time information that is essential for senior leaders making ongoing risk-based decisions affecting their critical missions and business functions. - FISMA Outreach Activity to Public and Private Sector Organizations: Cybersecurity outreach briefings were conducted and support was provided to all levels of private-sector organizations and government (including federal, state and local entities) on multiple information security topics of interest. These included, for example, an effective implementation of the NIST RMF, contingency planning, interconnection security agreements, security-focused configuration management, and information security for small businesses. In addition, the

ITL FISMA Team responded to hundreds of inquiries from customers, served on cybersecurity advisory panels, and conducted outreach activities with academic institutions, providing information on NIST's security standards and guidelines, and exploring new areas of cybersecurity research and development.

3.3.5 | NULL Authentication... 3.3.5 NULL Authentication NULL authentication is a special kind of authentication.

The DoD received questions about whether CMMC requirements apply to information systems that are designated as National Security Systems, Defense Business Systems, or systems operated on the DoD's behalf. In concert with those questions, one person recommended adding NIST SP 800-53 R5 requirements to the rule for such systems. The commenter further recommended expanding applicability of the rule to include contractor-owned systems that directly affect DoD NSS. Two commenters recommend edits to clarify that CMMC requirements do not apply to NSS or to government systems operated by contractors on the DoD's behalf. One commenter asked if a Cloud Service Provider that stores CUI would have to be at Impact Level 4 in accordance with the DISA Cloud Computing Security Requirements Guide. Response: The CMMC assessment requirements apply in conjunction with FAR clause 52.204-21 and DFARS clause 252.204-7012 requirements and provide a mechanism for verifying compliance with the security requirements for safeguarding FCI or CUI (e.g., NIST SP 800-171) levied by those clauses. The CMMC Program does not alter any additional security requirements that may be applicable to contractor-owned information systems that may also meet the criteria for designation as NSS. There is no conflict between the CMMC rule and the DISA Cloud SRG, which applies to contractor information systems that are part of Information Technology (IT) services or systems operated on behalf of the Government. The CMMC rule does not apply to those systems (§.170.3(b)). The DoD declines to modify the rule because the applicability section already states this rule applies to contractor-owned information systems. b. Infrastructure Entities Comment: Many commenters had concerns about CMMC's potential impact to the energy and electric industries, internet Service Providers (ISPs) and small, disadvantaged businesses looking to contract with the DoD, especially given dependencies on appropriate marking of Controlled Unclassified Information (CUI). Another commenter referenced Executive Order 13175 , ·Consultation and Coordination with Indian Tribal Governments· and requested information on CMMC impact to and potential exemptions for Native American and small disadvantaged contractors. Another commenter stated that some small businesses may stop providing cost estimating services to Federal agencies due to ·threatened penalties· under CMMC requirements.

This option is not selected as it does not allow DoD to increase bilateral information sharing to bolster DIB cybersecurity and safeguard DoD information transiting on DIB networks. In addition, the population of defense contractors with mandatory reporting requirements would continue to exceed those eligible to participate in the DIB CS Program. Companies that submit mandatory reports but are not eligible for the DIB CS Program would continue to be excluded from receiving cyber threat information and technical assistance. Alternative #2 DoD posts generic cyber threat information and cybersecurity best practices on a publicly accessible website without directly engaging participating companies. Reason for Not Selecting Alternative #2 This alternative was not selected as companies already have access to open-source cyber threat information and best practices from multiple sources in the public sector. This alternative does not afford access by defense contractors to government-furnished cyber threat information, specifically tailored for the DIB. In addition, this alternative does not enable defense contractor interaction with DC3. Alternative #3 Revise eligibility requirements to permit all defense contractors who own or operate a covered contractor information system (approximately 80,000 defense contractors) to participate in the DIB CS Program. Using the 10% estimation used for past program participation, the program is forecasted to grow to approximately 8,000 defense contractors. Reason for Selecting Alternative #3 The revised eligibility criteria allow DoD to perform outreach to a broader DIB community. Being able to share pertinent cyber threat information with the DIB will increase both the DoD and defense contractors' knowledge of the cyber threat landscape. Giving DoD the ability to have greater visibility over issues affecting unclassified networks will allow DoD to share pertinent alerts and threat information with a larger number of DIB organizations. DoD believes that revising the eligibility criteria to apply to contractors that own or operate covered contractor information systems is an important step in managing DoD's operational risk because it will allow additional companies to begin receiving cyber (printed page 27836) threat information to inform and harden their cybersecurity posture. DIB organizations that do not meet the current eligibility requirements

to be in a DoD-sponsored cyber threat information sharing program have expressed interest in this change as noted previously by the growing percentage of ineligible applicants. Regulatory Compliance Analysis A. Executive Order 12866 , ·Regulatory Planning and Review· and Executive Order 13563 , ·Improving Regulation and Regulatory Review· Executive Order 12866

The definitions in the rule are taken directly from the statute. In the final rule, the term ·covered item· has been replaced by the term ·covered item of supply·, thereby conforming to the statute. b. Information Technology Comment: The same respondent commented that the definition of ·information technology· is defined even more expansively than in Federal Acquisition Regulation (FAR) subpart 2.1, covering information systems ranging from systems used for intelligence activities to information systems used for the ·direct fulfillment of military or intelligence missions·. Response: The definition of ·information technology· in the rule is the same as in the statute (40 U.S.C. 11101(6)). c. Supply Chain Risk Comment: One respondent requested that DoD clarify the definition of ·supply chain risk·, stating that DoD should clarify the phrase ·maliciously introduce unwanted function· to clearly explain if this is a hardware or software concern or both, and recognize that threats posed maliciously are just one class of threat. Response: The definition of ·supply chain risk· is taken directly from the statute. It addresses both hardware and software concerns and is the only class of threat to which section 806 and the rule apply. (printed page 67245) 3. Scope and Applicability a. Prescription Comment: Three respondents commented that the scope is overly broad, recommending that DoD should include the rule's provisions and clauses in NSS solicitations and contracts only. One of these respondents commented that the rule should be narrowly scoped to reflect the intent of Congress, suggesting that DoD should include the rule's provisions and clauses in solicitations and contracts for information technology NSS rather than all information technology solicitations and contract, i.e., only in ·covered procurements·. Another respondent commented that DoD should establish an independent, special review council to evaluate issues such as: (1) ·covered· systems, technologies, items, procurements, and contracts; and (2) circumstances where the clause needs to be included and where information will be withheld under DFARS 239.7305(d), thus providing an independent check to ensure that this authority is being used in a manner consistent with section 806 of the FY 2011 NDAA and the underlying policy. This respondent also suggested that successful offerors be provided information that their contracts are covered by the clause. One respondent suggested that DoD should provide offerors sufficient notice that the goods or services they offer are to be used in a covered procurement. Response: The final rule limits use of the solicitation provision and contract clause to solicitations and contracts for information technology, whether acquired as a service or as a supply, that is a covered system, is a part of a covered system, or is in support of a covered system, as that term is defined at 239.7301. b. NSS Classifications Comment:

U.S. DEPARTMENT OF ENERGY RISK ASSESSMENT METHODOLOGY Volume I: DOE Risk Assessment Guideline Instructions, Resource Table, and Completed Sample Volume II: DOE Risk Assessment Worksheets

There are two types of exemptions, general and specific. The general exemption authorizes the exemption of a system of records from all but a few requirements of the Privacy Act. The specific exemption authorizes exemption of a system of records or portion thereof, from only a few specific requirements. If a new system of records originates for which an exemption is proposed, or an additional or new exemption for an existing system of records is proposed, the exemption shall be submitted with the system of records notice. No exemption of a system of records shall be considered automatic for all records in the system. The systems manager shall review each requested record and apply the exemptions only when this will serve significant and legitimate Government purposes. (b) Specific exemptions. (1) System identifier and name. RDCAA 900.1, DCAA Internal Review Case Files. (i) Exemption. Any portions of this system of records which fall under the provisions of 5 U.S.C. 552a(k)(2) and (k)(5) may be exempt from the following subsections of 5 U.S.C. 552a : (c)(3), (d), (e)(1), (e)(4)(G), (H), and (f). (ii) Authority. 5 U.S.C. 552a(k)(2) and (k)(5) . (iii) Reasons. (A) From subsection (c)(3) because disclosures from this system could interfere with the just, thorough and timely resolution of the complaint or inquiry, and possibly enable individuals to conceal their wrongdoing or mislead the course of the investigation by concealing, destroying or fabricating evidence or documents. (B) From subsection (d) because disclosures from this system could interfere with the just, thorough and timely resolution of the complaint or inquiry, and possibly enable individuals to conceal their wrongdoing or mislead the course of the investigation by concealing, destroying or fabricating evidence or documents. Disclosures could also subject sources and witnesses to harassment or intimidation which jeopardize the safety and well-

being of themselves and their families. (C) From subsection (e)(1) because the nature of the investigation functions creates unique problems in prescribing specific parameters in a particular case as to what information is relevant or necessary. Due to close liaison and working relationships with other Federal, state, local, foreign country law enforcement agencies, and other governmental agencies, information may be received which may relate to a case under the investigative jurisdiction of another government agency. It is necessary to maintain this information in order to provide leads for appropriate law enforcement purposes and to establish patterns of activity which may relate to the jurisdiction of other cooperating agencies. (D) From subsection (e)(4)(G) through (H) because this system of records is exempt from the access provisions of subsection (d).

These exemptions are necessary to protect the confidentiality of the records compiled for the purpose of: Enforcement of the conflict of interest statutes by the Department of Defense Standards of Conduct Counselor, General Counsel, or their designees; and determining suitability eligibility or qualifications for Federal civilian employment, military service or Federal contracts of those alleged to have violated or caused others to violate the Standards of Conduct regulations of the Department of Defense. (5) System identifier and name. DUSDP 02, Special Personnel Security Cases. (i) Exemption. All portions of this system which fall under 5 U.S.C. 552a(k)(5) are exempt from the following provisions of 5 U.S.C. 552a : (c)(3); (d). (ii) Authority. 5 U.S.C. 552a(k)(5) . (iii) Reasons. This system of records is exempt from subsections (c)(3) and (d) of 5 U.S.C. 552a which would require the disclosure of investigatory material compiled solely for the purpose of determining access to classified information, but only to the extent that the disclosure of such material would reveal the identity of a source who furnished information to the Government under an expressed promise that the identity of the source would be held in confidence or, prior to September 27, 1975, under an implied promise that the identity of the source would be held in confidence. A determination will be made at the time of the request for a record concerning whether specific information would reveal the identity of a source. This exemption is required in order to protect the confidentiality of the sources of information compiled for the purpose of determining access to classified information. This confidentiality helps maintain the Government's continued access to information from persons who would otherwise refuse to give it. (6) System identifier and name. DODDS 02.0, Educator Application Files. (i) Exemption. All portions of this system which fall within 5 U.S.C. 552a(k)(5) may be exempt from the following provisions of 5 U.S.C. 552a : (c)(3); (d). (ii) Authority. 5 U.S.C. 552a(k)(5) . (iii) Reasons. It is imperative that the confidential nature of evaluation and investigatory material on teacher application files furnished the Department of Defense Dependent Schools (DoDDS) under promises of confidentiality be exempt from disclosure to the individual to insure the candid presentation of information necessary to make determinations involving applicants suitability for DoDDS teaching positions. (7) System identifier and name. DGC 20, DoD Presidential Appointee Vetting File. (i) Exemption. Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. Portions of this system of records that (printed page 14805)

(iv) When a merger, sale, or acquisition involving a foreign interest and a contractor is finalized prior to having an acceptable FOCI mitigation or negation agreement in place, DSS will invalidate any existing FCL until such time as DSS determines that the contractor has submitted an acceptable FOCI action plan (see DoD 5220.22-M) and has agreed to interim measures that address FOCI concerns pending formal execution of a FOCI mitigation or negation agreement. Invalidation renders the contractor ineligible to receive new classified material or to bid on new classified contracts. If the affected GCA determines that continued access to classified material is required, DSS may continue the FCL in an invalidated status when there is no indication that classified information is at risk of compromise. If classified information remains at risk of compromise due to the FOCI, DSS will take action to impose appropriate security countermeasures or terminate the FCL, in coordination with the affected GCA. (v) Changed conditions, such as a change in ownership, indebtedness, or a foreign intelligence threat, may justify certain adjustments to the security terms under which a contractor is cleared or, alternatively, require the use of a particular FOCI mitigation or negation agreement. Depending on specific circumstances, DSS may determine that a contractor is no longer under FOCI or, conversely, that a contractor is no longer eligible for an FCL. (printed page 19473) (vi) If the contractor determined to be under FOCI does not have possession of classified material and does not have a current or pending requirement for access to

classified information, DSS will administratively terminate the FCL. (3) Assessing the Implications of FOCI.

(ii) Required to be disclosed under the Freedom of Information Act. (2) The purpose for the accounting of disclosure is to- (i) Enable an individual to ascertain those persons or agencies that have received information about them; (ii) Enable the DA to notify past recipients of subsequent amendments or Statements of Dispute concerning the record; and (iii) Provide a record of DA compliance with the Privacy Act of 1974, if necessary. (3) Since the characteristics of records maintained within DA vary widely, no uniform method for keeping the disclosure accounting is prescribed. (4) Essential elements to include in each disclosure accounting report are- (i) The name, position title, and address of the person making the disclosure; (ii) Description of the record disclosed; (iii) The date, method, and purpose of the disclosure; and (iv) The name, position title, and address of the person or agency to which the disclosure was made. (5) The record subject has the right of access to the disclosure accounting except when- (i) The disclosure was made for law enforcement purposes under 5 U.S.C. 552a(b)(7) ; or (ii) The disclosure was made from a system of records for which an exemption from 5 U.S.C. 552a(c)(3) has been claimed. (6) There are no approved filing procedures for the disclosure of accounting records; however, system managers must be able to retrieve upon request. With this said, keep disclosure accountings for 5 years after the disclosure, or for the life of the record, whichever is longer. (7) When an individual requests such an accounting, the system manager or designee will respond within 20 working days. § 505.8 Training requirements. (a) Training. (1) The Privacy Act requires all heads of Army Staff agencies, field operating agencies, direct reporting units, Major Commands, subordinate commands, and installations to establish rules of conduct for all personnel involved in the design, development, operation, and maintenance of any Privacy Act system of records and to train the appropriate personnel with respect to the privacy rules including the penalties for non-compliance (See 5 U.S.C. 552a(e)(9)). (2) To meet the training requirements, three general levels of training must be established. They are- (i) Orientation. Training that provides basic understanding of this part as it applies to the individual's job performance. This training will be provided to personnel, as appropriate, and should be a prerequisite to all other levels of training; (ii) Specialized training.

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Defense Defense Acquisition Regulations System 48 CFR Part 252 RIN 0750-AF58 AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD). ACTION: Proposed rule with request for comments. (printed page 2646) SUMMARY: DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to address requirements for validation of Taxpayer Identification Numbers as part of the Central Contractor Registration process. The proposed changes are consistent with changes made to the Federal Acquisition Regulation. DATES: Comments on the proposed rule should be submitted in writing to the address shown below on or before March 23, 2007, to be considered in the formation of the final rule. ADDRESSES: You may submit comments, identified by DFARS Case 2006-D037, using any of the following methods: Federal eRulemaking Portal: <http://www.regulations.gov> . Follow the instructions for submitting comments. E-mail: dfars@osd.mil . Include DFARS Case 2006-D037 in the subject line of the message. Fax: (703) 602-0350. Mail: Defense Acquisition Regulations System, Attn: Ms. Felisha Hitt, OUSD (AT&L) DPAP (DARS), IMD 3C132, 3062 Defense Pentagon, Washington, DC 20301-3062. Hand Delivery/Courier: Defense Acquisition Regulations System, Crystal Square 4, Suite 200A, 241 18th Street, Arlington, VA 22202-3402. Comments received generally will be posted without change to <http://www.regulations.gov> , including any personal information provided. FOR FURTHER INFORMATION CONTACT: Ms. Felisha Hitt, (703) 602-0310. SUPPLEMENTARY INFORMATION: A. Background DFARS 252.204-7004 contains a substitute paragraph for use with the clause at FAR 52.204-7, Central Contractor Registration, to address DoD-unique requirements relating to contractor registration in the Central Contractor Registration (CCR) database. Item I of Federal Acquisition Circular 2005-10, published at 71 FR 36923 on June 28, 2006, amended the clause at FAR 52.204-7 to include requirements for the Government to validate a contractor's Taxpayer Identification Number (TIN), and for the contractor to consent to this validation, as part of the CCR registration process. This proposed rule amends DFARS 252.204-7004 to address TIN validation, for consistency with the changes

made to FAR 52.204-7. This rule was not subject to Office of Management and Budget review under Executive Order 12866, dated September 30, 1993. B. Regulatory Flexibility Act

A senior official from the prime contractor and any applicable subcontractor will be required to affirm continuing compliance with the specified security requirements after every assessment, including POA&M closeout, and annually thereafter. Affirmations are entered electronically in SPRS (see § 170.22 for details on Affirmation requirements, procedures, and information collection). 4. Contracts or Subcontracts With a CMMC Level 3 Certification Assessment Requirement a. Security Requirements (New) For CMMC Level 3, when CMMC becomes a final rule, contractors and applicable subcontractors will be required to implement the 24 selected security requirements from NIST SP 800-172, as detailed in table 1 to § 170.14(c)(4). CMMC Level 2 is a prerequisite for CMMC Level 3. b. Assessment Requirements (New) At Level 3, CMMC adds a requirement for contractors and applicable subcontractors to verify through DoD assessment and receive certification that all applicable CMMC Level 3 security requirements from NIST SP 800-172 have been implemented. Selected requirements are allowed to have a POA&M that must be closed out within 180 days of the assessment (see § 170.21 for details on POA&Ms). The final certification will be valid for up to three years. The DoD assessor will enter the assessment information electronically into the eMASS, that will electronically transmit the assessment results into SPRS (see § 170.18 for details on CMMC Level 3 Certification Assessment requirements and procedures, and specifically § 170.18(a)(1)(i) for information collection). c. Affirmation Requirements (New) A senior official from the prime contractor and any applicable subcontractor will be required to affirm continuing compliance with the specified security requirements after every assessment, including POA&M closeout, and annually thereafter. Affirmations are entered electronically in SPRS (see § 170.22 for details on Affirmation requirements, procedures, and information collection). Summary of Provisions Contained in This Rule Section 170.1-Purpose Section 170.1 addresses the purpose of this rule. It describes the CMMC Program and establishes policy for requiring the protection of FCI and CUI that is processed, stored, or transmitted on defense contractor and subcontractor information systems. The security standards utilized in the CMMC Program are from the FAR clause 52.204-21; NIST SP 800-171 Rev 2; and selected requirements from the NIST SP 800-172, as applicable. The purpose of the CMMC Program is for contractors (printed page 89061) and subcontractors to demonstrate that FCI and CUI being processed, stored, or transmitted is adequately safeguarded through the methodology provided in the rule. Section 170.2-Incorporation by Reference Section 170.2 addresses the standards and guidelines that are incorporated by reference. The Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51

The main audiences for this publication are product security officers and security architects at IoT product manufacturers and those in their supply chain; cybersecurity test and evaluation experts; and other stakeholders in the IoT product market. This publication may also help customers or integrators of IoT products who are adopting IoT technologies in their residence or business, especially small business networks, as well as organizations concerned with conformity assessment of IoT products to published guidance. - 'Secure by Design': Uses Secure Code Storage; Secure Code Training (e.g., training starting on day one, and regularly ongoing); Secure Code Scanning (e.g., tracking vulnerabilities, hard-coded secrets, code leaks and binaries); Policy/Framework (e.g., using System Development Lifecycle (SDLC), Open Web Application Security Project(OWASP), NIST); Industry Maturity Model (using the Software Assurance Maturity Model (SAMM)); Application Lifecycle Management/Product Lifecycle Management (ALM/PLM) Integration into Development Model (using Quality Service Model Operating System (SMOS)); - 'Secure in Use': Employs mechanisms such as participating in the Bug90 program, penetration testing, and tracking metrics; and - 'Secure Thru Trust': Seeks to build connections with customers including a broad range of organizational partnerships, direct customer engagements, and the use of media to disseminate information about Zebra product security. Karin Athanas, TIC Council, pointed out that IoT product requirements will also require smart, expanded testing to ensure the outcomes can be accomplished as described. Considering the full IoT product will require wider manufacturer testing, as well as conformity certification testing, for expected and unexpected outcomes.

The panelists articulated some of the unique aspects of their HPC systems that inform their approach to security. Some of these differences included the use of dedicated login (bastion) nodes, the fact that users often do not belong to the same organization that owns or runs the HPC, the highly dynamic nature of the workloads, and the fact that users can bring and compile their own code. One panelist described how even the well-accepted practice of using multi-factor authentication is

challenging to accomplish with off-premises users who do not belong to the organization. - Multi-factor authentication - Network security monitoring - Intrusion detection - Vulnerability scanning - Log aggregation - Antivirus scanning - Endpoint detection - Hardware-based encryption OAC and the NSF have taken a holistic approach to securing science cyberinfrastructure through multiple programs that target different capabilities and challenges. For instance, the Secure and Trustworthy Computing (SaTC) program engages in fundamental cybersecurity research, while the Cybersecurity Innovation for Cyberinfrastructure (CICI) program targets applied and translational cybersecurity work for science cyberinfrastructure. CICI has three program areas: usable and collaborative security for science, reference scientific security datasets, and a transition to cyberinfrastructure resilience track. Across these areas, Dr. Beverly highlighted some particularly exciting projects, including work on improving the performance and security of data transport, analyzing and automatically patching scientific binary software, finding and fixing configuration vulnerabilities in HPC, performing encrypted search and computing on private data, and distributed credentialed access.

Executive Director, National Security Personnel System, Program Executive Office, 1401 Wilson Boulevard, Arlington, VA 22209-2325. Notification procedure: Individuals seeking to determine whether this system of records contains information about themselves should address written inquiries to the Executive Director, National Security Personnel System, Program Executive Office, 1401 Wilson Boulevard, Arlington, VA 22209-2325. Request should contain name; assigned case number; approximate case date (day, month, and year); case type; the names of the individuals and/or labor organizations filed the unfair labor practice charges; negotiability disputes; exceptions to arbitration awards; and impasses. Record access procedures: Individuals seeking access to records about themselves contained in this system of records should address written inquiries to the Executive Director, National Security Personnel System, Program Executive Office, 1401 Wilson Boulevard, Arlington, VA 22209-2325. Request should contain name; assigned case number; approximate case date (day, month, and year); case type; the names of the individuals and/or labor organizations filed the unfair labor practice charges; negotiability disputes; exceptions to arbitration awards; and impasses. Contesting record procedures: The OSD's rules for accessing records, for contesting contents and appealing initial agency determinations are published in OSD Administrative Instruction No. 81; 32 CFR part 311 ; or may be obtained from the system manager. Record source categories: Individual; other officials or employees; and departmental and other records containing information pertinent to the NSLRB action. Exemptions claimed for the system: None. (printed page 18787) Altered System of Record Notice DEPARTMENT OF DEFENSE Defense Logistics Agency Privacy Act of 1974; Systems of Records AGENCY: Defense Logistics Agency. ACTION: Notice to alter a system of records. Summary: The Defense Logistics Agency proposes to alter a system of records notice in its inventory of record systems subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended. The alteration adds two routine uses, revises the purpose category, and makes other administrative changes to the system notice. DATES: This action will be effective without further notice on (insert date thirty days after publication in the Federal Register) unless comments are received that would result in a contrary determination. ADDRESSES: Send comments to the Privacy Act Officer, Headquarters, Defense Logistics Agency, ATTN: DSS-B, 8725 John J. Kingman Road, Suite 2533, Fort Belvoir, VA 22060-6221. FOR FURTHER INFORMATION CONTACT: Ms. Mary Smith at (703) 000-0000. SUPPLEMENTARY INFORMATION: The Defense Logistics Agency notices for systems of records subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the Federal Register and are available from the address above. The proposed system report, as required by 5 U.S.C. 552a(r)

155 Privacy continuous monitoring means maintaining ongoing awareness of privacy risks and assessing privacy controls at a frequency sufficient to ensure compliance with applicable privacy requirements and to manage privacy risks. NIST SP 800-37, REVISION 2 RISK MANAGEMENT FRAMEWORK FOR INFORMATION SYSTEMS AND ORGANIZATIONS A System Life Cycle Approach for Security and Privacy

APPENDIX F PAGE 152 This publication is available free of charge from: <https://doi.org/10.6028/NIST.SP.800-37r2> lowest to the highest impact levels for the systems within the organization. Organizations may also consider employing the phased implementation approach by partitioning systems into subsystems or system elements and subsequently transitioning those subsystems or system elements to ongoing authorization one segment at a time until the entire system is ready for the full transition (at which time the authorizing official acknowledges that the system is now being managed by an ongoing authorization process). REAUTHORIZATION

Reauthorization actions occur at the discretion of the authorizing official in accordance with federal or organizational policy.¹⁵⁶ If a reauthorization action is required, organizations maximize the use of security and privacy risk information produced as part of the continuous monitoring processes currently in effect. Reauthorization actions, if initiated, can be either time-driven or event-driven. Time-driven reauthorizations occur when the authorization termination date is reached (if one is specified). If the system is under ongoing authorization,¹⁵⁷ a time-driven reauthorization may not be necessary. However, if the continuous monitoring program is not sufficiently comprehensive to fully support ongoing authorization, a maximum authorization period can be specified by the authorizing official. Authorization termination dates are guided and informed by federal and organizational policies and by the requirements of authorizing officials. Under ongoing authorization, a reauthorization may be necessary if an event occurs that produces risk above the acceptable organizational risk tolerance. A reauthorization may be warranted, for example, if there is a breach/incident or failure of or significant problems with the continuous monitoring program. Reauthorization actions may necessitate a review of and changes to the continuous monitoring strategy which may in turn, affect ongoing authorization. For security and privacy assessments associated with reauthorization, organizations leverage security and privacy information generated by the continuous monitoring program and fill in gaps with manual assessments. Organizations may supplement automatically-generated assessment information with manually-generated information in situations where an increased level of assurance is needed. If the security control assessments are conducted by qualified assessors with the necessary independence, use appropriate security standards and guidelines, and are based on the needs of the authorizing official, the assessment results can be applied to the reauthorization.¹⁵⁸ The senior agency official for privacy is responsible for assessing privacy controls and those assessment results can be cumulatively applied to the reauthorization. Independent assessors may assess privacy controls at the discretion of the organization. The senior agency official for privacy reviews and approves the authorization packages for information systems that process PII prior to the authorizing official making a reauthorization decision. The reauthorization action may be as simple as updating the security and privacy plans, security and privacy assessment ¹⁵⁶ Decisions to initiate a formal reauthorization include inputs from the senior agency information security officer, senior agency official for privacy, and senior accountable official for risk management/risk executive (function). ¹⁵⁷ An ongoing authorization approach requires that a continuous monitoring program is in place to monitor all implemented security controls with a frequency specified in the continuous monitoring strategy. ¹⁵⁸ [SP 800-53A] describes the specific conditions when security information can be reused to support authorization actions.

(E) From subsection (e)(4)(I) because to the extent that this provision is construed to require more detailed disclosure than the broad, generic information currently published in the system notice, an exemption from this provision is necessary to protect the confidentiality of sources of information and to protect privacy and physical safety of witnesses and informants. Dated: April 15, 2013. Patricia Toppings, OSD Federal Register Liaison Officer, Department of Defense. [FR Doc. 2013-09619 Filed 4-23-13; 8:45 am] BILLING CODE 5001-06-P

reporting systems in order to develop risk assessments. (c) The Contracting Officer will consider SPRS risk assessments during the evaluation of quotations or offers received in response to this solicitation as follows: (1) Item risk will be considered to determine whether the procurement represents a high performance risk to the Government. (2) Price risk will be considered in determining if a proposed price is consistent with historical prices paid for a product or a service or otherwise creates a risk to the Government. (3) Supplier risk, including but not limited to quality and delivery, will be considered to assess the risk of unsuccessful performance and supply chain risk. (d) SPRS risk assessments are generated daily. Quoters or Offerors are able to access their risk assessments by following the access instructions in the SPRS user's guide available at <https://www.sprs.csd.disa.mil/-reference.htm> . Quoters and Offerors are granted access to SPRS for their own risk assessment classifications only. SPRS reporting procedures and risk assessment methodology are detailed in the SPRS user's guide. The method to challenge a rating generated by SPRS is also provided in the user's guide. SPRS evaluation criteria are available at https://www.sprs.csd.disa.mil/-pdf/-SPRS_DataEvaluationCriteria.pdf . (e) The Contracting Officer may consider any other available and relevant information when evaluating a quotation or an offer. (End of provision) 252.213-7000 [Removed and Reserved] 13. Remove and reserve section 252.213-7000. [FR Doc. 2023-05671 Filed 3-21-23; 8:45 am] BILLING CODE 5001-06-P

[Insert name and address of entity or name and position of officer, director, partner, or similar entity official or officials] will not require, will not have, and can be effectively and formally excluded from, access to all classified information disclosed to the entity and does not occupy a position that would enable them to adversely affect the organization's policies or practices in the performance of classified contracts. (printed page 83322) Affirmation for Exclusion from Higher-level Classified Information [Insert name and address of entity or name and position of officer, director, partner, or similar entity official or officials] will not require, will not have, and can be effectively and formally excluded from access to [insert SECRET or TOP SECRET] classified information and does not occupy a position that would enable them to adversely affect the organization's policies or practices in the performance of [insert SECRET or TOP SECRET] classified contracts. (d) Insider Threat Program. Pursuant to this rule and CSA provided guidance to supplement unique CSA mission requirements, the contractor will establish and maintain an insider threat program to gather, integrate, and report relevant and available information indicative of a potential or actual insider threat, consistent with E.O. 13587 and Presidential Memorandum National Insider Threat Policy and Minimum Standards for Executive Branch Insider Threat Programs. (e) Standard practice procedures. The contractor will implement all applicable provisions of this rule at each of its cleared facility locations. The contractor will prepare written procedures when the CSA determines them to be necessary to reasonably exclude the possibility of loss or compromise of classified information, and in accordance with additional CSA-provided guidance, as applicable. (f) Cooperation with Federal agencies. Contractors will cooperate with Federal agencies and their officially credentialed USG or contractor representatives during official reviews, investigations concerning the protection of classified information, or personnel security investigations of present or former employees and others (e.g., consultants or visitors). At a minimum, cooperation includes: (1) Providing suitable arrangements within the facility for conducting private interviews with employees during normal working hours; (2) Providing, when requested, relevant employment or personnel files, security records, supervisory files, records pertinent to insider threat (e.g., security, cybersecurity, and human resources) and any other records pertaining to an individual under investigation that are, in the possession or control of the contractor or the contractor's representatives or located in the contractor's offices; (3) Providing access to employment and security records that are located at an offsite location; and (4) Rendering other necessary assistance. (g) Security training and briefings.

, the Contractor's financial statements shall be in compliance with Generally Accepted Accounting Principles in order to receive performance-based payments. (c)(1) The Contractor shall, in addition to providing the information required by FAR 52.232-32, submit information for all payment requests using the following format: (printed page 19689) (2) Incurred cost is determined by the Contractor's accounting books and records, to which the Contractor shall provide access upon request of the Contracting Officer. An acceptable accounting system in accordance with DFARS 252.242-7006 is not required for reporting of incurred costs under this clause. If the Contractor's accounting system is not capable of tracking costs on a job order basis, the Contractor shall provide a realistic approximation of the allocation of incurred costs attributable to this contract in accordance with the Contractor's accounting system. FAR 52.232-32(m) does not require certification of incurred costs. (d) Security for financing. (1) Title to the property described in paragraph (f) of the clause at FAR 52.232-32, Performance-Based Payments, is the preferred security for receipt of performance-based payments. (2)(i) If the Contractor's accounting system is not capable of identifying and tracking through the build cycle the property that is allocable and properly chargeable to this contract, the Contracting Officer may consider acceptance of one or a combination of the following alternative forms of security sufficient to constitute adequate security for the performance-based payments and so specify in the contract, consistent with FAR 32.202-4: (A) A paramount lien on assets. (B) An irrevocable letter of credit from a federally insured financial institution. (C) A bond from a surety, acceptable in accordance with FAR part 28. (D) A guarantee of repayment from a person or corporation of demonstrated liquid net worth, connected by significant ownership interest to the Contractor. (E) Title to identified Contractor assets of adequate worth.

Keywords : Cell Phone, Computer Forensics, Protocol Filter Over 2.5 billion cell phones are estimated in use in the world today and the number continues to grow. Digital evidence recovered from a cell phone can provide a wealth of information about the user, and technical advances in device capabilities generally offer opportunity for recovery of a broader range of information. Numerous forensic tools abound for automatic data recovery from cell phones. While the outlook should be positive, a number of factors have coalesced to impede progress in cell phone forensics. A

key issue is the delay between the availability of a cell phone to the public and support for the phone by a forensic tool. Forensic cell phone tools often recover data employing the same protocols used by phone managers. To avoid the problem of altering data on a phone, forensic tools restrict the protocol used to communicate with the device to only functions that are either known to be safe or involve very minor forensic issues. A potential way to gain the same advantage for phone managers is to apply a filter between the phone manager application and the device being managed that blocks harmful protocol commands from propagating. Filtering is an often used technique in computer forensics, commonly implemented in hardware or software write blockers for disk and USB device interfaces.

At the highest level of abstraction, the nation has pursued for the past several years a two-prong strategy for dealing with cybersecurity issues, namely, the continual development of cyber-protection technology and techniques, paired with the sharing of information about those capabilities, about new threats and vulnerabilities, and about data breaches (where required by law). Based on the Task Force's examination to date, these strategies will remain important. The dynamic nature of the cyber risk environment demands continuous innovation in cyber-protection capability. Ongoing improvements in education and other forms of awareness-raising are also necessary, given the fact that a significant proportion of Internet economy participants do not take adequate advantage of readily available cyber-protection tools. In response to the President's Cyberspace Policy Review, the U.S. Government is stepping up its investment in education and awareness-raising. For example, NIST has assumed overall coordination responsibility for a new National Initiative for (printed page 44220) Cybersecurity Education (NICE). [18] NICE has four tracks, each delegated to particular federal agencies. The tracks include: (1) National Cybersecurity Awareness led by the DHS; (2) K-12 and university-level Cybersecurity Education led by the Department of Education and the White House's Office of Science and Technology Policy; (3) the creation of a Federal Cybersecurity Workforce Structure led by the Office of Personnel Management; and (4) the creation of a Cybersecurity Workforce Training effort led by the DOD, DHS, and the Office of the Director of National Intelligence. The Department also recognizes that across the private sector, there are many initiatives-some nationally led, others locally led, some including public-private partnerships-aimed at improving cybersecurity awareness among businesses, consumers, and students. We seek comment on the efficacy of existing educational efforts, as well as the steps that might be taken to improve them. Are there data that demonstrate that certain educational programs qualify as best practices? What have those who are delivering cybersecurity education learned from their experiences? Which educational plans are succeeding or failing, and have providers of such educational efforts attempted to measure return-on-investment? What additional role, if any, should the government play in cybersecurity education and awareness efforts? What programs, beyond continuing education for IT professionals, workplace training for users, or curriculum development for K-12 or post-secondary institutions, should be developed? Does the private sector require government assistance in developing the kinds of materials and programs that would be useful in this area? Who should be the target audiences?

Periodic Reevaluation of the Program The Director of Operations shall reevaluate and modify the Program from time to time as deemed appropriate. The Director of Operations shall base such reevaluation and modification on the following: 1. Upon notification of a cybersecurity event, the Director of Operations must determine if the Incident Response Plan should be activated based on available information from event. 2. The Director of Operations must inform all personnel listed in Section 3.5.7 of this document when the response plan has been activated. 3. Impact to the manufacturing system must be determined by thorough investigation, and an incident type and severity level assigned. The Incident Report Template form should be used for this purpose. The severity level will be assigned by the Director of Operations in consultation with the IT Manager. 4. Approval must be received from the CEO and General Counsel if additional resources (i.e., external entities) are to be contacted to assist with incident response (e.g., forensic investigators, IT consultants, cybersecurity consultants, law enforcement, etc.). 5. The Director of Operations or IT Manager must coordinate the Incident Response Plan with stakeholders. 6. User awareness, training, and testing procedures must be reviewed after every incident and updated as necessary. 7. The General Counsel should be involved throughout the incident response due to the potential for legal action arising from the incident.

The management of configurations has traditionally been viewed as an IT management best practice. 7 Using SecCM to gain greater control over and ensure the integrity of IT resources facilitates asset

management, improves incident response, help desk, disaster recovery and problem solving, aids in software development and release management, enables greater automation of processes, and supports compliance with policies and preparation for audits. - Ability to pull information from a variety of sources (different type of components, different operating systems, different platforms, etc.); - Use of standardized specifications such as Extensible Markup Language (XML) and SCAP; - Integration with other products such as help desk, inventory management, and incident response solutions; - Vendor-provided support (patches, updated vulnerability signatures, etc.); - Compliance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidelines and link vulnerabilities to NIST [SP 800-53] controls; - Standardized reporting capability (e.g. SCAP, XML) including the ability to tailor output and drill down; and - Data consolidation into Security Information and Event Management (SIEM) tools and dashboard products. As changes are made to baseline configurations, the new baseline becomes the current version, and the previous baseline is no longer valid but is retained for historical purposes. If there are issues with a production release, retention of previous versions allows for a rollback or restoration to a previous secure and functional version of the baseline configuration. Additionally, archiving previous baseline configurations is useful for incident response and traceability support during formal audits. 23

Currently, payment instructions are being entered manually into DoD's payment systems due to a lack of clarity in the DFARS regarding payment instructions. This rule clarifies the payment instruction language in the DFARS. The clarifications in this rule will reduce data errors and inoperability problems throughout DoD's business processes created by manual entry of payment instructions in the payment systems, as well as reducing the cost of data entry. V. Executive Orders 12866 and 13563 Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. VI. Congressional Review Act As required by the Congressional Review Act (5 U.S.C. 801-808) before an interim or final rule takes effect, DoD will submit a copy of the interim or final rule with the form, Submission of Federal Rules under the Congressional Review Act, to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States. A major rule under the Congressional Review Act cannot take effect until 60 days after it is published in the Federal Register. The Office of Information and Regulatory Affairs has determined that this rule is not a major rule as defined by 5 U.S.C. 804. VII. Regulatory Flexibility Act A final regulatory flexibility analysis (FRFA) has been prepared consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, et seq. The FRFA is summarized as follows: (printed page 33833) The purpose of this rule is to provide clarifications on payment instructions for certain contracts based on the type of item acquired and the type of payment. DoD has found that the payment instructions often are not inserted when required and that payment instructions, if inserted, are often not appropriate for the contracts in question. An analysis of the issue showed that the appropriate accounting treatment for payments can be derived from the type of item acquired and the type of payment. In addition, the analysis highlighted the need to establish procedures for structuring progress payment requests for contracts with multiple production lots. The clarifications in this rule will promote consistency with generally accepted accounting principles and reduce data errors created by manual entry of payment instructions in the payment systems. No public comments were received in response to the initial regulatory flexibility analysis.

(C) Therefore, portions of this system of records may be exempt pursuant to 5 U.S.C. 552a(k)(2) and (k) (5) from the following subsections of 5 U.S.C. 552a(c)(3), (d), (e)(4)(G), (H), and (I), and (f). (ii) Authority. 5 U.S.C. 552a(k)(2) and (k)(5). (iii) Reasons. To protect the identity of sources to which proper promises of confidentiality have been made during investigations. Without these promises, sources will often be unwilling to provide information essential in adjudicating access in a fair and impartial manner. (13) System identifier and name. F071 AF OSI B, Security and Related Investigative Records. (i) Exemption. Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5), but only to the extent that such

material would reveal the identity of a confidential source. Therefore, portions of this system of records may be exempt pursuant to 5 U.S.C. 552a(k) (5) from the following subsections of 5 U.S.C. 552a(c)(3) , (d), (e)(4)(G), (H), and (I), and (f). (ii) Authority. 5 U.S.C. 552a(k)(5) . (iii) Reasons. To protect the identity of those who give information in confidence for personnel security and related investigations. Fear of harassment could cause sources to refuse to give this information in the frank and open way needed to pinpoint those areas in an investigation that should be expanded to resolve charges of questionable conduct. (14) System identifier and name. F031 497IG B, Special Security Case Files. (i) Exemption. Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. Therefore, portions of this system of records may be exempt pursuant to 5 U.S.C. 552a(k) (5) from the following subsections of 5 U.S.C. 552a(c)(3) , (d), (e)(4)(G), (H), and (I), and (f). (ii) Authority. 5 U.S.C. 552a(k)(5) . (iii) Reasons. To protect the identity of those who give information in confidence for personnel security and related investigations. Fear of harassment could cause sources to refuse to give this information in the frank and open way needed to pinpoint those areas in an investigation that should be expanded to resolve charges of questionable conduct. (15) System identifier and name. F031 AF SP N, Special Security Files. (i) Exemption. Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5)

As a result of the proposed changes in this NPRM, the enhanced security posture of regulated entities would likely reduce the number of breaches of ePHI and mitigate the effects of breaches that nonetheless occur. The Department has partially quantified these effects and presents them in a break-even analysis. The break-even analysis estimates that if the proposed changes in the NPRM reduce the number of individuals affected by breaches by 7 to 16 percent, the revised Security Rule would pay for itself. Alternatively, the same cost savings may be achieved by lowering the cost per affected individual's ePHI by 7 percent (\$35) to 16 percent (\$82), respectively. The changes to the Security Rule would likely result in important benefits and some costs that the Department is unable to fully quantify at this time. As explained further below, unquantified benefits include reductions in reputational, financial, and legal harm from breaches of individuals' ePHI, reductions in disruptions to health care delivery, increased confidence among parties to health care business transactions, and improved quality of health care. Table 2·Potential Non-Quantified Benefits

Benefits a Would benefit individuals by shielding them from unwanted disclosure of their ePHI and resulting reputational, financial, and legal harms from ePHI misuse. Would reduce reputational damage to regulated entities resulting from breaches. Would increase confidence among parties to health care business transactions that ePHI is protected to a higher degree than previously. Would reduce risk of breaches of ePHI by health plan sponsors. Would help to prevent health care cost increases to recoup financial losses from responding to breaches. Would help guard against potential data loss. Would help minimize potential disruption of service for individuals served by any of the affected entities. a Some of the items in this list represent differing perspectives on the same effect. In such cases, if more thorough quantification became feasible, we would take steps to avoid double-counting when summing the quantitative estimates. (printed page 994)

, a law that permits unsworn statements to be made under penalty of perjury as a substitute for notarization. To assist with the identification and location of requested records, when requested in the access procedures of the applicable SORN, the requester may also, at his or her option, include his or her DoD Identification Number (DoD ID Number) or Social Security Number (SSN). Providing a DoD ID Number or SSN should be appropriate for the type of record being sought. (d) When making a request for access to records as the parent or guardian for an individual who is a minor or for an individual who is determined by a court to be incompetent, the parent/guardian must establish: (1) The identity of the individual who is the subject of the record; (2) The parent/guardian's own identity; (3) That the requester is the parent or guardian of that individual, which may be proven by providing a copy of the individual's birth certificate showing parentage or a court order establishing the guardianship; and (4) That the parent or guardian is acting on behalf of the individual in making the request. (e) Members of the Military Services and married persons are not considered minors, regardless of age. (printed page 14732) §·310.4 Access exemptions. DoD may deny an individual access to certain information about the individual that resides in a DoD

Component's system of records when an exemption from the Privacy Act is claimed for the system of records and codified in the Code of Federal Regulations as described in § 310.12. When an exemption pursuant to subsection (j) or (k) of the Privacy Act exists, it will be listed in the SORN for the particular system in which the individual's information is located. Records compiled in reasonable anticipation of a civil action or proceeding may be withheld pursuant to subsection (d)(5) of the Privacy Act. § 310.5 Responses to requests for access to records. (a) Upon receipt of a request, a component will send an acknowledgment letter to the requester within 10 days (excluding Saturdays, Sundays, and legal public holidays) which shall confirm the requester's agreement to pay duplication fees, if any, and provide an assigned case file number for reference purposes. (b) In some cases, the DoD Component initially receiving the request may refer the request to another DoD Component or agency. The DoD Component that initially received the request will send the requester a notice of referral that will identify each DoD Component or agency to which the request has been referred, as well as which part of the request has been referred. (c) Access to protected health information, including medical records, is governed by the Privacy Act and DoD 6025.18-R, DoD Health Information Privacy Regulation (available at <http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodm/602518r.pdf>).

(A) From subsection (c)(3) and (d) when access to accounting disclosures and access to or amendment of records would cause the identity of a confidential source to be revealed. Disclosure of the source's identity not only will result in the Department breaching the promise of confidentiality made to the source but it will impair the Department's future ability to compile investigatory material for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, Federal contracts, or access to classified information. Unless sources can be assured that a promise of confidentiality will be honored, they will be less likely to provide information considered essential to the Department in making the required determinations. (B) From (e)(1) because in the collection of information for investigatory purposes, it is not always possible to determine the relevance and necessity of particular information in the early stages of the investigation. In some cases, it is only after the information is evaluated in light of other information that its relevance and necessity becomes clear. Such information permits more informed decision-making by the Department when making required suitability, eligibility, and qualification determinations. (3) System identifier and name. GNSA 03, Correspondence, Cases, Complaints, Visitors, Requests. (i) Exemption. (A) Investigatory material compiled for law enforcement purposes, other than material within the scope of subsection 5 U.S.C. 552a(j)(2) , may be exempt pursuant to 5 U.S.C. 552a(k)(2) . However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled (printed page 14792) by Federal law or for which he would otherwise be eligible, as a result of the maintenance of the information, the individual will be provided access to the information exempt to the extent that disclosure would reveal the identity of a confidential source. Note 1 to paragraph (c)(3)(i)(A). When claimed, this exemption allows limited protection of investigative reports maintained in a system of records used in personnel or administrative actions. (B) Records maintained solely for statistical research or program evaluation purposes and which are not used to make decisions on the rights, benefits, or entitlement of an individual except for census records which may be disclosed under 13 U.S.C. 8 , may be exempt pursuant to 5 U.S.C. 552a(k)(4) . (C) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. (D) All portions of this system of records which fall within the scope of 5 U.S.C. 552a(k)(2) , (k)(4), and (k)(5) may be exempt from the provisions of 5 U.S.C. 552a(c)(3)

AC.L2-3.1.4 · Separation of Duties CMMC Assessment Guide · Level 2 | Version 2.13 23 FURTHER DISCUSSION No one person should be in charge of an entire critical task from beginning to end . Documenting and dividing elements of important duties and tasks between employees reduces intentional or unintentional execution of malicious activities. Example 1 You are responsible for the management of several key systems within your organization including some that process CUI . You assign the task of reviewing the system logs to two different people. This way, no one person is solely responsible for the execution of this critical security function [c]. Example 2 You are a system administrator. Human Resources notifies you of a new hire, and you create an account with general privileges, but you are not allowed to grant access to systems that contain CUI [a,b]. The program manager contacts the team in your organization that has system administration authority

over the CUI systems and informs them which CUI the new hire will need to access. Subsequently, a second system administrator grants access privileges to the new hire [c]. Potential Assessment Considerations · Does system documentation identify the system functions or processes that require separation of duties (e.g., function combinations that represent a conflict of interest or an over-allocation of security privilege for one individual) [a]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.1.4

CMMC addresses the Department's scaling challenges by utilizing a private-sector accreditation structure. A DoD-authorized Accreditation Body will authorize, accredit, and provide oversight of C3PAOs which in turn will conduct CMMC Level 2 Certification Assessments of actual and prospective DoD contractors and subcontractors. Defense contractors will directly contract with an authorized or accredited C3PAO to obtain a CMMC Certification Assessment. The cost of CMMC Level 2 activities is driven by multiple factors, including market forces that govern availability of C3PAOs and the size and complexity of the enterprise or enclave under assessment. The Government will perform CMMC Level 3 Certification Assessments. Government resource limitations may affect schedule availability. Reduces Duplicate or Respective Assessments of Our Industry Partners CMMC assessment results will be posted in SPRS, DoD's authoritative source for supplier and product performance information. Posting CMMC assessment results in SPRS precludes the need to validate CMMC implementation on a contract-by-contract basis. This enables DoD to identify whether the CMMC requirements have been met for relevant contractor information systems, avoids duplicative assessments, and eliminates the need for program level assessments, all of which decreases costs to both DoD and industry. CMMC 2.0-Implementation The DoD is implementing a phased implementation for CMMC 2.0 and intends to introduce CMMC requirements in solicitations over a three-year period to provide appropriate ramp-up time. This phased implementation is intended to minimize the financial impacts to defense contractors, especially small businesses, and disruption to the existing DoD supply chain. After CMMC is implemented in acquisition regulation, DoD will include CMMC self-assessment requirements in solicitations when warranted by the type of information that will be handled by the contractor of subcontractor(s). CMMC requirements for Levels 1, 2, and 3 will be included in solicitations issued after the phase-in period when warranted by any FCI and/or CUI information protection requirements for the contract effort. In the intervening period, Government Program Managers will have discretion to include CMMC requirements or exclude them and rely upon existing DFARS Clause 252.204-7012 requirements, in accordance with DoD policy. As stated in 32 CFR 170.20(a), there is qualified standards acceptance between DCMA DIBCAC High Assessment and CMMC Level 2, which will result in staggering of the dates for new CMMC Level 2 assessments. The implementation period will consist of four (4) phases as set forth in 32 CFR 170.3(e), during which time the Government will include CMMC requirements in certain solicitations and contracts. During the CMMC phase-in period, program managers and requiring activities will be required to include CMMC requirements in certain solicitations and contracts and will have discretion to include in others.

In addition to FirstNet, the Department of Commerce is home to a joint program run by NTIA and the National Institute of Standards and Technology (NIST) called the Public Safety Communications Research (PSCR) program. PSCR performs research, development, testing, and evaluation to foster nationwide public safety communications interoperability on behalf of their sponsors at the Department of Homeland Security (DHS) Office of Interoperability and Compatibility (OIC)/ Office of Emergency Communication (OEC) and FirstNet. Working with public safety organizations (e.g., APCO and the National Public Safety Telecommunications Council (NPSTC)), PSCR draws on public safety communications requirements provided by public safety practitioners to ground their efforts in the needs of the public safety community. In 2013, PSCR began cyber security research efforts related to public safety communications including public safety mobile application security. The public safety mobile application security effort focuses on improving the mobile application development process, specifically the mobile application testing tools, by understanding and collecting the security requirements relevant to the public safety community. - · Public safety related requirements - · Test protocols to characterize whether and to what extent an app meets the requirements - · Testing of apps and listing test results on a registry - · Public safety profiles

(ii) A contractor employee may be furnished a security container to temporarily store classified material at a USG agency overseas location. The decision to permit a contractor to temporarily store classified information must be approved in writing by the senior security official for the USG host organization. (iii) A contractor employee may be permitted to temporarily remove classified information from an overseas USG-controlled facility when necessary for the performance of a GCA

contract or pursuant to an approved export authorization. (A) The responsible USG security official at the facility will verify that the contractor has an export authorization or other written USG approval to have the material, verify the need for the material to be removed from the facility, and brief the employee on handling procedures. (1) In such cases, the contractor employee will sign a receipt for the classified material. (2) Arrangements will also be made with the USG custodian for the return and storage of the classified material during non-duty hours. (B) The security office at the USG facility will report violations of this policy to the applicable CSA.

(iv) A contractor employee will not store classified information at overseas divisions or subsidiaries of U.S. entities incorporated or located in a foreign country. (A) The divisions or subsidiaries may possess classified information that has been transferred to the applicable foreign government through government-to-government channels pursuant to an approved export authorization or other written USG authorization. (B) Access to this classified information at such locations by a U.S. contractor employee assigned abroad by the parent facility on a visit authorization in support of a foreign government contract or subcontract, is governed by the laws and regulations of the country in which the division or subsidiary is registered or incorporated. The division or subsidiary that has obtained the information from the foreign government will provide the access.

(v) U.S. contractor employees assigned to foreign government or foreign contractor locations under a direct commercial sales arrangement will be subject to the host-nation's industrial security policies. (3) Transmission of classified material to employees abroad. The transmission of classified material to a cleared contractor employee located outside the United States will be through USG channels. (i) If the material is to be used for other than USG purposes, an export authorization is required and a copy of the authorization, validated by the DGR, will accompany the material. The material will be addressed to a U.S. military organization or other USG organization (e.g., an embassy). (ii) USG organization abroad will be responsible for custody and control of the material. (4) Security briefings.

wledge base; - Provision of outreach for small- and mediumsized businesses (SMBs), including guidance provided by the Applied Cybersecurity Division (ACD) in NIST Interagency Report (NISTIR) 7621 Rev. 1, Small Business Information Security: The Fundamentals ; - Coordinating with critical infrastructure owners and operators, regulators, and other industry organizations through a variety of meetings and industry events to ensure the understanding and use of the Framework; - Analyzing various industry work products (such as mapping documents) for Framework correctness; - Consulting with state and local governments, and the governments of other nations regarding their alignment with both the principles and the cybersecurity outcomes of

Workshop participants agreed that more education can help consumers understand why updates/patches are important to maintaining the cybersecurity of a device, and the relationship among security, safety, and privacy. Consumers value privacy; however, workshop respondents agreed that they lack awareness around how their privacy is impacted when an IoT device is deployed in their homes. Moreover, workshop participants agreed that consumers can better understand the issues around privacy and how it affects them more than they can cybersecurity. Jean Camp said, 'Consumers are willing to pay more for security/privacy, but they need information about security/privacy to make informed decisions.' Consumers are also more concerned with infringements on their privacy, but do not feel empowered or know what actions to take to protect themselves. Julie Haney put it simply: 'People don't trust manufacturers to respect their privacy.' All combined, these factors give consumers a sense of discomfort around home IoT devices. Takeaway 7: Consumer education about home IoT cybersecurity should be an ongoing, shared responsibility among stakeholders.

The SDNS architecture, and its associated specifications, were developed as a cooperative project between government and industry. The project was sponsored by the National Security Agency, and supported by the National Institute of Standards and Technology (formerly the National Bureau of Standards) and the Defense Communications Agency. Twelve leading U.S. companies in computers and telecommunications made significant contributions of their technical talents and development resources. The combined efforts of these organizations produced the basis for improved security technology, interoperable security standards, and costeffective security for computers and telecommunications. | ISO 8473 | 01 March 1986 Final Text of DIS 8473, Protocol for Providing the Connectionless-mode Network Service | |-----|-----

Information Processing Systems - Open Systems Interconnection - Security Architecture || ISO 8348/DAD 1 | Information Processing Systems - Data 07 Aug. 1985 Communications - Network Service Definition - Addendum 1 || ISO 8348/DAD2 | Information Processing Systems - Data 29 Feb.

Commenters suggested several actions the Department could take to mitigate capacity-related risks, including: extending the phase-in of Level 2 certification requirements; prioritizing companies for Level 2 phase-in; allowing C3PAOs to issue interim or conditional certifications when unable to timely complete contractor assessments; and waiving requirements for OSCs that are in the assessment process but not yet certified. Some asked that DoD forecast the volume and timing of Level 3 certification requirements and clearly communicate those assessment requirements with contractors. Another requested forecasts of both Level 2 and Level 3 assessment capacity against various demand scenarios for each certification level. Several commenters suggested that CMMC assessment requirements for External Service Providers (ESPs) will also impede CMMC implementation, as ESPs (1) must be CMMC certified before an OSC can include them in their CMMC certification assessment scope and (2) will be competing with DIB companies for scarce C3PAO assessors. Commenters suggested ways to reduce burden on ESPs, which included: allowing use of non-compliant ESPs until Phase 3 and prioritizing certification assessments for ESPs ahead of other assessments. Several commenters expressed concern about CCA and CCP roles, based on perceived scarcity of candidates in the job market compared with demand for similar services. Concerns included the potential for CCA and CCP burnout from overwork, dissatisfaction with repetitive assessments tasks, limited career path in the roles, and the complexity of operating within the CMMC ecosystem. One commenter compared CCA and CCP roles with those of Certified Public Accountants and Certified Information System Auditors, who have access to more varied opportunities and industries. Response: DoD received numerous comments about the use of ESPs which do not process, store, or transmit CUI. In response, the DoD revised the rule to reduce the assessment burden for ESPs. ESP assessment, certification, and authorization requirements in 32 CFR 170.19(c)(2) and (d)(2) have been updated. ESPs that are not CSPs and do NOT process, store, or transmit CUI, do not require CMMC assessment or certification. Services provided by an ESP are in the OSA's assessment scope. The phased implementation plan described in § 170.3(e) is intended to address ramp-up issues, provide time to train the necessary number of assessors, and allow companies time to understand and implement CMMC requirements. The DoD has updated the rule to add an additional six months to the Phase 1 timeline. Phase 2 will start one calendar year after the start of Phase 1. It is beyond the scope of this rule for DoD to determine the order in which organizations are assessed.

3.3.2 | Implementation Considerations... 3.3.2. 3.3.2, and recommendations regarding cryptographic module validation are described in Section 3.

. Compensating controls are implemented in the place of MFA to protect ePHI. [786] The Department does not propose to require that compensating controls be technical controls. Rather, a regulated entity should consider the nature of the exception, operating environment, and other appropriate circumstances to determine what controls are reasonable and appropriate and implement compensating controls effective for those circumstances. For example, if a software program does not support MFA, deploying a firewall or increasing the sensitivity of an existing firewall protecting that software may in some circumstances constitute a reasonable and appropriate compensating control. [787] In some instances, physical safeguards may serve as reasonable and appropriate compensating controls. For example, limiting access to certain components of a relevant electronic information system to workforce members who meet certain requirements may be a reasonable and appropriate compensating control under some circumstances. In most cases, it would be reasonable and appropriate for a regulated entity to implement multiple compensating controls to ensure that the affected electronic information system is secured. The Department proposes at proposed 45 CFR 164.312(f)(2)(iv)(B) (1) that, to comply with an exception at paragraph (f)(2)(iii)(A) or (B) or (f)(2)(iii)(C)(1) or (2), the regulated entity would be required to secure the relevant electronic information system with reasonable and appropriate compensating controls that have been reviewed, approved, and signed by the regulated entity's Security Official. Because exceptions are a departure from the designed Security Rule framework, the Department intends to ensure appropriate review by the Security Official of controls selected by the regulated entity to compensate for the absence of MFA. Merely because a regulated entity's Security Official has reviewed, approved, and signed off on compensating controls does not mean that those controls are effective. The regulated entity would also be required to give due consideration to the circumstances surrounding the

exception and implement compensating controls effective for those specific circumstances. With respect to the exception at proposed 45 CFR 164.312(f)(2)(iii)(C) (3), the Department proposes at proposed 45 CFR 164.312(f)(2)(iv)(B) (2

(Response) FDA agrees with these comments in part. In this final rule, FDA is requiring that records be made available as soon as possible, but not more than 24 hours from the time of receipt of an official request. FDA does not agree with the comments' suggestion that more time be made available if a request for records is made outside of the working week. FDA notes that it would only access the records if FDA has a reasonable belief that an article of food is adulterated and presents a threat of serious adverse health consequences or death to humans or animals. Under these circumstances, it is critical for FDA to move as quickly as possible to trace backwards to identify the source of any such adulteration and trace forward from that source to remove all similarly adulterated food from commerce to protect the public health. FDA notes that although the rule sets an outer limit of 24 hours to provide records, it requires that records be provided as soon as possible. (Comment 144) Several comments urge FDA to reconsider its proposed definition of work hours (8 a.m. to 6 p.m.). The comments state that in most ports of entry, the hours of operation of the trade community are established to mirror the hours of the commercial operations of CBP. If FDA requests records outside of those hours of operation, FDA could encounter difficulty in contacting the appropriate parties from whom to request records. Comments suggest that FDA use the phrase during times in which a firm is operating or during a firm's normal business hours. (Response) FDA is no longer defining work hours, and has modified its proposed records availability requirement to as soon as possible, not to exceed 24 hours from the time of receipt of the official request. (Comment 145) Some comments state that the agency has not considered difficulties of compliance in the real world where there are different time zones within the United States and foreign countries. According to these comments, mandating an unattainable compliance time may cause great confusion globally and may actually impede the information gathering process. Comments urge FDA to allow for records to be provided to FDA within a timeframe not to exceed 24 hours or other timeframe appropriate to the scope of records being sought. Others suggest 24 hours for domestic and 36 hours for foreign facilities. (Response) FDA agrees in part with these comments. FDA has deleted the 4-hour and 8-hour requirements. The final rule requires all records to be made available as soon as possible, not to exceed 24 hours from the time of receipt of the official request. With respect to the comments suggestion that foreign facilities be given 36 hours, FDA notes that foreign persons (except for foreign persons who transport food in the United States) are not subject to these final recordkeeping regulations.

From the NIST SP 800-172 Rev 3 Final Public Draft: Appendix B provides definitions for the terminology used in SP 800-172r1. The definitions are consistent with the definitions contained in the National Information Assurance Glossary [16] unless otherwise noted. advanced persistent threat An adversary that possesses sophisticated levels of expertise and significant resources which allow it to create opportunities to achieve its objectives by using multiple attack vectors, including cyber, physical, and deception. These objectives typically include establishing and extending footholds within the IT infrastructure of the targeted organizations for purposes of exfiltrating information; undermining or impeding critical aspects of a mission, program, or organization; or positioning itself to carry out these objectives in the future.

implementation. DCMA DIBCAC will score the OSC using the scoring methodology provided in § 170.24. All objectives must be met in order for a security requirement to be considered fully implemented; in some cases, if not all objectives are met, some security requirements may be placed on a POA&M as defined in § 170.21. If the minimum score has been achieved and some security requirements are in a POA&M, the OSC has a Conditional Certification Assessment; if the minimum score has been achieved and no security requirements are in a POA&M, the OSC has a Final Certification Assessment. For Conditional Certification Assessments, a POA&M close-out must be conducted within 180 days as described in § 170.21(b). After both Conditional Certification Assessment and Final Certification Assessment, DCMA DIBCAC will input the OSC's results into the CMMC instantiation of eMASS as described in § 170.18(a)(1)(i). After both Conditional Certification Assessment and Final Certification Assessment, the OSC must submit an affirmation as described in § 170.22. In order to be eligible for a contract with a CMMC Level 3 Certification Assessment requirement, the OSC must have a CMMC Level 3 Conditional Certification Assessment or CMMC Level 3 Final Certification Assessment and have submitted an affirmation. The CMMC Level 3 Certification Assessment must be completed tri-annually and the affirmation must be completed annually. Section 170.19-CMMC Scoping

Section 170.19 addresses the requirements for the scoping of each CMMC Level assessment. Scoping determines which assets are included in a given assessment and the degree to which each is assessed. The CMMC Assessment Scope is specified prior to any CMMC assessment, based on the CMMC Level being assessed. The Level 2 CMMC Assessment Scope may also be affected by any intent to achieve a CMMC Level 3 Certification Assessment, as detailed in § 170.19(e). Scoping for CMMC Level 1, as detailed in § 170.19(b), consists of all assets that process, store, or transmit FCI. These assets are fully assessed against the applicable CMMC security requirements identified in § 170.14(c)(2) and following the procedures in § 170.15(c). All other assets are out of scope and are not considered in the assessment.

GIDEP alerts are only used if they are Government-generated (Agency Action Notice) with a Commercial and Government Entity (CAGE) code reported explicitly for Suspected Counterfeit or Failure Experience. SPRS does not search GIDEP narratives or text. It only searches for data indicating that the item has been identified as suspected counterfeit or has been determined to be a material failure. Comment: One respondent commented that Mechanization of Contract Administration Services (MOCAS) is not specifically intended to measure on-time delivery performance and will require substantial investment by industry and DoD buying commands to maintain its accuracy and reliability. Response: SPRS only uses MOCAS records that provide a specific contractor's Commercial and Government Entity (CAGE) code, product service code (PSC), and a required delivery date on a contract line item that can be matched to an actual delivery date. This constrained usage mitigates the concerns the respondent identified. Comment: One respondent commented that the SPRS system itself may not be able to handle the (printed page 17337) administrative and logistical challenges that will arise under its expanded use. Response: DoD does not expect any issues with increased user traffic as a result of this rule. SPRS has recently experienced a rapid increase in user activity without any system impacts. Publication of this rule will not adversely impact operation of the system or the program office. C. Other Changes The following are amplifying changes to the rule that are not based on public comments, but were made to add clarity: The term 'overall risk assessments' at DFARS 204.7602 and 204.7603 was changed to 'risk assessments' throughout the final rule to use language consistent with the SPRS website. Some instances of the terms 'evaluated' and 'evaluation' were replaced with the term 'considered' and 'shall consider' to clarify that risk assessments are not a mandatory, stand-alone, evaluation factor for source selections and that the contracting officer shall 'consider' the risk assessments, if available, as part of broader evaluation factors during evaluation of quotations or offers and when determining contractor responsibility. DFARS 204.7603, Procedures, was updated to clarify the scope of SPRS risk assessments required to be considered when procuring supplies and services and the scope of SPRS risk assessments required to be considered when procuring an end product (see FAR 2.101) identified by an available material identifier (see Procedures, Guidance, and Information (PGI) 204.7603). The contracting officer shall consider price risk and supplier risk, if available, as part of the award decision. For the procurement of an end product identified by an available material identifier, the contracting officer shall also consider item risk. DFARS 204.7603, Procedures, was updated to clarify that contracting officers shall use their discretion in considering the information available in SPRS.

(ii) When placing an order with a schedule contractor for an end product identified by a material identifier that is available as described at PGI 204.7603, and item risk was not previously considered during award of the schedule contract, the contracting officer shall also consider SPRS assessments of item risk in the award decision. (iii) Use the provision at 252.204-7024, Notice on the Use of the Supplier Performance Risk System, as prescribed in 204.7604 to the extent permitted by the Federal Supply Schedule. PART 209-CONTRACTOR QUALIFICATIONS 4. Amend section 209.105-1 by revising paragraph (2) to read as follows: 209.105-1 Obtaining information. * * * * * (2) A satisfactory performance record is a factor in determining contractor responsibility (see FAR 9.104-1(c)). (i) One source of information relating to contractor performance is the Contractor Performance Assessment Reporting System (CPARS), available at <https://www.cpars.gov/>. (ii) Information relating to contract terminations for cause and for default is also available through the Federal Awardee Performance and Integrity Information System (FAPIIS) module of CPARS, available at <https://sam.gov> (see FAR subpart 42.15). This termination information is just one consideration in determining contractor responsibility. (iii) Contracting officers shall consider the supplier risk assessment available in the Supplier Performance Risk System at <https://piee.eb.mil/> when determining responsibility. See 204.7603(c). PART 212-ACQUISITION OF COMMERCIAL PRODUCTS AND COMMERCIAL SERVICES 5. Amend section 212.203 by adding paragraph (3) to read as follows: 212.203

Procedures for solicitation, evaluation, and award. * * * * * (3) See 204.7603 for procedures on the required use of Supplier Performance Risk System risk assessments as part of the award decision. 6. Amend section 212.301 by: a. Adding paragraph (f)(ii)(O); b. Removing paragraph (f)(v); and c. Redesignating paragraphs (f)(vi) through (xx) as paragraphs (f)(v) through (xix). The addition reads as follows: 212.301 Solicitation provisions and contract clauses for the acquisition of commercial products and commercial services. * * * * * (f) * * * (ii) * * * (O) Use the provision at 252.204-7024, Notice on the Use of the Supplier Performance Risk System, as prescribed in 204.7604. * * * * * PART 213-SIMPLIFIED ACQUISITION PROCEDURES 7. Revise section 213.106-2 to read as follows: 213.106-2 Evaluation of quotations or offers. (b)(i) See 204.7603 for procedures on the requirement for contracting officers to consider Supplier Performance Risk System risk assessments as a basis of award. 8. Revise section 213.106-2-70 to read as follows: 213.106-2-70 Solicitation provision. Use the provision at 252.204-7024, Notice on the Use of the Supplier Performance Risk System, as prescribed in 204.7604. PART 215-CONTRACTING BY NEGOTIATION 9. Amend section 215.304 by adding paragraph (c)(viii) to read as follows: 215.304 Evaluation factors and significant subfactors. (c) * * *

It also aligns with the Department's enhanced CPG for Centralized Incident Planning and Preparedness by requiring a regulated entity to maintain, revise, and test security incident response plans. [603] Additionally, the Department proposes to redesignate the implementation specification for response and reporting at 45 CFR 164.308(a)(6)(ii) as 45 CFR 164.308(a)(12)(ii)(B) and to rename it ·Response·. We also propose to modify the existing implementation specification by separating it into two paragraphs: one at paragraph (a)(12)(ii)(B)(1) for identifying and responding to suspected or known security incidents, and the other at paragraph (a)(12)(ii)(B)(2) for mitigating, to the extent practicable, the harmful effects of suspected or known security incidents. The Department also proposes to add three additional paragraphs to this implementation specification. Proposed 45 CFR 164.308(a)(12)(ii)(B) (3) would require a regulated entity to identify and remediate, to the extent practicable, the root cause(s) of suspected or known security incidents, while proposed 45 CFR 164.308(a)(12)(ii)(B) (4) would require the regulated entity to eradicate the security incidents that are suspected or known to the regulated entity. We would expect eradication to include the removal of malicious software, inappropriate materials, and any other components of the incident from the regulated entity's relevant electronic information systems. [604] Finally, proposed 45 CFR 164.308(a)(12)(ii)(B) (5) would require a regulated entity to develop and maintain documentation of investigations, analyses, mitigation, and remediation for security incidents that are suspected or known. For example, verbal reports of a suspected or known security incident would be required to be documented in writing. Under proposed 45 CFR 164.316(b)(1) , if finalized, a regulated entity would be required to maintain such documentation for six years from the date of its creation or the date when it last was in effect, whichever is later. These proposals are consistent with existing guidance described above and with other proposals or existing regulatory standards to secure health information. [605] o. Section 164.308(a)(13)(i)·Standard: Contingency Plan The purpose of any contingency plan is to allow an organization to return to its daily operations as quickly as possible after an unforeseen event. [606]

CUI (Controlled Unclassified Information) and FCI (Federal Contract Information) are distinct categories with different protection requirements: **FCI** (Federal Contract Information): - Information not intended for public release, provided by or generated for the Government under a contract - Requires CMMC Level 1 (15 basic safeguarding requirements from FAR 52.204-21) - Lower protection threshold - Does NOT include information provided to the public or simple transactional information **CUI** (Controlled Unclassified Information): - Information requiring safeguarding or dissemination controls per law, regulation, or Government-wide policy - Requires CMMC Level 2 (110 NIST SP 800-171 requirements) or Level 3 (NIST SP 800-172 enhanced) - Higher protection threshold - Includes 125 categories across 20 groupings (ISOO CUI Registry) Key distinction: All CUI is also FCI, but not all FCI is CUI. The type of information determines the CMMC level required. Contracts specify which type of information the contractor will handle.

IA.L2-3.5.1 · Identification [CUI Data] CMMC Assessment Guide · Level 2 | Version 2.13 113 identification may be defined by type, by device, or by a combination of type/device. NIST SP 800-63-3 provides guidance on digital identities. FURTHER DISCUSSION Make sure to assign individual, unique identifiers (e.g., user names) to all users and processes that access company systems . Authorized devices also should have unique identifiers. Unique identifiers can be as

simple as a short set of alphanumeric characters (e.g., SW001 could refer to a network switch, SW002 could refer to a different network switch). This requirement, IA.L2-3.5.1, provides a vetted and trusted identity that supports the access control mechanism required by AC.L2-3.1.1. Example You want to make sure that all employees working on a project can access important information about it. Because this is work for the DoD and may contain CUI, you also need to prevent employees who are not working on that project from being able to access the information. You assign each employee is assigned a unique user ID, which they use to log into the system [a]. Potential Assessment Considerations · Are unique identifiers issued to individual users (e.g., usernames) [a]? · Are the processes and service accounts that an authorized user initiates identified (e.g., scripts, automatic updates, configuration updates, vulnerability scans) [b]? · Are unique device identifiers used for devices that access the system identified [c]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.5.1 · FAR Clause 52.204-21 b.1.v

(A) Compliance with the approved security arrangement, standard rules, and applicable laws and regulations. (B) Problems regarding the practical application or utility of the security arrangement. (C) Security controls, practices, or procedures and whether they warrant adjustment. (ii) Annual Certification. For contractors operating under a VTA, PA, SSA, or SCA, DSS will obtain from the Chair of the GSC an implementation and compliance report one year from the effective date of the agreement and annually thereafter. DSS will review the annual report; address, resolve, or refer issues identified in the report; document the results of this review and any follow-up actions; and keep a copy of the report and documentation of related DSS actions on file for 15 years. The GSC's annual report must include: (A) A detailed description stating how the contractor is carrying out its obligations under the agreement. (B) Changes to security procedures, implemented or proposed, and the reasons for those changes. (C) A detailed description of any acts of noncompliance with FOCI provisions and a discussion of steps taken to prevent such acts from recurring. (D) Any changes or impending changes of senior management officials or key board members, including the reasons for the change. (E) Any changes or impending changes in the organizational structure or ownership, including any acquisitions, mergers, or divestitures. (F) Any other issues that could have a bearing on the effectiveness of the applicable agreement. (11) Foreign Government Ownership or Control. (i) In accordance with 10 U.S.C. 2536, the DoD cannot award contracts involving access to proscribed information to a company effectively owned or controlled by a foreign government unless a waiver has been issued by the Secretary of Defense or designee. (ii) A waiver is not required if the company is cleared under a PA or VTA because both agreements effectively negate foreign government control. (iii) DSS will, after consultation with the GCA, determine if a waiver is needed in accordance with subpart 209.104-1 of the Defense Federal Acquisition Regulation Supplement ·Responsible Prospective Contractors, General Standards· (available at http://www.acq.osd.mil/dpap/dars/dfars/pdf/r20090115/209_1.pdf). The GCA will request the waiver from the USD(I) and provide supporting information, to include a copy of the proposed NID. (iv) Upon receipt of an approved waiver, the GCA will forward the waiver and the NID to DSS. (v) If the USD(I) does not grant the waiver, the company may propose to DSS an appropriate PA or VTA. Otherwise, the company is not eligible for access to proscribed information. (12) Changed Conditions. (i) DSS will require contractors to submit timely reports of changes to FOCI by DSS-designated means in accordance with DoD 5220.22-M.

- c. Providing documentation with details describing external authentication IoT platforms, and associated authentication methods, that can be used with the IoT device. 2. Establish communications that provide details about the security capabilities of the IoT device software components. Information that may be necessary to provide describing the technical security capabilities include details and actions such as: - a. Providing details about how the security capabilities of the IoT device software components meet regulatory and other legal and policy requirements. 8 3. Establish communications for the IoT device customers with details for the security capabilities of the hardware components. Information that may be necessary to provide describing the security capabilities of hardware components include details and actions such as: - a. Providing the IoT device customers with details about the security capabilities of the IoT device hardware components. 4. Establish communications providing IoT device management details that can be incorporated within the IoT device customer's system development life cycle. Information that may be necessary to provide about IoT device security management include details and actions such as: - a. Providing the details necessary for customers to 1) manage the IoT device within their system using their organizationally-defined system development life cycle's associated information security considerations, 2) assign individuals with IoT device information security roles and

responsibilities, and 3) integrate the IoT device within the organizational information security risk management process. - b. Providing communications and the detailed instructions for implementing a hierarchy of privilege levels to use with the IoT device and/or necessary associated information systems. - c.

defense-in-depth Information security strategy integrating people, technology, and operations capabilities to establish variable barriers across multiple layers and missions of the organization. NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 d discussion 2895

Accordingly, we do not believe that the proposed rule would pose unique implementation challenges that would justify an extended compliance period (i.e., a period longer than the standard 180 days provided in 45 CFR 160.105). Further, the Department believes that adherence to the standard compliance period is necessary to timely address the circumstances described in this NPRM. Thus, the Department proposes to apply the standard compliance date of 180 days after the effective date of a final rule. [26] To help reduce administrative burdens on regulated entities, the Department proposes to add a provision at 45 CFR 164.318 affording regulated entities a transition period (beyond the 180-day compliance period) to modify business associate contracts (herein referred to as business associate agreements) or other written arrangements [27] that would qualify for the longer transition period, as discussed further below. The Department seeks comment on the proposed compliance period and transition period.

C. Table of Abbreviations/Commonly Used Acronyms in This Document

As used in this preamble, the following terms and abbreviations have the meanings noted below.

Term	Meaning
AI	Artificial Intelligence.
ANSI	American National Standards Institute.
AR	Augmented Reality.
ARRA	American Recovery and Reinvestment Act of 2009.
ASTP/ONC	Assistant Secretary for Technology Policy and Office of the National Coordinator for Health Information Technology.
CISA	Cybersecurity & Infrastructure Security Agency.
CMS	Centers for Medicare & Medicaid Services.
CPG	Cybersecurity Performance Goal.
Department of HHS	Department of Health and Human Services.
EHR	Electronic Health Record.
E.O.	Executive Order.
ePHI	Electronic Protected Health Information.
FDA	Food & Drug Administration.
FISMA	Federal Information Security Modernization Act.
FTC	Federal Trade Commission.
Health IT	Health Information Technology.
(printed page 902)	
HIPAA	Health Insurance Portability and Accountability Act of 1996.
HITECH Act	Health Information Technology for Economic and Clinical Health Act of 2009.
ICR	Information Collection Request.
IIHI	Individually Identifiable Health Information.
IT	Information Technology.
MFA	Multi-factor Authentication.
NAICS	North American Industry Classification System.
NCVHS	National Committee on Vital and Health Statistics.
NIST	National Institute of Standards and Technology.
NPRM	Notice of Proposed Rulemaking.
OCR	Office for Civil Rights.
OMB	Office of Management and Budget.
ONC	Office of the National Coordinator for Health Information Technology.
PHI	Protected Health Information.
PRA	Paperwork Reduction Act of 1995.
PSAO	Pharmacy Services Administration Organizations.
RFA	Regulatory Flexibility Act.
RIA	Regulatory Impact Analysis.
SBA	Small Business Administration.
SRMA	Sector Risk Management Agency.
SSA	Social Security Act of 1935.
UMRA	Unfunded Mandates Reform Act of 1995.
VR	Virtual Reality.
II.	Statutory Authority and Regulatory History
A.	Statutory Authority and History
1.	Health Insurance Portability and Accountability Act of 1996 (HIPAA)

CMMC Level 1 security requirements. The security requirements in CMMC Level 1 are those set forth in 48 CFR 52.204-21(b)(1)(i) through (xv) . (3) CMMC Level 2 security requirements. The security requirements in CMMC Level 2 are identical to the requirements in NIST SP 800-171 R2. (4) CMMC Level 3 security requirements. The security requirements in CMMC Level 3 are selected from NIST SP 800-172 Feb2021, and where applicable, Organization-Defined Parameters (ODPs) are assigned. Table 1 to this paragraph identifies the selected requirements and applicable ODPs that represent the CMMC Level 3 security requirements. ODPs for the NIST SP 800-172 Feb2021 requirements are italicized, where applicable: Table 1 to § 170.14(c) (4) Security requirement No.* CMMC Level 3 security requirements (selected NIST SP 800-172 Feb2021 security requirement with DoD ODPs italicized) (i) AC.L3-3.1.2e Restrict access to systems and system components to only those information resources that are owned, provisioned, or issued by the organization. (ii) AC.L3-3.1.3e Employ secure information transfer solutions to control information flows between security domains on connected systems. (iii) AT.L3-3.2.1e Provide awareness training upon initial hire, following a significant cyber event, and at least annually , focused on recognizing and responding to threats from social engineering, advanced persistent threat actors, breaches, and suspicious behaviors; update the training at least annually or when there are significant changes to the

threat. (iv) AT.L3-3.2.2e Include practical exercises in awareness training for all users, tailored by roles, to include general users, users with specialized roles, and privileged users, that are aligned with current threat scenarios and provide feedback to individuals involved in the training and their supervisors. (v) CM.L3-3.4.1e Establish and maintain an authoritative source and repository to provide a trusted source and accountability for approved and implemented system components. (vi) CM.L3-3.4.2e Employ automated mechanisms to detect misconfigured or unauthorized system components; after detection, remove the components or place the components in a quarantine or remediation network to facilitate patching, re-configuration, or other mitigations. (vii) CM.L3-3.4.3e Employ automated discovery and management tools to maintain an up-to-date, complete, accurate, and readily available inventory of system components. (viii) IA.L3-3.5.1e Identify and authenticate systems and system components, where possible, before establishing a network connection using bidirectional authentication that is cryptographically based and replay resistant. (ix) IA.L3-3.5.3e Employ automated or manual/procedural mechanisms to prohibit system components from connecting to organizational systems unless the components are known, authenticated, in a properly configured state, or in a trust profile. (x) IR.L3-3.6.1e Establish and maintain a security operations center capability that operates

(1) A request received by a DA activity having no records responsive to a request shall be referred to another DOD Component or DA activity, if the other Component or activity confirms that they have the requested records, or verifies that they are the proper custodian for that type of record. The requester will be notified of the referral. In cases where the DA activity receiving the request has reason to believe that the existence or nonexistence of the record may in itself be classified, that activity will consult the Component or activity having cognizance over the records in question before referring the request. If the Component or activity that is consulted determines that the existence or nonexistence of the records is in itself classified, the requester shall be so notified by the DA activity originally receiving the request that it can neither confirm nor deny the existence of the record, and no referral shall take place. (2) A DA activity shall refer a Privacy Act request for a classified record that it holds to another DOD Component, DA activity, or agency outside the Department of Defense, if the record originated in the other DOD Component, DA activity, or outside agency, or if the classification is derivative. The referring DA activity will provide the records and a release recommendation with the referral action. (3) Any DA activity receiving a request that has been misaddressed will refer the request to the proper address and advise the requester. (4) Within DA, referrals will be made directly to offices having custody of the requested records (unless the Denial Authority is the custodian of the requested records). If the office receiving the Privacy Act request does not know where the requested records are located, the office will contact the DA FOIA/P Office, to determine the appropriate office for referral. (5) The requester will be informed of the referral whenever records or a portion of records are, after prior consultation, referred to another activity for a release determination and direct response. Additionally, the DA activity referral letter will accomplish the following: (i) Fully describe the Privacy Act system of records from which the document was retrieved; and (ii) Indicate whether the referring activity claims any exemptions in the Privacy Act system of records notice. (6) Within the DA, an activity will refer a Privacy Act request for records that it holds but was originated by another activity, to the originating activity for direct response. An activity will not, in any case, release or deny such records without prior consultation with the originating activity. The requester will be notified of such referral.

A process to develop a Federal Information Processing Standard (FIPS) for Advanced Encryption Standard (AES) specifying an Advanced Encryption Algorithm (AEA) has been initiated by the National Institute of Standards and Technology (NIST). Earlier this year, candidate algorithms were nominated to NIST for consideration for inclusion in the AES. Those candidate algorithms meeting the minimum acceptability criteria have been announced by NIST and are available electronically at the address listed below. This notice solicits comments on the candidate algorithms from the public, and academic and research communities, manufacturers, voluntary standards organizations, and Federal, state, and local government organizations. These comments will assist NIST in narrowing the field of AES candidates to five or fewer for more detailed examination. It is intended that the AES will specify an unclassified, publicly disclosed encryption algorithm available royalty-free worldwide that is capable of protecting sensitive government information well into the next century.

Additionally, if modifications are adopted as proposed, the Security Rule would remain flexible and scalable by retaining broad standards with which regulated entities could comply in a variety of

ways. In 2003, the 13 implementation specifications that the Security Rule requires were considered so basic that no covered entity could effectively protect ePHI without implementing them. [286] While the Department agrees that these implementation specifications remain essential, we no longer believe that they are sufficient to address the risks to ePHI today. Rather, regulated entities must do more to ensure the confidentiality, integrity, and availability of ePHI today because of the changes in the environment in which health care is provided, how ePHI is maintained, the level of connectivity between information systems, and the technological sophistication of bad actors. We acknowledged in 2003 and again acknowledge here that there is no such thing as a totally secure system that carries no risks to security. [287] We posited at that time that Congress intended to set an exceptionally high goal for the security of [ePHI], while also recognizing that securing ePHI did not require that covered entities do so without regard for the cost. [288] However, we also made clear that a covered entity is required to implement adequate security measures and that cost was but one factor for a covered entity to consider when determining what constituted appropriate security measures. [289] As we noted, Cost is not meant to free covered entities from this responsibility. [290] In the 2013 Omnibus Rule, we further explained that [regulated entities] have the flexibility to choose security measures appropriate for their size, resources, and the nature of the security risks they face, enabling them to reasonably implement any given Security Rule standard. [. . .] Thus, the costs of implementing for [. . .] business associates will be proportional to their size and resources. [291] We continue to believe that this is the case. Additionally, as discussed above, there is a significant cost associated with breaches and unauthorized access financial, reputational (for both the individual and the regulated entity), and more. Thus, we believe that the standards and implementation specifications that we propose in this NPRM are the minimum that regulated entities should be doing to protect the security of ePHI and lower the costs associated with breaches and other incidents.

4. Small and Rural Health Care Providers Must Implement Strong Security Measures To Provide Efficient and Effective Health Care The statute requires that we consider the needs and capabilities of small health care providers and rural health care providers (as such providers are defined by the Secretary). [292]

(Comment 80) One comment notes that CBP's current requirements would apply to a trucking company transporting imported food into the United States and manifest data would be maintained. The comment states that FDA could easily coordinate with CBP to get the data from them in the event a threat to the nation's food supply is discovered, rather than develop its own distinct recordkeeping regulations. (Response) The Bioterrorism Act authorizes the Secretary (and, by delegation, FDA) to require the establishment and maintenance of records to address credible threats of serious adverse health consequences or death to humans or animals. As discussed in response to comment 79, subpart J of this final rule does not require duplication of existing records if those records contain all of the information required by subpart J. Therefore, to the extent information you keep for purposes of complying with CBP satisfies the provisions of subpart J, you do not need to keep duplicate records.

(Comment 81) One comment states that past situations have demonstrated that FDA already has a policy and good track record for finding and refusing adulterated products and products that could pose a problem to the American public. The comment questions how the final rule is going to improve upon existing recordkeeping. (Response) As explained in the proposed rule (68 FR 25188), FDA has been involved in traceback investigations where not all necessary records were established and maintained to enable FDA to conduct a complete tracing investigation. By issuing these regulations, FDA believes that the likelihood of such a situation recurring will be reduced. As discussed in response to comment 93 of this document, for those covered persons already establishing and maintaining records that contain all of the required information in subpart J of this final rule, duplication of those existing records is not necessary. (See response to comment 2 of this document for further discussion on FDA's past experiences with traceback failures.)

(Comment 82) Several comments recommend that, for accuracy and regulatory consistency, the final rule should recognize that compliance with the bill of lading regulations of DOT's FMCSA will constitute compliance with the transporter's obligations under proposed § 1.352. The comments note that bills of lading and freight/expense bills for motor carriers are legal documents and contain sufficient information for the agency to be able to fulfill its Bioterrorism Act responsibilities. The information to be included on the bill of lading and freight/expense bills is prescribed by the United States Department of Treasury at 49 CFR 373.101 and 373.103 .

concerning user privacy and security notices. One method of addressing this requirement is the use of a system-use notification banner that displays the legal requirements of using the system. Users may be required to click to agree to the displayed requirements of using the system each time they log on to the machine. This agreement can be used in the civil and/or criminal prosecution of an attacker that violates the terms. The legal notification should meet all applicable requirements. At a minimum, the notice should inform the user that:

- information system usage may be monitored or recorded, and is subject to audit;
- unauthorized use of the information systems is prohibited;
- unauthorized use is subject to criminal and civil penalties;
- use of the information system affirms consent to monitoring and recording;
- the information system contains CUI with specific requirements imposed by the Department of Defense; and
- use of the information system may be subject to other specified requirements associated with certain types of CUI such as Export Controlled information.

Example You are setting up IT equipment including a database server that will contain CUI. You have worked with legal counsel to draft a notification. It contains both general and specific CUI security and privacy requirements [a]. The system displays the required security and privacy information before anyone logs on to your organization's computers that contain or provide access to CUI [b].

Potential Assessment Considerations

- Are objectives identified for privacy and security notices, and does the implementation satisfy the required objectives [a,b]? Discrepancies may indicate a deficient process and/or an incomplete objective for the overall requirement.
- Are there any special requirements associated with the specific CUI category [a]? · Are appropriate notices displayed in areas where paper-based CUI is stored and processed [b]?

KEY REFERENCES · NIST SP 800-171 Rev. 2 3.1.9

3.3.3 | 3.3.3.3 Interface Specifications To help ensure consistently reliable access to ABAC services, all organizations that participate in information sharing through enterprise ABAC capabilities should fully understand the interface, interaction, and precondition requirements for all types of requests, including attribute and DP requests.

With a goal of developing exploitation and mitigation strategies, the Hardware Common Weakness Enumeration Special Interest Group (HW CWE SIG) has analyzed 108 different hardware weaknesses that originate from hardware design issues [6]. CWE categorizes and maintains hardware and software weaknesses separately, since they and their exploitation and mitigation techniques are fundamentally different. Additionally, the Common Attack Pattern Enumeration and Classification (CAPEC) established by the U.S. Department of Homeland Security [7] categorizes possible existing attack patterns in hardware, software, communications, supply chains, social engineering, and physical security. CAPEC also analyzes the likelihood of such attacks being launched, their potential severity and flow of execution, and the skills that an adversary is likely to need.

- A manufacturer may express a system's cybersecurity state through a Current Profile to report results relative to the Target Profile, or to compare with acquisition requirements. - A critical infrastructure owner/operator, having identified an external partner upon whom that infrastructure depends, may use the Target Profile to convey required cybersecurity outcomes. - A critical infrastructure sector may establish a baseline that can be used among its constituents as a sector-specific starting point from which to build tailored Target Profiles.

Industrial Control Systems (ICS), which include manufacturing systems, represent different types of control systems including supervisory control and data acquisitions (SCADA) systems, distributed control systems (DCS), and other control system configurations such as Programmable Logic Controllers (PLCs) often found in the industrial sectors and critical infrastructures. An ICS consists of combinations of control components (e.g., electrical, mechanical, hydraulic, and pneumatic) that act together to achieve an industrial objective (e.g., manufacturing, transportation of matter or energy). ICS support the large and diverse manufacturing industrial sector and can be categorized as either process-based, discrete-based, or a combination of both [3]. Manufacturing systems support the most critical and, sometimes, most sensitive operations and assets within an organization. The application of cybersecurity controls in these environments demands the greatest level of attention and effort to ensure that appropriate operational security and risk mitigation are achieved. The categorization process is the first step in the NIST Risk Management Framework (RMF) and provides organizations with information to support tailoring cybersecurity control implementation [3]. As defined by NIST Federal Information Processing Standard (FIPS) 199, the categorization process is based on the potential impact (e.g.

From the NIST SP 800-172 Rev 3 Final Public Draft: Data execution prevention safeguards can be

hardware- or software-enforced with hardware enforcement providing the greater strength of NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 mechanism. This requirement is sourced to a control tailored out of the SP 800-53B 2288

A commenter said the electric industry will experience increased costs as electric utilities comb through vast amounts of data across the electric grid to determine all potential CUI, even if that CUI is not specifically subject to a DoD contract. One commenter stated that guidance DoD has provided for electric utilities to identify CUI in the past is insufficient and suggested that use of Security Classifications Guides could help by minimizing the need for CMMC compliance. In addition, they speculated that inclusion of CMMC requirements could create requirements after award which might require adjustments to contract price. Another commenter stated energy companies servicing military customers must develop governance programs around data protection years in advance, with significant investments. The commenter is concerned that CMMC requires these companies to make these large investments prior to knowing if a proposed contract may contain CUI and without adequate guidance about what data is considered CUI. Response: This rule has no disproportionate impact on Native American-owned businesses. Once identified as a requirement, the CMMC Level will apply uniformly to all prospective competitors. DoD must enforce safeguarding requirements uniformly across the Defense Industrial Base for all contractors and subcontractors who process, store, or transmit CUI. The value of information (and impact of its loss) does not diminish when the information moves to DoD contractors and DoD subcontractors, regardless of their status as Native American or small disadvantaged businesses. The CMMC Program rule does not include threatened penalties. If a requirement of a DoD contract is not met, then standard contractual and other remedies applicable to that contract may apply. CMMC Program requirements make no change to existing policies for information security requirements implemented by DoD. Policies for CUI and creation of program documentation, to include Security Classification Guides, are separate from this rule. Section 170.4(b) of the rule states Defense Industrial Base (DIB) is defined in 32 CFR part 236 , which addresses DoD and DIB Cyber Security Activities. Section 236.2 includes the DoD approved definition for DIB. The CMMC Program applies only to DoD contracts that include the DFARS clause 252.204-7021 and under which FCI or CUI is processed, stored, or transmitted on contractor information systems. This includes CUI outside the category of the Defense Organizational Index Group. Contracts for the provision of electricity or other utilities which do not contain FAR clause 52.204-21 or DFARS clause 252.204-7012 and which do not require the processing, storing, or transmitting of FCI or CUI on contractor owned information systems will not require CMMC assessment. The CMMC rule makes no change to FAR cost allowability or cost accounting standards. The 32 CFR part 170

\$135,636,340 572 \$237,126 Option F \$119,792,995 621 \$192,903 (printed page 71645) Option H \$30,610,378 \$30,610,378 1,067 1,067 \$28,688 \$28,688 Option I \$106,138,020 1,072 \$99,009 Final Rule \$132,750,092 \$102,139,714 1,204 137 \$745,545 \$110,258 Adjusted Comprehensive \$244,134,086 \$111,383,994 1,282 78 \$1,428,000 \$190,432 The distribution of the number of illnesses averted due to faster traceback investigations and more successfully completed traceback investigations for each policy option are also reported in the following tables. Of the 800 annual food safety illnesses averted due to improved recordkeeping practices, about 600 can be attributed to more successfully completed tracebacks, and about 200 from faster tracebacks. The sum of averted illnesses from faster tracebacks, plus that from more successfully completed tracebacks may differ from that reported in the table of totals because of rounding in the computations. Table 19. All Averted (Reported and Unreported) Food Safety Illnesses per Year Mean Low High Adjusted Comprehensive 1,282 0 6,400 Option A 245 0 1,079 Option B 572 0 2,660 Option C 316 0 1,452 Option D 355 0 1,612 Option E 359 0 1,750 Option F 621 0 2,846 Final Rule 1,204 0 6,061 Option H 1,067 0 5,372 Option I 1,072 0 5,504 Table 20. Averted Annual Food Safety Illnesses From More Successfully Completed Tracebacks Mean Low High Adjusted Comprehensive 826 0 3,024 Option A 161 0 605 Option B 364 0 1,296 Option C 203 0 778 Option D 232 0 864 Option E 234 0 864 Option F 434 0 1,728 Final Rule 775 0 2,592 Option H 676 0 2,592 Option I 673 0 2,592 The next table shows the food safety benefits as the number of averted illnesses valued by the low, middle, and high cost of illness estimates, and for the \$5 million and \$6.5 million estimates of the value of a statistical life. These are estimated annual food safety

benefits and should be interpreted as minimum benefits from this final rule because food security benefits are not included. Table 22. Value of Averted Food Safety Illnesses for the Final Rule

Low	Medium	High	VSL
1 = \$5 million	\$7,388,685	\$15,905,182	\$24,421,229
VSL = \$6.5 million	\$8,199,494	\$16,715,991	\$25,232,038

1 Value of a statistical life used to value the averted deaths. 2 A value of \$100,000 was used to value a year in good health. 3 A value of \$300,000 was used to value a year in good health. 4 A value of \$500,000 was used to value a year in good health. V. Final Regulatory Flexibility Analysis FDA has examined the economic implications of this final rule as required by the Regulatory Flexibility Act (5 U.S.C. 601-612

By limiting these exceptions to devices that have been updated and/or patched while they were supported by their manufacturer, we believe that this proposal would balance the interest in encouraging regulated entities to dispense with legacy devices with the cost of replacing such devices. Additionally, the Department believes that regulated entities should already have plans to replace legacy devices that cannot be made cybersecure because of their existing Security Rule obligations. We also recognize that at some point, most, if not all, devices will likely become legacy devices and that there may be legitimate reasons not to immediately replace them when the manufacturer ceases to provide support. In such cases, it will continue to be important for regulated entities to plan for how to address their ongoing Security Rule obligations. Finally, we propose an exception, proposed 45 CFR 164.312(b)(3)(iv)(C) , that would be available for a device authorized by the FDA for marketing pursuant to a submission received on or after March 29, 2023, where the device is supported by its manufacturer. We understand that the FDA considers security during the review of medical device marketing submissions, including those for software that is approved as a medical device, and works with device manufacturers to ensure that appropriate cybersecurity protections are built into such devices, pursuant to FDA's authority under the Consolidated Appropriations Act, 2023. [744] Thus, we do not believe it would be necessary or appropriate for the Security Rule to require encryption for an FDA-authorized medical device that has been authorized by the FDA for marketing pursuant to a submission received on or after March 29, 2023 where the device continues to be supported by its manufacturer. Where a proposed exception applies to the proposed encryption requirement, the Department also proposes to require that a regulated entity implement alternative measures and compensating controls. Specifically, we propose at proposed 45 CFR 164.312(b)(4)(i) to require a regulated entity to document the existence of an applicable exception and implement reasonable and appropriate compensating controls. Under the proposal, we would require documentation to occur in real-time, meaning when the criteria for the exception exist and at the time compensating controls are implemented. For example, a regulated entity disclosing ePHI to an individual by unencrypted email in accordance with the right of access would be required to document in accordance with the proposed 45 CFR 164.312(b)(4)(i) that: (1) before the disclosure, the individual has requested to receive ePHI by unencrypted email or unencrypted messaging technology; and (2) before the disclosure, the regulated entity informed the individual of the risks associated with transmission of unencrypted ePHI. The exception would not apply where such individual requests to receive access to their ePHI pursuant to 45 CFR 164.524

From the NIST SP 800-172 Rev 3 Final Public Draft: NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 iv Reviewers are encouraged to comment on all or parts of SP 800-172, Revision 3 fpd. NIST 79 requests that all comments be submitted to 800-17 1comments@list.nist.gov by 11:59 p.m. Eastern Standard Time (EST) on November 14, 2025. Commenters are encouraged to use the comment template provided with the document announcement. Comments received in response to this request will be posted on the Protecting CUI project site after the due date. Submitters' names and affiliations (when provided) will be included, while contact information will be removed NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 v Call for

Promotion sequence number. (11) Awards and decorations. (12) Attendance at professional military schools. (13) Duty status at any given time. (14) Home of record (identification of the state only). (15) Length of military service. (16) Basic Pay Entry Date. (17) Official Photo. (B) All disclosures of personal information regarding military members (printed page 18772) shall be made in accordance with 32 CFR part 286 . (iii) Civilian employees not under the authority of OPM. (A) While it is not possible to identify categorically those items of personal information that must be released regarding civilian employees not subject to 5 CFR parts 293 , 294 , and 297 , such as nonappropriated fund employees, normally the following items may be released without a clearly unwarranted invasion of personal privacy: (1) Full name. (2) Grade or position. (3)

Date of grade. (4) Gross salary. (5) Present and past assignments. (6) Future assignments, if officially established. (7) Office or duty telephone numbers. (B) All releases of personal information regarding civilian personnel in this category shall be made in accordance with 32 CFR part 286. (6) When military or civilian personnel are assigned, detailed, or employed by the National Security Agency, the Defense Intelligence Agency, the National Reconnaissance Office, or the National Geospatial-Intelligence agency, information about such personnel may only be disclosed as authorized by Public Law 86-36 (National Security Agency-Officers and Employees) and 10 U.S.C. 424 (Disclosure of Organizational and Personnel Information: Exemption for Specified Intelligence Agencies). When military and civilian personnel are assigned, detailed or employed by an overseas unit, a sensitive unit, or to a routinely deployable unit, information about such personnel may only be disclosed as authorized by 10 U.S.C. 130b (Personnel in Overseas, Sensitive, or Routinely Deployed Units: Nondisclosure of Personally Identifying Information). (7) Information about military or civilian personnel that otherwise may be disclosable consistent with § 310.22(b)(5) may not be releasable if a requester seeks listings of personnel currently or recently assigned/detailed/employed within a particular component, unit, organization or office with the Department of Defense if the disclosure of such a list would pose a privacy or security threat. (c) Disclosures for established routine uses. (1) Records may be disclosed outside the Department of Defense pursuant to a routine use that has been established for the system of records that contains the records. (2) A routine use shall: (i) Be compatible with the purpose for which the record was collected; (ii) Identify the persons or organizations to whom the record may be released; (iii) Identify specifically the intended uses of the information by the persons or organization; and (iv) Have been published in the Federal Register (see § 310.32(i)).

implement the security requirements listed in § 170.14(c)(4) and table 1 to § 170.14(c)(4) within its Level 3 CMMC Assessment Scope as described in § 170.19(d). Successful implementation requires meeting all objectives defined in NIST SP 800-172A Mar2022 for the corresponding CMMC Level 3 security requirements. Requirements for ESPs and CSPs that process, store, transmit CUI are provided in § 170.18(c)(5) and (6). After implementation, the OSC must contact DCMA DIBCAC to perform an assessment to verify the implementation. DCMA DIBCAC will score the OSC using the scoring methodology provided in § 170.24. All objectives must be met in order for a security requirement to be considered fully implemented; in some cases, if not all objectives are met, some security requirements may be placed on a POA&M as defined in § 170.21. If the minimum score has been achieved and some security requirements are in a POA&M, the OSC has achieved the CMMC Status of Conditional Level 3 (DIBCAC); if all requirements are MET as defined in § 170.24(b), the OSC has achieved the CMMC Status of Final Level 3 (DIBCAC). For Conditional Level 3 (DIBCAC), a POA&M closeout must be conducted within 180 days as described in § 170.21(b) or the Conditional Level 3 (DIBCAC) CMMC Status will expire. After a Level 3 certification assessment, as well as after a POA&M closeout, DCMA DIBCAC will input the OSC's results into the CMMC instantiation of eMASS as described in § 170.18(a)(1)(i). After a Level 3 certification assessment, as well as after a POA&M closeout, the OSC must submit an affirmation as described in § 170.22. In order to be eligible for a contract with a requirement for the CMMC Status of Level 3 (DIBCAC), the OSC must have achieved the CMMC Status of either Conditional Level 3 (DIBCAC) or Final Level 3 (DIBCAC) and have submitted an affirmation. The Level 3 certification assessment must be completed every three years and the affirmation must be completed annually following the Final CMMC Status Date. Section 170.19-CMMC Scoping Section 170.19 addresses the requirements for the scoping of each CMMC Level and determines which assets are included in a given assessment and the degree to which each is assessed. The CMMC Assessment Scope is specified prior to any CMMC assessment, based on the CMMC Level being assessed. The Level 2 CMMC Assessment Scope may also be affected by any intent to achieve a CMMC Level 3 Certification Assessment, as detailed in § 170.19(e). Scoping for CMMC Level 1, as detailed in § 170.19(b), consists of all assets that process, store, or transmit FCI. These assets are fully assessed against the applicable CMMC security requirements identified in § 170.14(c)(2) and following the procedures in § 170.15(c). All other assets are out-of-scope and are not considered in the assessment.

(a) The contracting officer shall insert the clause at 52.204-2, Security Requirements for Classified Information, in solicitations and contracts when the contract may require access to classified information, unless the conditions specified in paragraph (d) of this section apply. (printed page 4292) (b) If a cost contract (see 16.302) for research and development with an educational institution is contemplated, the contracting officer shall use the clause with its Alternate I. (c) If a construction or architect-engineer contract under which employee

identification is required for security reasons is contemplated, the contracting officer shall use the clause with its Alternate II. (d) If the contracting agency is not covered by the NISP and has prescribed a clause and alternates that are substantially the same as those at 52.204-2, the contracting officer shall use the agency-prescribed clause as required by agency procedures. 4.403 Controlled unclassified information (CUI). 4.403-1 Definitions. As used in section 4.403· CUI Basic means the subset of CUI for which the authorizing law, regulation, or Governmentwide policy does not set out specific handling or dissemination controls. CUI Basic must be handled according to the uniform set of controls set forth in 32 CFR part 2002 and the CUI Registry. CUI Categories means those types of information for which laws, regulations, or Governmentwide policies require or permit agencies to exercise safeguarding or dissemination controls, and which has been listed in the CUI Registry. CUI Specified means the subset of CUI for which the authorizing law, regulation, or Governmentwide policy contains specific handling controls that it requires or permits agencies to use and that differ from those for CUI Basic. The CUI Registry indicates which laws, regulations, and Governmentwide policies include such specific requirements. Handling means any use of CUI, including but not limited to collecting, developing, receiving, transmitting, storing, marking, safeguarding, transporting, disseminating, reusing, and disposing of the information. Lawful Government purpose means any activity, mission, function, operation, or endeavor that the Government authorizes or recognizes as within the scope of its legal authorities or the legal authorities of non-executive branch entities such as State and local law enforcement. Limited dissemination control means any control identified on the CUI Registry that agencies may use to limit or specify CUI dissemination. On behalf of an agency means a contractor uses or operates an information system or maintains or collects information for the purpose of processing, storing, or transmitting Federal information, and those activities are not incidental to providing a service or product to the Government. 4.403-2 General. (a) Executive Order 13556

smart phones) in a manner that compromises the integrity of commercial and personal information. Such exploits are often launched through interactive Web sites that end users access online and through the use of external devices (e.g., portable USB drives, digital picture frames). While computer training and consumer education programs can reduce the amount of malware spread through these means by instructing users in safer online practices, there may be other mechanisms or systems that could prove effective in reducing such cyber risks. In Department of Commerce listening sessions, stakeholders identified improved Web site and component security as another area where modest technology investments might generate large improvements in the level of cybersecurity across the Internet. Should the government alone, the private sector, or the government and private sector collaboratively explore whether third-party verification of Web site and component security is or can prove effective in reducing the proliferation of malware? If so, what measures should be considered? What would be the implementation challenges in deploying such measures? 4. Authentication/Identity (ID) Management In our listening sessions, several stakeholders urged the Task Force to promote more widespread uptake of state-of-the-art authentication and ID management systems to reduce the incidents of successful cyber intrusions and attacks. Effective authentication and authorization systems establish a user's right to access resources. Many users currently rely on simple password systems for authentication. More sophisticated systems require multiple factors in the authentication process, for example, something the user knows, plus something that the user possesses (e.g., a physical credential or token). [20] (printed page 44221) The Department seeks comment on the effectiveness of current identity management systems in addressing cybersecurity risks. On June 25, 2010, the White House released the National Strategy for Trusted Identities in Cyberspace for public comment. This strategy promotes a set of options for enhancing on-line security and privacy so that individuals and organizations use trusted, interoperable identity solution as in a manner that promotes confidence, privacy, choice, and innovation to experience efficient and secure access to on line services. [21] Beyond the measures recommended in the National Strategy for Trusted Identities in Cyberspace,

Deploy technical controls to allow access to electronic protected health information only to those users and technology assets that have been granted access rights to the covered entity's or business associate's relevant electronic information systems as specified in §.164.308(a)(10). (viii) Maintenance. Review and test the effectiveness of the procedures and technical controls required by this paragraph (a)(2) at least once every 12 months or in response to environmental or operational changes, whichever is more frequent, and modify as reasonable and appropriate. (b) Standard: Encryption and decryption ·(1) General. Deploy technical controls to encrypt and decrypt electronic protected health information using encryption that meets prevailing cryptographic

standards. (2) Implementation specification. Encrypt all electronic protected health information at rest and in transit, except to the extent that an exception at paragraph (b)(3) of this section applies. (3) Exceptions. This paragraph (b)(3) applies only to the electronic protected health information directly affected by one or more of the following exceptions and only to the extent that the covered entity or business associate documents that an exception applies and that all other applicable conditions are met. (i) The technology asset in use does not support encryption of the electronic protected health information consistent with prevailing cryptographic standards, and the covered entity or business associate establishes and implements a written plan to migrate electronic protected health information to a technology asset that supports encryption consistent with prevailing cryptographic standards within a reasonable and appropriate period of time. (ii) An individual requests pursuant to § 164.524 to receive their electronic protected health information in an unencrypted manner and has been informed of the risks associated with the transmission, receipt, and storage of unencrypted electronic protected health information. This exception does not apply where such individual will receive their electronic protected health information pursuant to § 164.524 and the technology used by the individual to receive the electronic protected health information is controlled by the covered entity or its business associate. (iii) During an emergency or other occurrence that adversely affects the covered entity's or business associate's relevant electronic information systems in which encryption is infeasible, and the covered entity or business associate implements reasonable and appropriate compensating controls in accordance with and determined by the covered entity's or business associate's contingency plan under § 164.308(a)(13). (iv) The technology asset in use is a device under section 201(h) of the Food, Drug, and Cosmetic Act, 21 U.S.C. 321(h) that has been authorized for marketing by the Food and Drug Administration, as follows:

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Defense Department of the Army [Docket No. USA-2006-0011] 32 CFR Part 505 RIN 0702-AA53 AGENCY: Department of the Army, DoD. ACTION: Proposed rule; request for comments. SUMMARY: The Department of the Army is proposing to update policies and responsibilities for the Army Privacy Program, which implements the Privacy Act of 1974, by showing organizational realignments and by revising referenced statutory and regulatory authority, such as the Health Insurance Portability and Accountability Act and E-Government Act of 2002. DATES: Consideration will be given to all comments received by June 26, 2006. ADDRESSES: You may submit comments, identified by 32 CFR part 505 , Docket No. USA-2006-0011 and or RIN 0702-AA53, by any of the following methods: Federal eRulemaking Portal: <http://www.regulations.gov> . Follow the instructions for submitting comments. Mail: Federal Docket Management System Office, 1160 Defense Pentagon, Washington, DC 20301-1160. Instructions: All submissions received must include the agency name and docket number or Regulatory Information Number (RIN) for this Federal Register document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information. FOR FURTHER INFORMATION CONTACT: Ms. Janice Thornton at (703) 428-6503. SUPPLEMENTARY INFORMATION: A. Background The Department of the Army's objective in revising 32 CFR part 505 is to reinforce Privacy Act policy objectives to include (1) restricting disclosure of personally identifiable records maintained; (2) to grant individuals rights of access to agency records maintained on themselves; (3) to grant individuals the right to seek amendment of agency records maintained on themselves upon a showing that the records are not accurate, relevant, timely, or complete; and (4) to establish practices ensuring the Army is complying with statutory norms for collection, maintenance, and dissemination of records. B. Executive Order 12866 (Regulatory Planning and Review)

MA.L2-3.7.1 · Perform Maintenance CMMC Assessment Guide · Level 2 | Version 2.13 144 Maintenance (MA) MA.L2-3.7.1 · PERFORM MAINTENANCE Perform maintenance on organizational systems. ASSESSMENT OBJECTIVES [NIST SP 800-171A]126 Determine if: [a] system maintenance is performed. POTENTIAL ASSESSMENT METHODS AND OBJECTS [NIST SP 800-171A]126 Examine [SELECT FROM: System maintenance policy; procedures addressing controlled system maintenance; maintenance records; manufacturer or vendor maintenance specifications; equipment sanitization records; media sanitization records;

system security plan; other relevant documents or records]. Interview [SELECT FROM: Personnel with system maintenance responsibilities; personnel with information security responsibilities; personnel responsible for media sanitization; system or network administrators]. Test [SELECT FROM: Organizational processes for scheduling, performing, documenting, reviewing, approving, and monitoring maintenance and repairs for systems; organizational processes for sanitizing system components; mechanisms supporting or implementing controlled maintenance; mechanisms implementing sanitization of system components]. DISCUSSION [NIST SP 800-171 REV. 2]

From the NIST SP 800-172 Rev 3 Final Public Draft: Recovery and reconstitution operations reflect mission and business priorities; recovery point, NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 recovery time, and reconstitution objectives; and organizational metrics consistent 1360

According to security_rule_2003: Use your Visa or Master Card number and expiration date. Credit card orders can also be placed by calling the order desk at (202) 512-1800 or by faxing to (202) 5122250. The cost for each copy is \$10. As an alternative, you can view and photocopy the Federal Register document at most libraries designated as Federal Depository Libraries and at VerDate Jan<31>2003 many other public and academic libraries throughout the country that receive the Federal Register. This Federal Register document is also available from the Federal Register online database through GPO access, a service of the U.S. Government Printing Office. The Web site address is <http://www.access.gpo.gov/nara/index.html>. ## I. Background The Department of Health and Human Services (HHS) Medicare Program, other Federal agencies operating health plans or providing health care, State Medicaid agencies, private health plans, health care providers, and health care clearinghouses must assure their customers (for example, patients, insured individuals, providers, and health plans) that the integrity, confidentiality, and availability of electronic protected health information they collect, maintain, use, or transmit is protected. The confidentiality of health information is threatened not only by

AC.L2-3.1.13 · Remote Access Confidentiality CMMC Assessment Guide · Level 2 | Version 2.13 44
This requirement, AC.L2-3.1.13, requires the use of cryptographic mechanisms when enabling remote sessions and complements five other requirements dealing with remote access (AC.L2-3.1.12, AC.L2-3.1.14, AC.L2-3.1.15, IA.L2-3.5.3, and MA.L2-3.7.5): · AC.L2-3.1.12 requires the control of remote access sessions. · AC.L2-3.1.14 limits remote access to specific access control points. · AC.L2-3.1.15 requires authorization for privileged commands executed during a remote session. · IA.L2-3.5.3 requires multifactor authentication for network access to non-privileged accounts. · Finally, MA.L2-3.7.5 requires the addition of multifactor authentication for remote maintenance sessions. Example You are responsible for implementing a remote network access capability for users who access CUI remotely. In order to provide session confidentiality, you decide to implement a VPN mechanism and select a product that has completed FIPS 140 validation [a,b]. Potential Assessment Considerations · Are cryptographic mechanisms used for remote access sessions (e.g., Transport Layer Security (TLS) and Internet Protocol Security (IPSec) using FIPS -validated encryption algorithms) defined and implemented [a ,b]? Note that simply using an approved algorithm is not sufficient · the module (software and/or hardware) used to implement the algorithm must be separately validated under FIPS 140. KEY REFERENCES · NIST SP 800-171 Rev. 2 3.1.13

) or as authorized by the Contracting Officer. Additional controls other than NIST SP 800-171 Revision 2 may be specified in the contract's requirements document, in accordance with 32 CFR 2002.14(h)(2) , to address unique requirements to protect CUI Basic at higher than the moderate confidentiality level; (B) Comply with all additional security requirements for CUI Specified identified by the agency in the SF XXX; (C) Implement additional information security requirements the Contractor reasonably determines necessary to provide adequate security in a dynamic environment; (D) Comply with any requirements from NIST SP 800-172, Enhanced Security Requirements for Protecting Controlled Unclassified Information, identified by the agency. For any requirements in NIST SP 800-172 identified by the agency, the organizational defined parameters (ODP) provided in Attachment 1 of SF XXX shall be applied for applicable security requirements; (E) Ensure that, if the Contractor uses a cloud service provider to store, process, or transmit any CUI identified in SF XXX· (1) The cloud service provider meets security requirements established by the Government for the FedRAMP Moderate baseline (<https://www.fedramp.gov/documents/>); and (2) The additional requirements in paragraphs (d)(5)(ii)(B) and (C), and (g) of this clause are met; and (F) Submit the system security plan, and any associated plans of action required by NIST SP 800-171,

Revision 2, for any planned implementations or mitigations to the Government upon request to demonstrate the Contractor's implementation or planned implementation of the security requirements.

(e) Compliance. (1) The Contracting Officer may require the submission of supporting documentation to verify compliance with the contract's security requirements, or may require access to Contractor facilities or systems, as listed in SF XXX. (2) For applicable non-Federal information systems, the agency may conduct validation actions in accordance with NIST SP 800-171A, Assessing Security Requirements for Controlled Unclassified Information and, if applicable, NIST SP 800-172A, (printed page 4299) Assessing Enhanced Security Requirements for Controlled Unclassified Information. (f) Training. (1) General CUI training. All Contractor employees who will handle CUI shall complete general CUI training before doing so, and periodically complete refresher training thereafter, as described in the training sections at Section II of Part B and Section III of Part C of the SF XXX. The Contractor shall maintain documentation of employee training and shall provide it to the Contracting Officer upon request. (2) Additional training. Additional agency-specific training.

The Defense Counterintelligence and Security Agency (DCSA), as the DoD designated NISP cognizant security office, has collected information about baseline costs using an OMB-approved information collection process employing statistical methods for contractors' NISP implementation (OMB Control Number 0704-0458, Industry Cost Collection Report Survey). The most recent data collected by DCSA on contractors' NISP implementation costs are for fiscal year (FY) 2017 and reported in the ISOO 2017 annual report to the President. DCSA has used this survey collection methodology for contractors' NISP implementation under DoD security cognizance for over 11 years. A NISP government and industry working group developed the survey in 1995 and predecessor office to the OUSD(I&S) initially ran the annual survey. The Information Security Oversight Office (ISOO) placed a moratorium on conducting this survey after 2017 until a new NISP survey methodology is developed. DCSA began the costs analysis for the baseline costs for fiscal year 2017 by randomly selecting active NISP contractor facilities that have existing DoD approval for classified storage at their own physical locations and having those facilities submit security costs. The randomly selected contractor facilities also have an active facility security clearance and a permanent Commercial and Government Entity (CAGE) Code. In addition to the randomly selected cleared facilities having approved classified storage, DCSA categorizes these contractor facilities for the survey based on the size, scope, and complexity of each contractor's security program. The general methodology used to estimate security costs incurred by contractor cleared facilities with approved storage of classified information is based on the costs incurred by respondent contractors for the protection of classified information. The methodology captures the most significant portion of industry's costs, which is labor. Security labor in the survey is defined as personnel whose positions exist to support operations and staff in the implementation of government security requirements for the protection of classified information. Guards who are required as supplemental controls are included in security labor. The respondent contractors are requested to compile their cleared facility's current annual security labor cost in burdened, current year dollars with the most recent data being from the 2017 survey. The labor cost, when identified as an estimated percent of each contractor's total security costs, enables the respondent contractors to calculate their total security costs. Information collected is compiled to create an aggregate estimated cost of NISP classification-related activities. Only the aggregate data is reported. There is a 95% confidence that the full enterprise industrial security total baseline cost does not exceed \$1.486 billion for fiscal year 2017. NISP cost estimates (2017) Benefits of NISP rule

Three commenters viewed CMMC's intent to store CMMC related data in an existing DoD system, SPRS, as an indication that SPRS would replace other DoD risk tracking systems or the risk monitoring responsibilities of other agencies. One commenter asked whether other Services would have their own systems, as the SPRS Program Office is within the Navy. Another comment stated CMMC and SPRS should not be tasked with the responsibility of addressing Supply Chain Risk Management (SCRM). One comment asked if the DoD intended to make CMMC Level 2 and 3 certification information available to other agencies, which could reduce the cost burden of compliance with assessment/certification programs adopted by other agencies. One comment asked how PII would be protected in SPRS. Another comment asked for SPRS to be redesigned to list assessment results for each security requirement instead of the aggregate level. One comment asked for a CMMC-specific process for entering data into SPRS to make it easier for small businesses and another comment asked for vendor visibility into a potential sub-contractor's SPRS score. Several comments asked about the CAGE code requirement and noted a perception that businesses outside the U.S are unable to obtain a CAGE or become a member of PIEE

and therefore unable to access SPRS. One comment asked whether each contract would require a new SPRS entry. One comment asked if OSCs that already have an eMASS account would be able to access the CMMC instantiation of eMASS and one comment questioned the cost/benefit of entering pre-assessment data into eMASS. Another comment asked for clarification on the roles and responsibilities of DoD Program Managers regarding the data uploaded into eMASS. One commenter suggested that eMASS be modified to permit tracking of self-assessment, in addition to certification assessments. Response: SPRS is used to provide CMMC Status, score results, and affirmation status to contracting officers and program managers as part of the contract award process. It does not supersede other DoD program office risk register systems. SPRS will be used for reporting CMMC Status of all contractors, regardless of which service issued the contract. Although the SPRS program is managed by the Department of the Navy, its use spans across the Department. There is no role for other agencies associated with this CMMC rule, which applies only to DoD contractors that process, store, or transmit FCI or CUI. The CMMC PMO has no current agreements with other Federal agencies to share CMMC assessment results. There is nothing that prevents an OSA from sharing their CMMC Status with other entities.

Compliance with NIST Guidelines 28 19,600,000 12,000,000 Annual Assessments 27 6,600,000 6,600,000 Continuous Monitoring Strategy 28 408,000 N/A Develop and Maintain OT List 28 204,000 102,000 Binding Operational Directives and Emergency Directives 28 3,640,000 840,000 FEDRamp Compliance 53 46,000,000 32,000,000 Totals 76,635,700 51,543,000 C. Government Compliance Requirements The total estimated annualized costs to the Government associated with this FAR rule over a ten-year period are approximately \$136,000 (calculated at a 7-percent discount rate). The following specific compliance requirements related to FAR clause 52.239-XX and 52.239-YY are tasks for the Government: 1. Review and Analyze Annual Assessments The Government must review and analyze each of the 54 assessments provided by contractors annually (see 39.X03(c)) and provide a recommendation to the contractor to implement, or a rationale for not implementing, each recommendation in the contractor's assessments. It is estimated that a General Schedule (GS) 15/step 5 employee will spend 20 hours reviewing, analyzing, and drafting recommendation responses for each assessment. The wage rate of a GS 15/step 5 employee is \$74.35 per hour, according to the Office of Personnel Management (OPM) 2023 GS Locality Pay Table for the rest of the United States (https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/salary-tables/pdf/2023/RUS_.h.pdf). A factor of 36.25 percent, based on OMB M-08-13, Update to Civilian Position Full Fringe Benefit Cost Factor, is applied to the average wage rate to account for total employee benefits paid for by the Government ($\$74.35 * 1.3625 = \101.30), and a factor of 12 percent is then applied to the rate of \$101.30 to account for overhead, which results in a loaded rate of \$113.46 ($\$101.30 * 1.12$). Based on the discussion above, the total annual estimated cost for the Government to review, analyze, and (printed page 68411) respond to 54 annual assessment submissions each year is approximately \$122,537 (54 responses * 20 hours * \$113.46). 2. Review List of Operational Technology Equipment Upon submission, the Government must review approximately six lists of OT equipment submitted by contractors each year (see 39.X03(k)). It is estimated that a GS 15/step 5 employee will spend 20 hours reviewing, analyzing, and processing a contractor's submission. Using an average loaded wage rate of \$113.46 for GS Schedule 15/step 5 employees, the total annual estimated cost for the Government to review, analyze, and file six OT equipment list submissions each year is approximately \$13,615 (6 responses * 20 hours * \$113.46). 3. Review Continuous Monitoring Strategy

mation: A Supplement to NIST Special Publication 800-171 (SP 800-172) offers additional recommendations for handling CUI in situations where that information runs a higher than usual risk of exposure. The enhanced security requirements protect the confidentiality, integrity, and availability of CUI from APTs by promoting penetration-resistant architectures, damage-limiting operations, and designs to help achieve cyber resiliency and survivability. NIST also issued Assessing Enhanced Security Requirements for CUI (draft SP 800-172A) to assist organizations with planning and conducting efficient, effective, and cost-effective assessments of the enhanced security requirements in SP 800-172.

From the NIST SP 800-172 Rev 3 Final Public Draft: NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 INTENDED EFFECT IMPACT ON RISK EXPECTED RESULTS Expunge Remove resources that are known to be or are suspected of being unsafe, incorrect, or corrupted. Reduce the likelihood of impact of subsequent events in the same threat scenario. · A malfunctioning, misbehaving, or suspect resource is restored to normal operation.

· The adversary loses a capability for some period as adversary- directed threat mechanisms (e.g., malicious code) are removed. · Adversary-controlled resources are so badly damaged that they cannot perform any function or be restored to a usable condition without being entirely rebuilt.
Example: The defender uses virtualization to refresh critical

CIS Safeguard 3.11 · Encrypt Sensitive Data At Rest Encrypt sensitive data at rest on servers, applications, and databases containing sensitive data. Storage-layer encryption, also known as server-side encryption, meets the minimum requirement of this Safeguard. Additional encryption methods may include application-layer encryption, also known as client-side encryption, where access to the data storage device(s) does not permit access to the plain-text data. Implementation Groups: 2,3 Asset Type: data Security Function: protect Parent Control: Data Protection

, is limited to a small number of U.S. cleared legal entities in the NISP for which the ultimate parent entity and any intermediate parent entities of such subsidiary are located in a country that is part of the NTIB; and that is subject to the FOCI requirements of the NISP. There are currently 20 U.S. cleared legal entities with their associated cleared divisions, subsidiaries or branch (estimated to be another 100 cleared entities) to whom Section 842 of Public Law 115-232 applies. Section 881 of Public Law 114-328 expanded the legal definition of the NTIB to include the United Kingdom and Australia. The NTIB is comprised of the United States, the United Kingdom of Great Britain and Northern Ireland, Canada and Australia. NTIB is based on the principle that defense trade between the United States and its closest allies enables a host of benefits, including increased access to innovation, economies of scale, and interoperability (10 U.S.C. 2500). Section 842 of Public Law 115-232 is deregulatory by statute and this rule. There are no estimated costs to the small number of entities impacted because they are required already to submit any new or change to FOCI information for their initial and continued FCL, respectively, via the SF 328, Certificate Pertaining to Foreign Interests in the NISP as do all other U.S. cleared legal entities. 32 CFR part 2004 provides a CSA up to 30 days to assess the submitted NID and then another 30 days for a controlling agency to make a NID for the type of proscribed information under the purview of each (ODNI for SCI, DOE for RD or NSA for COMSEC). Thus, with Section 842 of Public Law 115-232 , there has been minimum 60 day delay for a NID involving an NTIB covered entity which has impacted the timeliness of contract performance. There are estimated costs savings as this small number of cleared entities and their entity cleared employees designated to work on specific classified contracts involving proscribed information will no longer have to wait at least 60 days for NIDs after contract award for access to proscribed information when all other requirements have been met for access to classified information and contract performance. Using the published Office of Personnel Management GS salary schedule for FY20, the labor rate for an FSO and an estimated 8 cleared employees in each of the 2 small business entities impacted is the equivalent of a GS11 step 5 with a time savings of 320 hours for each year 1 through 20. The labor rate for an FSO and an estimated 19 cleared employees in each of the 18 large business entities impacted is the equivalent of a GS13 step 5 with a time savings of 320 hours for each year 1 through 20. These assumptions imply cost savings of \$11.81 million in each year. C. USG Cost Analysis of the Changes to the Baseline From This Rule 1. Projected USG Cost/Cost Savings.

DFARS 252.204-7008 (Compliance with Safeguarding CDI Controls) Requires offerors to represent that they will implement NIST SP 800-171 security requirements. Contractors should review the full text of DFARS 252.204-7008 in conjunction with their contracting officer and legal counsel to ensure full compliance. The clause should be read alongside the CMMC requirements at 32 CFR Part 170.

The Congressional Review Act, 5 U.S.C. 801 et seq., as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. We will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States. A major rule cannot take effect until 60 days after it is published in the Federal Register . This final rule is a ·major rule· as defined by 5 U.S.C. 804(2) because it is also economically significant under section 3(f) of E.O. 12866 with an annual effect on the economy of \$100 million or more. Sec. 202, Public Law 104-4 , ·Unfunded Mandates Reform Act· Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1532) requires agencies to assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for

inflation. This final rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs. Public Law 96-511, Paperwork Reduction Act (44 U.S.C. Chapter 35) It has been determined that 32 CFR part 117 does impose reporting or recordkeeping requirements under the Paperwork Reduction Act of 1995. DoD is not proposing changes to the DoD collections based on this final rule, nor have any of the other NISP CSAs indicated proposed changes based on this rule. The DOE and NRC have collections based on their respective authorities as a NISP CSA; but neither has a collection for a Contract Security Classification Specification because DOE and NRC each complete that specification for both prime contracts and subcontracts. By accepting the contract, the contractor obligates itself to fulfill the requirements specified in applicable DOE Acquisition Regulation (DEAR) clauses (available at <https://www.energy.gov/management/downloads/searchable-electronic-department-energy-acquisition-regulation>) and identified DOE Directives. The DOE Directives contain a contractor requirements document that conveys security obligations and the statutes for civil penalties for security violations. The Nuclear Regulatory Commission Acquisition Regulation part 2052.204-70 includes the security requirements levied on the contractor (available at https://www.acquisition.gov/nrcar/nrcar-part-2052-solicitation-provisions-and-contract-clauses#P41_1774). For ease of review of this rule, the collections are discussed below. Materials associated with all of the collections can reviewed at www.reginfo.gov . OMB Control Number 0704-0194, DD Form 441, DoD Security Agreement. OMB Control Number: 0704-0571, National Industrial Security System,

(Response) FDA agrees with the comments in part. Persons who manufacture, process, pack, transport, distribute, receive, hold, or import food are subject to §§ 1.361 and 1.363 of this final rule (records access for existing records) with respect to its packaging (the outer packaging of food that bears the label and does not contact the food). All other persons who manufacture, process, pack, transport, distribute, receive, hold, or import packaging are excluded from all of the requirements of subpart J of this final rule. In addition, persons who place food directly in contact with its finished container are subject to all of the requirements of subpart J as to the finished container that directly contacts that food. All other persons who manufacture, process, pack, transport, distribute, receive, hold, or import the finished container that directly contacts the food are excluded from the requirements of subpart J as to the finished container, except §§ 1.361 and 1.363 of this final rule. For example, a manufacturer and transporter of candy bar wrappers are not required to establish and maintain records as to the wrappers because they do not place food (candy bars) directly in contact with its finished container (wrappers). A manufacturer of candy bars, who places the candy bars in the wrappers, is required to keep records as to the sources of the wrappers and the recipients of the candy bars as a whole (not the candy bar and wrapper separately). Once the candy bar is placed in the wrapper, all persons who manufacture, process, pack, transport, distribute, receive, hold, or import the wrapped candy bar are required to keep records of the wrapped candy bar, but not to keep separate records with respect to the wrapper. FDA notes that the food in contact with the finished container refers to articles used by people in the ordinary way that most people use food primarily for taste, aroma, or nutritive value and not all substances defined as food by section 201(f) of the FD&C Act. The requirements for packaging and food contact substances are reflected in the following table. Table B. Packaging and Food Contact Substances

SUBSTANCE	ACTIVITY	COVERAGE
Packaging (Defined as the outer packaging of food that bears the label and does not contact the food. Packaging does not include food contact substances (§ 1.328).	Manufacture, process, pack, transport, distribute, receive, hold, or import	Excluded from all provisions of the rule unless person also engages in covered activity with respect to food, in which case subject to §§ 1.361 and 1.363 (record access) (See § 1.327(i))
Food contact substance, other than the finished container that directly contacts food	Manufacture, process, pack, transport, distribute, receive, hold, or import	Excluded from all provisions of the rule, except §§ 1.361 and 1.363 (record access) (See § 1.327(j))
Finished container that contacts food	Place food directly in contact with its finished container	

Audit and Evaluation of Computer Security II: System Vulnerabilities and Controls ## Audit and Evaluation of Computer Security II: System Vulnerabilities and Controls NATIOIVAX. The National Bureau of Standards, with the support of the U.S. General Accounting Office, sponsored a second invitational workshop on computer security audit, entitled "Audit and Evaluation of Computer Security II: System Vulnerabilities and Controls," In Miami Beach, Florida, on November 28-30, 1978. A cross-section of highly qualified people In the computer science and EDP audit fields was assembled to develop material that would be directly usable for a Federal Information Processing

Standard (FTPS) Guideline on the subject. In order to cover the material in a systematic fashion, the workshop was partitioned into three management sessions and five technical sessions. The management sessions addressed Managerial and Organizational Vulnerabilities and Controls at the Staff Level (1 session) and the Line Level (2 sessions). The technical sessions addressed vulnerabilities and controls in the areas of Terminal and Remote Peripherals, Communication Components, Operating Systems, Applications and Non- Integrated Data Files, and Data Base/ Data Base Management Systems. These Proceedings are the reports developed by the eight sessions of the workshop.

The report specifically noted that the audit results were consistent with the findings of OCR's compliance reviews and complaint investigations. [244] Recent enforcement actions provide evidence that the results of the 2016-2017 audits were not isolated cases. In 2023, OCR entered into seven resolution agreements with regulated entities after investigations indicated that they had potentially violated the Security Rule, constituting almost half of the total resolution agreements OCR entered into that year. [245] In each case, OCR's investigation found evidence of multiple potential violations. For example, in one case, a regulated entity did not detect an intrusion into its network until 20 months later when its files were encrypted with ransomware. [246] OCR's investigation found evidence of potential failures of the regulated entity to conduct a risk analysis or to sufficiently monitor information system activity. OCR also found evidence that the regulated entity may not have had policies and procedures in place to implement the requirements of the Security Rule to protect the confidentiality, integrity, and availability of ePHI. [247] As another example, an OCR investigation of a large health care system found indications of multiple potential violations of the Security Rule, including failures by the regulated entity to conduct a risk analysis, monitor and safeguard its electronic information systems, and implement policies and procedures to record and examine activity in its electronic information systems containing ePHI. [248] The regulated entity was not only unable to prevent the cyberattack, but it was unaware the attack had occurred until two years later. This is despite the long-standing requirements of the Security Rule and the obligations imposed on regulated entities for risk analysis and risk management. Despite the long-standing nature of the Security Rule and the proliferation of guidance documents from NIST, the Department, CISA, FTC, and others, regulated entities continue to fail to implement reasonable and appropriate security measures as required by the Security Rule. [249] For example, the Security Rule and NIST guidance have addressed encryption for data in transit and at rest for many years. [250] And yet, in the 2021 survey of health care cybersecurity professionals, only half of the respondents reported having implemented encryption for data in transit across the enterprise. [251] Similarly, according to its CEO, a large covered entity failed to deploy multi-factor authentication (MFA) throughout its enterprise and experienced a significant breach. [252] If this is accurate, it would run counter to long-standing provisions in both the Security Rule and NIST guidance; the Security Rule has required the implementation of appropriate access controls since 2003 and NIST recommends similar controls. [253]

(Response) To the extent that a purchase order contains all required identifiers of food received or released, the purchase orders may be used to satisfy the requirement. To the extent that a purchase order only contains some of the required information, those records will need to be supplemented to satisfy all the requirements contained in §§ 1.337 and 1.345 of this final rule. FDA notes that the final rule only requires that persons who manufacture, process, or pack food maintain lot or code number or other identifier of the food, and only requires this information to the extent that the information exists. Furthermore, FDA is not specifying the form or the format of the information that is required to be established and maintained. (Comment 115) One comment states the FDA should standardize lot codes. (Response) FDA does not agree. The agency has determined that the least burdensome way of issuing the recordkeeping requirements mandated by the Bioterrorism Act is to specify the information that must be contained in the records, but not the format in which the records are kept. As indicated by other comments summarized previously, persons subject to this final rule already have various means to identify food, including lot numbers. The final rule allows such persons to use lot numbers or other appropriate identifiers, including abbreviations, provided such information can readily be decoded to identify particular foods if FDA makes an appropriate request to access records. 7. Quantity and How the Food is Packaged (Comment 116) A few comments recommend that FDA allow quantity of products in bulk containers to be expressed in gross quantity, e.g., 1 to 5,000 gallon (gal) tank load; 5 to 1,000 gal totes. (Response) FDA agrees with this comment that, when recording quantity of bulk food, the gross quantity, or weight, (e.g., 5,000 gal)

is acceptable. To satisfy the requirement to record how the food is packaged, ·tank load· or ·totes· is acceptable. FDA has revised §§ 1.337(a)(5) and 1.345(a)(5) of this final rule accordingly. (Comment 117) One comment representing warehouses recommends that the final rule require that the information relating to quantity and how a food is packaged be maintained by the warehouse customer. (Response) FDA disagrees with this comment. Warehouses ·hold· food and are, therefore, subject to all of the regulations in subpart J of this final rule. The comment has not explained why a warehouse would not know or could not obtain information regarding the quantity of food received and how it is packaged. FDA believes it is necessary to maintain this information at each step of the distribution chain to be able to effectively and efficiently conduct a tracing investigation. 8. Name, Responsible Individual, Address, Telephone Number, Fax Number, E-Mail Address of Transporters Who Transported the Food To You and From You

AU.L2-3.3.9 · Audit Management CMMC Assessment Guide · Level 2 | Version 2.13 89 AU.L2-3.3.9 · AUDIT MANAGEMENT Limit management of audit logging functionality to a subset of privileged users. ASSESSMENT OBJECTIVES [NIST SP 800-171A]78 Determine if: [a] a subset of privileged users granted access to manage audit logging functionality is defined; and [b] management of audit logging functionality is limited to the defined subset of privileged users. POTENTIAL ASSESSMENT METHODS AND OBJECTS [NIST SP 800-171A] Examine [SELECT FROM: Audit and accountability policy; access control policy and procedures; procedures addressing protection of audit information; system security plan; system design documentation; system configuration settings and associated documentation; access authorizations; system-generated list of privileged users with access to management of audit logging functionality; access control list; system audit logs and records; other relevant documents or records]. Interview [SELECT FROM: Personnel with audit and accountability responsibilities; personnel with information security responsibilities; system or network administrators; system developers]. Test [SELECT FROM: Mechanisms managing access to audit logging functionality]. DISCUSSION [NIST SP 800-171 REV. 2]

Multiple commenters pointed out that the rule does not specify an authoritative source for obtaining a CMMC certificate, leaving the pedigree of certificates in question. Two comments inquired about the security of record [data] collection and retention and whether the assessors' platforms would need to be CMMC Level 3 compliant to protect sensitive data used for the assessment/certification process. Response: The processes for achieving compliance with a CMMC level are described in § 170.15 through § 170.18. CMMC Level 2 Certification Assessments are conducted by C3PAOs authorized by the CMMC Accreditation Body. C3PAOs grant CMMC Level 2 certificates of assessment. The DoD conducts CMMC Level 3 Certification Assessments and grants Level 3 certificates of assessment. A C3PAO's IT infrastructure must achieve at least a CMMC Level 2 Certification Assessment. Certified CMMC Assessors working at their place of business or from home must use their C3PAO's IT infrastructure. Assessment data and results are securely uploaded by the C3PAO into the CMMC instantiation of eMASS. The CMMC instantiation of eMASS automatically feeds compliance data into SPRS. Both eMASS and SPRS are Department owned and operated systems. Comment: A few commenters requested resources for understanding CMMC requirements. There were also many comments related to the purpose, status, schedule, or content of the CMMC Assessment Guides. Additional comments requested clarification on the evaluation criteria and evidence described in the current Assessment Guides. Response: CMMC Assessment Guides are optional resources to aid in understanding CMMC requirements and are largely derived from NIST documentation, to include NIST SP 800-171 Rev 2 and NIST SP 800-172. The CMMC assessment process is defined in § 170.15 through § 170.18, and the CMMC Scoring Methodology is defined in § 170.24. The evaluation criteria (i.e., assessment procedures) and evidence (i.e., potential assessment methods and objects) required are taken directly from the NIST documentation, and revisions to NIST documentation are outside the scope of this rule. The CMMC Assessment Guides provide supplementary information, further discussion, examples, and references for assessors and contractors preparing for assessments. The guides do not identify (printed page 89076) specific solutions or baselines. These documents are available at: <https://DoDcio.defense.gov/CMMC/>. Updated CMMC Assessment Guides and associated CMMC documents were posted on the OUSD(A&S) CMMC website after the public comment period for DFARS Case 2019-D041 closed on November 30, 2020. These documents reflected changes based on review of public comments. Future updates to CMMC guidance documentation will be made as needed. Comment:

e. With respect to the definitions of ·information system· and ·electronic information system·, the extent of a business associate's direct management control over applications in cloud computing environments, where the business associate is the cloud service provider. f. Whether defining the

term ·technical controls· and adding it to the definition of ·technical safeguards· would more clearly explain the requirements of 45 CFR 164.312 . g. Whether defining ·implement· and ·deploy· as we propose would more clearly explain the differences between what is expected of regulated entities with respect to administrative and physical safeguards and technical safeguards. To the extent that the proposals would not clarify the differences, please provide alternative solutions.

C. Section 164.306·Security Standards: General Rules 1. Current Provisions Section 164.306 applies to regulated entities and includes the general rules for security standards. Generally, paragraph (a) codifies HIPAA statutory requirements for safeguarding ePHI. [406] Under these rules, regulated entities are required to do all of the following: Ensure the confidentiality, integrity, and availability of all ePHI the regulated entity creates, receives, maintains, or transmits. [407] Protect against reasonably anticipated threats or hazards to the security or integrity of such information. [408] Protect against any reasonably anticipated uses or disclosures of such information not permitted by the Privacy Rule. [409] Ensure that workforce members comply with the Security Rule. [410] Paragraph (b) of this section permits regulated entities to determine the most (printed page 931) appropriate security measures for protecting ePHI and their information systems. Accordingly, 45 CFR 164.306(b)(1) permits regulated entities to use any security measures to reasonably and appropriately implement the standards and implementation specifications of the Security Rule, while 45 CFR 164.306(b)(2) contains the factors that regulated entities are to consider when deciding which security measures to use. This paragraph furthers the aim of HIPAA's requirement for the security standards to take into account certain factors by providing for their consideration by regulated entities. [411] Accordingly, 45 CFR 164.306(b)(2) directs regulated entities to take these factors into account when determining the manner in which they will comply with the security standards and implementation specifications. Section 164.306(c) requires regulated entities to comply with the administrative, physical, and technical safeguard standards in sections 45 CFR 164.308 , 164.310 , and 164.312 respectively, and with standards for organizational requirements and policies, procedures, and documentation requirements in sections 45 CFR 164.314 and 164.316

On July 30, 1993, notice was published in the Federal Register (58 FR 40791) that a Federal Information Processing Standard for EES was being proposed for Federal use. The written comments submitted by interested parties and other material available to the Department relevant to this standard were reviewed by NIST. On the basis of this review, NIST recommended that the Secretary approve the standard as a Federal Information Processing Standards Publication and prepared a detailed justification document for the Secretary's review in support of that recommendation. The detailed justification document which was presented to the Secretary is part of the public record and is available for inspection and copying in the Department's Central Reference and Records Inspection Facility, room 6020, Herbert C. Hoover Building, 14th Street between Pennsylvania and Constitution Avenues, NW., Washington DC 20230. This FIPS contains two sections: (1) An announcement section, which provides information concerning the applicability, implementation, and maintenance of the standard; and (2) a specifications section which deals with the technical requirements of the standard. Both sections of the standard are provided in this notice.

CIS Safeguard 16.5 · Use Up-to-Date and Trusted Third-Party Software Components Use up-to-date and trusted third-party software components. When possible, choose established and proven frameworks and libraries that provide adequate security. Acquire these components from trusted sources or evaluate the software for vulnerabilities before use. Implementation Groups: 2,3 Asset Type: applications Security Function: protect Parent Control: Application Software Security

- Securely Provision (SP): Risk Management (RSK), Systems Architecture (ARC), Systems Development (SYS) - Operate and Maintain (OM): Data Administration (DTA), Network Services (NET), Systems Administration (ADM), Systems Analysis (ANA) - Oversee and Govern (OV): Cybersecurity Management (MGT), Executive Cyber Leadership (EXL), Program/Project Management (PMA) and Acquisition - Protect and Defend (PR): Cybersecurity Defense Analysis (CDA), Cybersecurity Defense Infrastructure Support (INF), Incident Response (CIR), Vulnerability Assessment and Management (VAM) - Investigate (IN): Digital Forensics (FOR) The publication provides insights to inform organizations' risk management processes. After reading this publication, an organization should be able to improve the quality of its risk assessments for IoT devices and its response to the identified risk through the lens of cybersecurity and privacy. However, this does not mean cybersecurity and privacy risks for an IoT device can all be addressed within the device itself. Every IoT device operates within a broader IoT environment where it interacts with other IoT and non-IoT devices, cloud-based services, people, and

other components. Cybersecurity risk and privacy risk are related but distinct concepts. Risk is defined in NIST SP 800-37 Revision 2 as 'a measure of the extent to which an entity is threatened by a potential circumstance or event, and typically is a function of: (i) the adverse impact, or magnitude of harm, that would arise if the circumstance or event occurs; and (ii) the likelihood of occurrence.' [4] For cybersecurity, risk is about threats-the exploitation of vulnerabilities by threat actors to compromise device or data confidentiality, integrity, or availability.

A manager (MGMT2) for 32 hours ($\$95.96/\text{hr} \times 32\text{hrs} = \$3,071$) A staff IT specialist (IT4) for 72 hours ($\$97.49/\text{hr} \times 72\text{hrs} = \$7,019$) A senior IT specialist (IT3) for 72 hours ($\$81.96/\text{hr} \times 72\text{hrs} = \$5,901$) An IT specialist (IT2) for 120 hours ($\$54.27/\text{hr} \times 120\text{hrs} = \$6,512$) Phase 3: Reporting of certification assessment results: \$2,712 A director (MGMT5) for 4 hours ($\$190.52/\text{hr} \times 4\text{hrs} = \762) A manager (MGMT2) for 4 hours ($\$95.96/\text{hr} \times 4\text{hrs} = \384) A staff IT specialist (IT4) for 16 hours ($\$97.49/\text{hr} \times 16\text{hrs} = \$1,560$) A senior IT specialist (IT3) for 0.08 hours ($\$81.96/\text{hr} \times 0.08\text{hrs} = \7) Affirmations: initial affirmation post assessment: \$2,712 C3PAO Costs: C3PAO engagement inclusive of Phases 1, 2, and 3 (5-person team) for 200 hours ($\$260.28/\text{hr} \times 200\text{hrs} = \$52,056$) Reaffirmations: It is estimated that the costs to reaffirm a Level 2 certification assessment annually is \$2,712 (three-year cost is \$8,136 or $\$2,712 \times 3$) A director (MGMT5) for 4 hours ($\$190.52/\text{hr} \times 4\text{hrs} = \762) A manager (MGMT2) for 4 hours ($\$95.96/\text{hr} \times 4\text{hrs} = \384) A staff IT specialist (IT4) for 8 hours ($\$97.49/\text{hr} \times 8\text{hrs} = \$1,560$) A senior IT specialist (IT3) for 0.08 hours ($\$81.96/\text{hr} \times 0.08\text{hrs} = \7) The Level 2 affirmations cost burden will be addressed as part of the 48 CFR part 204 CMMC Acquisition rule. Summary: The following is the annual other than small entities total cost summary for Level 2 certification assessments and affirmations over a ten-year period: (Example calculation, Year 2: ($\$112,345$ assessment per entity $\times 673$ entities) + ($\$2,712$ annual affirmation per entity $\times 135$ entities) = $\$75,974,425$) Small Entities Nonrecurring or recurring engineering costs: There are no nonrecurring or recurring engineering costs associated with Level 2 certification assessment since it is assumed the contractor or subcontractor has implemented the NIST SP 800-171 R2 security requirements. Assessment Costs and Initial Affirmation Costs: It is estimated that the cost to support a Level 2 certification assessment and affirmation for a small entity is $\$101,752$. The three-year cost is $\$104,670$ (as summarized in 4.1.2, table 10), and includes the triennial assessment + affirmation plus two additional annual affirmations ($\$101,752 + \$1,459 + \$1,459$). Phase 1: Planning and preparing for the certification assessment: \$20,699 A director (MGMT5) for 54 hours ($\$190.52/\text{hr} \times 54\text{hrs} = \$10,288$) An external service provider (ESP) for 40 hours ($\$260.28/\text{hr} \times 40\text{hrs} =$ (printed page 83186) $\$10,411$) Phase 2: Conducting the certification assessment: \$45,509 A director (MGMT5) for 64 hours ($\$190.52/\text{hr} \times 64\text{hrs} = \$12,193$) An external service provider (ESP) for 128 hours ($\$260.28/\text{hr} \times 128\text{hrs} = \$33,316$) Phase 3: Reporting of certification assessment results: \$2,851 A director (MGMT5) for 4 hours ($\$190.52/\text{hr} \times 4\text{hrs} = \762) An ESP for 8 hours ($\$260.28/\text{hr} \times 8\text{hrs} = \$2,082$) A staff IT specialist (IT4-SB) for 0.08 hours ($\$86.24/\text{hr} \times 0.08\text{hrs} = \7) Affirmations: cost to post initial affirmation \$1,459 C3PAO Costs:

(B) The investigation or proceeding involves a possible violation of criminal law where there is reason to believe that the subject of the investigation or proceeding is unaware of the pending investigation or proceeding. (C) The disclosure of the existence of the records could reasonably be expected to interfere with enforcement proceedings. (ii) Exclusion 2 . The DoD Components may treat records requested as not subject to the FOIA when a third party uses an informant's name or personal identifier to request informant records maintained by a criminal law enforcement organization within the DoD Component, and the informant's status as an informant has not been officially confirmed. (h) Exemption 8. Pursuant to 5 U.S.C. 552(b)(8) of Reference (b), records contained in or related to examination, operation, or condition reports prepared by, on behalf of, or for the use of any agency responsible for the regulation or supervision of financial institutions are exempt from disclosure. (i) Exemption 9 . Pursuant to 5 U.S.C. 552(b)(9) , records containing geological and geophysical information and data (including maps) concerning wells are exempt from disclosure. Subpart D-FOIA Request Processing § 286.17 General provisions. (a) Release of agency records. 5 U.S.C. 552(a) mandates release of agency records in response to a written request, unless: (1) The record is subject to one or more FOIA exemptions. (2) The record has not been described well enough to enable the DoD Component to locate it with a reasonable amount of effort by an employee familiar with the files. (3) The requester has failed to comply with procedural requirements, including failure to comply with a written agreement to pay any required fee incurred in processing previous requests. (b) Requests from private parties. (1) The provisions of the FOIA are reserved for members of the public as opposed to U.S. Federal agencies

seeking official information. Requests may be submitted in person, by mail, facsimile, or electronically. Commercial delivery is acceptable; however, due to security concerns, the DoD Components may refuse to accept commercial delivery of requests. (2) Individuals seeking DoD information should address their FOIA requests to one of the FOIA Requester Service Center addresses listed in Appendix B to this part. If a requester is not sure where to send a FOIA for DoD information, the request can be sent to the OSD/Joint Staff FOIA Requester Service Center. (3) The subject of a FOIA request may involve documents located at multiple Federal Government agencies. When this is the case, the DoD Components should try to determine whether the requester sent the request to the other relevant agencies. The requester should be contacted by the Component if the request does not mention any other agencies to which the request was sent.

The information collection requirements of the Defense Federal Acquisition Regulation Supplement (DFARS) part 245, Government Property, related clauses in DFARS part 252, and related forms in DFARS part 253, have been approved by the Office of Management and Budget (OMB) under OMB Control Number 0704-0246. No new information collection requirements are imposed by this final rule. List of Subjects in 48 CFR Parts 201, 245, and 252 Government procurement Ynette R. Shelkin, Editor, Defense Acquisition Regulations System. Therefore, 48 CFR parts 201, 245, and 252 are amended as follows: 1. The authority citation for 48 CFR parts 201, 245, and 252 continues to read as follows: Authority: 41 U.S.C. 1303 and 48 CFR chapter 1. PART 201-FEDERAL ACQUISITION REGULATIONS SYSTEM 2. Add section 201.670 to read as follows: 201.670 Appointment of property administrators and plant clearance officers. (a) The appropriate agency authority shall appoint or terminate (in writing) property administrators and plant clearance officers. (b) In appointing qualified property administrators and plant clearance officers, the appointing authority shall consider experience, training, education, business acumen, judgment, character, and ethics. PART 245-GOVERNMENT PROPERTY 3. Amend section 245.107 by adding paragraph (e) to read as follows: 245.107 Contract clauses. * * * * (d) Use the clause at 252.245-7004, Reporting, Reutilization, and Disposal, in solicitations and contracts that contain the clause at FAR 52.245-1, Government Property. 4. Add subpart 245.5, consisting of section 245.570, to read as follows: Subpart 245.5-Support Government Property Administration 245.570 Storage at the Government's expense. All storage contracts or agreements shall be separately priced and shall include all costs associated with the storage. 5. Revise subpart 245.6 to read as follows: Subpart 245.6-Reporting, Reutilization, and Disposal 245.602 Reutilization of Government property. 245.602-1 Inventory disposal schedules. 245.602-3 Screening. 245.602-70 Plant clearance procedures. 245.604 Disposal of surplus property. 245.604-3 Sale of surplus property. Subpart 245.6-Reporting, Reutilization, and Disposal 245.602 Reutilization of Government property. 245.602-1 Inventory disposal schedules. For termination inventory, plant clearance officers shall verify inventory schedules, either directly or through appropriate technical personnel, to determine the following: (a) Allocability. (1) Review contract requirements, delivery schedules, bills of material, and other pertinent documents to determine whether schedules include property that: (i) Is appropriate for use on the contract; or (ii) Exceeds the quantity required for completion of the contract, but could be diverted to other commercial work or Government use. (2) Review the contractor's: (i) Recent purchases of similar material; (ii) Plans for current and scheduled production; (iii) Stock record entries; and (iv) Bills of material for similar items. (b) Quantity.

(B) Exempted portions of this system also contain information considered relevant and necessary to make a determination as to qualifications, eligibility, or suitability for Federal employment and Federal contracts, and that was obtained by providing an express or implied promise to the source that his or her identity would not be revealed to the subject of the record. (20) System identifier and name. N12930-1, Human Resources Group Personnel Records. (i) Exemptions. (A) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, military service, Federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5), but only to the extent that such material would reveal the identity of a confidential source. (B) Testing or examination material used solely to determine individual qualifications for appointment or promotion in the Federal service may be exempt pursuant to 5 U.S.C. 552a(k)(6), if the disclosure would compromise the objectivity or fairness of the test or examination process. (C) Portions of this system of records are exempt from the following subsections of the Privacy Act: (d), (e)(4)(G) and (H), and (f). (ii) Authority. 5 U.S.C. 552a(k)(5) and (k)(6). (iii) Reasons. (A) Exempted portions of this system contain information considered relevant and necessary to make a determination as to

qualifications, eligibility, or suitability for Federal employment, and was obtained by providing express or implied promise to the source that his or her identity would not be revealed to the subject of the record. (B) Exempted portions of this system also contain test or examination material used solely to determine individual qualifications for appointment or promotion in the Federal Service, the disclosure of which would comprise the objectivity or fairness of the testing or examination process. (21) System identifier and name. N05813-4, Trial/Government Counsel Files. (i) Exemption. Parts of this system may be exempt pursuant to 5 U.S.C. 552a(j)(2) if the information is compiled and maintained by a component of the agency which performs as its principle function any activity pertaining to the enforcement of criminal laws. Portions of this system of records that may be exempt pursuant to subsection 5 U.S.C. 552a(j)(2) are (c)(3), (c)(4), (d), (e)(1), (e)(2), (e)(3), (e)(5), (e)(4)(G), (H), and (I), (e)(8), (f), and (g). (ii) Exemption. Information specifically authorized to be classified under E.O. 12958, as implemented by DOD 5200.1-R, may be exempt pursuant to 5 U.S.C. 552a(k)(1). (iii) Exemption. Investigatory material compiled for law enforcement purposes may be exempt pursuant to 5 U.S.C. 552a(k)(2).

Computer technology Electronic information system Electronic transactions Employer benefit plan Group health plan Health Health care Health facilities Health insurance Health professions Health records Hospitals Investigations Medicaid Medical Research Medicare Penalties Preemption Privacy Public health Reporting and recordkeeping requirements Security 45 CFR Part 164 Administrative practice and procedure Computer technology Drug abuse Electronic information system Electronic transactions Employer benefit plan Group health plan Health Health care Health facilities Health insurance Health professions Health records Hospitals Medicaid Medical research Medicare Privacy Public health Reporting and recordkeeping requirements Security Proposed Rule For the reasons stated in the preamble, the Department of Health and Human Services proposes to amend 45 CFR subtitle A, subchapter C, parts 160 and 164 as set forth below: PART 160-GENERAL ADMINISTRATIVE REQUIREMENTS 1. The authority citation for part 160 continues to read as follows: Authority: 42 U.S.C. 1302(a); 42 U.S.C. 1320d-1320d-9; sec. 264, Pub. L. 104-191, 110 Stat. 2033-2034 (42 U.S.C. 1320d-2 (note)); 5 U.S.C. 552; secs. 13400-13424, Pub. L. 111-5, 123 Stat. 258-279; and sec. 1104 of Pub. L. 111-148, 124 Stat. 146-154. 2. Amend § 160.103 by revising the definition of "Electronic media" to read as follows: § 160.103 Definitions. * * * * * Electronic media means: (1) Electronic storage material on which data may be recorded, maintained, or processed. This includes, but is not limited to, hard drives, (printed page 1011) removable media, magnetic tape, optical disk, and any other form of digital memory or storage. (2) Transmission media used to exchange information already in electronic storage material. Transmission media includes, but is not limited to, the internet, extranet or intranet, leased lines, dial-up lines, private and public networks, and the physical movement of removable/transportable electronic storage material. * * * * * PART 164-SECURITY AND PRIVACY 1. The authority citation for part 164 continues to read as follows: Authority: 42 U.S.C. 1302(a); 42 U.S.C. 1320d-1320d-9; sec. 264, Pub. L. 104-191, 110 Stat. 2033-2034 (42 U.S.C. 1320d-2(note)); and secs. 13400-13424, Pub. L. 111-5, 123 Stat. 258-279. 2. Revise and republish subpart C to read as follows: Subpart C-Security Standards for the Protection of Electronic Protected Health Information 164.302 Applicability. 164.304 Definitions. 164.306 Security standards: General rules. 164.308 Administrative safeguards. 164.310 Physical safeguards. 164.312 Technical safeguards. 164.314 Organizational requirements. 164.316 Documentation requirements. 164.318 Transition provisions. 164.320 Severability. Appendix A to Subpart C of Part 164-Security Standards: Matrix Authority: 42 U.S.C. 1320d-2 and 1320d-4; 42 U.S.C. 17931. § 164.302 Applicability.

cyber, physical, and deception). To address APTs, NIST has published NIST SP 800-172 Feb2022. CMMC Level 3 certification assessment provides for government assessment of a contractor's implementation of a defined subset of NIST SP 800-172 Feb2021 Enhanced Security Requirements with DoD predefined parameters and specifications. (c) Scale and Depth Today, DoD prime contractors must include DFARS clause 252.204-7012 in subcontracts for which performance will involve covered defense information, but this does not provide the Department with sufficient insights with respect to the cybersecurity posture of all members of a multi-tier supply chain for any given program or technology development effort. The revised CMMC Program requires prime contractors to flow down CMMC requirements, as applicable, to subcontractors throughout their supply chain(s). Given the size of the Defense Industrial Base (DIB), the Department cannot scale its existing cybersecurity assessment workforce to conduct on-site assessments of approximately 220,000 DoD contractors and subcontractors every three years. The Department's existing assessment capability is best suited for conducting targeted

assessments for the relatively small subset of DoD contractors and subcontractors that support designated high-priority programs. CMMC addresses the Department's scaling challenges by utilizing a private-sector accreditation structure. The DoD-recognized Accreditation Body will authorize, accredit, and provide oversight of CMMC Third-Party Assessment Organizations (C3PAO) which in turn will conduct CMMC Level 2 certification assessments of actual and prospective DoD contractors and subcontractors. Organizations Seeking Certification (OSCs) will directly contract with an authorized or accredited C3PAO to undergo a Level 2 certification assessment to achieve a CMMC Status of Conditional and Final Level 2 (C3PAO). The cost of CMMC Level 2 activities is driven by multiple factors, including market forces that govern availability of C3PAOs and the size and complexity of the enterprise or enclave under assessment. The Government will perform Level 3 certification assessments. Government resource limitations may affect schedule availability. (printed page 83196) (d) Reduces Duplicate or Repetitive Assessments of Our Industry Partners CMMC assessment results and contractor affirmations of compliance will be posted in Supplier Performance Risk System (SPRS), DoD's authoritative source for supplier and product performance information. Posting CMMC assessment results in SPRS precludes the need to validate CMMC implementation on a contract-by-contract basis. This enables DoD to identify whether the CMMC assessment requirements have been met for relevant contractor information system(s), avoids duplicative assessments, and eliminates the need for program level assessments, all of which results in decreased costs to both DoD and industry. Significant Issues Raised by Public Comments

Written comments and recommendations on the proposed information collections should be sent to Ms. Jasmeet Seehra at the Office of Management and Budget, DoD Desk Officer, Room 10102, New Executive (printed page 89118) Office Building, Washington, DC 20503, with a copy to the Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Mailbox #24 Suite 08D09, Alexandria, VA 22350-1700. Comments can be received from 30 to 60 days after the date of this notice, but comments to OMB will be most useful if received by OMB within 30 days after the date of this notice. You may also submit comments, identified by docket number DoD-2023-OS-0063 and title through the Federal eRulemaking Portal at <https://www.regulations.gov> . Follow the instructions for submitting comments. Instructions: All submissions received must include the agency name, docket number and title for this Federal Register document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <https://www.regulations.gov> as they are received without change, including any personal identifiers or contact information. To request more information on these proposed information collections or to obtain a copy of the proposal and associated collection instruments, please write to Department of Defense, Office of the DoD Chief Information Officer, 4800 Mark Center Drive, Suite 11G14, Alexandria, VA 22350 or contact Ms. Diane Knight at 202-770-9100 or diane.l.knight10.civ@mail.mil . F. Executive Order 13132 , ·Federalism· Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has federalism implications. This proposed rule will not have a substantial effect on State and local governments. G. Executive Order 13175 , ·Consultation and Coordination With Indian Tribal Governments· Executive Order 13175 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct compliance costs on one or more Indian Tribes, preempts Tribal law, or effects the distribution of power and responsibilities between the federal government and Indian Tribes. This proposed rule will not have a substantial effect on Indian Tribal governments. List of Subjects in 32 CFR Part 170 CMMC CMMC Program CMMC Levels Cybersecurity Certification Federal Contract Information Controlled Unclassified Information Contracts Government procurement Incorporation by reference Accordingly, the Department of Defense proposes to add 32 CFR part 170 to read as follows: PART 170·CYBERSECURITY MATURITY MODEL CERTIFICATION (CMMC) PROGRAM Subpart A·General Information. 170.1 Purpose. 170.2

Amend section 232.502-4-70 by adding paragraph (c) to read as follows: 232.502-4-70 Additional clauses. * * * * * (c) Use the clause at 252.232-7018, Progress Payments·Multiple Lots, to authorize separate progress payment requests for multiple lots. PART 252·SOLICITATION PROVISIONS AND CONTRACT CLAUSES 4. Amend section 252.204-7006· a. By revising the section heading, clause heading, and clause date; and b. In the clause introductory text, removing ·payment· and adding ·payment using a cost voucher· in its place. The revisions read as follows: 252.204-7006 Billing Instructions·Cost Vouchers. * * * * * Billing Instructions·Cost Vouchers (May 2023) * * *

* * 5. Revise section 252.232-7002 to read as follows: 252.232-7002 Progress Payments for Foreign Military Sales Acquisitions. As prescribed in 232.502-4-70(a), use the following clause: Progress Payments for Foreign Military Sales Acquisitions (May 2023) If this contract includes foreign military sales (FMS) requirements, the Contractor shall: (a) Submit separate progress payment requests for the FMS and U.S. line items in the contract; (b) Submit a supporting schedule showing the amount of each request distributed to each country's requirements; (c) Identify in each progress payment request the contract requirements to which it applies (i.e., FMS or U.S.); (d) Calculate each request on the basis of the prices, costs (including costs to complete), subcontract financing, and progress payment liquidations of the contract requirements to which it applies; and (e) Distribute costs among the countries in a manner acceptable to the Administrative Contracting Officer. (End of clause) 6. Add section 252.232-7018 to read as follows: 252.232-7018 Progress Payments-Multiple Lots. As prescribed in 232.502-4-70(c), use the following clause: Progress Payments-Multiple Lots (May 2023) (a) Definitions. As used in this clause: Lot means one or more fixed-price deliverable line items or deliverable subline items representing a single, severable group where the sum of the costs for each group is segregated and a single progress payment rate is used. Multiple lots means more than one lot on a single contract where progress payment proration is performed on a lot-wide, versus contract-wide, basis. (b) When submitting progress payment requests under the billing instructions in Federal Acquisition Regulation (FAR) clause 52.232-16, Progress Payments, or Defense Federal Acquisition Regulation Supplement (DFARS) clause 252.232-7002, Progress (printed page 33834) Payments for Foreign Military Sales Acquisitions, of this contract, the Contractor shall: (1) Submit separate progress payment requests for each lot identified in the contract; (2) Identify the contract price for the lot as the sum of all fixed-priced line items identified to the lot, in accordance with FAR 32.501-3; (3) Identify the lot on each progress payment request to which the request applies;

(vii) Information for which foreign disclosure has been prohibited in whole or in part. (viii) Information provided to the USG in confidence by a third-party government. (ix) Classified information furnished by a third-party government. (l) Temporary eligibility for access to classified information. In accordance with SEAD 8 (available at: https://www.dni.gov/-/files/-/NCSC/-documents/-Regulations/-SEAD-8_-Temporary_-Eligibility_-U.pdf), the CSA may grant temporary (previously called interim) eligibility for access to classified information, as appropriate, to applicants for access to TOP SECRET, SECRET, and CONFIDENTIAL information. This eligibility may only be granted if there is no evidence of adverse information that calls into question an individual's eligibility for access to classified information. If results are favorable following completion of full investigative requirements, the CSA will update the temporary eligibility determination for access to classified information to be final. In any case, a temporary eligibility determination shall not exceed one year unless approved by the applicable CSA in the system of record. Non-U.S. citizens are not eligible for access to classified information on a temporary basis. (1) A temporary SECRET or CONFIDENTIAL eligibility determination is valid for access to classified information at the level of the eligibility granted. Access to RD, COMSEC information, and NATO information requires a final SECRET eligibility determination. (2) A temporary TOP SECRET eligibility determination is valid for access to TOP SECRET information. If an individual has a temporary TOP SECRET eligibility determination and has a final SECRET eligibility determination based on a previously completed investigation, the temporary TOP SECRET eligibility determination is valid for access to RD, NATO, and COMSEC information at the SECRET or CONFIDENTIAL level. (3) Access to SCI and SAP information based on a temporary eligibility determination is a determination made by the granting authority. (4) When a temporary eligibility determination has been made and derogatory information is subsequently developed, the CSA may withdraw the temporary eligibility pending completion of the processing that is a prerequisite to the final eligibility determination. (5) When a temporary eligibility determination is withdrawn for an individual who is required to be eligible for access to classified information in connection with the entity eligibility determination for access to classified information, the contractor must remove the individual from access to classified information and any KMP position requiring PCL eligibility or the temporary entity eligibility determination will also be withdrawn. (6) Withdrawal of a temporary eligibility determination is not a denial, termination, or revocation of eligibility under this rule and may not be appealed. (m) Consultants.

DoD does not expect this rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601 , et seq. , because the rule relates to an administrative requirement for TIN validation, which is performed by the

Government. Contractors need only provide consent for TIN validation as part of the CCR registration process. Therefore, DoD has not performed an initial regulatory flexibility analysis. DoD invites comments from small businesses and other interested parties. DoD also will consider comments from small entities concerning the affected DFARS subpart in accordance with 5 U.S.C. 610. Such comments should be submitted separately and should cite DFARS Case 2006-D037. C. Paperwork Reduction Act The Paperwork Reduction Act does not apply, because the rule does not impose any information collection requirements that require the approval of the Office of Management and Budget under 44 U.S.C. 3501, et seq. List of Subjects in 48 CFR Part 252 Government procurement Michele P. Peterson, Editor, Defense Acquisition Regulations System. Therefore, DoD proposes to amend 48 CFR Part 252 as follows: PART 252-SOLICITATION PROVISIONS AND CONTRACT CLAUSES 1. The authority citation for 48 CFR Part 252 continues to read as follows: Authority: 41 U.S.C. 421 and 48 CFR Chapter 1. 2. Section 252.204-7004 is amended as follows: a. By revising the section heading, clause title, and clause date; and b. In paragraph (a), by revising the definition of Registered in the CCR database to read as follows: 252.204-7004 Alternate A, Central Contractor Registration. Alternate A, Central Contractor Registration (XXX 2007) * * * * (a) * * * Registered in the CCR database means that: (1) The Contractor has entered all mandatory information, including the DUNS number or the DUNS+4 number, into the CCR database; (2) The Contractor's CAGE code is in the CCR database; and (3) The Government has validated all mandatory data fields, to include validation of the Taxpayer Identification Number (TIN) with the Internal Revenue Service, and has marked the records Active. The Contractor will be required to provide consent for TIN validation to the Government as part of the CCR registration process. [FR Doc. E7-736 Filed 1-19-07; 8:45 am] BILLING CODE 5001-08-P

(3) In coordination with the appropriate requiring activity (or activities), ensure the head of the contracting activity responsible for each covered contract takes appropriate steps to assign sufficient oversight personnel to the contract to verify that the contractor responsible for performing private security functions complies with the requirements of this part. This includes ensuring that the contracting officer coordinates with the requiring activity to nominate and appoint a qualified contracting officer's representative (COR) or other multiple or alternate CORs, in accordance with DoD Instruction 5000.72, DoD Standard for Contracting Officer's Representative (COR) Certification (available at <https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/500072p.pdf>). 7. Amend § 159.6 by: a. Revising paragraph (a) introductory text. b. In paragraph (a)(1)(i), removing Contractor Personnel Authorized to Accompany the U.S. Armed Forces... and adding a period in its place. c. In paragraph (a)(1)(iii) introductory text: i. Removing geographic Combatant Commander and adding in its place CCDR of the geographic AOR wherever it appears. ii. Removing of this part. d. In paragraph (a)(1)(iii)(C): i. Removing Guidance for Determining Workforce Mix... and adding in its place Policy and Procedures for Determining Workforce Mix... ii. Redesignating footnote 12 as footnote 1. e. In paragraph (a)(1)(iii)(F)(1), redesignating footnote 13 as footnote 2. f. In paragraph (a)(1)(iv), adding PSC personnel, weapons, before armored vehicles. g. In paragraph (a)(1)(v)(F), removing TASER guns and adding in its place disruption devices. h. In paragraph (a)(1)(viii), removing commander of a combatant command may request and adding in its place CCDR may, through the contracting officer, request. i. In paragraph (a)(1)(x), removing paragraph (a)(2)(ii) and adding in its place paragraph (a)(2)(iii). j. In paragraph (a)(2)(i), removing Contractor Personnel Authorized to Accompany the U.S. Armed Forces... and adding a period in its place. k. Redesignating paragraphs (a)(2)(ii) through (iv) as paragraphs (a)(2)(iii) through (v) and adding new paragraph (a)(2)(ii). l. Further redesignating newly redesignated paragraph (a)(2)(v) as paragraph (a)(2)(vi) and adding new paragraph (a)(2)(v). m. In newly redesignated paragraph (a)(2)(vi), removing Chief of Mission and adding in its place COM. n. Removing paragraph (b) and redesignating paragraphs (c) and (d) as paragraphs (b) and (c). o. In newly redesignated paragraph (b): i. Revising the paragraph heading. ii. Removing Chief of Mission and combatant command and adding in their places COM and CCDR, respectively. p. In newly redesignated paragraph (c): i. Revising the paragraph heading. ii. Removing Chief of Mission and geographic Combatant Commander/sub unified commander and adding in their places COM and CCDR with geographic AOR/sub unified commander, respectively.

As proposed, Level 1 contractors would annually attest their compliance with the requirements. While at Level 2, there would be attestations with C3PAO certifications every three years. Stakeholders raised questions about the practical steps the DoD will take in enforcement actions for breaches.

Further, stakeholders raised concerns regarding the availability of remediating steps in the instance of failure to meet a CMMC requirement. Advocacy recommends the agency create guidance documents for small business contractors to better understand the legal effects of the CMMC. · DoD Response: Regarding enforcement, as the CMMC is slated for implementation as a precondition for contract award consideration, non-compliance with CMMC requirements will result in disqualification from contract award; or post-award, could result in standard contractual and other remedies for failure to timely and satisfactorily address outstanding POA&Ms to fully implement CMMC requirements and meet contractual obligations. · SBA Comment 5: Advocacy highlights the need for DoD to create rules that encourage and improve small business participation in contracting programs. Advocacy reiterates the importance of small businesses in Federal contracting. [Excerpt from footnote 21: ·Small businesses make up 99.9 percent of all U.S. businesses as well as 73 percent of companies in the defense industrial base, and last year small businesses were awarded over 25 percent of all DoD prime contracts. As the economic engine of our nation, small businesses create jobs, generate innovation, and are essential, daily contributors to national security and the defense mission.] Creating accessible, commercially viable, and secure cyber systems is critical for the future of national security. Small businesses wish to continue to be a powerful driver of national defense contracting. Advocacy heard small business stakeholders from across the country express their strong commitment to protecting our country from cyber-attacks and recognize the critical need for CMMC and other cybersecurity measures. ·Small businesses urge DoD to create flexibilities such as using Plan of Action and Milestones (POA&Ms) when this rule goes into effect initially, allowing small businesses to ramp up to full compliance with their respective CMMC level. · DoD Response: Department acknowledges the concerns voiced by the SBA regarding the participation of small businesses in contracting programs and the importance of fostering their involvement in Federal contracting, particularly within the defense industrial base. Recognizing the significant role small businesses play in national security and defense missions, the Department is committed to diligently addressing these concerns.

The reduction in benefits from excluding all foreign persons except those who transport food in the United States is considerable because the large number of excluded entities increases the likelihood of hampering traceback investigations. Moreover, the risk of contamination (unintentional) is generally higher for many products earlier in the supply chain. In addition, enforcement costs for foreign persons would likely be prohibitively high-decreasing the likelihood of obtaining records required for a traceback even if these persons were covered. When compared to the eight other individual options considered for the final rule, the large number of excluded foreign persons ranks third highest of the reductions in benefits relative to the baseline considered. This reduction in benefits, however, is mitigated in one respect: The risk of not being able to complete traceback investigations due to this exclusion is considered low because most of these foreign entities occupy positions early in the supply chain. The reduction in benefits from relaxing the recordkeeping requirements for persons who manufacture, process, pack, transport, distribute, import, receive, or hold food contact substances other than the finished container that directly contacts the food, and who manufacture or process the finished container that directly contacts the food, as estimated by the number of applicable facilities, is small. Although relaxing requirements for these persons may expose a ·soft target· for intentional contamination, the probability of foodborne illness from unintentionally contaminated food contact substance and finished container material is low. Furthermore, the likelihood of needing records from food contact substance and finished container facilities during traceback investigations is also low. When compared to the other issues considered for the final rule, relaxing the requirements for these persons ranks only seventh in the reductions in benefits relative to the baseline. The reduction in benefits from relaxing the requirement to access records within 24 hours from 4- and 8-hour requirement would be substantial. We estimate that relaxing the records access requirement would increase the amount of time for any preventive action to be taken during a traceback investigation by about 5 days relative to the baseline, if all persons subject to an access request took the full 24 hours to respond. The loss of time relative to the baseline would limit the preventive benefits for 15 percent to 18 percent of outbreaks. Relaxing the record access requirement from 4 and 8 hours, to within 24 hours ranks second in reductions in benefits relative to the baseline.

One comment notes that the proposed rule includes an exemption for restaurants, which are defined as facilities that sell food directly to consumers for immediate consumption. The comment asserts that many convenience stores make such sales of prepared foods, but convenience stores are included in the proposed rule's definitions as an example of retail facilities. In the comment's view,

convenience stores that sell food for immediate consumption should be exempt from the proposed rule. There is no reason why convenience stores that sell prepared foods should have greater regulatory burdens than any other type of entity that sells prepared foods. The comment further states that the restaurant exemption as currently proposed leads to results that are difficult to justify. The comment asks why, for example, should a convenience store that sells lunchmeat be required to comply with a costly system of recordkeeping, while a delicatessen that sells precisely the same product to the same consumer is exempt? The comment states that the only sensible answer to these unjustifiable inconsistencies is to exempt retailers that sell food to consumers for immediate consumption from the requirements of the regulation. (Response) FDA agrees with these comments. Section 306 of the Bioterrorism Act exempts restaurants from recordkeeping requirements. There is no similar exemption in section 306 for retail facilities. In the proposed rule, FDA exercised the agency's discretion and proposed excluding retail facilities from the requirement to establish and maintain records of the immediate subsequent recipients of food when the food is sold directly to consumers (68 FR 25188 at 25192). As explained therein, the Bioterrorism Act expressly states that the Secretary may require the establishment and maintenance of records by persons who distribute food, and therefore retail facilities could be subject to all of the provisions in subpart J of this final rule if FDA thought it was necessary to address credible threats of serious adverse health consequences or death to humans or animals.

The Department examined two different data points: the annual number of individuals affected by health care breaches, and the annual number of large breaches. Additionally, the Department considered a high and a low baseline based on the number of breaches and affected individuals per year. The Department calculated the high baseline as the average of the three highest values in the 6 years of available data (2018 to 2023, shown in table 8), and the low baseline as the average of the three lowest values. Table 8-Data on Breaches of e PHI Breach years Affected individuals for large breaches a Cost b per record 983 2018 12,493,549 \$488 2019 38,732,966 504 2020 37,641,403 476 2021 37,182,558 502 2022 41,747,613 477 2023 113,173,613 463 Number of large breaches (500+ individuals) Cost per breach 2018 302 12,012,809 2019 408 7,582,508 2020 656 8,273,537 2021 609 10,241,897 2022 626 10,468,138 2023 725 10,930,000 a The numbers of affected individuals and numbers of large breaches are contained in the Reports to Congress on Breaches of Unsecured Protected Health Information for years 2018-2022, <https://www.hhs.gov/hipaa/for-professionals/compliance-enforcement/reports-congress/index.html> . Data for 2023 is contained in OCR's breach portal, "Breach Portal: Notice to the Secretary of HHS Breach of Unsecured Protected Health Information," Office for Civil Rights, U.S. Department of Health and Human Services, https://ocrportal.hhs.gov/ocr/breach/breach_report.jsf . b The cost per record and cost per breach are based on estimates for health care breaches from the annual IBM Security and Ponemon Institute Costs of a Data Breach Reports for years 2018-2023. See "Cost of a Data Breach Report 2023," IBM Security, p. 10, 13 (July 24, 2023), available at <https://www.ibm.com/reports/data-breach> . Because only general breach costs were available for the 2020-2023 period, the Department adjusted those by multiplying them by the average of the ratios of health care-specific to overall breach costs for the years for which both data points were available (2018, \$408/\$148 and 2019, \$429/\$150). All dollar values were converted to 2023 dollars using the seasonally adjusted GDP Implicit Price Deflator, <https://fred.stlouisfed.org/series/GDPDEF/> . The high baseline used 669 breaches and a total of 71 million individuals affected, and the low baseline used 440 breaches and 29 million individuals affected. [984] The high baseline represents years with higher incidence of breaches, whereas the low baseline represents years with lower incidence. For each data point, the Department calculated the number of breaches or affected individuals by which the affected universe would have to decrease for the proposed rule to fully offset the annualized costs of regulated entities. [985] Table 9 and the discussion that follows analyses the costs and cost savings based on the number of individuals affected by breaches in a year and the cost per individual's ePHI or medical record. (printed page 1004)

§ 170.15 CMMC Level 1 self-assessment and affirmation requirements. (a) Level 1 self-assessment. To comply with CMMC Level 1 self-assessment requirements, the OSA must meet the requirements detailed in paragraphs (a)(1) and (2) of this section. An OSA conducts a Level 1 self-assessment as detailed in paragraph (c) of this section to achieve a CMMC Status of Final Level 1 (Self). (1) Level 1 self-assessment requirements. The OSA must complete and achieve a MET result for all security requirements specified in § 170.14(c)(2) to achieve the CMMC Status of Final Level 1 (Self). No POA&Ms are permitted for CMMC Level 1. The OSA must conduct a self-assessment in

accordance with the procedures set forth in § 170.15(c)(1) and submit assessment results in SPRS. To maintain compliance with the requirements for the CMMC Status of Final Level 1 (Self), the OSA must conduct a Level 1 self-assessment on an annual basis and submit the results in SPRS, or its successor capability. (i) Inputs to SPRS. The Level 1 self-assessment results in the Supplier Performance Risk System (SPRS) shall include, at minimum, the following items: (A) CMMC Level. (B) CMMC Status Date. (C) CMMC Assessment Scope. (D) All industry CAGE code(s) associated with the information system(s) addressed by the CMMC Assessment Scope. (E) Compliance result. (ii) [Reserved] (2) Affirmation. Affirmation of the Level 1 (Self) CMMC Status is required for all Level 1 self-assessments. Affirmation procedures are set forth in § 170.22 . (b) Contract eligibility. Prior to award of any contract or subcontract with a requirement for the CMMC Status of Level 1 (Self), OSAs must both achieve a CMMC Status of Level 1 (Self) and have submitted an affirmation of compliance into SPRS for all information systems within the CMMC Assessment Scope. (c) Procedures · (1) Level 1 self-assessment. The OSA must conduct a Level 1 self-assessment scored in accordance with the CMMC Scoring Methodology described in § 170.24 . The Level 1 self-assessment must be performed in accordance with the CMMC Level 1 scope requirements set forth in § 170.19(a) and (b) and the following: (i) The Level 1 self-assessment must be performed using the objectives defined in NIST SP 800-171A Jun2018 (incorporated by reference, see § 170.2) for the security requirement that maps to the CMMC Level 1 security requirement as specified in table 1 to paragraph (c)(1)(ii) of this section. In any case where an objective addresses CUI, FCI should be substituted for CUI in the objective. (ii) Mapping table for CMMC Level 1 security requirements to the NIST SP 800-171A Jun2018 objectives. Table 2 to § 170.15 (c)(1)(ii) ·CMMC Level 1 Security Requirements Mapped to NIST SP 800-171A Jun2018 CMMC Level 1 security requirements as set forth in § 170.14(c)(2) NIST SP 800-171A Jun2018 AC.L1-b.1.i 3.1.1 AC.L1-b.1.ii 3.1.2 AC.L1-b.1.iii 3.1.20 AC.L1-b.1.iv 3.1.22 IA.L1-b.1.v 3.5.1 IA.L1-b.1.vi 3.5.2 MP.L1-b.1.vii 3.8.3 PE.L1-b.1.viii 3.10.1 First phrase of PE.L1-b.1.ix (FAR b.1.ix *) 3.10.3 Second phrase of PE.L1-b.1.ix (FAR b.1.ix *) 3.10.4 Third phrase of PE.L1-b.1.ix (FAR b.1.ix *) 3.10.5 SC.L1-b.1.x 3.13.1 SC.L1-b.1.xi 3.13.5 SI.L1-b.1.xii 3.14.1 SI.L1-b.1.xiii 3.14.2 SI.L1-b.1.xiv 3.14.4 SI.L1-b.1.xv 3.14.5 * Three of the 48 CFR 52.204-21 requirements were broken apart by ·phrase· when NIST SP 800-171 R2 was developed. (iii) Additional guidance can be found in the guidance document listed in paragraph (b) of appendix A to this part. (2) Artifact retention. The artifacts used as evidence for the assessment must be retained by the OSA for six (6) years from the CMMC Status Date.

As described in § 170.22(a)(2)(ii), the CMMC affirmation shall include a statement to the effect that the OSA has implemented and will maintain implementation ·within the relevant assessment scope·, which adequately addresses the commenters suggestion. No change to the rule text was therefore required. Annual affirmations ensure OSAs conduct periodic checks and verify to the Department that changes to their networks have not taken them out of compliance during the certification period. The annual affirmation requirement enables DoD to permit 3 years between CMMC Level 2 or 3 assessments, rather than requiring annual assessments. The DoD does not agree with the comment that following the procedures in § 170.22 creates an additional burden. The DoD does not concur with removing the terms ·continuing· or ·continuous· as it relates to an OSA's affirmation. Continuing compliance means that the contractor system in question remains in compliance and that the OSA intends to maintain compliance over time, not that the OSA cannot have an operational plan of action. Any changes to the information system beyond use of operational plans of action require a new assessment and a new affirmation. Operational plans of action as described in CA.L2-3.12.2 are part of normal (printed page 83146) maintenance of a system and do not require a separate out-of-cycle affirmation. The DoD declines to address specific cases when affirmations are not required. DoD's use of the term OSA within the affirmations section is deliberate and conveys that each organization is responsible for affirmations pertaining to their own assessments. An Affirming Official definition was added to the rule and provides that clarification. The rule delineates which requirements may be addressed with a POA&M for up to 180 days to achieve Final CMMC Status. As stated in § 170.22, an Affirming Official attests the organization is satisfying and will maintain its specified cybersecurity requirements. An OSA may complete a self-assessment and submit a new affirmation at any time. POA&Ms associated with conditional assessments are closed-out by C3PAOs for Level 2 final certification assessments and by DCMA DIBCAC for Level 3 final certification assessments. OSAs must affirm results in SPRS for all assessments. If an OSA makes significant changes within the CMMC Assessment Scope, a new assessment and affirmation are required. The rule does not preclude OSAs from contacting a C3PAO for a review prior to an annual affirmation, however this is not required. No supporting evidence is required for an annual affirmation. Annual representations and certifications submitted in the System for Award Management (SAM) serve a

different purpose from the CMMC affirmation requirement completed in SPRS. Furthermore, given the sensitivity of an OSA's cyber security status, the DoD has elected not to use SAM, a public website.

From the NIST SP 800-172 Rev 3 Final Public Draft: DISCUSSION Integrated analysis of audit records requires that the analysis of information NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 generated by scanning, monitoring, or other data collection activities is integrated 894

(u) The Commander, U.S. Army Criminal Investigation Command, is authorized to act on requests for criminal investigative records of USACIDC headquarters, and its subordinate activities, and military police reports. This includes criminal investigation records, investigation-in-progress records, and all military police records and reports that result in criminal investigation reports. This authority has been delegated to the Director, U.S. Army Crime Records Center. (v) The Commander, U.S. Army Human Resources Command, is authorized to act on requests for military personnel files relating to active duty personnel including, but not limited to military personnel matters, military education records including records related to the removal or suspension from a military school or class; personnel locator, physical disability determinations, and other military personnel administration records; records relating to military casualty and memorialization activities; heraldic activities, voting, records relating to identification cards, naturalization and citizenship, commercial solicitation, Military Postal Service Agency and Army postal and unofficial mail service. The Commander, U.S. Army Human Resources Command, is also authorized to act on requests concerning all personnel and medical records of retired, separated, discharged, deceased, and reserve component military personnel, unless such records clearly fall within another Denial Authority's authority. (w) The Commander, U.S. Army Resources Command-St. Louis has been delegated authority to act on behalf of the U.S. Army Human Resources Commander for requests concerning all personnel and medical records of retired, separated, discharged, deceased, and reserve component military personnel, unless such records clearly fall within another Denial Authority's authority. The authority does not include records relating to USAR plans, policies, and operations; changes in the organizational status of USAR units, mobilization and demobilization policies; active duty tours, and the individual mobilization augmentation program. (x) The Assistant Chief of Staff for Installation Management is authorized to act on requests for records relating to planning, programming, execution and operation of Army installations. This includes base realignment and closure activities, environmental activities other than litigation, facilities and housing activities, and installation management support activities. (y) The Commander, U.S. Army Intelligence and Security Command, is authorized to act on requests for intelligence and security records, foreign scientific and technological records, intelligence training, intelligence threat assessments, and foreign liaison information, mapping and geodesy information, ground surveillance records, intelligence threat assessment, and missile intelligence data relating to tactical land warfare systems.

the law or departmental policies. DISTRIBUTION STATEMENT A. Approved for public release.
Distribution is unlimited.

creation of FCI or CUI as part of the contract effort. Such waivers will be requested and approved by DoD in accordance with internal policies, procedures, and approval requirements. The Department

ultimately adopted alternatives 3 and 4. The drawback of alternative 1 (at time of proposal or offer submission) is the increased risk for contractors since they may not have sufficient time to achieve the required CMMC level after the release of the solicitation. The drawback of alternative 2 (after contract award) is the increased risk to the Department with respect to the costs, program schedule, and uncertainty in the event the contractor is unable to achieve the required CMMC level in a reasonable amount of time given their current cybersecurity posture. This potential delay would apply to the entire supply chain and prevent the appropriate flow of CUI and FCI. The Department seeks public comment on the requirement to achieve a specified CMMC level by the time of contract award. Benefits The Department of Defense expects this proposed rule to protect DoD and industry from the loss of FCI and CUI, including intellectual property. The theft of intellectual property and sensitive unclassified information due to malicious cyber activity threatens U.S. economic security and national security. In 2010, the Commander of the U.S. Cyber Command and Director of the National Security Agency estimated the value of U.S. intellectual property to be \$5 trillion and that \$300 billion is stolen over networks annually [46] . The 2013 Intellectual Property Commission Report provided concurrence and noted that the ongoing theft represents the greatest transfer of wealth in history. The report also highlighted the challenges of generating an exact figure because Government and private studies tend to understate the impacts due to inadequate data or scope, which is evidenced in subsequent analyses. [47] The responsibility of federal agencies to protect FCI or CUI does not change when such information is shared with defense contractors. A comparable level of protection is needed when FCI or CUI is processed, stored, or transmitted on contractor information systems. [48] The protection of FCI, CUI, and intellectual property on defense contractor systems can directly impact the ability of the federal government to successfully conduct its essential missions and functions. [49]

SC.L2-3.13.9 · Connections Termination CMMC Assessment Guide · Level 2 | Version 2.13 230
 FURTHER DISCUSSION Prevent malicious actors from taking advantage of an open network session or an unattended computer at the end of the connection. Balance user work patterns and needs against security to determine the length of inactivity that will force a termination. This requirement, SC.L2-3.13.9, specifies network connections be terminated under certain conditions, which complements AC.L2 -3.1.18 that specifies control of mobile device connections. Example You are an administrator of a server that provides remote access. Your company's policies state that network connections must be terminated after being idle for 60 minutes [a]. You edit the server configuration file and set the timeout to 60 minutes and restart the remote access software [c]. You test the software and verify that the connection is terminated appropriately. Potential Assessment Considerations · Are the network connections requiring management and time-out for inactivity documented [a]? · Are the network connections requiring management and time-out for inactivity configured and implemented [c]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.13.9

Commentary to 2 ; A number of papers included in this report propose several security levels. Michael Baum proposes three numbered levels and defines each level with "baseline" characteristics. Peter Weiss proposes four levels, including a non-sensitive level. Jim Orr identifies types of data transmissions in health care applications for each of three risk levels: low, medium, and high. Irvin Chmielewski states that a "balance of high and low tech solutions to achieve EDI security has made the process workable in the real world where large numbers of trading partners are involved." All participants recognized that a "one size fits all" techniques is generally consistent with that contained in the American Bar Association's Model Payments Agreement and Commentary ("Model Agreement") . 32 Jurimetrics 601 (Summer, 1992) . Similarly, Michael Baum's Security Baseline -Level 1 includes only noncryptographic techniques. | L Introduction | |-----| | n. Security and Reliability | | a. Treatment in the Law | | b. 3.2.6. Verifier-CSP or IdP Communications Throughout this document, [FIPS140] requirements are satisfied by security technologies, products, and services that utilize implementations of cryptography validated by the Cryptography Module Validation Program [CMVP]. FIPS 140 requirements at a given AAL are often different for authenticators and verifiers, with more stringent requirements generally applying to verifiers. This is in recognition of the practical

limitations on the certification of authenticators as well as the broader scope that is often associated with a security breach at a verifier. 2.1.2. Authenticator and Verifier Requirements Authenticators used at AAL1 SHALL use approved cryptography. In other words, they must use approved algorithms, but the implementation need not be validated under [FIPS140].

(iii) Coordinating with the local Staff Judge Advocate to determine whether a more formal investigation such as a commander's inquiry or an AR 15-6 investigation is appropriate; and (iv) Ensuring the decision at the local level from either the Privacy Act Officer or other individual who directed a more formal investigation is provided to the complainant in writing. (2) The decision at the local level may be appealed to the next higher command level Privacy Act Officer. (3) A legal review from the next higher command level Privacy Act Officer's servicing Staff Judge Advocate is required prior to action on the appeal. §505.13 Computer Matching Agreement Program. (a) General provisions. (1) Pursuant to the Privacy Act and this part, DA records may be subject to computer matching, i.e., the computer comparison of automated systems of records. (2) There are two specific kinds of Matching Programs covered by the Privacy Act: (i) Matches using records from Federal personnel or payroll systems of records; and (ii) Matches involving Federal benefit programs to accomplish one or more of the following purposes: (A) To determine eligibility for a Federal benefit; (B) To comply with benefit program requirements; and (C) To effect recovery of improper payments or delinquent debts from current or former beneficiaries. (3) The comparison of records must be computerized. Manual comparisons are not covered. (4) Any activity that expects to participate in a Computer Matching Program must contact the DA FOIA/P Office immediately. (5) In all cases, Computer Matching Agreements are processed by the Defense Privacy Office and approved by the Defense Data Integrity Board. Agreements will be conducted in accordance with the requirements of 5 U.S.C. 552a, and OMB Circular A-130. (b) Other matching. Several types of computer matching are exempt from the restrictions of the Act such as matches used for statistics, pilot programs, law enforcement, tax administration, routine administration, background checks, and foreign counterintelligence. The DA FOIA/P Office should be consulted if there is a question as to whether the Act governs a specific type of computer matching. §505.14 Recordkeeping requirements under the Privacy Act. (a) AR 25-400-2, The Army Records Information Management System (ARIMS). To maintain privacy records are required by the Army Records Information Management System (ARIMS) to provide adequate and proper documentation of the conduct of Army business so that the rights and interests of individuals and the Federal Government are protected. (b) A full description of the records prescribed by this part and their disposition/retention requirements are found on the ARIMS Web site at <https://www.arims.army.mil>. Appendix A to Part 505-References (a) The Privacy Act of 1974 (5 U.S.C. 552a, as amended). (b) OMB Circular No. A-130, Management of Federal Information Resources. (printed page 24508) (c) AR 25-55, The Department of the Army Freedom of Information Program.

During the course of a FOIA/Privacy Act and/or MDR action, exempt materials from other system of records may become part of the case records in this system of records. To the extent that copies of exempt records from those other systems of records are entered into these case records, NSA/CSS hereby claims the same exemptions for the records as claimed in the original primary system of records of which they are a part. The exemption rule for the original records will identify the specific reasons why the records are exempt from specific provisions of 5 U.S.C. 552a. §310.28 Office of the Inspector General (OIG) exemptions. (a) Exemption for classified records. Any record in a system of records maintained by the Office of the Inspector General which falls within the provisions of 5 U.S.C. 552a(k)(1) may be exempt from the following subsections of 5 U.S.C. 552a: (c)(3), (d), (e)(1), (e)(4)(G) through (I) and (f) to the extent that a record system contains any record properly classified under Executive Order 12958 and that the record is required to be kept classified in the interest of national defense or foreign policy. This specific exemption rule, claimed by the Inspector General under authority of 5 U.S.C. 552a(k)(1), is applicable to all systems of records maintained, including those individually designated for an exemption herein as well as those not otherwise specifically designated for an exemption, which may contain isolated items of properly classified information. (b) The Inspector General of the Department of Defense claims an exemption for the following record systems under the provisions of 5 U.S.C. 552a(j) and (k)(1)-(k)(7) from certain indicated subsections of the Privacy Act of 1974. The exemptions may be invoked and exercised on a case-by-case basis by the Deputy Inspector General for Investigations or the Director, Communications and Congressional Liaison Office, and the Chief, Freedom of Information/Privacy Act Office, which serve as the Systems Program Managers. Exemptions will be exercised only when necessary for a specific, significant and legitimate reason connected

with the purpose of the records system. (c) No personal records releasable under the provisions of The Freedom of Information Act (5 U.S.C. 552) will be withheld from the subject individual based on these exemptions. (1) System identifier and name. CIG-04, Case Control System. (i) Exemption. Any portion of this system which falls within the provisions of 5 U.S.C. 552a(j)(2) may be exempt from the following subsections of 5 U.S.C. 552a : (c)(3), (c)(4), (d), (e)(1), (e)(2), (e)(3), (e)(4)(G), (H), (I), (e)(5), (e)(8), (f), and (g). (ii) Authority. 5 U.S.C. 552a(j)(2) . (iii) Reasons.

(d) Limit, notwithstanding any other provision of law, in whole or in part, the disclosure of information relating to the basis for carrying out any of the actions authorized by paragraphs (a) through (c) of this section, and if such disclosures are so limited- (1) No action undertaken by the individual authorized under such authority shall be subject to review in a bid protest before the Government Accountability Office or in any Federal court; and (2) The authorized individual shall- (i) Notify appropriate parties of a covered procurement action and the basis for such action only to the extent necessary to effectuate the covered procurement action; (ii) Notify other Department of Defense components or other Federal agencies responsible for procurements that may be subject to the same or similar supply chain risk, in a manner and to the extent consistent with the requirements of national security; and (iii) Ensure the confidentiality of any such notifications.

239.7306 Solicitation provision and contract clause. (a) Insert the provision at 252.239-7017, Notice of Supply Chain Risk, in all solicitations, including solicitations using FAR part 12 procedures for the acquisition of commercial items, that involve the development or delivery of any information technology whether acquired as a service or as a supply. (b) Insert the clause at 252.239-7018, Supply Chain Risk, in all solicitations and contracts, including solicitations and contracts using FAR part 12 procedures for the acquisition of commercial items, that involve the development or delivery of any information technology whether acquired as a service or as a supply.

PART 244-SUBCONTRACTING POLICIES AND PROCEDURES 9. Add new sections 244.201 and 244.201-1 to subpart 244.2 to read as follows: 244.201 Consent and advance notification requirements.

244.201-1 Consent requirements. In all solicitations and contracts involving the development or delivery of any information technology, whether acquired as a service or as a supply, consider the need for a consent to subcontract requirement regarding supply chain risk (see subpart 239.73).

PART 252-SOLICITATION PROVISIONS AND CONTRACT CLAUSES 10. Add section 252.239-7017 to read as follows: 252.239-7017 Notice of supply chain risk. As prescribed in 239.7306(a), use the following provision: NOTICE OF SUPPLY CHAIN RISK (NOV 2013) (a) Definition. Supply chain risk, as used in this provision, means the risk that an adversary may sabotage, maliciously introduce unwanted function, or otherwise subvert the design, integrity, manufacturing, production, distribution, installation, operation, or maintenance of a national security system (as that term is defined at 44 U.S.C. 3542(b)) so as to surveil, deny, disrupt, or otherwise degrade the function, use, or operation of such system. (b) In order to manage supply chain risk, the Government may use the authorities provided by section 806 of Public Law 111-383

to limit disclosure of information, no action undertaken by the Government under such authority shall be subject to review in a bid protest before the Government Accountability Office or in any Federal court. (e) The Contractor shall include the substance of this clause, including this paragraph (e), in all subcontracts involving the development or delivery of any information technology, whether acquired as a service or as a supply. (End of clause) [FR Doc. 2013-27311 Filed 11-15-13; 8:45 am] BILLING CODE 5001-06-P

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Defense Office of the Secretary [DoD-2007-OS-0086; 0790-AI24] 32 CFR Part 286 AGENCY: Department of Defense. ACTION: Proposed rule. SUMMARY: The Department of Defense is proposing to update current policies and procedures to reflect the DoD FOIA Program as prescribed by Executive Order 13392 . The proposed changes will ensure appropriate agency disclosure of information, and offer consistency with the goals of section 552 of title 5, United States Code. DATES: Comments must be received by February 19, 2008. ADDRESSES: You may submit comments, identified by docket number and/or RIN number and title, by any of the following methods: Federal Rulemaking Portal: <http://www.regulations.gov> . Follow the instructions for submitting

comments. Mail: Federal Docket Management System Office, 1160 Defense Pentagon, Washington, DC 20301-1160. Instructions: All submissions received must include the agency name and docket number or Regulatory Information Number (RIN) for this Federal Register document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://regulations.gov> as they are received without change, including any personal identifiers or contact information. FOR FURTHER INFORMATION CONTACT: James Hogan (703) 696-4495. SUPPLEMENTARY INFORMATION: Executive Order 13132, 'Federalism'. It has been certified that 32 CFR part 286 does not have federalism implications, as set forth in Executive Order 13132. This rule does not have substantial direct effects on: (1) The States; (2) The relationship between the National Government and the States; or (3) The distribution of power and responsibilities among the various levels of Government. Executive Order 12866, 'Regulatory Planning and Review'. It has been certified that 32 CFR part 286 does not: (1) Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy; a section of the economy; productivity; competition; jobs; the environment; public health or safety; or State, local, or tribal governments or communities; (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another Agency; (3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or

means any item, collection, or grouping of information about an individual that is maintained by an agency, including, but not limited to, his education, financial transactions, medical history, and criminal or employment history and that contains his name, or the identifying number, or symbol, or other identifying particular assigned to the individual, such as a finger or voice print or a photograph, as defined in the Privacy Act. Request for access to a record means a request made under subsection (d)(1) of the Privacy Act. Request for amendment or correction of a record means a request made under subsection (d)(2) of the Privacy Act. Request for an accounting means a request made under subsection (c)(3) of the Privacy Act. Requester means an individual who makes a request for access, a request for amendment or correction, or a request for an accounting under the Privacy Act. System of records means any group of records under the control of the Department of Defense from which information is retrieved by the name of the individual or by some other identifying number, symbol, or other identifying particular assigned to the individual as defined in the Privacy Act. Subpart B-Requests for Access and Amendment to Records §-310.3 Requesting access to records. (a) Individuals may request access to records in a system of records or request to be notified if a system of records contains records pertaining to them by writing to or appearing in person before the DoD Component that maintains the record. Written requests should be sent to the address listed in the record access procedures of the system of records notice (SORN) containing the record requested. If the name of the system of records or the address for the DoD Component that has the record is unknown, the individual may look up the SORN or the contact information for the DoD Component Privacy Office at <http://www.defense.gov/privacy>. (b) For access to the Official Personnel Files of federal civilian employees, which are maintained in the custody of the Department under the authority of the Office of Personnel Management (OPM) SORN OPM/GOVT-1, individuals must contact their DoD Component FOIA Requester Service Center. Contact information for DoD Component FOIA Requester Service Centers can be found at <https://www.foia.gov/report-makerequest.html>. (c) Requesters should provide their full name, current address and email address, and when requested in the access procedures of the applicable SORN, date of birth, place of birth, and telephone number, to assist the DoD Component in responding to the request and providing released records to the requester. The requester must sign the request and have it notarized or submit the request under 28 U.S.C. 1746

Supply Chain Raw materials are utilized to support the continuous operation of the manufacturing process. Raw materials are typically supplied through a long-term contract established with suppliers and are transported to the facility on a regular basis. Westman is committed to protecting its trade secrets, including product development, manufacturing processes, product quality, and supply chain management.

One comment asked whether the stipulation that CCIs must not disclose CMMC data or metrics applies to all data or only 'non-public' data. Consistency: One commenter asked for clarification regarding templates and formats required for information uploaded into the CMMC instantiation of eMASS. Response: The DoD has incorporated a request to delete the word 'enhance' from §-170.1(b), and the purpose of the CMMC Program now reads that the CMMC Program is designed as a compliance assessment

to assist in DoD's enforcement of information safeguarding requirements. Lower level paragraphs in § 170.3 have been reordered for added clarity. The words "and to the DoD via CMMC eMASS" have been added to the end of the Assessment Findings Report definition in § 170.4(b). In addition, § 170.9(b)(17) has been rephrased to stipulate that all assessment data and information uploaded into the CMMC instantiation of eMASS must be compliant with the data standard provided in the eMASS CMMC Assessment Import Templates available on the CMMC eMASS website. The DoD replaced the word "granting" with the word "conducting" in the description of C3PAO assessments in § 170.9(a). Sections 170.9(b)(9) and (b)(20) have been modified to eliminate redundancy between the two paragraphs, however the DoD did not concur that §§ 170.9(b)(17) and (18) are redundant and made no change. Section 170.18(c)(1)(i) was revised to clarify that the CMMC Assessment Scope for Level 3 must be equal to or a subset of the CMMC Assessment Scope for the Level 2 certification assessment of the system in question. Section 170.19 was revised to clarify that, for CMMC Level 2, OSAs will be assessed against all Level 2 requirements. For CMMC Level 3, OSAs will be assessed against all Level 2 and Level 3 requirements. Section 170.1 has been revised to correct punctuation and improve grammar. The section now conveys more clearly that the CMMC Program is designed as a compliance assessment to assist in DoD's enforcement of information safeguarding requirements. No changes were made regarding use of "not logically or physically isolated from all such CUI systems". Specifying a CMMC Assessment Scope is a necessary preparatory step for a CMMC assessment. Assessment requirements are specified in § 170.19. At Levels 2 and 3, logical or physical isolation is the primary mechanism used to separate in-scope from out-of-scope assets. CRMA and Specialized Asset categories only apply to assets that are within the Assessment Scope or boundary. § 170.6(b) has been revised to reference DFARS clause 252.204-7020 rather than DFARS clause 252.204-7012. In addition, § 170.05 was revised to reference DFARS clause 252.204-7012, rather than DFARS 204.73, for consistency and clarity. The title of § 170.16(c)(1) has been updated to specify self-assessment of the OSA. DoD declined to make other administrative changes because they would not result in a substantive change.

. This proposed standard would require a regulated entity to establish and implement a plan for reducing the risks identified through its risk analysis activities. Specifically, it would require a regulated entity to implement security measures sufficient to reduce risks and vulnerabilities to all ePHI to a reasonable and appropriate level. What would constitute a reasonable and appropriate level depends on the regulated entity's specific circumstances, including but not limited to its size, needs and capabilities, risk profile, the ability of security measures to reduce or eliminate a particular identified risk or vulnerability, and the ubiquity of such security measures. We also propose four implementation specifications that would require regulated entities to engage in activities that are consistent with previously issued guidance described below. Under the proposed implementation specification for planning at proposed paragraph (a)(5)(ii)(A), a regulated entity would be required to establish and implement a written risk management plan for reducing risks to all ePHI, including, but not limited to, those risks identified by the regulated entity's risk analysis, [500] to a reasonable and appropriate level. Proposed paragraph (a)(5)(i)(B) contains the proposed implementation specification for maintenance and would require the regulated entity to review the written risk management plan at least once every 12 months, and as reasonable and appropriate in response to changes in its risk analysis. The Department would interpret "reasonable and appropriate" in both paragraphs as requiring the regulated entity to take into account not only its specific circumstances, but also the criticality of the risks identified. We propose an implementation specification for priorities at proposed 45 CFR 164.308(a)(5)(ii)(C) that would require a regulated entity's written risk management plan to prioritize the risks identified in the regulated entity's risk analysis based on the risk levels determined by that analysis. Finally, in the proposed implementation specification for implementation at proposed 45 CFR 164.308(a)(5)(ii)(D) , we propose to require that a regulated entity implement security measures in a timely manner to address the risks identified in the regulated entity's risk analysis in accordance with the priorities established under paragraph (a)(5)(ii)(C). The proposed risk management standard aligns with the Department's essential CPG to Mitigate Known Vulnerabilities. [501] The Department previously issued guidance on risk management, including links to NIST resources, that is consistent with what we propose in this NPRM. [502] We encourage regulated entities to refer to similar NIST guidance for descriptions of risk management activities. [503]

Multiple comments recommended adding all the omitted requirements from NIST SP 800-172 Feb2021 or a subset including Network Intrusion Detection System, Deception and Unpredictability, arguing that they are necessary for protecting CUI and to defend against advanced persistent threats. Two

comments inferred that the requirement to restrict access to systems owned, provisioned or issued by the OSC means that the OSC must provide all equipment used to access the system, which they asserted is impossible because outside entities using GFE, to include DoD, may need access. One commenter also asked if DIB Furnished Equipment would be required, and one commenter argued for an exception for GFE, even though it is not owned, provisioned, or issued by the OSC. Three comments stated that Organizationally Defined Parameters (ODP) values need to be set by OSAs, not DoD. One commenter argued this will be necessary because of the emerging ODPs at Level 2 associated with NIST SP 800-171 Revision 3. One commenter argued this is critical for uniformity across the Federal enterprise as many contractors support multiple Federal agencies. The commenter further offered that allowing ODP values to be set by OSAs could be limited to contractor systems not operated on behalf of the DoD. One commenter suggested that ODP values set by OSAs may require approval by the contracting officer. One comment stated that the ODPs are too detailed for the 32 CFR part 170 CMMC Program rule, and table 1 to § 170.14 should be moved to the Level 3 Assessment Guide. One comment argued that removal or quarantine of components to facilitate patching or re-configuration, as specified in table 1 to § 170.14(c)(4) CM.L3-3.4.2e, is a disruptive and (printed page 83145) possibly a destructive operational constraint affecting business operations. They asserted that patching and reconfiguration are standard day-to-day IT administrative activity, and components do not need to be removed or quarantined. One comment asserted that CMMC should be based on NIST SP 800-53 R5 requirements (linked to the associated NIST SP 800-172 Feb2021 requirements) due to additional labor required to create NIST SP 800-53 R5 solutions and benefits to be gained from NIST SP 800-53 R5 overlays. Two comments argued that IA:L3-3.5.3e regarding 'the prohibition of system components from connecting to organizational systems unless certain conditions are met' is essentially the same requirement as CM:L2-3.4.7 'restricting, disabling, or preventing the use of nonessential programs, functions, ports, protocols, and services'. Response:

overall before attempting to define more specific relationships. 4. The direction of the mapping. A mapping could indicate how a concept in source A maps to a concept in source B, vice versa, or both. As Section 4 discusses, many mappings either have an obvious direction or are inherently directionless, so explicitly indicating the direction of mapping is often not necessary. 5. How exhaustive the mapping will be. An exhaustive mapping will not be necessary in most cases, such as mapping between concept systems in different domains (e.g., NICE Framework roles to Secure Software Development Framework [SSDF] categories) or at different levels of abstraction (e.g., CSF to SP 800-53 controls). Mapping indirect or tenuous relationships would create so many mappings that they would lose their value. Instead, we recommend capturing the strongest direct relationships between concepts. This helps keep the mapping clear and in line with the stated use case, targets the needs of the audience, and helps them prioritize their work.

The contractor will categorize the information system and the information processed, stored, and transmitted by the information system based on an impact analysis. Unless imposed by contract, the information system baseline is moderate-confidentiality, low-integrity, and low-availability. (3) Select. The contractor will select an initial set of baseline security controls for the information system based on the security categorization; tailoring and supplementing the security control baseline as needed based on an organizational assessment of risk and local conditions. (4) Implement. The contractor will implement the security controls and document how the controls are deployed within the information system and the operational environment. (5) Assess. The contractor will assess the security controls to determine the extent to which the controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting the security requirements for the information system. The contractor will review and certify to the CSA that all systems have the appropriate protection measures in place. (6) Authorize. The CSA will use the information provided by the contractor to make a timely, credible, and risk-based decision to authorize the system to process classified information. The CSA must authorize the system before the contractor can use the system to process classified information. (7) Monitor. The contractor will monitor and assess selected security controls in the information system on an ongoing basis: (i) Effectiveness of security controls. (ii) Documentation of changes to the information system and the operational environment. (iii) Analysis of the security impact of changes to the information system. (iv) Making appropriate reports to the CSA. (f) Unclassified information systems that process, store, or transmit CUI. While outside the requirements of the NISPOM, contractors will comply with contract requirements regarding contractor information systems that process, store, or transmit CUI. § 117.19 International security requirements. (a) General. This section provides information and procedures governing the protection of classified information

in international programs. (b) Disclosure of classified U.S. information to foreign interests. (1) Applicable federal law. The transfer of articles, services, and related data to a foreign person, within or outside the United States, or the movement of such material or information to any destination outside of the legal jurisdiction of the United States constitutes an export. Depending on the nature of the articles or data, most exports are pursuant to (1) 22 U.S.C. chapter 39, also known and referred to in this rule as the Arms Export Control Act, (2) 50 U.S.C. 4801 et seq., also known as the Export Control Reform Act of 2018, or (3) the AEA. This section applies to those exports that involve classified information. (2) Security agreements. (i) Bilateral security agreements (e.g.,

(b) The requirements of this part do not apply to government information systems operated by contractors or subcontractors on behalf of the Government. (c) CMMC Program requirements apply to all DoD solicitations and contracts pursuant to which a defense contractor or subcontractor will process, store, or transmit FCI or CUI on unclassified contractor information systems, including those for the acquisition of commercial items (except those exclusively for COTS items) valued at greater than the micro-purchase threshold except under the following circumstances: (1) The procurement occurs during Implementation Phase 1, 2, or 3 as described in paragraph (e) of this section, in which case CMMC Program requirements apply in accordance with the requirements for the relevant phase-in period; or (2) Application of CMMC Program requirements to a procurement or class of procurements may be waived in advance of the solicitation at the discretion of DoD in accordance with all applicable policies, procedures, and approval requirements. (d) DoD Program Managers or requiring activities are responsible for selecting the CMMC Level that will apply for a particular procurement or contract based upon the type of information, FCI or CUI, that will be processed on, stored on, or transmitted through a contractor information system. Application of the CMMC Level for subcontractors will be determined in accordance with § 170.23. (e) DoD is utilizing a phased approach for the inclusion of CMMC Program requirements in solicitations and contracts. Implementation of CMMC Program requirements will occur over four (4) phases: (1) Phase 1. Begins on the effective date of the CMMC revision to DFARS 252.204-7021. DoD intends to include CMMC Level 1 Self-Assessment or CMMC Level 2 Self-Assessment for all applicable DoD solicitations and contracts as a condition of contract award. DoD may, at its discretion, include CMMC Level 1 Self-Assessment or CMMC Level 2 Self-Assessment for applicable DoD solicitations and contracts as a condition to exercise an option period on a contract awarded prior to the effective date. DoD may (printed page 89120) also, at its discretion, include CMMC Level 2 Certification Assessment in place of CMMC Level 2 Self-Assessment for applicable DoD solicitations and contracts. (2) Phase 2. Begins six months following the start date of Phase 1. In addition to Phase 1 requirements, DoD intends to include CMMC Level 2 Certification Assessment all for applicable DoD solicitations and contracts as a condition of contract award. DoD may, at its discretion, delay the inclusion of CMMC Level 2 Certification Assessment to an option period instead of as a condition of contract award. DoD may also, at its discretion, include CMMC Level 3 Certification Assessment for applicable DoD solicitations and contracts. (3) Phase 3.

CIS Safeguard 10.4 · Configure Automatic Anti-Malware Scanning of Removable Media Configure anti-malware software to automatically scan removable media. Implementation Groups: 2,3 Asset Type: devices Security Function: detect Parent Control: Malware Defenses

Section 170.21 addresses rules for having a POA&M for the purposes of a CMMC assessment and satisfying contract eligibility requirements for CMMC. All POA&Ms must be closed within 180 days of the Conditional CMMC Status Date. To satisfy CMMC Level 1 requirements, a POA&M is not allowed. To satisfy CMMC Level 2 requirements, a POA&M is allowed. Section 170.21 details the overall minimum score that must be achieved (printed page 83103) and identifies the Level 2 security requirements that cannot have a POA&M and must be fully met at the time of the assessment. To satisfy CMMC Level 3 requirements, a POA&M is allowed. Section 170.21 details the overall minimum score that must be achieved and identifies the Level 3 security requirements that cannot have a POA&M and must be fully met at the time of the assessment. Section 170.21 also established rules for closing POA&Ms. Section 170.22·Affirmation Section 170.22 addresses that the OSA's Affirming Official must affirm, in SPRS, compliance with the CMMC Status: upon completion of any self-assessment, certification assessment, or POA&M closeout assessment (as applicable), and annually following a Final CMMC Status Date. Section 170.23·Application to Subcontractors Section 170.23 addresses flow down of CMMC requirements from the prime contractor to the subcontractors in the supply chain. Prime contractors shall comply and shall require subcontractor compliance throughout

the supply chain at all tiers with the applicable CMMC Level for each subcontract as addressed in § 170.23(a). Section 170.24-CMMC Scoring Methodology Section 170.24 addresses the assessment finding types MET, NOT MET, and NOT APPLICABLE (N/A) in the context of CMMC assessments, and the CMMC Scoring Methodology used to measure the implementation status of security requirements for CMMC Level 2 and CMMC Level 3. Scoring is not calculated for CMMC Level 1 since all requirements must be MET at the time of assessment. For CMMC Level 2, the maximum score is the total number of Level 2 security requirements and is the starting value for assessment scoring. Any security requirement that has one or more NOT MET objectives reduces the current score by the value of the specific security requirement. Values for each CMMC Level 2 requirement are enumerated in § 170.24(c)(2)(i)(B). For CMMC Level 3, the maximum score is the total number of Level 3 security requirements and is the starting value for assessment scoring. Any security requirement that has one or more NOT MET objectives reduces the current score by the value of the specific security requirement. CMMC Level 3 does not use varying values; the value for each requirement is one (1), as described in § 170.24(c)(3). Appendix A to Part 170: Guidance Appendix A lists the guidance documents that are available to support defense contractors and the CMMC Ecosystem in the implementation and assessment of CMMC requirements. Discussion of Public Comments and Resulting Changes

Contribution of This NOI to the Internet Policy Task Force: Responses to this Notice will assist the Department's Internet Policy Task Force in preparing a report on cybersecurity, innovation and the Internet economy. The primary purposes of the report will be to identify and evaluate cybersecurity challenges facing commercial actors and consumers outside the critical infrastructure and key resources sectors to analyze various approaches to meet those challenges. The Department would also like to know how it can improve its execution of core cybersecurity responsibilities, including those supporting CIKR sectors and their customers. The Task Force's report may include options and recommendations for changes in public policy, as well as recommendations for voluntary steps that will enhance the commercial sector's and consumers' cybersecurity preparedness. The Task Force is hopeful that the dialogue launched here and the responses to this inquiry will contribute to Administration-wide policy positions and global cybersecurity strategy. Request for Comment The primary focus of this inquiry, as reflected above and in the questions listed below, is on enhancing the cybersecurity practices of commercial actors, consumers, and citizens outside the CIKR sectors. Activities involving government systems, other critical infrastructures and key resources receive attention from the Department of Homeland Security and other agencies. As such, they are not the main subject of this inquiry. The questions below are intended to help frame the issues and should not be construed as a limitation on comments that parties may submit. Comments containing references, studies, research, and other empirical data that are not widely published should include copies of the referenced materials. Comments will be posted at <http://www.ntia.doc.gov/internetpolicytaskforce> and <http://csrc.nist.gov>. 1. Quantifying the Economic Impact Prior to releasing this NOI, the Task Force conducted listening sessions with a wide range of stakeholders in order to understand the issues that have the greatest bearing on cybersecurity preparedness and continued growth of the Internet economy. During those conversations, the Task Force heard that while cybersecurity threats continue to pose challenges for Internet users and services providers, it appears difficult to assess the macro- and microeconomic impact of cybersecurity incidents with current tools. It is hard to manage that which one cannot measure. Losses related to Internet fraud (e.g.,

The SBA size thresholds are discussed in Section V.C. Regulatory Flexibility Act-Small Entity Analysis of this NPRM. The Department also estimated the percentage of rural and urban health care providers by matching health care provider data from CMS, [951] Health Resources & Services Administration, [952] and the Statistics of U.S. Businesses (SUSB) [953] with county population data from the U.S. Census Bureau. [954] We determined whether a health care provider was rural or urban based on OMB's standards for delineating metropolitan and micropolitan statistical areas. [955] Consistent with OMB's standard, we considered a county to be rural if it has fewer than 50,000 inhabitants. [956] This includes micropolitan areas (towns and cities between 10,000 and 49,999) and counties outside of metropolitan statistical areas and micropolitan areas. Based on this analysis, we estimate that 7-8 percent of health care providers operate in rural areas. Estimated Number and Type of Business Associates The Department adopts the estimate of approximately 1,000,000 business associates (including subcontractors) as stated in the 2024 ICR and the 2013 Modifications to the HIPAA Privacy, Security, Enforcement, and Breach Notification Rules Under the Health Information Technology for Economic and Clinical Health [HITECH] Act and the

Genetic Information Nondiscrimination Act, and Other Modifications to the HIPAA Rules· final rule.

[957] We considered whether to increase this figure in our updates but did not do so because many business associates serve multiple covered entities. We lack sufficient data to estimate the number of such businesses more precisely, but we believe that the number of business associates is highly dynamic and dependent on multiple market factors, including expansion and consolidation among various lines of business, changing laws and legal interpretations, and emerging technologies. We include subcontractors of business associates within our estimate because they are business associates of business associates. The Department welcomes comments on the number or type(s) of regulated entities that would be affected by the proposals in this proposed rule and the extent to which they may experience costs or other burdens not already accounted for in the cost estimates. The Department also requests comment on the number of health plan documents that would need to be revised, if any. The Department additionally requests detailed comment on any situations, other than those identified here, in which covered entities or business associates would be affected by the proposals in this rulemaking. Health Plan Sponsors Within this NPRM, the Department is for the first time including estimates of health plan sponsors' potential costs of compliance with specific (printed page 997)

(2) If a portion of the record contains information that is exempt from access, an extract or summary containing all of the information in the record that is releasable shall be prepared. (3) When the physical condition of the record or its state makes it necessary to prepare an extract for release, ensure the extract can be understood by the requester. (4) Explain to the requester all deletions or changes to the records. (f) Access to medical records. (1) Access to medical records is not only governed by the access provisions of this part but also by the access provisions of DoD 6025.18-R. The Privacy Act, as implemented by this part, however, provides greater access to an individual's medical record than that authorized by DoD 6025.18-R. (2) Medical records in a system of records shall be disclosed to the individual to whom they pertain, even if a minor, but when it is believed that access to such records could have an adverse effect on the mental or physical health of the individual or may result in harm to a third party, the following special procedures apply. (i) If a determination is made in consultation with a medical doctor that release of the medical information may be harmful to the mental or physical health of the individual or to a third party, the Component shall: (A) Send the record to a physician named by the individual; and (B) In the transmittal letter to the physician explain why access by the individual without proper professional supervision could be harmful (unless it is obvious from the record). (ii) The Component shall not require the physician to request the records for the individual. (3) If the individual refuses or fails to designate a physician, the record shall not be provided. Such refusal of access is not considered a denial under the Privacy Act (see paragraph (a) of § 310.18). (4) If records are provided the designated physician, but the physician declines or refuses to provide the records to the individual, the DoD Component is under an affirmative duty to take action to deliver the records to the individual by whatever means deemed appropriate. Such action should be taken expeditiously especially if there has been a significant delay between the time the records were furnished the physician and the decision by the physician not to release the records. (5) Access to a minor's medical records may be granted to his or her parents or legal guardians. However, access is subject to the restrictions as set forth at paragraph C9.7.3 of DoD 6025.18-R. (6) All members of the Military Services and all married persons are not considered minors regardless of age, and the parents of these individual do not have access to their medical records without written consent of the individual. (g) Access to information compiled in anticipation of civil action (see § 310.27). (h) Non-Agency Records.

aim is valid. There are also legislative restrictions regarding certain types of technology, such as cryptography, that require federal agencies to use only tested and validated cryptographic modules. Federal agencies, industry, and the public rely on cryptography for the protection of information and communications used in electronic commerce, critical infrastructure, and other application areas. At the core of all products offering cryptographic services is the cryptographic module. Cryptographic modules, which contain cryptographic algorithms, are used in products and systems to provide security services such as confidentiality, integrity, and authentication. Although cryptography is used to provide security, weaknesses such as poor design or weak algorithms can render the product insecure and place highly sensitive information at risk. Adequate testing and validation of the cryptographic module and its underlying cryptographic algorithms against established standards is essential to provide security assurance.

(A) Pursuant to a submission received before March 29, 2023, provided that the covered entity or business associate deploys in a timely manner any updates or patches required or recommended by the manufacturer of the device. (B) Pursuant to a submission received on or after March 29, 2023, where the device is no longer supported by its manufacturer, provided that the covered entity or business associate has deployed any updates or patches required or recommended by the manufacturer of the device. (C) Pursuant to a submission received on or after March 29, 2023, where the device is supported by its manufacturer. (4) Alternative measures. (i) Alternative measures. Where an exception at paragraph (b)(3) of this section applies, a covered entity or business associate must document in real-time the existence of an applicable exception and implement reasonable and appropriate compensating controls in accordance with paragraph (b)(4)(ii) of this section. (ii) Compensating controls. (A) To the extent that a covered entity or business associate determines that an exception at paragraph (b)(3)(i), (ii), or (iii) or (b)(3)(iv)(A) or (B) of this section applies, the covered entity or business associate must secure such electronic protected health information by implementing reasonable and appropriate compensating controls reviewed and approved by the covered entity's or business associate's designated Security Official. (B) To the extent that a covered entity or business associate determines that an exception at paragraph (b)(3)(iv)(C) of this section applies, the covered entity or business associate shall be presumed to have implemented reasonable and appropriate compensating controls where the covered entity or business associate has deployed the security measures prescribed and as instructed by the authorized label for the device, including any updates or patches recommended or required by the manufacturer of the device. (C) To the extent that a covered entity or business associate is implementing compensating controls under this paragraph (b)(4)(ii), the implementation and effectiveness of compensating controls must be reviewed, documented, and signed by the designated Security Official at least once every 12 months or in response to environmental or operational changes, whichever is more frequent, to continue securing electronic protected health information and relevant electronic information systems. (printed page 1018) (5) Maintenance. Review and test the effectiveness of the technical controls required by this paragraph (b) at least once every 12 months or in response to environmental or operational changes, whichever is more frequent, and modify as reasonable and appropriate. (c) Standard: Configuration management. (1) General.

·Revise § 170.12(b)(5) to state that CCIs may serve on an assessment team for a student's company, provided the CCI does not provide consulting to an OSC during delivery of the CMMC Instruction or breach other conflict of interest rules, and add that the CCI must be a currently certified CCA and conduct at least one certified or mock assessment under the direction of a C3PAO annually. ·Revise § 170.12(b)(6) to allow CCIs to craft exam objectives and content, as CCIs are the most in tune with issues faced by candidate CCPs and CCAs. ·Strike § 170.12 altogether, because potential Col concerns will be rare and can be managed by existing conflicts of interest mechanisms; clarify that while serving as a CMMC instructor means limited only to while actively teaching or any time while the person holds the CCI certification; and that Col concerns could be addressed by the addition of an Instructor Code of Conduct. One commenter also suggested this section would significantly decrease the available pool of CMMC instructors, as they would be forced to choose between instructing and consulting, which may be a more lucrative option. They also claimed it prevented CCIs who teach CCP/CCA courses at night from providing consulting services during the day. ·Impose a three- or four-year prohibition on ecosystem members from participating in the CMMC assessment process for an assessment in which they previously served as a consultant or since the OSC last obtained CMMC certification, whichever is most recent. ·Add language to §§ 170.11 and 170.13 to clarify if an individual consults with a defense industrial base company, they are prohibited from participating as a CMMC assessor for that same company. ·Update § 170.8(b)(ii)(17)(ii)(G) and add a time limit to this requirement to ensure a consultant can perform assessments, given an appropriate amount of time has passed. ·Revise § 170.8(b)(17)(ii)(G) to say, Prohibit CMMC Ecosystem members from participating in the CMMC assessment process for a CMMC assessment in which they previously served as an employee or consultant to prepare the organization for any CMMC assessment, as both an OSC employee and a CCPA/CCP serving as a consultant would face identical Col. ·Provide more detail on the scope of CCA and CCP conflict of interest disclosure required, particularly around the definition of process, store, or transmit in § 170.4(b). ·More narrowly tailor the Col requirement in § 170.8(b)(17)(i)(D) and more expressly identify the perceived conflicts of interest scenarios to help ecosystem members avoid legal risk. ·Rewrite § 170.8(b)(17)(iii)(C) to clarify what constitutes a satisfactory record of integrity and business ethics. ·Provide more detail in § 170.10(b)(11) on the term separation of duties, so CCAs know whether they can volunteer to develop test questions or provide training. Response

Summary:

AC.L2-3.1.1 · Authorized Access Control [CUI Data] CMMC Assessment Guide · Level 2 | Version 2.13

15 DISCUSSION [NIST SP 800-171 REV. 2]12 Access control policies (e.g., identity - or role-based policies, control matrices, and cryptography) control access between active entities or subjects (i.e., users or processes acting on behalf of users) and passive entities or objects (e.g., devices, files, records, and domains) in systems. Access enforcement mechanisms can be employed at the application and service level to provide increased information security. Other systems include systems internal and external to the organization. This requirement focuses on account management for systems and applications. The definition of and enforcement of access authorizations, other than those determined by account type (e.g., privileged versus [sic] non-privileged) are addressed in requirement 3.1.2 (AC.L2-3.1.2). FURTHER DISCUSSION Identify users, processes, and devices that are allowed to use company computers and can log on to the company network. Automated updates and other automatic processes should be associated with the user who initiated (authorized) the process. Limit the devices (e.g., printers) that can be accessed by company computers. Set up your system so that only authorized users, processes, and devices can access the company network. This requirement, AC.L2-3.1.1, controls system access based on user, process, or device identity. AC.L2-3.1.1 leverages IA.L2-3.5.1 which provides a vetted and trusted identity for access control. Example 1 Your company maintains a list of all personnel authorized to use company information systems, including those that store, process, and transmit CUI [a]. This list is used to support identification and authentication activities conducted by IT when authorizing access to systems [a,d]. Example 2 A coworker wants to buy a new multi-function printer/scanner/fax device and make it available on the company network within the CUI enclave. You explain that the company controls system and device access to the network and will prevent network access by unauthorized systems and devices [c]. You help the coworker submit a ticket that asks for the printer to be granted access to the network, and appropriate leadership approves the device [f]. Potential Assessment Considerations · Is a list of authorized users maintained that defines their identities and roles [a]? · Are account requests authorized before system access is granted [d,e,f]? 12 NIST SP 800-171 Rev. 2, p. 10.

3.1.2 | 3. 3.1.2 Security Objectives and Types of Potential Losses As reflected in Table 1, FISMA and FIPS 199 define three security objectives for information and information systems. 3.1.2, the organizational entity responsible for impact determination must assign impact levels and consequent security categorization for the missionbased and management and support information types identified for each information system.

We assume that the potential records destroyed (after retention requirements have been met) as a result of the access requirement would be from the set of establishments with the poorest food safety practices. To determine the percent of firms with the poorest food safety practices, we obtained information from FDA personnel indicating that inspections of approximately 3 to 4 percent of all FDA-regulated food and cosmetic facilities from 2001 to 2003 were classified as official action indicated (Ref. 20). Based on this information, we assume that the incentive for records destruction will result in approximately 3 to 4 percent of firms destroying their records after 24 months, with destruction taking place shortly after retention commitments have been met. (printed page 71630) We assume that the private utility of records decreases over time, and that the rate at which records subject to 6 months retention are destroyed shortly after meeting the retention requirement is half that for records subject to 12 months retention, which is half that for records subject to 24 months retention. Consequently, an estimated 0.5 percent of records subject to the 6 month retention time are assumed to be destroyed shortly after the 6 months have been met (i.e., the solution for $\cdot X \cdot$ when solving the algebraic problem, $3.5 \text{ percent} = X + 2X + 4X$, where 3.5 percent is the midpoint between 3 and 4 percent and the rate at which all records are destroyed, X is the rate that records subject to the 6 month retention requirements are destroyed, $2X$ is the rate that records subject to 12 month retention requirements are destroyed, and $4X$ is the rate that records subject to the 24 month retention requirements are destroyed.). The destruction of records is estimated to affect about 0.02 percent of access requests (i.e., 0.5 percent records destruction rate x 3.3 percent of records requests made after 6 months). Finally, we assume that records destruction will slow down and terminate traceback investigations at the same rates at which the destruction takes place. Consequently, we estimate that both traceback speeds and rates of successful traceback completions will decline by 0.02 percent because of access requests when the requested records had been destroyed because of retention requirements. c. Extending the compliance dates

5. The 1965 Brooks Act gave the National Bureau of Standards (now NIST) responsibilities for

federal information technology standards. Public Law 89-306 (Oct. 30, 1965). The Computer Security Act of 1987 reaffirmed the responsibilities of NIST for the security of unclassified, non-military government computer systems. Public Law. 100-235 (Jan. 8, 1988). Under the law, the role of the National Security Agency (NSA) was limited in the civilian security realm to providing technical assistance. The 2002 Cyber Security Research and Development Act authorized funding to NIST for computer and network security research and established status reporting requirements. Public Law 107-305 (Nov. 27, 2002). The 2002 Federal Information Security Management Act provided for development and maintenance by NIST of minimum controls required to protect federal information and information systems. Title III of Public Law 107-347 (Dec. 17, 2002). Back to Citation 6.

See 47 U.S.C. 902 (b)(2)(D) (providing that NTIA has "[t]he authority to serve as the President's principal adviser on telecommunications policies pertaining to the Nation's economic and technological advancement and to the regulation of the telecommunications industry."); see also Federal Communications Commission, *Connecting America: The National Broadband Plan*, at 55 (2010), <http://download.broadband.gov/plan/national-broadband-plan.pdf>. In 1993, the White House formed the Information Infrastructure Task Force (White House Task Force), chaired by the Secretary of Commerce, to develop telecommunications and information policies to promote the development of the Internet. In 1997, the White House Clinton Administration published *A Framework for Global Electronic Commerce*. This was the work of an interagency working group of high level representatives of several cabinet agencies, including the Departments of Treasury, State, Justice and Commerce, as well as the Executive Office of the President, including the Council of Economic Advisors, the National Security Council, the Office of Science and Technology Policy, the Office of the Vice President, and the U.S. Trade Representative. Independent commissions including the Federal Communications Commission and the Federal Trade Commission also contributed to the working group. In several instances, the Framework notes NTIA's collaborative efforts, in conjunction with other federal agencies, such as the State Department, Federal Trade Commission, U.S. Trade Representative, to explore opportunities for international cooperation to protect consumers and to prosecute false, deceptive, and fraudulent commercial practices in cyberspace. President William J. Clinton and Vice President Albert Gore, Jr., *A Framework for Global Electronic Commerce* (1997) (pagination not available), <http://clinton4.nara.gov/WH/New/Commerce/>; see also Memorandum on Electronic Commerce, 33 Weekly Comp. Pres. Doc 1006 (July 1, 1997). Back to Citation

3.3.1 Current Authentication Practice... 3.3.1 Current Authentication Practice The most common and critical form of communication, voice communication via LMR, does not require authentication, as described in Section 2.

The Security Rule does not currently include a definition for the term "risk." The Department considered defining it when it first promulgated the final rule in 2003, but declined to do so because it determined that the term was commonly understood. [379] However, the Department now believes that the lack of a definition may affect the clarity of some key requirements for regulated entities. Such requirements include conducting a risk analysis to assess the potential risks and vulnerabilities to the confidentiality, integrity, and availability of ePHI held by the regulated entity [380] and implementing security measures sufficient to reduce risks and vulnerabilities to a reasonable and appropriate level to comply with the general rules at 45 CFR 164.306(a) . [381] One of the ways NIST defines the term is as "a measure of the extent to which an entity is threatened by a potential circumstance or event, and typically a function of: (i) the adverse impacts that would arise if the circumstance or event occurs; and (ii) the likelihood of occurrence." [382] This and other NIST definitions serve as helpful references for the Department when considering how to define the term within the rule.

b. Proposal The Department proposes to define "risk" as the extent to which the confidentiality, integrity, or availability of ePHI is threatened by a potential circumstance or event. The Department believes that defining the term would clarify several existing and proposed provisions of the Security Rule, such as the factors regulated entities must consider when determining the security measures they will implement [383] and the importance and purpose of conducting the required risk analysis. [384] 15.

Clarifying the Definitions of "Security or Security Measures" and "Security Incident"

a. Current Provision and Issues To Address The Security Rule defines "security or security measures" as encompassing all of the administrative, physical, and technical safeguards in an information system. [385] The definition implies that the safeguards must be part of the information system, as opposed to something that may be applied or done to a system to protect the confidentiality, integrity, and availability of ePHI.

From the NIST SP 800-172 Rev 3 Final Public Draft: confidentiality 2852 Preserving authorized restrictions on information access and disclosure, including means for protecting personal privacy and proprietary information. [20] configuration management A collection of activities focused on establishing and maintaining the integrity of information technology products and systems through the control of processes for initializing, changing, and monitoring the configurations of those products and systems throughout the system development life cycle. configuration settings The set of parameters that can be changed in hardware, software, or firmware that affect the security posture or functionality of the system. controlled unclassified information Information that law, regulation, or government-wide policy requires to have safeguard

We revised the estimated costs of the final rule in response to comments on the proposed rule and to account for the changes between the proposed and final rules. The final rule will cover more (printed page 71612) than 1 million entities at a cost of approximately \$1.41 billion in present value with a 7-percent discount rate. With a discount rate of 3 percent, the estimated present value of the costs is approximately \$1.94 billion. Costs for learning, records redesign, and planning for records access requests are one-time costs incurred in the first 2 years following publication of the final rule. Additional records maintenance costs and records retention costs are incurred each year following publication of the rule beginning in the second year for large and small firms, and in the third year for very small firms. Learning costs and records access planning costs for new entrants are also incurred each year following publication of the final rule beginning after the second year. The total cost estimate can be computed by summing the costs estimated for learning, records redesign, additional records maintenance, records retention, and planning for a records access request. The annual and total costs of the final rule are reported in table 1 of this document. The recurring annual costs of the final rule (the sum of additional records maintenance and learning for new firms) are about \$123 million. The annualized costs of this final rule are \$108,000 using a 3-percent discount rate and \$110,000 using a 7-percent discount rate. Table 1. Estimated Annual and Total Recordkeeping Costs 1 21 CFR Section Costs (in dollars) 1.337, 1.345, and 1.352 (learning) \$85,082,000 1.337, 1.345, and 1.352 (records redesign) \$205,239,000 1.337, 1.345, and 1.352 (additional records maintenance) \$114,701,000 1.337, 1.345, and 1.352 (learning for new firms) \$8,508,200 Discounted present value of total costs 2 \$1,406,356,000 1 The annual costs are reported in undiscounted terms. Records access planning costs and records retention costs are estimated to be zero and are not reported here. 2 The reported discounted present value of total costs assumes a 7-percent discount rate and a 20-year time horizon over which annual costs are summed.

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Defense General Services Administration National Aeronautics and Space Administration 48 CFR Parts 1, 2, 4, 52, and 53 [FAC 2020-07; FAR Case 2015-002; Item I; Docket No. FAR-2015-0002; Sequence No. 1] RIN 9000-AN40 AGENCY: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA). ACTION: Final rule. SUMMARY: DoD, GSA, and NASA are issuing a final rule amending the Federal Acquisition Regulation (FAR) to require electronic submission of the DD Form 254, Contract Security Classification Specification. DATES: Effective: August 3, 2020. FOR FURTHER INFORMATION CONTACT: Mr. Curtis E. Glover, Sr., Procurement Analyst, at 202-501-1448 or curtis.glover@gsa.gov for clarification of content. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202-501-4755. Please cite FAR Case 2015-002. SUPPLEMENTARY INFORMATION: I. Background DoD, GSA, and NASA published a proposed rule in the Federal Register at 84 FR 33201 on July 12, 2019, proposing to amend the FAR to update and clarify the requirements for using the DD Form 254, Contract Security Classification Specification. This rule amends the FAR, in part, to provide procedures for use of the DD Form 254 and the requirement to use the Procurement Integrated Enterprise Environment (PIEE), to Streamline the submission process for the existing DD Form 254 and enable businesses to submit an electronic form once, instead of repeated paper submissions; Require use of the DD Form 254 by nondefense agencies that have industrial security services agreements with DoD, and DoD components, to specify the security classification for a contract involving access to information classified as Confidential, Secret, or Top Secret; Require agency preparation of the DD Form 254 using the National Industrial Security Program Contracts Classification System module of the PIEE unless a nondefense agency has an existing DD

Form 254 information system. Five respondents submitted comments on the proposed rule. II. Discussion and Analysis The Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (the Councils) reviewed the public comments in the development of the final rule. A discussion of the comments is provided as follows: A. Summary of Significant Changes

. Another policy option considers extending each of the proposed compliance dates by 6 months: Large, small, and very small firms would be required to be in compliance with the regulation 12, 18, and 24 months, respectively, after publication of the final rule instead of the proposed 6, 12, and 18 months after publication. The longer compliance dates reduce the time savings for a preventive action for 50 percent of the annual number of traceback investigations, and lead to a 50 percent increase in the annual number of outbreak investigations prematurely terminated for records quality reasons. Unlike the reduction in the benefits from the other policy options considered, these are one-time decreases in the benefits, because the option only extends the initial baseline compliance times by 6 months. d. Exemption of all very small entities . FDA also considered whether it should exempt all entities with ten or fewer employees, not just those in the retail sector as is provided in the final rule; however, this would create a ‘Swiss Cheese’ approach to trace back, as there would be a potential failure of entities to keep records throughout the distribution chain. The number of very small entities account for a large fraction of the total number of food establishments. Moreover, many of our failures in a typical trace back investigation (i.e., unclassified scenarios) have been at the wholesaler (distributor) level. As discussed above, we would have significant concerns if 90 percent of the transporters (as very small entities) would be excluded from the requirements to establish and maintain records, particularly if these are predominantly intrastate transporters that are not currently subject to DOT’s requirements. (FDA notes that intrastate shipments carried by interstate transporters also are not subject to DOT’s requirements.) In light of the above, FDA does not believe we would have an effective recordkeeping system if we were to exempt all very small entities from the rule. Unlike the very small retailers who are at the end of the distribution chain only, a full exemption by size would create holes throughout the distribution chain and would not provide FDA adequate assurances that, in the event of a threat of serious adverse health consequences or death to humans or animals, FDA would be able to conduct an efficient and effective traceback investigation. F. Costs 1. Estimates of the Number of Facilities Affected By the Final Rule In the PRIA, FDA estimated the number of transporters and packers from data in the 2000 County Business Pattern statistics (Ref. 21) and the 1999 Nonemployer statistics (NES) (Ref. 22). We assumed that local and long distance specialized freight carriers devoted exclusively to transporting food were about 20 percent of the total of the specialized freight category. In the PRIA, FDA requested comments on the assumption that 20 percent was appropriate for this estimate.

An authorized or accredited C3PAO must perform a Level 2 certification assessment in accordance with NIST SP 800-171A Jun2018 (incorporated by reference, see § 170.2) and the CMMC Level 2 scoping requirements set forth in § 170.19(a) and (c) for the information systems within the CMMC Assessment Scope. The Level 2 certification assessment must be scored in accordance with the CMMC Scoring Methodology described in § 170.24 and the C3PAO must upload the results into the CMMC instantiation of eMASS. Final results are communicated to the OSC through a CMMC Assessment Findings Report. (2) Security requirement re-evaluation. A security requirement that is NOT MET (as defined in § 170.24) may be re-evaluated during the course of the Level 2 certification assessment and for 10 business days following the active assessment period if all of the following conditions exist: (i) Additional evidence is available to demonstrate the security requirement has been MET; (ii) Cannot change or limit the effectiveness of other requirements that have been scored MET; and (iii) The CMMC Assessment Findings Report has not been delivered. (3) POA&M. If a POA&M exists, a POA&M closeout certification assessment must be performed by a C3PAO within 180-days of the Conditional CMMC Status Date. Additional guidance can be found in § 170.21 and in the guidance document listed in paragraph (c) of appendix A to this part. (4) Artifact retention and integrity. The hashed artifacts used as evidence for the assessment must be retained by the OSC for six (6) years from the CMMC Status Date. To ensure that the artifacts have not been altered, the OSC must hash the artifact files using a NIST-approved hashing algorithm. The OSC must provide the C3PAO with a list of the artifact names, the return value of the hashing algorithm, and the hashing algorithm for upload into the CMMC instantiation of eMASS. Additional guidance for hashing artifacts can be found in the guidance document listed in paragraph (h) of appendix A to this part. (5) Level 2 certification assessment with the use of Cloud Service Provider (CSP). An OSC may use a cloud environment to process, store, or transmit CUI in performance of a contract or subcontract with a requirement for

the CMMC Status of Level 2 (C3PAO) under the following circumstances: (i) The CSP product or service offering is FedRAMP Authorized at the (printed page 83230) FedRAMP Moderate (or higher) baseline in accordance with the FedRAMP Marketplace; or (ii) The CSP product or service offering is not FedRAMP Authorized at the FedRAMP Moderate (or higher) baseline but meets security requirements equivalent to those established by the FedRAMP Moderate (or higher) baseline. FedRAMP Moderate or FedRAMP Moderate equivalent is in accordance with DoD Policy.

Revision to Include Updates in Cybersecurity Framework Version 1.1 The Cybersecurity Framework Manufacturing Profile, NISTIR 8183, is scheduled to be revised to include the updates in the Cybersecurity Framework Version 1.1, and will be published as NISTIR 8183, Revision 1. Once NISTIR, 8183, Revision 1 has been released, this implementation guide will be revised to include the updates in the Cybersecurity Framework Version 1.1 as well, and will be published as NISTIR 8183A, Revision 1.

and NIST [SP 800-124]: Guidelines for Managing the Security of Mobile Devices in the Enterprise .
`` ## 4. Eliminate Unnecessary Ports, Services, and Protocols (Least Functionality) Devices are configured to allow only the necessary ports, protocols, and services in accordance with functional needs and the risk tolerance in the organization.

, (k)(1), (k)(2), (k)(3), (k)(4), (k)(5), (k)(6), and (k)(7). (iii) Reasons. Records are only exempt from pertinent provisions of 5 U.S.C. 552a to the extent such provisions have been identified and an exemption claimed for the original record, and the purposes underlying the exemption for the original record still pertain to the record which is now contained in this system of records. In general, the exemptions were claimed in order to protect properly classified information relating to national defense and foreign policy, to avoid interference during the conduct of criminal, civil, or administrative actions or investigations, to ensure protective services provided the President and others are not compromised, to protect the identity of confidential sources incident to Federal employment, military service, contract, and security clearance determinations, and to preserve the confidentiality and integrity of Federal evaluation materials. The exemption rule for the original records will identify the specific reasons why the records are exempt from specific provisions of 5 U.S.C. 552a . §-310.15 Department of the Army exemptions. (a) Special exemption. 5 U.S.C. 552a(d)(5) ·Denies individual access to any information compiled in reasonable anticipation of a civil action or proceeding. (b) General and specific exemptions. The Secretary of the Army may exempt Army systems of records from certain requirements of the Privacy Act of 1974. The two kinds of exemptions that require Secretary of the Army enactment are general and specific exemptions. The general exemption authorizes the exemption of a system of records from most requirements of the Act; the specific exemptions authorize the exemption of a system of record from only a few. (c) General exemptions. Only Army activities actually engaged in the enforcement of criminal laws as their principal function may claim the general exemption. See 5 U.S.C. 552a(j)(2) . To qualify for this exemption, a system must consist of: (1) Information compiled to identify individual criminal offenders and alleged offenders, which consists only of identifying data and arrest records; type and disposition of charges; sentencing, confinement, and release records; and parole and probation status; (2) Information compiled for the purpose of criminal investigation including reports of informants and investigators, and associated with an identifiable individual; or (printed page 14745) (3) Reports identifiable to an individual, compiled at any stage of the process of enforcement of the criminal laws, from arrest or indictment through release from supervision. (d) Specific exemptions. The Secretary of the Army has exempted all properly classified information and systems of records that have the following kinds of information listed in this section, from certain parts of the Privacy Act. The Privacy Act exemption reference appears in parentheses after each category.

Public comments received illustrate that some small businesses may be unaware of how to propose cybersecurity-related costs for cost-type contracts. This rule does not change existing contract cost principles or procedures. For firm-fixed priced efforts, market supply and demand dictates profitability and bid prices, and underlying costs are not itemized. 9. Disputes Regarding CMMC Assessments Comment: Multiple commenters asked about the CMMC assessment dispute resolution process, with regard to which standards would be followed, how much time would be available to appeal findings, the types of complaints that could be raised, any limits to the costs or schedule required for dispute resolution, and roles and responsibilities of the DoD, C3PAOs, and the Accreditation Body. Commenters also wanted to know whether a tiered recourse process would be

available to resolve contractor objections to the initial resolution. Two commenters expressed concerns regarding potential impacts of C3PAO assessment errors. Two commenters requested clarification regarding whether the CMMC Level required by the DoD or a prime contractor could be contested. Response: The CMMC assessment appeal process (formerly referred to as dispute resolution) described in the DFARS Case 2019-D041 Supplementary Information has changed and is described in § 170.9(b)(20) and § 170.8(b)(16). The appeals process is derived from and consistent with ISO/IEC 17020:2012 and ISO/IEC 17011:2017. Each C3PAO is required to have a time-bound, internal appeals process to address disputes related to perceived assessor errors, malfeasance, and unethical conduct. Requests for appeals will be reviewed and approved by individual(s) within the C3PAO not involved in the original assessment activities in question. OSCs can request a copy of the process from their C3PAO. If a dispute regarding assessment findings cannot be resolved by the C3PAO, it will be escalated to the Accreditation Body. The decision by the Accreditation Body will be final. A request for an appeal about an assessor's professional conduct that is not resolved with the C3PAO will be escalated and resolved by the Accreditation Body. The issue of C3PAO liability is between an OSC and the C3PAO with which it contracts to do the assessment. Any questions about the CMMC Level required by the solicitation should be directed to the contracting officer for the affected contractor. 10. Acceptance of Alternate Standards a. NIST SP 800-171 Rev 2 DoD Assessments and CMMC Assessments Comment: Multiple commenters asked for clarification on reciprocity between NIST SP 800-171 Rev 2 DoD Assessments and CMMC assessments. Response:

to clarify the organization of regulatory text and to clarify its longstanding expectations that policies and procedures must be in writing and to replace ·contain· with ·maintain,· consistent with terminology used throughout the HIPAA Rules. The Department believes that having written policies for the disposal of ePHI and the technology assets on which it is stored and for the removal of ePHI from electronic media such that the ePHI cannot be recovered continues to be important to ensuring the physical safety of ePHI. Improper disposal of technology assets puts the ePHI stored in or on such assets at risk for a potential breach, and as discussed elsewhere, data breaches can result in substantial costs to regulated entities and the individuals affected by the breach. We also propose in the related implementation specifications at 45 CFR 164.310(d)(2)(i) and (ii) to require that written policies and procedures for disposal of ePHI and sanitization of electronic media be tied to current standards for sanitizing electronic media before the media are made available for re-use. [653] For example, photocopiers today are often connected to the same network as workstations and generally store the information, including ePHI, transmitted to them. This capability is a significant change from photocopier capabilities that existed when the Security Rule was first issued in 2003. Under this proposal, a regulated entity would be required to include in its written policies and procedures for disposing of ePHI, and the technology assets on which it is maintained, policies and procedures addressing ePHI maintained on photocopiers, consistent with the current standards for disposing and removing ePHI from electronic media. [654] We have previously explained in guidance that a regulated entity should consider all of the following as part of its risk analysis: Disposal of hardware and software, and the documentation of such disposal. Destruction of ePHI in such a manner that it cannot be recreated. Secure removal of ePHI that was previously stored on hardware or electronic media such that it cannot be accessed and reused. The identification of all removable media and their use (e.g., CDs/DVDs, USB flash drives). (printed page 962) The removal of all ePHI from reusable media before the media are reused. [655] Our guidance describes these considerations in greater detail. For example, regulated entities should consider how to address the replacement of technology assets, including devices and media. [656] Technology assets that need to be replaced should be decommissioned, meaning that they are taken out of service before the final disposition of such assets. [657]

The Food and Drug Administration (FDA) is issuing final regulations pertaining to the dissemination of information on unapproved uses (also referred to as “new uses” and “off-label uses”) for marketed drugs, including biologics, and devices. The final rule describes the new use information that a manufacturer may disseminate and describes the content of and establishes procedures for a manufacturer's submission to FDA before it may begin disseminating information on the new use. The final rule also describes how manufacturers seeking to disseminate information on a new use must agree to submit a supplemental application for that use within a specified period of time, unless a supplemental application already has been submitted or FDA has exempted the manufacturer from the requirement to submit a supplement. The final rule provides for requests to extend the time period for submitting a supplemental application for a new use and describes how a manufacturer can seek an exemption from the requirement to submit a supplemental application for the new use. Additionally,

the final rule discusses FDA actions in response to manufacturers' submissions, corrective actions that FDA may take or require, and recordkeeping and reporting requirements. The final rule implements sections 551 through 557 of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 360aaa through 360aaa-6) as amended by section 401 of the Food and Drug Administration Modernization Act of 1997 (FDAMA).

(i) The DIB participants shall not share GFI outside of their company or organization, regardless of personnel clearance level, except as authorized in this part or otherwise authorized in writing by the Government. (j) If the DIB participant utilizes a third-party service provider (SP) for information system security services, the DIB participant may share GFI with that SP under the following conditions and as authorized in writing by the Government: (1) The DIB participant must identify the SP to the Government and request permission to share or disclose any GFI with that SP (which may include a request that the Government share information directly with the SP on behalf of the DIB participant) solely for the authorized purposes of this program; (2) The SP must provide the Government with sufficient information to enable the Government to determine whether the SP is eligible to receive such information, and possesses the capability to provide appropriate protections for the GFI; (3) Upon approval by the Government, the SP must enter into a legally binding agreement with the DIB participant (and also an appropriate agreement with the Government in any case in which the SP will receive or share information directly with the Government on behalf of the DIB participant) under which the SP is subject to all applicable requirements of this part and of any supplemental terms and conditions in the DIB participant's FA with the Government, and which authorizes the SP to use the GFI only as authorized by the Government. (k) The DIB participant may not sell, lease, license, or otherwise incorporate the GFI into its products or services, except that this does not prohibit a DIB participant from being appropriately designated an SP in accordance with paragraph (j) of this section. §.236.5 Cyber security information sharing. (a) GFI. The Government shall share GFI with DIB participants or designated SPs in accordance with this part. (b) Initial incident reporting. The DIB participant shall report to DC3/DCISE cyber incidents involving covered defense information on a covered DIB system. These initial reports will be provided within 72 hours of discovery. DIB participants also may report other cyber incidents to the Government if the DIB participant determines the incident may be relevant to information assurance for covered defense information or covered DIB systems or other information assurance activities of the Government. (c) Follow-up reporting. After an initial incident report, the Government and the DIB participant may voluntarily (printed page 62437) share additional information that is determined to be relevant to a reported incident, including information regarding forensic analyses, mitigation and remediation, and cyber intrusion damage assessments. (d) Cyber intrusion damage assessment.

AU.L2-3.3.1 · System Auditing CMMC Assessment Guide · Level 2 | Version 2.13 74 In defining the audit log retention period, OSAs must ensure that logs are retained for a sufficiently long period to allow for the investigation of a security event. The retention period must take into account the delay of weeks or months that can occur between an initial compromise and the discovery of attacker activity. Example You set up audit logging capability for your company. You determine that all systems that contain CUI must have extra detail in the audit logs. Because of this, you configure these systems to log the following information for all user actions [b,c]: · time stamps; · source and destination addresses; · user or process identifiers; · event descriptions; · success or fail indications; and · filenames. Potential Assessment Considerations · Are audit log retention requirements appropriate to the system and its associated level of risk [e]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.3.1

- . Office of Management and Budget (OMB) policy decisions - . Congressional legislation - . Selection of categories within major Department of Defense efforts such as the Corporate Information Management (CIM) and/or Computer-aided Acquisition and Logistics Support (CALS) Noel Nazario (NIST) summarized the developments in the labeling effort since the previous workshop. These include: Ron Sharp (AT&T) represented the Trusted Systems Interoperability Group (TSIG) . Mr. Sharp described the TSIG as a very informal group of implementors interested in developing interoperable trusted distributed systems. The TSIG is engaged in projects such as CIPSO, Trusted X-Windows, Trusted Network File Systems (NFS), Trusted Session Management, and Trusted Sockets. The current focus for TSIG members is the TCP/IP communications protocol but the door remains open for a transition to OSI as markets emerge. In developing CIPSO the TSIG adopted and modified original work done by Sun Microsystems and Hewlett-Packard. The group has spawned an Internet Working Group whose purpose is

to present CIPSO as an Internet Request for Comment (RFC) . Mr. Sharp enumerated reasons for the development of CIPSO, its main features, and presented the label format. His presentation slides and the current version of the CIPSO specification appears on page 55 of this document.

The speakers specialize in cyber attack methods, attack warning and detection, and cyber countermeasures. They have presented numerous talks on cloud forensics, cyber adversaries and advanced persistent threats to a wide range of public and government audiences.

CA.L2-3.12.2 · operational Plan of Action CMMC Assessment Guide · Level 2 | Version 2.13 204

FURTHER DISCUSSION When you write a plan of action, define the clear goal or objective of the plan.

You may include the following in the action plan: · ownership of who is accountable for ensuring the plan's performance; · specific steps or milestones that are clear and actionable; · assigned responsibility for each step or milestone; · milestones to measure plan progress; and · completion dates. This requirement, CA.L2 -3.12.2, which ensures developing and implementing operational plans of action to correct and reduce vulnerabilities in systems, is driven by risk management requirement RA.L2-3.11.1, which promotes periodically assessing risk to organizational systems. CA.L2-3.12.2 promotes monitoring security controls on an ongoing basis as defined in requirement CA.L2-3.12.3. An operational plan of action in accordance with CA.L2 -3.12.2 differs from a CMMC assessment POA&M as described in 32 CFR § 170.21. The assessment POA &M places conditions on which security requirements can be assessed as NOT MET and allows the OSA to qualify for a CMMC Status of Conditional Level 2 (Self), Conditional Level 2 (C3PAO), or Conditional Level 3 (DIBCAC) . Operational plans of action are not subject to the 180 day POA&M closeout requirement. Severity, availability of remediation, and business requirements are among the factors to consider when creating and maintaining operational plans of action. Example As IT director, one of your duties is to develop action plans when you discover that your company is not meeting security requirements or when a security issue arises [b]. A recent vulnerability scan identified several items that need to be addressed so you develop a plan to fix them [b]. Your plan identifies the people responsible for fixing the issues, how to do it, and when the remediation will be completed [b]. You also define how to verify that the person responsible has fixed the vulnerability [b]. You document this in an operational plan of action that is updated as milestones are reached [b]. You have a separate resource review the modifications after they have been completed to ensure the plan has been implemented correctly [c]. Potential Assessment Considerations · Is there an action plan to remediate identified weaknesses or deficiencies [a]? · Is the action plan maintained as remediation is performed [b]? · Does the action plan designate remediation dates and milestones for each item [c]?

This Recommendation specifies a message authentication code (MAC) algorithm based on a symmetric key block cipher. This block cipher-based MAC algorithm, called CMAC, may be used to provide assurance of the authenticity and, hence, the integrity of binary data. authentication; block cipher; cryptography; information security; integrity; message authentication code; mode of operation CMAC, like any well-designed MAC algorithm, provides stronger assurance of data integrity than a checksum or an error detecting code. The verification of a checksum or an error detecting code is designed to detect only accidental modifications of the data, while CMAC is designed to detect intentional, unauthorized modifications of the data, as well as accidental modifications.

FedRAMP safeguards and controls are based upon the requirements of NIST SP 800-53 and specify the requirements that must be met for a cloud offering depending on the designation of the information system as a low, moderate, or high FIPS 199 impact level, which then equates to a single FedRAMP impact level. Based on a survey of the FedRAMP Marketplace website, most of the FedRAMP-authorized cloud service providers offer solutions designated as moderate FedRAMP impact level; Therefore, the Government bases the effort and resources needed to implement the requirements of FAR clause 52.239-XX on a cloud FIS designated as a FedRAMP moderate impact level. The safeguards and controls required to meet a FedRAMP moderate impact level include and build upon the NIST SP 800-53 requirements for existing non-cloud FIS systems. As such, the rule uses the costs to implement NIST SP 800-53 for non-cloud FIS as a starting point and then accounts for the additional costs and impacts for contractors to implement approximately 16 additional NIST SP 800-53 controls, which are not required for non-cloud FISs, to be compliant with FedRAMP moderate impact level requirements. Subject matter expects estimate that the effort to implement these 16 additional controls, and those requirements for multifactor authentication, administrative accounts, and consent banners, is approximately 25 percent of the total estimated hours and cost to implement NIST SP 800-53.

Therefore, contractors awarded a contract involving a cloud FIS are anticipated to expend between 2,900 (2,300 hours * 1.25) and 8,200 hours (6,500 hours * 1.25) and \$273,000 (\$218,000 * 1.25) and \$854,000 (\$683,000 * 1.25) in labor and materials in year one to implement, and between \$158,000 (\$127,000 * 1.25) and \$598,000 (478,000 * 1.25) each following year to maintain compliance with NIST SP 800-53 and the contract requirements on multifactor authentication, administrative accounts, and consent banners. Based on the discussion above, the total annual estimated cost for 56 contractors that develop, implement, operate, or maintain a cloud FIS to maintain compliance with FedRAMP requirements, and the requirements specified in the contract as identified above, in year one is approximately \$46 million, and approximately \$32,000,000, each following year to maintain compliance with FedRAMP requirements and the contract, as specified. The cost of the compliance includes the time needed to read and implement NIST SP 800-53 requirements, as well as the additional NIST SP 800-53 controls needed to be compliant with FedRAMP and the contract requirements regarding multifactor authentication, administrative accounts, and consent banners. The following is a summary of the total initial and subsequent year costs to the public as described in section IV.

Requirement	Number of entities impacted	Estimated total cost- first year	Estimated total cost- each subsequent year
Regulatory Familiarization	252	\$183,700	N/A

Computer Security Training & Awareness Course Compendium ## Computer Security Training & Awareness Course Compendium This National Institute of Standards and Technology (NIST) Interagency Report (NISTIR) is a compendium of computer security training and awareness courses. The purpose of this publication is to assist federal agencies locate computer security training resources. This publication is part of a continuing NIST effort to support federal agencies in accordance with NIST's mandate under the Computer Security Act of 1987. In addition to the table of contents, which lists the courses, there are four appendices: A) lists the courses by training areas within audience categories as defined in NIST Special Publication 500-172, Computer Security Training Guidelines; B) lists the vendors that participated in this effort; C) lists the specific products for which training is available; and D) lists the product specific courses.

FAR 4.403-7 requires the contracting officer to insert the clause at FAR 52.204-XX, Controlled Unclassified Information, or the clause at FAR 52.204-YY, Identifying and Reporting Information That Is Potentially Controlled Unclassified Information, and to insert the provision at FAR 52.204-WW, Notice of Controlled Unclassified Information Requirements, in solicitations and contracts, excluding solicitations and contracts solely for the acquisition of commercially available off-the-shelf (COTS) items. FAR 4.404 clause prescription is moved to FAR 4.403-7. Coverage from FAR subpart 4.19 has been moved to FAR 4.404. Several organizational changes, including relocation of text and definitions from FAR subpart 4.19, improve the logical flow of information. (printed page 4280) FAR 4.404-1 adds definitions for ·covered contractor information system· and ·covered Federal information·. The term ·Federal contract information· was changed to ·covered Federal information· to align with the term ·covered contractor information system·, and the definition of ·covered Federal information· was revised to clarify that the term excludes CUI and classified information. The definition of ·covered Federal information· is also amended in FAR clause 52.204-21, Basic Safeguarding of Covered Contractor Information Systems. FAR 4.404-2, Applicability, has been added to state that while covered Federal information is not required to be marked or identified by the Government, some administrative markings (e.g., draft, deliberative process, predecisional, not for public release) can indicate that the information is covered Federal information. FAR 4.404-3 has been added to require the contracting officer to insert the clause at FAR 52.204-21, Basic Safeguarding of Covered Contractor Information Systems, in solicitations and contracts, excluding solicitations and contracts solely for the acquisition of COTS items or Federally-funded basic and applied research in science, technology, and engineering at colleges, universities, and laboratories in accordance with National Security Decision Directive 189 when the agency does not provide any covered Federal information to the contractor. FAR 4.404-3 replaces the clause prescription section at FAR 4.1903. The prescription for the clause at FAR 52.204-21 was updated to match the prescription for the CUI clause, because, while both types of information are likely to be in a wide range of contracts, covered Federal information is more ubiquitous than CUI and it may be difficult for the contracting officer to identify during development of the solicitation when covered Federal information may be applicable for the procurement. FAR 4.1301 and 4.1303 have been updated to remove the references to ·PUB Number· and ·PUB· and edit the term ·Federally-controlled information system· to make it ·Federal information system·. (5) FAR 7.103, Agency-head responsibilities. New language is added to describe agency planners' responsibilities for compliance with

Response: Based on DoD decision criteria that include the type and sensitivity of program information to be shared, Program Managers will identify and coordinate as appropriate the CMMC requirement in the solicitation. Internal policies for implementation of CMMC requirements by DoD's acquisition community have been developed, and work will continue as needed to integrate CMMC policies into relevant acquisition policies, guidebooks, and training materials. The DoD intends that requiring activities will determine when compliance should be assessed through CMMC Level 3 as part of the ordinary acquisition planning and requirements generation process. The CMMC assessment level required does not change based on acquisition lifecycle phase, but based on whether FCI and CUI are processed, stored, or transmitted on contractor owned information systems. All contractor-owned information systems that process, store, or transmit CUI are subject to the requirements of NIST SP 800-171 when DFARS clause 252.204-7012 is included in the contract. c. CMMC Level 3 Determination Comment: Multiple comments requested further clarification about which types or categories of CUI require enhanced protection against Advanced Persistent Threats (APTs) at CMMC Level 3 and whether the CMMC level would be based on the Program or the data. Two comments expressed concern or asked how DoD Components will avoid assigning CMMC Level 3 requirements to too many contracts. One comment recommended that DoD modify its criteria for CMMC Level 3 to consider factors such as Acquisition Program Category. Response: CMMC levels do not correspond to CUI levels as the CMMC Program requirements make changes to neither the CUI Program, categories of CUI, nor existing DoD policies for information security requirements. The CMMC Flow down requirement is defined in §.170.23. The Requiring Activity knows the type and sensitivity of information that will be shared with or developed by the awarded contractor and selects the CMMC Level required to protect the information according to DoD guidance. The DoD declines to modify CMMC Level 3 selection criteria as described in the commenters recommended alternatives, which have no bearing on DoD's need for increased confidence in a contractor's ability to safeguard certain CUI against Advanced Persistent Threats. The value of information, and impact of its loss, does not diminish based on the total number or dollar value of contracts held by the awardee, or acquisition program category. The DoD reserves the right to decide when compliance should be assessed by the Government through CMMC Level 3 certification. The DoD defines the work requirements to be solicited for any given program contract. d. Environments Processing Both FCI and CUI Comment:

And FDA agrees: ·AI technologies are transforming health care by producing diagnostic, therapeutic, and prognostic medical recommendations, or decisions, in some cases independently, informed by the vast amount of data generated during the delivery of health care.· [895] In medical devices, areas for AI application include: Image acquisition and processing Early disease detection More accurate diagnosis, prognosis, and risk assessment Identification of new patterns in human physiology and disease progression Development of personalized diagnostics Therapeutic treatment response monitoring [896] For example, clinicians are using AI to distill large volumes of EHR information about a complex patient into a summarized note that they can use to consider diagnoses and treatment. AI also has been used for aid in the detection of diabetic retinopathy, screening for breast and lung cancer, and classification of skin conditions. [897] Others are using ambient AI scribes, a technology that uses microphones to transcribe encounters with patients in real-time. [898] This tool creates clinical documentation that clinicians can later edit, which can lead to improved interactions with patients and reduced time on documentation. [899] Newer AI tools may search medical records for relevant information regarding common conditions and other risk factors [900] or offer relevant questions for clinicians to pose to make an accurate diagnosis. [901] Unfortunately, AI can also be used to harm individuals, both intentionally and unintentionally. Bad actors are using generative AI to threaten the privacy and security of ePHI more effectively through phishing and other social engineering. As explained by NCVHS, ·AI tools can create mass scale [cyberattacks] that are highly effective and major threats to ePHI.· [902] Experts anticipate that AI ·will ultimately pioneer the malicious use of [. . .] ·Offensive AI·highly sophisticated and malicious attack code·[that] will be able to mutate itself as it learns about its environment, and to expertly compromise systems with minimal chance of detection.· [903] Such experts are concerned about the level of destruction that will lie in its wake and compare it to an arms race that can only escalate. [904] Indeed, it seems likely that regulated entities will need to invest in AI to defend against malicious use of AI in the future. [905] After assessing current and potential AI threats, NCVHS recommended that the Department clarify how the HIPAA Rules apply to AI. [906] We agree with their assessment and recommendation. Specifically, ePHI, including ePHI in AI training data, prediction models, and algorithm data that is maintained by a regulated entity for covered functions is protected by the HIPAA Rules and all

applicable standards and specifications. [907] For example, generative AI tools have produced in their output the names and personal information of persons included in the tools' sources of training data. [908]

CMMC provides uniform and improved DoD cybersecurity requirements in three (3) levels, using the security requirements in NIST SP 800-171 and NIST SP 800-172. With this rule, the Department is publishing supplemental guidance documents to assist the public and in particular, small businesses, with CMMC implementation, increasing the likelihood of successful implementation and strengthening cybersecurity across the DIB. CMMC decreases the burden and cost on companies protecting FCI by allowing all companies at Level 1, and a subset of companies at Level 2, to demonstrate compliance through self-assessments. CMMC allows companies, under certain limited circumstances, to make a Plan of Action & Milestones (POA&M) to provide additional time to achieve final certification assessment. These key updates to CMMC benefit the DoD and our national interest by providing: improved safeguarding of competitive advantages through requirements flow-down to the defense contractor supply chain and protections for proprietary information and capabilities, and increased efficiency in the economy and private markets as a result of the streamlining of cybersecurity requirements, the resulting improvements in cybersecurity, and accountability across the supply chain. In summary, the CMMC Program enforces and validates implementation of DoD's required cyber protection standards for companies in the DIB, preserving U.S. technical advantage. In addition, CMMC increases security for the most sensitive unclassified information by applying additional requirements. Implementation of CMMC will help protect DoD's sensitive unclassified information upon which DoD systems and critical infrastructure rely, making it vital to national security. (printed page 89102) CMMC is focused on securing the Department's supply chain, including the smallest, most vulnerable innovative companies. The security risks that result from the significant loss of FCI and CUI, including intellectual property and proprietary data, make implementation of the CMMC Program vital, practical, and in the public interest. III. Regulatory Compliance Analysis A. Executive Order 12866 , ·Regulatory Planning and Review· and Executive Order 13563 , ·Improving Regulation and Regulatory Review· These Executive Orders direct agencies to assess all costs, benefits, and available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health, safety effects, distributive impacts, and equity). These Executive Orders emphasize the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. The Office of Management and Budget (OMB) has determined this proposed rule is significant as defined by Section 3(f)(1) for purposes of Executive Order 12866 . B. Congressional Review Act (5 U.S.C. 801 et seq.) As defined by 5 U.S.C. 804(2)

844. ·While we are proposing in this NPRM in 45 CFR 164.308(a)(13)(i) to specifically include a security incident as an example of an emergency or occurrence that may damage a relevant electronic information system for which a contingency plan would be required, we believe that this is a clarification, rather than a change. Back to Citation

Some contractors awarded a contract involving a non-cloud FIS will reference NIST SP 800-30 to develop and ensure risk assessment processes and procedures for the system incorporate the requirements of the publication. It is estimated that all 6 contractors awarded a contract involving a non-cloud, custom-build FIS, as well as 4 contractors (20 percent) awarded a contract involving an existing non-cloud FIS will expend approximately 120 hours (3 employees * 8 hours/day * 5 days) reading to become more familiar with and developing or adjusting processes and procedures to comply with NIST SP 800-30 in year one. Using an average loaded wage rate of \$91.10 for FIS occupations, the total estimated labor cost for a contractor to comply with NIST SP 800-30 is approximately \$10,900 (120 hours * \$91.10). ix. NIST SP 800-63-3. Contractors may reference the current version of this guidance for more specific information regarding NIST SP 800-53 controls. As such, the Government assumes that the 28 contractors awarded a contract involving a non-cloud FIS will read and better familiarize themselves with this publication in conjunction with and as a part of their familiarization efforts and costs for NIST SP 800-53. x. NIST SP 800-34. Contractors will reference the current version of this guidance to align its contingency plans for all IT systems to the requirements of NIST SP 800-34. This guidance will be applicable to all contracts involving a custom-build system, as these plans will need to be developed for when a new non-cloud FIS is being designed, as well as some contracts involving existing systems where current plans need to be modified to comply with the guidance. As such, the Government assumes all 6 contractors awarded a contract involving a custom-build, non-cloud FIS and 4 (20 percent * 22) of the contractors awarded a contract involving an existing, non-cloud FIS will expend effort to read and better familiarize themselves with the publication and develop new or adapt existing plans to the guidance of NIST SP 800-34. Some contractors awarded a contract involving a non-cloud FIS will reference this guidance when developing new contingency plans for custom-build FISs and reviewing plans for some existing FISs to ensure the contractor's IT systems meet the requirements set forth in NIST SP 800-34. It is estimated that all 6 contractors awarded a contract involving a non-cloud, custom-build FIS, as well as 4 (20 percent) contractors awarded a contract involving an existing non-cloud FIS will expend approximately 120 hours (3 employees * 8 hours/day * 5 days) reading to become more familiar with and developing or adjusting plans to comply with NIST SP 800-34 in year one. Using an average loaded wage rate of \$91.10 for FIS occupations, the total estimated labor cost for a contractor to comply with NIST SP 800-34 is \$10,900(120 hours * \$91.10). 3. Annual Assessments of the FIS

The Director of Defense Procurement has issued a final rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to add a requirement for contractor employees that are cleared for access to certain classified information to attest orally that they will comply with the security requirements associated with the information.

Given the failure of regulated entities to implement the security awareness and training standard and consistent with existing guidance, the Department proposes to provide more detailed requirements for security awareness training. Specifically, the Department proposes to rename and redesignate the standard for security awareness and training at 45 CFR 164.308(a)(5)(i) as the standard for security awareness training at proposed 45 CFR 164.308(a)(11)(i) and to add a paragraph heading to clarify the organization of the regulatory text. The proposed standard would require a regulated entity to implement security awareness training for all workforce members on protection of ePHI and information systems as necessary and appropriate for the members of the workforce to carry out their assigned function(s) (i.e., role-based training). The proposals to revise this standard would also align with the Department's essential CPG for Basic Cybersecurity Training because they would require a regulated entity to educate users on how to access ePHI and electronic information systems in a manner that protects the confidentiality, integrity, and availability of ePHI. [584] Additionally, the proposals would align with the essential CPG for Email Security by requiring a regulated entity to train workforce members to guard against, detect, and report suspected or known security incidents, including, but not limited to, malicious software and social engineering. [

585] We propose four implementation specifications for the proposed security awareness training standard. The proposed implementation specification for training at 45 CFR 164.308(a)(11)(ii)(A) would require a regulated entity to establish and implement security awareness training for all workforce members that addresses the following: The written policies and procedures required by the Security Rule, as necessary and appropriate for the workforce members to carry out their assigned functions. [586] Guarding against, detecting, and reporting suspected or known security incidents, including but not limited to malicious software and social engineering. [587] The written policies and procedures for accessing the regulated entity's electronic information systems, including, but not limited to, safeguarding passwords, setting unique passwords of sufficient strength to ensure the confidentiality, integrity, and availability of ePHI, and establishing limitations on sharing passwords. Consistent with the recommendation from NCVHS, such policies and procedures should ensure that the regulated entity does not employ default passwords and should prevent workforce members from sharing of credentials. [588] We do not propose that passwords be required to meet a particular standard because best practices for password configuration may change over time; however, we believe that it is essential for a regulated (printed page 953)

A0195-2a USACIDC, Source Register. (i) Exemption. Parts of this system may be exempt pursuant to 5 U.S.C. 552a(j)(2) if the information is compiled and maintained by a component of the agency which performs as its principal function any activity pertaining to the enforcement of criminal laws. Therefore, portions of this system of records may be exempt pursuant to 5 U.S.C. 552a(j) (2) from subsections 5 U.S.C. 552a(c)(3) , (c)(4), (d), (e)(1), (e)(2), (e)(3), (e)(4)(G), (e)(4)(H), (e)(4)(I), (e)(5), (e)(8), (f), and (g). (ii) Authority. 5 U.S.C. 552a(j)(2) . (iii) Reasons. (A) From subsection (c)(3) because the release of the disclosure accounting would permit the subject of a criminal investigation or matter under investigation to obtain valuable information concerning the nature of that investigation which will present a serious impediment to law enforcement. (B) From subsection (c)(4) because an exemption is being claimed for subsection (d), making this subsection not applicable. (C) From subsection (d) because access to the records contained in this system would inform the subject of a criminal investigation of the existence of that investigation, provide the subject of the investigation with information that might enable him to avoid detection or apprehension, and would present a serious impediment to law enforcement. (D) From subsection (e)(1) because in the course of criminal investigations, information is often obtained concerning the violation of laws or civil obligations of others not relating to an active case or matter. In the interests of effective law enforcement, it is necessary that this valuable information be retained since it can aid in establishing patterns of activity and provide valuable leads for other agencies and future cases that may be brought. (E) From subsection (e)(2) because in a criminal investigation, the requirement that information be collected to the greatest extent possible from the subject individual would present a serious impediment to law enforcement in that the subject of the investigation would be placed on notice of the existence of the investigation and would therefore be able to avoid detection. (F) From subsection (e)(3) because the requirement that individuals supplying information be provided with a form stating the requirements of subsection (e)(3) would constitute a serious impediment to law enforcement in that it could compromise the existence of a confidential investigation, reveal the identity of confidential sources of information and endanger the life and physical safety of confidential informants. (G) From subsections (e)(4)(G) and (e)(4)(H) because portions of this system of records have been exempted from access provisions of subsection (d), making these subsections not applicable. (H) From subsection (e)(4)(I) because the identity of specific sources must be withheld in order to protect the confidentiality of the sources of (printed page 14753)

Findings from DoD Inspector General report (DODIG-2019-105 ·Audit of Protection of DoD CUI on Contractor-Owned Networks and Systems·) indicate that DoD contractors did not consistently implement mandated system security requirements for safeguarding CUI. That report included recommendations for DoD take steps to assess a contractor's ability to protect this information. The report emphasizes that malicious actors can exploit vulnerabilities in contractors' information systems and exfiltrate information related to some of the Nation's most valuable advanced defense technologies. Due to these shortcomings and the associated risks to national security, the Department developed the Cybersecurity Maturity Model Certification (CMMC) Program to assess contractor and subcontractor implementation of DoD's required cybersecurity standards. The CMMC Program verifies compliance with DoD cyber protection standards by defense contractors and subcontractors and is designed to protect FCI and CUI that is shared by the Department with its contractors and subcontractors, and when developed by a contractor in the course of contract performance but not shared. The program

incorporates a set of cybersecurity requirements into acquisition contracts and provides the Department increased assurance that contractors and subcontractors are meeting these requirements. The CMMC Program has three key features: Tiered Model: CMMC requires that companies demonstrate, through assessment that they have implemented cybersecurity requirements. The type of assessment and requirements against which it is conducted are selected based on the information that must be safeguarded. The program also sets forth the requirements for flow down of CMMC requirements to subcontractors. Assessment Requirement: CMMC assessments allow the Department to verify the implementation of cybersecurity requirements. Implementation through Contracts: Once CMMC is fully implemented, DoD contractors that handle FCI and CUI on their non-Federal information systems will be required to achieve a particular CMMC Status as a condition of contract award. In September 2020, the DoD published the 48 CFR CMMC interim final rule in the Federal Register (DFARS Case 2019-D041) that implemented the DoD's initial vision for the CMMC Program and outlined the key features of the program. The 48 CFR CMMC interim final rule became effective on November 30, 2020. In March 2021, the Department initiated an internal review of CMMC's implementation, informed by more than 750 public comments in response to the 48 CFR CMMC interim final rule. This comprehensive, programmatic assessment engaged cybersecurity and acquisition leaders within DoD to refine policy and program implementation.

3.3.9 Review and Maintain System Security Plans and Applicable Agreements... 3.3.9 Review and Maintain System Security Plans and Applicable Agreements System security plans, applicable agreements (e.

Under the HIPAA Security Rule (45 CFR Part 164, Subpart C) and Privacy Rule (Subpart E), covered entities and business associates must implement safeguards to protect electronic protected health information (ePHI). Key requirements include administrative, physical, and technical safeguards, as well as organizational requirements and documentation. Note: The HIPAA Security Rule NPRM (December 2024) proposes significant changes including mandatory MFA, required encryption, and elimination of the 'addressable' category. These are proposed, not yet finalized. The final rule is expected around May 2026. Organizations should comply with current requirements while preparing for proposed changes.

assessment requirements expanded the scope and cost of the CMMC program. Additionally, some comments described overarching concerns about applicability of CMMC requirements to an ESP when it only provided a Security Protection Asset or processed Security Protection Data. In general, commenters requested to narrow the rule while providing more clarity and definition related to CMMC requirements for ESPs and CSPs. Many comments gave either hypothetical or actual scenarios and asked whether the ESP in that scenario would be required to complete a CMMC assessment at the level required for the OSA being supported. One comment suggested that ESPs should be treated the same as Risk Managed Assets. Another comment suggested that they be treated as Specialized Assets. Two comments proposed that DoD restrict DoD contractors to the use of an ESP/MSP/MSSP that is ISO/IEC 27001:2022(E) certified. Two comments suggest that OSA's be allowed to use non-certified or some form of conditionally certified ESPs if they retain the appropriate artifacts for review. Response: The DoD has revised the rule to reduce the assessment burden on External Service Providers (ESP). ESP assessment, certification, and authorization requirements in §§ 170.19(c)(2) and (d)(2) have been updated. The use of an ESP, its relationship to the OSA, and the services provided need to be documented in the OSA's SSP and described in the ESP's service description and customer responsibility matrix (CRM), which describes the responsibilities of the OSA and ESP with respect to the services provided. ESPs that are CSPs, and process, store, or transmit CUI, must meet the FedRAMP requirements in DFARS clause 252.204-7012. ESPs that are CSPs and do NOT process, store, or transmit CUI, are not required to meet FedRAMP requirements in DFARS clause 252.204-7012. Services provided by the CSP are in the OSA's scope. When ESPs that are not CSPs, process, store, or transmit CUI, a CMMC assessment is required to verify compliance with requirements for safeguarding CUI. Any ESP services used to meet OSA requirements are within the scope of the OSA's CMMC assessment. When ESPs that are not CSPs do NOT process, store, or transmit CUI, they do not require CMMC assessment or certification, however, services they provide are in the OSA's assessment scope. There is nothing in the rule that precludes an ESP, that is not a CSP, from voluntarily requesting a C3PAO assessment. A C3PAO may perform such an assessment if the ESP makes that business decision. ESPs can be part of the same corporate/organizational structure but still be external to the OSA such as a centralized Security Operations Center (SOC) or Network Operations Center (NOC) which supports multiple business units. The same requirements apply and are based on whether the ESP

provides cloud services and whether the ESP processes, stores, or transmits CUI on their systems. An ESP that is used as on-site staff augmentation only, i.e.,

Availability of Guidance and Procedures. The geographic Combatant Commander shall ensure the guidance and procedures prescribed in paragraph (a) of this section are readily available and accessible by PSCs and their personnel (e.g., on a Web page and/or through contract terms), consistent with security considerations and requirements. (c) Subordinate Guidance and Procedures. A sub unified commander or JFC, in consultation with the Chief of Mission, will issue guidance and procedures implementing the standing combatant command publications specified in paragraph (a) of this section, consistent with the situation and operating environment. (d) Consultation and Coordination. The Chief of Mission and the geographic Combatant Commander/sub unified commander or JFC shall make every effort to consult and coordinate responses to common threats and common concerns related to oversight of the conduct of U.S.G.-funded PSCs and their personnel. Dated: August 3, 2011. Patricia L. Toppings, OSD Federal Register Liaison Officer, Department of Defense.

Footnotes 1. ·Nothing in this Final Rule is intended to reflect the views of the DoD or the United States regarding the merits of any claim or defense that may be asserted by a private party in any pending or future litigation or disputes. Back to Citation 1. ·With respect to an area of other significant military operations, the requirements of this part shall apply only upon agreement of the Secretary of Defense and the Secretary of State. Such an agreement of the Secretaries may be made only on an area-by-area basis. With respect to an area of combat operations, the requirements of this part shall always apply. Back to Citation 2. ·Contractors performing private security functions are not authorized to perform inherently governmental functions. In this regard, they are limited to a defensive response to hostile acts or demonstrated hostile intent. From the NIST SP 800-172 Rev 3 Final Public Draft: based on [Assignment: organization-defined circumstances for physical or logical 2063 separation of components]. DISCUSSION System partitioning is part of a defense-in-depth protection strategy. Organizations determine the degree of physical separation of system components. Physical separation options include physically distinct components in separate racks in the same room, critical components in separate rooms, and geographical separation of critical components. Managed interfaces restrict or prohibit network access and information flow among partitioned system components. This requirement does not enhance a specific requirement in SP 800-171 but can be used to strengthen the protection of CUI associated with critical programs or high value assets. PROTECTION STRATEGY PRA, D

DFARS 252.204-7008 (Compliance with Safeguarding CDI Controls) Requires offerors to represent that they will implement NIST SP 800-171 security requirements. Contractors should review the full text of DFARS 252.204-7008 in conjunction with their contracting officer and legal counsel to ensure full compliance. The clause should be read alongside the CMMC requirements at 32 CFR Part 170.

DoD has updated language in § 170.18(a)(1)(i)(B) to reflect for each DCMA DIBCAC Assessor conducting the assessment, name and government organization information will be required for the CMMC instantiation of eMASS. The DoD has considered the recommendation to change the description of what an SSP should contain and declines to revise the rule text. The NIST SP 800-171 R2 requirement states that an SSP must describe . . . how security requirements are implemented . . . which is equivalent to going . . . through each NIST SP 800-171 security requirement and explain how the requirement is implemented, monitored, and enforced. Perceived Errors DoD declines to make the edit to change ·shall· to ·will· in § 170.9(b). The existing language is consistent with standard

rulemaking usage. The title for NIST SP 800-171A Jun2018 is the current title used by NIST and does not have a version number, so no change was needed. While not used in the rule text, the term enterprise is used in the description of the CMMC Program in the preamble's Statement of Need for This Rule section: Defense contractors can achieve a specific CMMC Level for its entire enterprise network or an enclave(s), depending upon where the information to protected is processed, stored, or transmitted, therefore enterprise remains in the definitions list. DoD verified links by clicking on them in the PDF and by copying and pasting the links into a web browser. In both cases links resolved correctly. The DoD has changed ·all personnel involved in inspection activities· to ·all personnel involved in assessment activities· in §·170.9(b)(9). A comment asserted that there was a rulemaking formatting error in §·170.4(b). DoD is following the Office of the Federal Register standards for this section. In sections or paragraphs containing only definitions, paragraph designations are not used, and the terms are listed in alphabetical order. The definition paragraph begins with the term being defined. If a definition contains subordinate paragraphs, these paragraphs are numbered with paragraph designations beginning with the next appropriate level based on the dedicated definitions section. The 2nd sentence of §·170.17(a)(1) includes the word ·obtaining· for clarity. 35. Comments in Favor of the CMMC Program Comment: Some commenters expressed favorable opinions about the CMMC program as a viable long-term solution to ensure cybersecurity controls are in place. Others commented about specific content of the 32 CFR part 170 CMMC Program proposed rule and the supplemental documents. For example, two commenters specifically complimented the inclusion of an Affirmation requirement and another supported CMMC implementation as a (printed page 83168)

Voluntary or Mandatory. Include in the Privacy Act Statement specifically whether furnishing the requested personal data is mandatory or voluntary. A requirement to furnish personal data is mandatory ONLY when a federal statute, Executive Order, regulation, or other law specifically imposes a duty on the individual to provide the information sought, and when the individual is subject to a penalty if he or she fails to provide the requested information. If providing the information is only a condition of or prerequisite to granting a benefit or privilege and the individual has the option of receiving the benefit or privilege, providing the information is always voluntary. However, the loss or denial of the privilege, benefit, or entitlement sought must be listed as a consequence of not furnishing the requested information. (7) Some acceptable means of administering the PAS are as follows, in the order of preference: (i) Below the title of the media used to collect the personal information. The PAS should be positioned so that the individual will be advised of the PAS before he or she provides the requested information; (ii) Within the body with a notation of its location below the title; (iii) On the reverse side with a notation of its location below the title; (iv) Attached as a tear-off sheet; or (v) Issued as a separate supplement. (8) An example of a PAS is at appendix B of this part. (9) Include a PAS on a Web site page if it collects information directly from an individual and is retrieved by his or her name or personal identifier (See Office of Management and Budget Privacy Act Guidelines, 40 FR 28949 , 28961 (July 9, 1975)). (10) Army policy prohibits the collection of personally identifying information on public Web sites without the express permission of the user. Requests for exceptions must be forwarded to the Army CIO/G-6. (See AR 25-1, para 6-4n.) (c) Collecting personal information from third parties. (1) It may not be practical to collect personal information directly from the individual in all cases. Some examples of when collection from third parties may be necessary are when: (i) Verifying information; (ii) Opinions or evaluations are needed; (iii) The subject cannot be contacted; or (iv) At the request of the subject individual. (2) When asking third parties to provide information about other individuals, they will be advised of: (i) The purpose of the request; and (ii) Their rights to confidentiality as defined by the Privacy Act of 1974 (Consult with your servicing Staff Judge Advocate for potential limitations to the confidentiality that may be offered pursuant to the Privacy Act). (d) Confidentiality promises. Promises of confidentiality must be prominently annotated in the record to protect from disclosure any information provided in confidence pursuant to 5 U.S.C. 552a(k)(2) , (k)(5), or (k)(7). §505.5 Individual access to personal information. (a) Individual access.

CIS Safeguard 4.10 · Enforce Automatic Device Lockout on Portable End-User Devices Enforce automatic device lockout following a predetermined threshold of local failed authentication attempts on portable end-user devices, where supported. For laptops, do not allow more than 20 failed authentication attempts; for tablets and smartphones, no more than 10 failed authentication attempts. Example implementations include Microsoft? InTune Device Lock and Apple? Configuration Profile maxFailedAttempts. Implementation Groups: 2,3 Asset Type: devices Security Function: respond Parent Control: Secure Configuration of Enterprise Assets and Software

From the NIST SP 800-172 Rev 3 Final Public Draft: PROTECTION STRATEGY DLO ADVERSARY EFFECTS
 NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI
 September 2025 Expose (Detect, Reveal) 1580

Malicious cyber actors have targeted and continue to target defense contractors and the DoD supply chain. These attacks not only focus on the large prime contractors, but also target subcontractors that make up the lower tiers of the DoD supply chain. Many of these subcontractors are small entities that provide critical support and innovation. Overall, the DIB sector consists of over 220,000 companies [26] that process, store, or transmit CUI or FCI in support of the warfighter and contribute towards the research, engineering, development, acquisition, production, delivery, sustainment, and operations of DoD systems, networks, installations, capabilities, and services. The aggregate loss of intellectual property and controlled unclassified information from the DoD supply chain can undercut U.S. technical advantages and innovation, as well as significantly increase the risk to national security. As part of multiple lines of effort focused on the security and resiliency of the DIB, the Department is working with industry to enhance the protection of FCI and CUI within the DoD supply chain. Toward this end, DoD has developed the CMMC Program. Cybersecurity Maturity Model Certification Program The CMMC Program provides a comprehensive and scalable certification approach to verify the implementation of requirements associated with the achievement of a cybersecurity level. CMMC is designed to provide increased assurance to the

Department that defense contractors can adequately protect FCI and CUI at a level commensurate with the risk, accounting for information flow down to its subcontractors in a multi-tier supply chain. Defense contractors can achieve a specific CMMC Status for their entire enterprise network or an enclave(s), depending upon where the information to be protected is processed, stored, or transmitted. The CMMC Program assesses implementation of cybersecurity requirements. The CMMC requirements for safeguarding and security are the same as those required by FAR Subpart 4.19 and DFARS clause 252.204-7012, as well as selected NIST SP 800-172 Feb201 requirements. CMMC Level 1 requires implementation of the safeguarding requirements set forth in FAR clause 52.204-21. CMMC Level 2 requires implementation of the security requirements in NIST SP 800-171 R2. CMMC Level 3 requires implementation of the security requirements in NIST SP 800-171 R2 as well as selected NIST SP 800-172 Feb2021 requirements, with DoD specified parameters. The CMMC security requirements for all three Levels are provided in § 170.14. In general, CMMC assessments do not duplicate efforts from existing DoD assessments. In rare circumstances a re-assessment may be necessary when cybersecurity risks, threats, or awareness have changed.

The 2013 Intellectual Property Commission Report provided concurrence and noted that the ongoing theft represents the greatest transfer of wealth in history. The report also highlighted the challenges of generating an exact figure because Government and private studies tend to understate the impacts due to inadequate data or scope, which is evidenced in subsequent analyses. [55] The responsibility of Federal agencies to protect FCI or CUI does not change when such information is shared with defense contractors. A comparable level of protection is needed when FCI or CUI is processed, stored, or transmitted on contractor information systems. [56] The protection of FCI, CUI, and intellectual property on defense contractor systems can directly impact the ability of the Federal Government to successfully conduct its essential missions and functions. [57] Malicious cyber actors have targeted and continue to target the DIB sector that consists of approximately 220,000 small-to-large sized entities that support the warfighter. In particular, actors ranging from cyber criminals to nation-states continue to attack companies and organizations that comprise the Department's multi-tier supply chain including smaller entities at the lower tiers. From at least January 2020, through February 2022, the Federal Bureau of Investigation (FBI), National Security Agency (NSA), and Cybersecurity and Infrastructure Security Agency (CISA) observed regular targeting of U.S. cleared defense contractors (CDCs) by Russian state-sponsored cyber actors. The actors have targeted sensitive, unclassified information, as well as proprietary and export-controlled technology. The acquired information provides significant insight into U.S. weapons platforms development and deployment timelines, vehicle specifications, and plans for communications infrastructure and IT. By acquiring proprietary internal documents and email (printed page 83193) communications, adversaries may be able to adjust their own military plans and priorities, hasten technological development efforts, inform foreign policymakers of U.S. intentions, and target potential sources for recruitment. [58] In addition to stealing intellectual property for military gains, Russia may conduct cyber-attacks against the U.S. for retaliatory purposes. On March 21, 2022, the Biden-Harris Administration stated intelligence indicates that the Russian Government and Russian-aligned cybercrime groups have threatened to conduct cyber operations in retaliation for perceived cyber offensives against the Russian Government or the Russian people. [59]

Any individual who believes he or she has a legitimate complaint or grievance against the Department of Defense or any DoD employee concerning any right granted by this part shall be permitted to seek relief through appropriate administrative channels. § 310.46 Civil actions. An individual may file a civil suit against a DoD Component if the individual believes his or her rights under the Act have been violated. (See 5 U.S.C. 552a(g) .) § 310.47 Civil remedies. In addition to specific remedial actions, the Privacy Act provides for the payment of damages, court costs, and attorney fees in some cases. § 310.48 Criminal penalties. (a) The Act also provides for criminal penalties. (See 5 U.S.C. 552a(i) .) Any official or employee may be found guilty of a misdemeanor and fined not more than \$5,000 if he or she willfully: (1) Discloses information from a system of records, knowing dissemination is prohibited to anyone not entitled to receive the information (see subpart E of this part); or (2) Maintains a system of records without publishing the required public notice in the Federal Register . (See subpart G of this part.) (b) Any person who knowingly and willfully requests or obtains access to (printed page 18781) any record concerning another individual under false pretenses may be found guilty of misdemeanor and fined up to \$5,000. § 310.49 Litigation status sheet. Whenever a complaint citing the Privacy Act is filed in a U.S. District Court against the Department of Defense, a DoD Component, or any DoD employee, the

responsible system manager shall notify the DPO. The litigation status sheet at Appendix H to this part provides a standard format for this notification. The initial litigation status sheet forwarded shall, as a minimum, provide the information required by items 1 through 6 of the status sheet. A revised litigation status sheet shall be provided at each stage of the litigation. When a court renders a formal opinion or judgment, copies of the judgment and opinion shall be provided to the DPO with the litigation status sheet reporting that judgment or opinion. § 310.50 Lost, stolen, or compromised information. (a) When a loss, theft, or compromise of information occurs (see § 310.14), the breach shall be reported to: (1) The United States Computer Emergency Readiness Team (US CERT) within one hour of discovering that a breach of personally identifiable information has occurred. Components shall establish procedures to ensure that US CERT reporting is accomplished in accordance with the guidance set forth at <http://www.us-cert.gov>. (i) The underlying incident that led to the loss or suspected loss of PII (e.g., computer incident, theft, loss of material, etc.) shall continue to be reported in accordance with established procedures (e.g., to designated Computer Network Defense (CND) Service Providers (reference (z)), law enforcement authorities, the chain of command, etc.). (ii) [Reserved]

Numerous comments requested correction of perceived misstatements, oversights, or erroneous paragraph references in the CAICO responsibilities section. One commenter suggested the level of detail in § 170.10(b) is more appropriate for a statement of work and some paragraphs could be deleted from the rule. They offered preferred rewording to clarify that the CAICO must also comply with AB and ISO/IEC requirements, and further recommended deleting the requirement to provide all documentation in English. In addition, they recommended deleting separation of duties as a requirement, because it is already required under ISO/IEC certification. One commenter conflated CAICO subcontractors with DIB subcontractors and suggested deletion of the rule's restrictions on releasing CMMC-related information. One comment asked whether the Cyber AB and CAICO have documented processes for regular review and updates to their compliance documentation. Lastly, one comment requested duplicative language relating to ethics, record keeping, etc. be moved to a central location in the rule. A few commenters suggested preferred edits to improve the role of the CAICO. One comment noted that the (printed page 83122) accreditor for certifying the CAICO should be a U.S.-based signatory to ILAC or relevant International Accreditation Forum (IAF) in addition to complying with ISO/IEC 17011:2017(E). Two comments noted concerns that having only one CAICO would create an untenable bottleneck should something happen to the single CAICO. One commenter asserted that the CMMC Certified Instructor (CCI) certification requirement is redundant and not cost-effective since instructors will need to be certified as CCPs or CCAs to teach those courses. One comment suggested a grace period of 18-24 months from final rule publication, to allow update of training and examinations, before implementing the CCP and CCA certification requirements. Three comments recommended that Approved Publishing Partner (APP) and Approved Training Providers (ATP) sections be added to Subpart C of the rule. One commenter asked for clarification on what constitutes a CAICO subcontractor and if this includes LTPs and LPPs, and asked why an authorization process for LTPs and LPPs is not included in the rule. One commenter appreciated that CAICO responsibilities include compliance with relevant ISO/IEC standards, as those are internationally recognized standards. One commenter provided an attachment containing an image of an article published in the February 2024 issue of National Defense Magazine. The commentor did not provide specific questions or comments regarding the article, they simply submitted an article. DoD declines to comment on the reposting of information being reported in the media. Response:

3.3.3 Access Control for Network Communications ... 3.3.3 Access Control for Network Communications
A major component of controlling access to network communications and protecting their content is the use of cryptography. 3.3.3.

(B) From subsection (d), because access to the records contained in this system would inform the subject of a criminal investigation of the existence of that investigation, provide the subject of the investigation with information that might enable him to avoid detection or apprehension, and would present a serious impediment to law enforcement. (C) From subsection (e)(1) because in the course of criminal investigations, information is often obtained concerning the violation of laws or civil obligations of others not relating to an active case or matter. In the interests of effective law enforcement, it is necessary that this valuable information be retained since it can aid in establishing patterns of activity and provide valuable leads for other agencies and future cases that may be brought. (D) From subsections (e)(4)(G) and (e)(4)(H) because portions of this system of records have been exempted from the access provisions of subsection (d), making these subsections

not applicable. (E) From subsection (e)(4)(I) because the identity of specific sources must be withheld in order to protect the confidentiality of the sources of criminal and other law enforcement information. This exemption is further (printed page 14757) necessary to protect the privacy and physical safety of witnesses and informants. (F) From subsection (f) because portions of this system of records have been exempted from the access provisions of subsection (d). (24) System identifier and name. A0351-17b USMA, U.S. Military Academy Management System Records. (i) Exemption. (A) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. (B) Evaluation material used to determine potential for promotion in the Military Services may be exempt pursuant to 5 U.S.C. 552a(k)(7) , but only to the extent that the disclosure of such material would reveal the identity of a confidential source. (C) It is imperative that the confidential nature of evaluation and investigatory material on candidates, cadets, and graduates, furnished to the United States Military Academy under a promise of confidentiality be maintained to ensure the candid presentation of information necessary in determinations involving admissions to the Military Academy and suitability for commissioned service and future promotion. (D) Therefore, portions of this system of records may be exempt pursuant to 5 U.S.C. 552a(k)(5) or (k) (7) from subsections 5 U.S.C. 552a(c)(3) , (d), (e)(1), (e)(4)(G), (e)(4)(H), (e)(4)(I), and (f). (ii) Authority. 5 U.S.C. 552a(k)(5) and (k)(7) . (iii) Reasons.

(n) ISO/IEC 17020:2012(E), titled ·Conformity assessment·Requirement for the operation of various types of bodies performing inspection,· Second edition, March 1, 2012 (ISO/IEC 17020:2012(E)), specifies requirements for the competence of bodies performing inspection and for the impartiality and consistency of their inspection activities. It applies to inspection bodies of type A, B or C, as defined in ISO/IEC 17020:2012(E), and it applies to any stage of inspection.· This document is incorporated by reference as a source for requirements on the CMMC Ecosystem. (o) ISO/IEC 17024:2012(E), titled ·Conformity assessment·General requirements for bodies operating certification of persons,· Second edition, July 1, 2012 (ISO/IEC 17024:2012(E)), contains principles and requirements for a body certifying persons against specific requirements and includes the development and maintenance of a certification scheme for persons.· This document is incorporated by reference as a source for requirements on the CMMC Ecosystem. Section 170.3·Applicability Section 170.3 identifies entities to which the rule applies and how the Department intends to implement the rule. The rule applies to defense contractors and subcontractors that will process, store, or transmit FCI or CUI in performance of a DoD contract, and private-sector businesses or other entities that are specified in Subpart C. This rule does not apply to Federal information systems operated by contractors and subcontractors in support of the Government. CMMC Program requirements apply to DoD solicitations and contracts requiring defense contractors and subcontractors to process, store, or transmit FCI or CUI. Exceptions to the applicability of this rule are addressed in § 170.3(c)(1) and (2). Department Program Managers or requiring activities will determine which CMMC Level and assessment type will apply to a contract or procurement. Applicability of the required CMMC Level and assessment type to subcontractors is addressed in § 170.23. Section 170.3 addresses the four-phased implementation plan of the CMMC Program requirements in solicitations and contracts. Phase 1 begins on the effective date of this CMMC 32 CFR part 170 CMMC Program rule or the complementary 48 CFR part 204 CMMC Acquisition rule, whichever occurs later. More information regarding Phase 1 can be found in § 170.3(e)(1). Phase 2 begins one calendar year after the start date of Phase 1. More information regarding Phase 2 can be found in § 170.3(e)(2). Phase 3 begins one calendar year after the start date of Phase 2. More information regarding Phase 3 can be found in § 170.3(e)(3). Phase 4, or full implementation, begins one calendar year after the start date of Phase 3. More information regarding Phase 4 can be found in § 170.3(e)(4). Section 170.4·Acronyms and Definitions

According to the NIST Cybersecurity Framework 2.0, having a comprehensive understanding of the organization's assets (e.g., data, hardware, software, systems, facilities, services, people), suppliers, and related cybersecurity risks enables a regulated entity to prioritize its efforts consistent with its risk management strategy and its mission needs. [453] The proposed standard would be accompanied by three implementation specifications. Under the proposed implementation specification for inventory at proposed 45 CFR 164.308(a)(1)(ii)(A) , the regulated entity would be required to establish a written inventory that contains the regulated entity's technology assets. Technology assets are components of an electronic information system, including

but not limited to hardware, software, electronic media, information, and data. The written inventory would be required to include technology assets that create, receive, maintain, or transmit ePHI and those that do not but that may affect the confidentiality, integrity, or availability of ePHI. [454] It would also be required to include the identification, version, person accountable for, and location of each of the assets or information system components. [455] The proposed implementation specification for network map at proposed 45 CFR 164.308(a)(1)(ii)(B) would require a regulated entity to develop a network map that illustrates the movement of ePHI throughout its electronic information systems, including but not limited to how ePHI enters and exits such information systems, and is accessed from outside of such information systems. Under the proposed implementation specification for maintenance at proposed 45 CFR 164.308(a)(1)(ii)(C) , a regulated entity would be required to review and update the written inventory of technology assets and the network map in the following circumstances: (1) on an ongoing basis, but at least once every 12 months; and (2) when there is a change in the regulated entity's environment or operations that may affect ePHI. Such a change in the (printed page 938)

Architecture, Threat Analysis, and Security Posture Architecture, Threat Analysis, and Security Posture Guo Y, Chandramouli R, Wofford L, Gregg R, Key G, Clark A, Hinton C, Prout A, Reuther A, Adamson R, Warren A, Bangalore P, Deumens E, Farkas C (2024) High-Performance Computing Security: Architecture, Threat Analysis, and Security Posture. (National Institute of Standards and Technology, Gaithersburg, MD), NIST Special Publication (SP) NIST SP 800-223. <https://doi.org/10.6028/NIST.SP.800-223>

After a regulated entity conducts a written inventory of its technology assets and creates its network map, it is critical for it to identify the potential risks and vulnerabilities to its ePHI. Conducting a risk analysis is necessary to adequately protect the confidentiality, integrity, and availability of ePHI because it provides the basis for determining the manner in which the regulated entity will comply with and carry out the other standards and implementation specifications in the Security Rule. [460] Basic questions that a regulated entity would consider when conducting a risk analysis that is compliant with the Security Rule include: [461] Have you identified all the ePHI that you create, receive, maintain, or transmit? What are the external sources of ePHI? For example, do vendors or consultants create, receive, maintain, or transmit ePHI? What are the human, natural, and environmental threats to information systems that contain ePHI? (printed page 939) What are the risks posed by legacy devices, including any risks that would be posed by replacing legacy devices with new ones? There are numerous methods of performing a risk analysis, and there is no single method or 'best practice' that guarantees compliance with the Security Rule. [462] The Department has issued multiple guidance documents and tools for regulated entities to help them implement risk analyses, [463] and several versions of its Security Risk Assessment Tool, a desktop application that walks users through the process of conducting a risk assessment. [464] NIST has published numerous guides for risk assessment over the past two decades, [465] in addition to reference materials it has developed in collaboration with the Department, including a toolkit and a crosswalk between the Security Rule to NIST Cybersecurity Framework, [466] and 'how to' guides on risk analysis. [467] In February 2024, NIST released a new guide that provides resources for implementing a Security Rule risk analysis. [468] Consistent with previous Department guidance, the guide describes key elements in a comprehensive risk assessment process, that include the following: Prepare for the assessment by conducting a technology asset inventory. [469] Determine whether ePHI is transmitted to external third parties, such as cloud service providers or others. The regulated entity can also examine how access to ePHI is controlled and whether ePHI is encrypted at rest and in transit. The scope of a risk assessment should include both the physical boundaries of a regulated entity's location and a logical boundary that includes any devices or media that contain ePHI, including electronic networks through which ePHI is transmitted, regardless of its location.

); (2) retail food establishments that employ 10 or fewer full-time equivalent employees; (3) nonprofit food establishments that prepare or serve food directly to the consumer or otherwise provide food or meals for consumption by humans or animals in the United States; and (4) persons who manufacture, process, pack, transport, distribute, receive, hold, or import food contact substances other than the finished container that directly contacts the food. Persons who manufacture, process, pack, transport, distribute, receive, hold, or import food are subject to §§ 1.361 and 1.363 with respect to its packaging (the outer packaging of food that bears the label and does not contact the food). All other persons who manufacture, process, pack, transport, distribute, receive,

hold, or import packaging are excluded from all of the requirements of this subpart J of this final rule. Persons who place food directly in contact with its finished container are subject to all of the requirements of subpart J of this final rule as to the finished container that directly contacts that food. All other persons who manufacture, process, pack, transport, distribute, receive, hold, or import the finished container that directly contacts the food are excluded from the requirements of subpart J of this final rule as to the finished container, except §§ 1.361 and 1.363. Persons who distribute food directly to consumers are excluded from the requirement in § 1.345 to establish and maintain records to identify the immediate subsequent recipients as to those transactions. The term “consumers” does not include businesses. Persons who operate retail food establishments that distribute food to persons who are not consumers are subject to all of the requirements in subpart J of this final rule. However, the requirements in § 1.345 to establish and maintain records to identify the nontransporter and transporter immediate subsequent recipients that are not consumers applies as to those transactions only to the extent the information is reasonably available. Persons who manufacture, process, pack, transport, distribute, receive, hold, or import food for personal consumption are excluded from all of the requirements of subpart J of this final rule. Persons who receive or hold food on behalf of specific individual consumers and who are not also parties to the transaction and who are not in the business of distributing food are excluded from all of the requirements of subpart J of this final rule. The regulations in subpart J of this final rule do not require duplication of existing records if those records contain all of the information required by the subpart. Furthermore, persons can supplement existing records with any new information required by this final rule instead of creating an entirely new record containing both existing and new information.

Evaluation and Definition of the Existing Security Program

The comment included several questions regarding the inputs used to determine lack of ongoing management resource requirements for reaffirmation, a risk management application, and inputs across the DIB regarding the level of assurance needed for affirmations to address liability concerns with the False Claims Act. Another recommendation suggested the DoD clearly state the degree of rigor an OSA should assume and revisit the cost assumptions involved to provide the Entity official with assurance for reaffirmation. One commenter reviewed the CMMC AB's draft CMMC Assessment Process (CAP) document and agreed that 120 hours for a C3PAO's three-person team inclusive of Phases 1, 2 and 3 is appropriate for smaller companies and should be considered a lower bound for C3PAOs deployed resources but suggested the 156 ESP assessment hours should be decreased. One comment highlighted the following rule text, “The total estimated Public (large and small entities) and Government costs associated with this rule, calculated in over a 20-year horizon in 2023 dollars at a 7 percent discount rate and a 3 percent discount rate are provided as follows,” and asked how an organization could become eligible for the 7% discount. One comment proposed DOD remove CMMC Level 1, or defer CMMC Level 1 implementation for several years, since it does not involve CUI. The comment stated CMMC Level 1 cost estimations and burden of compliance in the rule were greatly understated, that few companies subject to this CMMC level have any idea what is expected of them, and most will struggle with financial, technical, and human resources. Though FAR clause 52.204-21 is widely used in Federal contracts, it has not been successfully communicated that NIST SP 800-171A Jun2018 will be used. The comment concludes stating CMMC Level 1 does not include CUI, therefore making cost and compliance an excessive demand. Response: Subsidizing costs for the defense

industrial base compliance is not within the scope of this rule. The rule has taken several steps to keep the cost of compliance with the rule commensurate with the risk to the DoD's information. In addition, Level 1 only requires self-assessment, and many contracts with CUI will only require a Level 2 self-assessment. Companies that are currently and validly attesting that they meet DFARS clause 252.204-7012 should not have difficulty passing a Level 2 self-assessment. Cost estimates provided in this rule were based on internal expertise, compliant with OMB Circular A-4, and informed by public feedback. Certain elements of the estimated costs will be influenced by market forces of supply and demand, which will determine C3PAO pricing for CMMC Level 2 certification assessments.

There is qualified standards acceptance between DCMA DIBCAC High Assessment and CMMC Level 2 Certification Assessment as described in § 170.20(a). There is no standards acceptance between DCMA DIBCAC High Assessment and CMMC Level 3. To be eligible for standards acceptance resulting in a CMMC certification, an OSC must achieve a perfect 110 score on the Joint Surveillance assessment without any open POA&Ms at the time of assessment. If the Joint Surveillance assessment results in POA&M actions, any POA&M must be closed prior to standards acceptance. Completion of a prior DCMA DIBCAC High Assessment does not necessarily indicate the likelihood of a future CMMC Level 3 requirement. DIBCAC High assessments are currently conducted against the NIST SP 800-171 R2 requirements, whereas the DoD will identify the need for a CMMC Level 3 assessment when its internal policies indicate the added protections of NIST SP 800-172 Feb2021 are necessary to adequately safeguard DoD information. Acceptance of a small number of DIBCAC High or Joint Surveillance Program assessments to meet future CMMC Level 2 assessment requirements will reduce the initial demand for C3PAO assessment. Only those DIBCAC High Assessments completed prior to the effective date of the rule are eligible for standards acceptance to meet CMMC Level 2 Certification requirements. The DoD will enter CMMC Level 2 Certifications into eMASS for suitable DIBCAC High Assessments, with a validity period of 3 years from the date of the original High Assessment. A CMMC Final Level 2 certification assessment is entered into eMASS by the C3PAO following a successful (i.e., perfect score with no POA&Ms) joint surveillance assessment against NIST SP 800-171 R2. It is not the result of a CMMC Level 3 assessment but can be provided as evidence that an OSC is ready to initiate a CMMC Level 3 assessment. Although Joint Surveillance is listed as standards acceptance in 170.20(a)(1), the details of this DCMA program and any changes to it are beyond the scope of this rule. A Joint surveillance is a DCMA DIBCAC assessment and falls under their purview. The CMMC office understands that there is disparity between what is assessed by a C3PAO and the DIBCAC and that the guidance information in the DoD Procurement Toolbox is the driving factor. Since the Procurement Toolbox is outside of the scope of the 32 CFR part 170 CMMC Program rule, it cannot be properly addressed here or in the rule. With CMMC the DoD utilizes a risk-based approach in its allowance for POA&Ms, gradient scoring for certain controls (e.g., FIPS and MFA), temporary deficiencies, and enduring exceptions.

The main delays in traceback investigations are long travel times and overnight stays, slow and poor cooperation from recordkeepers, and inconsistent and incomplete records. Many recordkeepers may not be inclined to devote sufficient labor to providing records to inspectors during business hours because that is a costly time of day to reallocate resources. Furthermore, sometimes companies follow time-consuming procedures before approving FDA's request for records access. The legally binding provision in this rule will expedite cooperation from recordkeepers and reduce access times. When we take into account the requirement in the rule that access be provided on weekends, we estimate a substantial amount of time saved due to the records access provision-especially when there are multiple point of service or distributor visits. The inconsistency and incompleteness with which some records are maintained are also important causes for delay in an investigative visit. Records from approximately 50 percent of access requests require additional information from the recordkeeper. Examples of information that may be incomplete include supplier contact information, a description of a product received or shipped, or date of receipt or shipment. This information is used by analysts located at headquarters, along with inventory rotation and control information, to determine precisely what was shipped, by whom, and when it was received. Often, many similar products from different suppliers are received during the course of the day by any given receiver. Frequently, records document transactions from regular suppliers or customers where the identity of the shipper and description of the product can be determined readily based on the regularity and composition of the shipments. Sometimes, an entity will receive an unusual shipment (especially during holiday seasons), or it may receive multiple shipments of similar products from different suppliers, making it difficult to precisely link an incoming product with an outgoing

shipment. Other times, descriptions of products received differ from how they are referenced on the shipping documents, making it difficult for the analyst to link the incoming product with an outgoing shipment. Each category of incidents may result in confusion on the part of the analyst located at central headquarters and require an additional visit by the field inspector to the recordkeeper for further clarification. Because travel times account for a significant amount of time in a traceback investigation, and an estimated 20 percent of all point of service or distributor visits require an overnight stay, we estimated that the final rule would result in substantially reduced traceback durations.

, unless a waiver is granted by the Secretary of Defense, no contract may be awarded to a firm if the government of a country that is a state sponsor of terrorism owns or controls a significant interest in-

(1) The firm; (2) A subsidiary of the firm; or (3) Any other firm that owns or controls the firm. (c) Representation. Unless the Offeror submits with its offer the disclosure required in paragraph (d) of this provision, the Offeror represents, by submission of its offer, that the government of a country that is a state sponsor of terrorism does not own or control a significant interest in-

(1) The Offeror; (2) A subsidiary of the Offeror; or (3) Any other firm that owns or controls the Offeror. (d) Disclosure. (1) The Offeror shall disclose in an attachment to its offer if the government of a country that is a state sponsor of terrorism owns or controls a significant interest in the Offeror; a subsidiary of the Offeror; or any other firm that owns or controls the Offeror. (2) The disclosure shall include-

(i) Identification of each government holding a significant interest; and (ii) A description of the significant interest held by each government. (End of provision) [FR Doc. 2014-28819 Filed 12-10-14; 8:45 am] BILLING CODE 5001-06-P

NCR C Development Toolkit Release 2; NIST-95/1303; 8/1 /96 SCO OpenServer Development System Release 5; NIST-95/1941; The FIPS PUB 128-1 requires the use of application profiles. In particular, FIPS PUB 128-1 requires the use of military specification MIL-D-28003A, commonly known as the Continuous Acquisition and Life-Cycle Support (CALS) CGM Application Profile (AP).

PI-Provisional Instructor PIIIE-Procurement Integrated Enterprise Environment PII-Personally Identifiable Information PLC-Programmable Logic Controller POA&M-Plan of Action and Milestones PRA-Paperwork Reduction Act RM-Risk Management SAM-System of Award Management SC-System and Communications Protection SCADA-Supervisory Control and Data Acquisition SI-System and Information Integrity SIEM-Security Information and Event Management (printed page 83217) SP-Special Publication SPD-Security Protection Data SPRS-Supplier Performance Risk System SSP-System Security Plan (b) Definitions. Unless otherwise noted, these terms and their definitions are for the purposes of this part. Access Control (AC) means the process of granting or denying specific requests to obtain and use information and related information processing services; and/or entry to specific physical facilities (e.g., Federal buildings, military establishments, or border crossing entrances), as defined in FIPS PUB 201-3 Jan2002 (incorporated by reference, see §.170.2). Accreditation means a status pursuant to which a CMMC Assessment and Certification Ecosystem member (person or organization), having met all criteria for the specific role they perform including required ISO/IEC accreditations, may act in that role as set forth in §.170.8 for the Accreditation Body and §.170.9 for C3PAOs. (CMMC-custom term) Accreditation Body is defined in §.170.8 and means the one organization DoD contracts with to be responsible for authorizing and accrediting members of the CMMC Assessment and Certification Ecosystem, as required. The Accreditation Body must be approved by DoD. At any given point in time, there will be only one Accreditation Body for the DoD CMMC Program. (CMMC-custom term) Advanced Persistent Threat (APT) means an adversary that possesses sophisticated levels of expertise and significant resources that allow it to create opportunities to achieve its objectives by using multiple attack vectors (e.g., cyber, physical, and deception). These objectives typically include establishing and extending footholds within the information technology infrastructure of the targeted organizations for purposes of exfiltrating information, undermining or impeding critical aspects of a mission, program, or organization; or positioning itself to carry out these objectives in the future. The advanced persistent threat pursues its objectives repeatedly over an extended period-of-time, adapts to defenders' efforts to resist it, and is determined to maintain the level of interaction needed to execute its objectives, as is defined in NIST SP 800-39 Mar2011 (incorporated by reference, see §.170.2). Affirming Official

Although they were both published in 2003, the interim final rule was published two months after the

Security Rule. Thus, when the Security Rule was published in 2003, it was necessary to specify that the term ‘user’ included both natural persons and entities, but we believe that this is no longer the case because the current definition of ‘person’ includes natural persons as well as entities. [394] b. Proposal The Department proposes to clarify the definition of ‘User’ by removing the reference to an entity. [395] Because the definition of ‘person’ includes an entity, including entity in the definition of ‘user’ is redundant and could cause confusion. We believe that this is a technical correction because it would not change how the Department has interpreted the term. 21. Adding a Definition of ‘Vulnerability’ a. Issues To Address The term ‘vulnerability’ is currently not defined in the Security Rule. The Department previously explained that although some cyberattacks may be sophisticated and exploit previously unknown vulnerabilities (i.e., zero-day attacks), most can be prevented or mitigated by addressing known vulnerabilities. [396] For example, (printed page 930) exploitable vulnerabilities exist across many components of IT infrastructures including, but not limited to, servers, desktops, mobile device operating systems, web software, and firewalls. [397] To mitigate against intrusions and hacking threats, the Department has recommended that regulated entities install vendor patches, make software updates, and monitor sources of cybersecurity alerts describing new vulnerabilities, such as the NIST National Vulnerability Database [398] and CISA’s Known Exploited Vulnerabilities Catalog. [399] b. Proposal The Department proposes to define vulnerability by adopting substantially the same definition as NIST (a ‘weakness in an information system, system security procedures, internal controls, or implementation that could be exploited or triggered by a threat source’) [400] with minor changes to clarify how it applies to regulated entities and ePHI. The definition, if adopted as proposed, would then form the basis for understanding key assessment and mitigation strategies proposed in this NPRM, such as risk analyses, [401] patch management, [402] and vulnerability management and scans. [403] 22. Clarifying the Definition of ‘Workstation’ a. Current Provision and Issues To Address The Department currently defines the term ‘workstation’ to mean an electronic computing device and provides the examples of technology that dominated the health care environment in 2003 and 2013, such as a laptop, desktop computer, and other device that performs similar functions, and electronic media stored in its immediate environment. [404]

NIST participation has also grown considerably in Internet of Things (IoT) standardization activities, including JTC 1/SC 41 (IoT architecture and vocabulary, IoT Interoperability, and IoT Applications), JTC 1/SC 27 (IoT aspects of Security and Privacy), IETF - SW Updates for IoT, and the International Telecommunications Union-Telecommunication Standardization Sector (ITU-T): Sector Joint Coordination Activity on IoT and ‘IoT and Smart Cities.’ NIST has been instrumental in promoting and participating in the development of a family of voluntary ISO standards that align with NIST’s cryptographic module validation standard and related specifications. NIST serves as the project editor for nine of those standards. FIPS 140-3, Security Requirements for Cryptographic Modules, points to ISO/IEC 19790, Security Requirements for Cryptographic Modules. Testing for these requirements will be performed in accordance with ISO/IEC 24759, Test Requirements for Cryptographic Modules. This is an ongoing effort and will continue over the next several years to support a smooth transition path to those using FIPS 140-3 specifications. - Update of the NIST Risk Management Framework (RMF) . For years, the RMF has been a mainstay for federal agencies and others to use in assessing and managing cybersecurity needs and challenges. Two drafts of the new version were produced in FY18-NIST Special Publication (SP) 800-37, Revision 2 5 before becoming final in early FY19. Updates included significant new guidance in addressing privacy risks and integrating security and privacy into the design of systems. The RMF also references NIST systems security engineering guidance at appropriate points, including NIST SP 800-160, 6 which addresses the engineering of trustworthy secure systems.

Such language is unnecessary in so far as it is already addressed in our existing regulations. Section 862(b)(3) of the 2008 NDAA as amended includes the following language: ‘NONCOMPLIANCE OF PERSONNEL WITH CLAUSE’ The contracting officer for a covered contract may direct the contractor, at its own expense, to remove or replace any personnel performing private security functions in an area of combat operations or other significant military operations who violate or fail to comply with applicable requirements of the clause required by this subsection. If the violation or failure to comply is a gross violation or failure or is repeated, the contract may be terminated for default.’ Incorporation of this statutory language will be considered in the DFARS case implementing Section 862. Comment: The rule fails to address subcontractors providing security for the prime contractor Response: The definition of ‘covered contract’ has been revised in the Rule to cover contracts for the performance of services and/or the delivery of supplies. Further, we will ensure that regulatory

guidance developed subsequent to the publication of this Rule makes clear that subcontractors providing security for prime contractors must comply. Comment: Recommend application of the rule to PSCs working under contract to the DoD whether domestically or internationally. Response: As required by Section 862 of the 2008 NDAA, as amended, this Rule applies to PSCs working for any U.S. Government agency in an area of combat operations or other significant military operations. It also applies to PSCs working for DoD in contingency operations outside the United States. The arrangements for PSC employment in the United States are outside the scope of this Rule. Comment: Section 159.4(a) ·Consistent with the requirement of paragraph (a)(2) * * *. should include at the end of the section, ·Coordination shall encompass the contemplated use of PSC personnel during the planning stages of contingency operations so to allow guidance to be developed under parts (b) and (c) herein and promulgate under 159.5 in a timely manner that is appropriate for the needs of the contingency operation· Response: The language has been revised in the Final Rule. Comment: Section 159.6(a)(i) ·Contain at a minimum procedures to implement the following process * * *. should include, ·That the Secretary of Defense, in coordination with the Secretary of State, shall prescribe regulations on the selection, training, equipping, and conduct of personnel performing private security functions under a covered contract in an area of combat operations· Response: We believe that the current wording is correct, as it reflects our intent.

(Comment 129) Many comments state that because an infrastructure for long-term record retention does not exist to the extent FDA envisions, more reasonable time requirements for retention of records should be established. Another comment states that, although the proposed record retention periods seem simple and straightforward, in practice, they are difficult and confusing for some companies to apply because of the other record retention requirements of varying lengths with which they also must comply. The comment urges FDA to review the recordkeeping retention periods now in effect for specific food categories (e.g., acidified foods, low acid canned foods, bottled water, juices, seafood, and milk) and work to harmonize the proposed record retention requirements with those periods. A few comments question the value of a 2-year record retention period for a product with a shelflife of 60 days, particularly in light of the additional costs associated with the extended retention requirements for perishables. Another comment states that the proposed timeframes for maintaining records for all food products, based solely on whether a food has a shelflife of 7 days, does not appear to utilize sound risk management principles. (Response) FDA agrees in part with these comments and has revised the record retention requirements in the final rule. FDA used similar criteria as the NIST definitions for perishable, semiperishable and long shelf-life food. The record retention requirements in § 1.360(b) of this final rule now require record retention of: (1) 6 months for (printed page 71603) food for which a significant risk of spoilage, loss of value, or loss of palatability occurs within 60 days after the date you receive or release the food; (2) 1 year for food for which a significant risk of spoilage, loss of value, or loss of palatability occurs only after a minimum of 60 days, but within 6 months, after the date you receive or release the food; and (3) 2 years for food for which a significant risk of spoilage, loss of value, or loss of palatability does not occur sooner than 6 months after the date you receive or release the food, including foods preserved by freezing, dehydration, or being placed in a hermetically sealed container. Transporters, or nontransporters retaining records on behalf of a transporter, are required to retain records for 6 months for any food having a significant risk of spoilage, loss of value, or loss of palatability within 60 days after the date the food is received or released and 1 year for any food having a significant risk of spoilage, loss of value, or loss of palatability only after a minimum of 60 days after the date the food is received or released.

MA.L2-3.7.4 · Media Inspection CMMC Assessment Guide · Level 2 | Version 2.13 150 MA.L2-3.7.4 · MEDIA INSPECTION Check media containing diagnostic and test programs for malicious code before the media are used in organizational systems. ASSESSMENT OBJECTIVES [NIST SP 800-171A]132 Determine if: [a] media containing diagnostic and test programs are checked for malicious code before being used in organizational systems that process, store, or transmit CUI. POTENTIAL ASSESSMENT METHODS AND OBJECTS [NIST SP 800-171A]132 Examine [SELECT FROM: System maintenance policy; procedures addressing system maintenance tools; system maintenance tools and associated documentation; maintenance records; system security plan; other relevant documents or records]. Interview [SELECT FROM: Personnel with system maintenance responsibilities; personnel with information security responsibilities]. Test [SELECT FROM: Organizational process for inspecting media for malicious code; mechanisms supporting or implementing inspection of media used for maintenance]. DISCUSSION [NIST SP 800-171 REV. 2]133 If, upon inspection of media containing maintenance diagnostic and test programs, organizations determine that the media contain malicious code, the

incident is handled consistent with incident handling policies and procedures. FURTHER DISCUSSION
As part of troubleshooting , a vendor may provide a diagnostic application to install on a system.
As this is executable code , there is a chance that the file is corrupt or infected with malicious
code. Implement procedures to scan any files prior to installation. The same level of scrutiny must
be made as with any file a staff member may download. This requirement, MA.L2-3.7.4, extends both
SI.L2-3.14.2 and SI.L2-3.14.4. SI.L2-3.14.2 and SI.L2-3.14.4 require the implementation and
updating of mechanisms to protect systems 132 NIST SP 800-171A, p. 39. 133 NIST SP 800-171 Rev.
2, p. 28.

The existing implementation specification for isolating health care clearinghouse functions only
applies in the situation where a health care clearinghouse is part of a larger organization. This
would remain true under the proposal to revise this implementation specification, if adopted. In
these situations, the health care clearinghouse is responsible for protecting the ePHI that it is
creating, receiving, maintaining, and transmitting. As discussed in NIST guidance, if a health care
clearinghouse is part of a larger organization, the clearinghouse must implement policies and
procedures that protect the ePHI of the clearinghouse from unauthorized access by the larger
organization. [571] This necessarily includes its relevant electronic information systems.
First, the regulated entity must determine (printed page 951) whether any of its components
constitute a health care clearinghouse under the Security Rule. [572] If no health care
clearinghouse functions exist within the organization, the regulated entity should document this
finding. If a health care clearinghouse does exist within the organization, the regulated entity
must implement procedures that are consistent with the Privacy Rule. [573] Questions for
regulated entities to consider include: If health care clearinghouse functions are performed, are
policies and procedures implemented to protect ePHI from the other functions of the larger
organization? Does the health care clearinghouse share hardware or software with a larger
organization of which it is a part? Does the health care clearinghouse share staff or physical space
with staff from a larger organization? Has a separate network or subsystem been established for the
health care clearinghouse, if reasonable and appropriate? Has staff of the health care clearinghouse
been trained to safeguard ePHI from disclosure to the larger organization, if required for
compliance with the Privacy Rule? [574] Regulated entities should also consider whether
additional technical safeguards are needed to separate ePHI in electronic information systems used
by the health care clearinghouse to protect against unauthorized access by the larger organization.
We also propose to redesignate the implementation specification for access authorization as proposed
45 CFR 164.308(a)(10)(ii)(B) and to modify it to emphasize that a regulated entity must establish
and implement written policies and procedures for granting and revising access to ePHI and the
regulated entity's relevant electronic information systems as necessary and appropriate for each
prospective user and technology asset to carry out their assigned function(s) (i.e., role-based
access policies). Additionally, we propose to redesignate the implementation specification for
access establishment and modification as 45 CFR 164.308(a)(10)(ii)(D)

Strategies for the Integration of Software Supply Chain Security in DevSecOps CI/CD Pipelines ##
Strategies for the Integration of Software Supply Chain Security in DevSecOps CI/CD Pipelines
Chandramouli R, Kautz F, Torres-Arias S (2024) Strategies for the Integration of Software Supply
Chain Security in DevSecOps CI/CD Pipelines. (National Institute of Standards and Technology,
Gaithersburg, MD), NIST Special Publication (SP) NIST SP 800-204D.
<https://doi.org/10.6028/NIST.SP.800-204D>

means the designation (such as ·Complete·) used to describe the degree of alarm protection installed
in an alarmed area. Facility means a plant, laboratory, office, college, university, or commercial
structure with associated warehouses, storage areas, utilities, and components, that, when related
by function and location, form an operating entity. FCL means an administrative determination
that, from a security viewpoint, an entity is eligible for access to classified information of a
certain level (and all lower levels) (e.g., a type of favorable entity eligibility determination
used by some CSAs). An entity eligibility determination for the DHS CCIPP is not the equivalent of
an FCL and does not meet the requirements for FCL reciprocity. FGI means information that is: (1)
Provided to the United States by a foreign government or governments, an international organization
of governments, or any element thereof with the expectation, expressed or implied, that the
information, the source of the information, or both, are to be held in confidence; or (2) Produced
by the United States pursuant to, or as a result of, a joint arrangement with a foreign government
or governments, an international organization of governments, or any element thereof, requiring that

the information, the arrangement, or both are to be held in confidence. Foreign interest means any foreign government, agency of a foreign government, or representative of a foreign government; any form of business enterprise or legal entity organized, chartered or incorporated under the laws of any country other than the United States or its territories, and any person who is not a citizen or national of the United States. Foreign national means any person who is not a citizen or national of the United States. Foreign person is defined in 31 CFR 800.224 for CFIUS purposes. FRD means classified information removed from the Restricted Data category upon a joint determination by the DOE and DoD that such information relates primarily to the military utilization of atomic weapons and that such information can be adequately safeguarded as classified defense information. Freight forwarder (transportation agent) means any agent or facility designated to receive, process, and transship U.S. material to foreign recipients. In the context of this rule, it means an agent or facility cleared specifically to perform these functions for the transfer of U.S. classified material to foreign recipients. GCA means an element of an agency that the agency head has designated and delegated broad authority regarding acquisition functions. A foreign government may also be a GCA. Governing board means an entity's board of directors, board of managers, board of trustees, or equivalent governing body. Grant means a legal instrument which, consistent with 31 U.S.C. 6304

In addition, recently FDA was significantly hampered in identifying the source of contaminated food during a trace back investigation following a Hepatitis A outbreak due to contaminated green onions. This outbreak involved a distributor who purchased green onions from a variety of firms in no predictable pattern and distributed them without recording brand and lot information. The distributor did not keep records of the previous sources of the green onions, which might have indicated a particular supplier of green onions during the specified exposure time period. It was impossible for investigators to determine, from the distributor, the identity of the supplier of the green onions that were sent to the implicated restaurant, and therefore FDA had to spend time investigating all potential suppliers of the green onions to identify the one supplier that supplied the restaurant. Speedy trace back would have enabled FDA to prevent further distribution of contaminated products sooner, thereby preventing more illnesses. Further, 20 percent of all tracing investigations are prematurely terminated due to deficiencies in recordkeeping. A reduction of just one premature termination could prevent at least 53 people from becoming ill. Requiring adequate records to complete a tracing investigation reduces trace-back times by 8 days. This increased efficiency facilitates preventive action in 15 to 18 percent of outbreaks. The speed with which a tracing investigation can be conducted is of vital importance in reducing the number of people who could potentially become ill. Access to records that do not exist or that do not contain sufficient information (with no requirement to retain them or make them available in a timely fashion) is not an efficient and effective way to conduct a tracing investigation during a public health emergency involving (printed page 71567) serious adverse health consequences or death to humans or animals. (Comment 3) One comment states that established industry practice with regard to investigating product defects and conducting product recalls is consistent with the terms of the Bioterrorism Act allowing for the rapid identification of the immediate previous source and immediate subsequent recipient of foods. The comment asserts that the industry's response to the events of September 11, 2001, has strengthened these existing practices. The comment explains that as an inevitable result of industry's commitment to Responsible Care Security Code No. 7 and increased requests from customers, emphasis is now shifting from security at fixed plant sites and major distribution centers to security of products throughout the value chain. This shift in emphasis enhances industry's existing traceback capabilities. The comment asserts that the controls needed to effectively trace the source and recipient of foods are already in place.

(Comment 194) Several comments question the format for presenting the additional required information and whether existing records could satisfy the requirements. These comments cite specific types of transactions to illustrate the difficulties in maintaining the required information on one form. In addition, several comments state that the required information is typically available. One comment states that it is already standard business practice to maintain all required information on bills of lading in the trucking industry. Several comments state that FDA should maintain flexibility in the information required, as well as the type of forms maintained. (Response) Neither the proposed nor final rule specifies the form or format in which records are to be established and maintained. There are no restrictions on the kinds of forms maintained. Commercial invoices, bills of lading, packing lists, and other forms commonly used when executing business transactions can all be used to record the information required by the

regulation. We assume that most of the required information is already maintained on forms ordinarily used in conducting business. Persons subject to this final rule can choose to record the required information in one record or to use existing and newly created supplemental records to capture the required information. (Comment 195) One comment requests clarification that transportation record includes the various documents that may be developed by a company and that it is not necessary to include all of this information in one shipping document. Furthermore, the comment asks us to clarify that existing records can be used to satisfy the requirements, even if they are not in the same location within the manufacturing facility (i.e., all required information is there, but not in the same location). Others comment that the proposed regulation is not practical or reasonable, and fails to consider the business practices currently in place for food protection. (Response) FDA believes that most of the information required by this regulation is currently collected as a matter of normal business practices and that any changes to current business practices as a result of this final rule are small. The revised language in the final rule removing the requirement to record lot codes for distributor and retail facilities increases the agency's belief that changes to existing recordkeeping practices will be small. (Comment 196) One comment states that the need for both manufacturers and third party warehouse or wholesalers to keep the records is redundant.

(v) DSS will provide a copy of the DSS FOCI assessment, proposed FOCI action plan and any associated risk assessments to the GCAs with an interest in the company or corporate family. In the absence of written objections (signed at the Program Executive Office (PEO) level or higher) from GCAs with an interest in the company or corporate family, DSS may proceed with implementation of what DSS considers in its discretion to be an acceptable FOCI action plan based on available information. Unless other regulatory review processes for mergers or acquisitions have an earlier suspense date, DSS will provide a 30 calendar day period for the GCAs with an interest in the company or corporate family to provide their PEO level or higher written objections. (vi) DSS will submit to the USD(I) for approval the DSS templates for those FOCI mitigation or negation agreements identified in paragraph (b)(4)(iii) of this (printed page 19475) section as well as templates for any supplements thereto (e.g., the electronic communications plan (ECP) or technology control plan (TCP)). DSS may propose changes to the contents of these template FOCI mitigation or negation agreements. DSS may tailor non-substantive provisions of the template agreement for any particular FOCI case without further approval from the USD(I), provided DSS notifies the OUSD(I) Security Directorate of the deviation from the template. DSS may provide this notification through the electronic submission of an annotated copy of the modified agreement. (5) NID. The requirement for a NID to authorize access to proscribed information applies only to those foreign-owned U.S. contractors or companies in process for an FCL under an SSA which is used as a mechanism for FOCI mitigation. A NID does not authorize disclosure of classified information to a foreign government, a non-U.S. citizen or a non-U.S. entity. Timelines for NID decisions are set forth in 32 CFR part 2004 and the provisions of this paragraph. NIDs can be program, project, or contract specific, subject to the concurrence of NSA for COMSEC, ODNI for SCI or DOE for RD. For program and project NIDs, a separate NID is not required for each contract. DSS will inform the DoD SAPCO of NID requirements to allow the SAPCO to advise of awareness of unacknowledged SAPs or any carve-out SAP activity. (i) A NID is necessary when access to proscribed information is required for: (A) Pre-contract activities in accordance with paragraph (b)(4)(iii)(C)(1) of this section. (B) New contracts to be issued to a company in process for an FCL that DSS has determined to be under FOCI when an SSA is anticipated, or a contractor already cleared under an SSA. (C) Existing contracts when a contractor is acquired by foreign interests and proposes an SSA as the FOCI action plan. (ii) If a contractor is proposing to use an SSA to mitigate FOCI and requires access to proscribed information: (A) DSS will: (1

the incident response team react efficiently during a cyber event and identify the root cause when possible, and the recovery team return the business capabilities in a prioritized and orderly manner. - Authority - Documented name and point of contact information for two or more management staff members who may activate the plan. - Recovery team membership - Point of contact information for designated members of the team who have reviewed, exercised, and are prepared to implement the plan. - Specific recovery details and procedures - Documented system details that apply to the given information system, with diagrams where applicable. These details may prescribe specific recovery activities to be performed by the recovery team, including application restoration details or methods to activate alternate means of processing (e.g., backup servers, failover site). - Out of band communications - Ability to communicate with critical business, IT, and IT security

stakeholders, including external parties like incident response and recovery teams, without using existing production systems, which are frequently monitored by advanced adversaries. - Communication plan - Any specific notification and/or escalation procedures that apply to this information system. As an example, some systems impact users outside of the organization, and legal, public relations, and human resources personnel may need to be engaged to manage expectations and information disclosure about the incident and recovery progress. - Off-site storage details - Details regarding any arrangement for storing specific records or media at an offline or offsite location. This is particularly critical given the credible threat of ransomware that encrypts data and holds the decryption key hostage for payment. - Operational workarounds - Approved workaround procedures if the information system is not able to be restored within the recovery time objective (RTO).

One comment discussed operational energy-related issues including registering activities involved with maintenance and security of the electrical grid, coordinating the activities of other U.S. Government entities operating in the area of operation, and coordinating with the host government on matters related to infrastructure in the area of operation. Response: While the Department appreciates the comment, it does not specifically address private security contractors and does not require a change to the rule. Comment: The second comment was supportive of the rule and suggested the new guidance be made readily available to all contractors. The commenter also opined that these policies should be strictly enforced with increased penalties for those that do not follow the requirements of the rule. Response: The Department appreciates the comment. The new guidance will be made available to the contractors through publication on public websites and will be shared with the contracting community and industry groups to support wider dissemination. Enforcement and penalties are not decided at the Department level. They must be considered and assessed on an individual contract basis. As no public comment required changes to the rule, the Department is finalizing the rule with minor administrative edits to provide additional clarity. Expected Impact of the Final Rule As no public comment was received on the economic analysis of the proposed rule, the Department is finalizing this section with no changes. Separate from this amendment rule, contractors are required to report certain types of incidents to the combatant commander (CCDR) with the geographic area of responsibility (AOR) in which they are assigned and in accordance with orders and instructions established by those commanders. Total Costs for Non-Government and Government The Office of the Secretary of Defense (OSD) subject matter experts on contractors performing private security functions have estimated an average of 4 incidents per month or 48 incidents (responses) per year from 12 respondents. Based on the nature of the task, the subject matter experts determined that it takes approximately 30 minutes for each contractor to retrieve, prepare, and submit the information for each incident report. Based on our assessment, the complexity of the reporting requirement is equivalent to that of a GS-11, step 5. See the rate calculation below. The estimated annual cost to contractors for receiving, preparing, and submitting the information for incidents is as follows: Estimation of Respondent Burden Hours: Office of Management and Budget (OMB) Control Number 0704-0549 Number of respondents 12 Responses per respondent 4 Number of responses (a) 48 Hours per response (b) .5 Estimated hours (number of responses multiplied hours per response) 24 Cost per hour (c) \$45 Total cost to respondents \$1,080

7. Minimize access to data fields necessary to accomplish an employee's task-normally, access shall be granted only to those data elements (fields) required for the employee to perform his or her job rather than granting access to the entire database. 8. Do not totally rely on proprietary software products to protect personnel data during processing or storage. F. Special Procedures 1. Managers shall: a. Prepare and submit for publication all system notices and amendments and alterations thereto. (See § 310.30(f).) b. Identify required controls and individuals authorized access to PII and maintain updates to the access authorizations. c. When required, ensure Privacy Impact Assessments are prepared consistent with the requirements of the DoD Deputy Chief Information Officer Memorandum, 'DoD Privacy Impact Assessment Guidance,' October 28, 2005. d. Train all personnel whose official duties require access to the system of records in the proper safeguarding and use of the information and ensure that they receive Privacy Act training. G. Record Disposal 1. Dispose of records subject to this Regulation so as to prevent compromise. (See § 310.13(c).) Magnetic tapes or other magnetic medium may be cleared by degaussing, overwriting, or erasing. (See DoD Memorandum, 'Disposition of Unclassified DoD Computer Hard Drives,' June 4, 2001.) 2. Do not use respliced waste computer products containing personal data. Appendix B to Part 310 Sample Notification Letter (See § 310.14 of subpart C) Dear Mr. John Miller: On January 1, 2006, a Department of Defense (DoD) laptop computer was stolen from the parked car of a DoD employee in Washington, DC after normal duty hours while the employee was running a personal errand. The laptop

contained personally identifying information on 100 DoD employees who were participating in the xxx Program. The compromised information is the name, social security number, residential address, date of birth, office and home email address, office and home telephone numbers of the Program participants. The theft was immediately reported to local and DoD law enforcement authorities who are now conducting a joint inquiry into the loss. We believe that the laptop was the target of the theft as opposed to any information that the laptop might contain. Because the information in the laptop was password protected and encrypted, we also believe that the probability is low that the information will be acquired and used for an unlawful purpose. However, we cannot say with certainty that this might not occur. We therefore believe that you should consider taking such actions as are possible to protect against the potential that someone might use the information to steal your identity. (printed page 18784) You should be guided by the actions recommended by the Federal Trade Commission at its Web site at http://www.consumer.gov/idtheft/con_steps.htm .

From the NIST SP 800-172 Rev 3 Final Public Draft: Adversary Effects 3134 Cyb er resiliency solutions are only relevant if they have some effect on risk, specifically by reducing the likelihood of the occurrence of threat events,^{21 21} The term ‘threat event’ refers to an event or situation that has the potential to cause undesirable consequences or impacts. Threat events can be caused by adversarial or non-adversarial threat sources. However, this section emphasizes the effect on adversarial threats and specifically on the APT, for which threat events can be identified with adversary activities. the ability of threat events to cause harm, and the extent of that harm.²² 22 While different risk models are valid and useful, three elements are common across most models: (1) the likelihood of occurrence (i.e., the likelihood that a thre

From the NIST SP 800-172 Rev 3 Final Public Draft: NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 i Abstract 1 The protection of Controlled Unclassified Information (CUI) resident in nonfederal systems and organizations is of paramount importance to federal agencies and can directly impact the ability of the Federal Government to successfully conduct its essential missions and functions. This publication provides federal agencies with recommended security requirements for protecting the confidentiality, integrity, and availability of CUI when it is resident in a nonfederal system and organization and associated with a critical program or high value asset (HVA). The security requirements apply to the components of nonfederal systems that process, store, or transmit C

HIPAA Security Rule section 164.314 (Organizational Requirements) addresses group health plan requirements. Covered entities and business associates must implement appropriate safeguards to protect electronic protected health information (ePHI). For group health plan requirements, organizations should: 1. Establish and document policies specific to group health plan requirements 2. Implement technical and procedural controls 3. Train workforce members on their responsibilities 4. Conduct periodic risk assessments addressing group health plan requirements 5. Maintain documentation of compliance efforts Under 45 CFR 164.314, this is a organizational requirements requirement that applies to all covered entities and business associates that create, receive, maintain, or transmit ePHI.

(c) The failure of any person to make records or other information available to FDA as required by section 414 or 704(a) of the act and this regulation is a prohibited act under section 301 of the act. Compliance Dates §.1.368 What are the compliance dates for this subpart? The compliance date for the requirements in this subpart is December 9, 2005. However, the compliance dates for small and very small businesses are contained in paragraphs (a) and (b) of this section. The size of the business is determined using the total number of full-time equivalent employees in the entire business, not each individual location or establishment. A full-time employee counts as one full-time equivalent employee. Two part-time employees, each working half time, count as one full-time equivalent employee. (a) The compliance date for the requirements in this subpart is June 9, 2004, for small businesses employing fewer than 500, but more than 10 full-time equivalent employees. (b) The compliance date for the requirements in this subpart is December 11, 2006, for very small businesses that employ 10 or fewer full-time equivalent employees. PART 11-ELECTRONIC RECORDS; ELECTRONIC SIGNATURES 3. The authority citation for 21 CFR part 11 continues to read as follows: Authority: 21 U.S.C. 321-393 ; 42 U.S.C. 262 . 4. Section 11.1 is amended by adding paragraph (f) to read as follows: §.11.1 Scope * * * * * (f) This part does not apply to records required to be established or maintained by §§.1.326 through 1.368 of this chapter. Records that satisfy the requirements of part 1, subpart J of this chapter, but that also are required under

other applicable statutory provisions or regulations, remain subject to this part. Dated: November 30, 2004. Lester M. Crawford, Acting Commissioner of Food and Drugs. Dated: December 2, 2004. Tommy G. Thompson, Secretary of Health and Human Services. Footnotes 1. FDA's long-standing interpretation of the FD&C Act's definition of color additive, section 201(t), is an additional example of where "food" is used more narrowly than as defined in section 201(f) of the FD&C Act. A color additive is defined in section 201(t) as a substance that "when applied to a food is capable of imparting color thereto * * *". The agency's food additive regulations distinguish between color additives and "colorants," the latter being used to impart color to a food contact material (21 CFR 178.3297(a)). See also 21 CFR 70.3(f) . Thus, "food" as it appears in the statutory definition of color additive, necessarily excludes food contact materials. Breach Notification Rule's safe-harbor provision. [724] As the use of mobile computing devices (e.g., laptops, smartphones, tablets) has become more pervasive, the risks to sensitive data stored on such devices also have increased. [725] And while in 2003 and even in 2013, encryption might have been out of reach for many regulated entities because of cost or a similar reason, [726] today, encryption solutions are generally considered to be widely accessible. The cost of such solutions has decreased significantly, as has the difficulty in implementing such solutions. In fact, many applications have encryption solutions embedded in them. [727] Once enabled, a device's encryption solution can protect stored sensitive data, including ePHI, from unauthorized access in the event the device is lost or stolen. The same is true for most software today. [728] Thus, while encryption of a particular regulated entity's ePHI might not have been reasonable and appropriate in 2003 or 2013, the Department believes encryption generally is reasonable and appropriate today. [729] Because the prevalence of encryption solutions has increased, as has their affordability and the role they play in protecting information, including ePHI, the Department believes it is appropriate to consider requiring encryption and elevating it from an implementation specification to a standard to increase its visibility and prominence. Based on this and consistent with NCVHS' recommendation, the Department proposes to redesignate the implementation specification for encryption and decryption at 45 CFR 164.312(a)(2)(iv) as a standard at proposed 45 CFR 164.312(b)(1) . [730] The proposed standard would incorporate the requirements of two implementation specifications that address encryption—the one addressed here and the one at 45 CFR 164.312(e)(2)(ii) . [731] The Department proposes that the new standard would require a regulated entity to configure and implement technical controls to encrypt and decrypt all ePHI in a manner that is consistent with prevailing cryptographic standards. This proposed new standard aligns with the Department's essential CPG for Strong Encryption by calling for regulated entities to deploy encryption to protect ePHI and with the recommendation of NCVHS. [732] We also note that the adoption of health IT that is certified through the ONC Health IT Certification Program as having the technical capability to encrypt and decrypt electronic health information, using an encryption algorithm that meets certain requirements, may contribute to a regulated entity's compliance with the proposed standard for encryption and decryption, should the proposal be finalized. [733]

From the NIST SP 800-172 Rev 3 Final Public Draft: ODPs provide flexibility through the use of assignment and selection operations to allow federal agencies and nonfederal organizations to specify values for the designated parameters in the requirements. 15 NIST does not establish or assign values for ODPs. If ODP values for selected security requirements are not formally established or assigned by a federal agency or a consortium of federal agencies, nonfederal organizations must assign those values to complete the requirements. Assignment and selection operations provide the capability to customize the enhanced security requirements based on specific protection needs. The determination of ODP NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 values can be guided and info

One comment suggested that C3PAOs be permitted to conduct partial assessments of ESPs, MSPs, and MSSPs. Multiple comments expressed concern with CMMC assessment requirements for OSAs that use ESPs, stating that OSAs would be unlikely to know which components of the services they purchased were covered by a required CMMC Level 2 assessment. This commenter recommended the creation of a separate type of CMMC assessment specifically for ESPs, which they further recommended should be highlighted on the CMMC AB marketplace to assist OSAs in selecting an appropriately vetted ESP. These comments provided an extended description of the specific scoping guidance that should be adding to existing CMMC supplemental documentation, as well as several sample scenarios explaining how requirements for this new type of assessment should be applied. Two comments highlighted that the rule's preamble does not include details of assessment and implementation requirements. Several commenters recommended the DoD abandon the CMMC ecosystem model and conduct all cybersecurity compliance assessments using DIBCAC assessors, which would reduce cost to the DIB. One such commenter suggested that DIBCAC assessment of C3PAOs, as part of the accreditation process, detracts from DIBCAC's capacity to perform CMMC level 2 assessments for the DIB. Another noted that as Government employees, DIBCAC assessors could exercise judgement to make risk-tolerance decisions that non-Government C3PAOs cannot, including possible acceptance of partial non-compliance. Response: DoD must enforce CMMC requirements uniformly across the Defense Industrial Base for all contractors and subcontractors who process, store, or transmit CUI. The value of information and impact of its loss does not diminish when the information moves to contractors and subcontractors. The DoD has considered the recommendation and declines to revise the rule text to rely solely on self-assessment or eliminate the 3-year validity period to rely on a one-time certification. It is important that contractors maintain security compliance for systems that process, store, or transmit DoD CUI. Given the evolving cybersecurity threat, DoD's best interests are served by ensuring that CMMC Level 2 assessments remain valid for no longer than a 3-year period, regardless of who performs the assessment.

Amend section 53.204-1 by revising the introductory text to read as follows: 53.204-1 Safeguarding classified information within industry (DD Form 254, DD Form 441). The following forms, which are prescribed by the Department of Defense, shall be used by DoD components and those nondefense agencies with which DoD has agreements to provide industrial security services for the National Industrial Security Program if contractor access to classified information is required, as specified in subpart 4.4 and the clause at 52.204-2: * * * * 53.300 [Amended] 12. In section 53.300 amend the table in paragraph (b) in the table 53-2 by removing from Form DD 254 url, <http://www.dtic.mil/whs/directives/forms/eforms/dd0254.pdf> and adding <https://www.esd.whs.mil/Portals/54/Documents/DD/forms/dd/dd0254.pdf> ; and removing from Form DD 441 url, http://www.dtic.mil/whs/directives/forms/eforms/dd0441_2017.pdf and adding https://www.esd.whs.mil/Portals/54/Documents/DD/forms/dd/dd0441_2020.pdf in their places, respectively. [FR Doc. 2020-12762 Filed 7-1-20; 8:45 am] BILLING CODE 6820-EP-P

Persons seeking unauthorized access to data and information are increasingly sophisticated. Their methods of attempting to gain such access can take many forms and result in a wide array of harms, as discussed above. One of the methods they use is through the introduction of malicious software (also referred to as malware) into an electronic information system. As the sophistication of bad actors has increased, so has the variety of types of malicious software that they use to access electronic information systems. The Security Rule defines malicious software but limits it to software designed to damage or disrupt a system. The regulatory text provides only one example of malicious software in regulatory text: a virus. b. Proposal The Department proposes to replace the current definition of malicious software with one that would be consistent with how cybersecurity experts define the term today. [362] Specifically, we propose to define it to mean software or firmware intended to perform an unauthorized action or activity that will have adverse impact on an electronic information system and/or the confidentiality, integrity, or availability of electronic protected health information. This proposal would therefore clarify that malicious software could include either software or firmware and that the negative effects of the malicious software may not be limited to damaging or disrupting a system. Rather, effects of the software could be intended to have any type of adverse impact on an electronic information system and/or the confidentiality, integrity, or availability of ePHI. The Department also proposes to include in regulatory text a non-exhaustive list of examples, such as viruses, worms, Trojan horses, spyware, and some forms of adware, to assist regulated entities in understanding what constitutes malicious software. (printed page 926) 10. Adding a Definition of ·Multi-Factor Authentication· (MFA) a. Issues To

Address The Security Rule includes several technical safeguard provisions that require regulated entities to identify and authenticate persons accessing information and systems to protect ePHI. Section 164.312(a)(2)(1) includes the standard that requires a regulated entity to implement technical policies and procedures that limit access to ePHI to only those persons or software programs that have been granted access rights, while 45 CFR 164.312(d)(2), the standard for person or entity authentication, requires a regulated entity to implement procedures to verify that a person seeking access to ePHI is the one claimed.

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Defense Defense Acquisition Regulations System [Docket DARS-2020-0038; OMB Control No. 0750-0004] AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD). ACTION: Notice and request for comments regarding a proposed extension of an approved information collection requirement. SUMMARY: In compliance with the Paperwork Reduction Act of 1995, DoD announces the proposed extension of a public information collection requirement and seeks public comment on the provisions thereof. DoD invites comments on: whether the proposed collection of information is necessary for the proper performance of the functions of DoD, including whether the information will have practical utility; the accuracy of the estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including the use of automated collection techniques or other forms of information technology. The Office of Management and Budget (OMB) has approved this information collection for use through April 30, 2021. DoD proposes that OMB extend its approval for use for three additional (printed page 70593) years beyond the current expiration date. DATES: Consideration will be given to all comments received by January 4, 2021. ADDRESSES: You may submit comments, identified by OMB Control Number 0750-0004, using any of the following methods: Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments. Email: osd.dfars@mail.mil. Include OMB Control Number 0750-0004 in the subject line of the message. Mail: Defense Acquisition Regulations System, Attn: Ms. Heather Kitchens, OUSD(A&S)DPC(DARS), 3060 Defense Pentagon, Room 3B938, Washington, DC 20301-3060. Comments received generally will be posted without change to <http://www.regulations.gov>, including any personal information provided. FOR FURTHER INFORMATION CONTACT: Ms. Heather Kitchens, telephone 571-372-6104. SUPPLEMENTARY INFORMATION: Title and OMB Number: Defense Federal Acquisition Regulation Supplement (DFARS), Assessing Contractor Implementation of Cybersecurity Requirements; OMB Control Number 0750-0004. Affected Public: Businesses and other for-profit entities. Respondent's Obligation: Required to obtain or retain benefits. Type of Request: Extension of a currently approved collection. Reporting Frequency: On occasion.

, a regulated entity would be required to deploy technology assets and/or technical controls that protect all of the technology assets in its relevant electronic information systems against malicious software, such as viruses and ransomware. Anti-malware software, especially when used in combination with other technical controls such as intrusion detection/prevention solutions, can also help prevent, detect, and contain cyberattacks. [751] This protection would be applied to all of a regulated entity's technology assets in its relevant electronic information systems. When determining how to fulfill this proposed obligation, regulated entities may consider deploying tools such as anti-malware and endpoint detection and response (EDR) solutions. Anti-malware tools generally scan a regulated entity's electronic information systems to (printed page 972) identify malicious software. [752] Such tools may also quarantine malicious software if identified. As explained by the Office of Management and Budget, "EDR combines real-time continuous monitoring and collection of endpoint data [. . .] with rules-based automated response and analysis capabilities." [753] We propose a new implementation specification for software removal at proposed 45 CFR 164.312(c)(2)(ii) to require a regulated entity to remove extraneous software from the regulated entity's relevant electronic information systems. Software is extraneous if it is unnecessary for the regulated entity's operations. It can be a target for attack, and older applications may no longer be supported with patches for new vulnerabilities. [754] Removal of unnecessary software reduces an avenue of attack. The Department is not proposing to specify what would constitute necessary and unnecessary software. Rather, we intend that the regulated entity

would consider removal of unwanted or unused software, for example, default software added by a computer manufacturer or reseller where such software may open an avenue for unnecessary risk because the regulated entity does not intend to use it. Accordingly, the proposal would require a regulated entity to consider all software on its relevant electronic information systems and any potential avenue of risk and address the risk through software removal where such software is unnecessary for the regulated entity's operations. The proposed implementation specification for configuration at proposed 45 CFR 164.312(c)(2)(iii) would require a regulated entity to configure and secure operating systems and software in a manner consistent with the regulated entity's risk analysis. Generally, a regulated entity's risk analysis should guide its implementation of appropriate technical controls to reduce the risk to ePHI. [755] Requiring operating systems and software to be maintained in a secure manner would reduce exploitable vulnerabilities. [756] Often, known vulnerabilities can be mitigated by applying vendor patches or upgrading to a newer version. [757]

), encourages the voluntary formation of organizations engaged in the sharing of information related to cybersecurity risks and incidents to establish mechanisms to continually improve their capabilities and functions as well as to better allow them to partner with the Federal government on a voluntary basis. E.O. 12333 ; ·United States Intelligence Activities,· December 4, 1981, as amended (available at <https://www.archives.gov/federal-register/codification/executive-order/12333.html> , provides general principles that in addition to and consistent with applicable laws are intended to achieve the proper balance between the acquisition of essential information and the protection of individual interests. Title 42 U.S.C. 2011 et seq. (also known as and referred to in this rule as ·The Atomic Energy Act of 1954,· as amended (AEA)); Title 50 U.S.C. chapter 44 (also known as ·The National Security Act of 1947, as amended); Title 50 U.S.C. 3501 et seq. (also known as ·The Central Intelligence Agency Act of 1949,· as amended); Public Law 108-458 (also known as the ·Intelligence Reform and Terrorism Prevention Act of 2004·), which includes development of uniform and consistent policies and procedures to ensure effective, efficient and timely completion of security clearances. Finally, 32 CFR part 2004 ·National Industrial Security Program,· May 7, 2018, establishes uniform standards for the NISP, and helps agencies implement requirements in E.O. 12829 , and establishes agency responsibilities for implementing the insider threat provisions of E.O. 13587 . III. Changes Made by This Rule and Expected Impact The NISPOM was first published in 1995 as DoD Manual 5220.22. Updates to the NISPOM have included Conforming Change 1, March 28, 2013 and NISPOM Change 2 in May 21, 2016. The most current version of the NISPOM (Change 2) is available at <https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodm/522022M.pdf?ver=2019-06-06-145530-170> . In addition to codifying the NISPOM in the CFR and adding the requirements of SEAD 3 and Section 842 of Public Law 115-232 , DoD is also removing 32 CFR part 117, subpart C , ·National Industrial Security Program· because it is duplicative of 32 CFR part 2004 , ·National Industrial Security Program· and removing 32 CFR part 117, subpart B , because it is also duplicative of other industrial security provisions set forth in 32 CFR part 2004 . These administrative removals support a recommendation from the DoD Regulatory Reform Task Force created under E.O. 13777 , Enforcing the Regulatory Reform Agenda (available at <https://www.govinfo.gov/content/pkg/FR-2017-03-01/pdf/2017-04107.pdf>), and by themselves create no changes in current DoD policy. Upon the effective date of 32 CFR part 117 , DoD will no longer publish the DoD Manual 5220.22, NISPOM as a DoD policy issuance. Specific changes in this rule that are not in the current NISPOM, include the following. §.117.8: Reporting Requirements. §.117.8(a) General

CIS Safeguard 5.4 · Restrict Administrator Privileges to Dedicated Administrator Accounts Restrict administrator privileges to dedicated administrator accounts on enterprise assets. Conduct general computing activities, such as internet browsing, email, and productivity suite use, from the user's primary, non-privileged account. Implementation Groups: 1,2,3 Asset Type: users Security Function: protect Parent Control: Account Management

Where an exception at paragraph (a)(4)(ii)(D) of this section applies, a covered entity or business associate must document in real-time the existence of an applicable exception and implement reasonable and appropriate compensating controls in accordance with paragraph (a)(4)(ii)(F) of this section. (F) Compensating controls. To the extent that a covered entity or business associate determines that an exception at paragraph (a)(4)(ii)(D) of this section applies, a covered entity or business associate must implement reasonable and appropriate security measures to address the identified risk in a timely manner as required by paragraph (a)(5)(ii)(D) of this section until a

patch, update, or upgrade that does not adversely affect the confidentiality, integrity, or availability of electronic protected health information becomes available. (5) Standard: Risk management ·(i) General. Implement security measures sufficient to reduce risks and vulnerabilities to all electronic protected health information to a reasonable and appropriate level. (ii) Implementation specifications ·(A) Planning. Establish and implement a written risk management plan for reducing risks to all electronic protected health information, including but not limited to those risks identified by the risk analysis under paragraph (a)(2)(ii)(A) of this section, to a reasonable and appropriate level. (B) Maintenance. Review the written risk management plan required by paragraph (a)(5)(ii)(A) of this section at least once every 12 months and as reasonable and appropriate in response to changes in the risk analysis made in accordance with paragraph (a)(2)(ii)(B) of this section, and modify as reasonable and appropriate. (C) Priorities. The written risk management plan must prioritize the risks identified in the risk analysis required by paragraph (a)(2)(ii)(A) of this section, based on the risk levels determined by such risk analysis. (D) Implementation. Implement security measures in a timely manner to address the risks identified in the covered entity's or business associate's risk analysis in accordance with the priorities established under paragraph (a)(5)(ii)(C) of this section. (6) Standard: Sanction policy ·(i) General. Apply appropriate sanctions against workforce members who fail to comply with the security policies and (printed page 1014) procedures of the covered entity or business associate. (ii) Implementation specifications ·(A) Policies and procedures. Establish written policies and procedures for sanctioning workforce members who fail to comply with the security policies and procedures of the covered entity or business associate. (B) Modifications. Review written sanctions policies and procedures at least once every 12 months, and modify as reasonable and appropriate. (C) Application.

In FY 2015, collaborators and the associated collaborations have included Carnegie Mellon University (test development environment), Johns Hopkins Applied Physics Lab (the practical application of a combinatorial coverage measurement tool), the University of Texas at Arlington (a covering array generation algorithm), Mexico's Centro de Investigación y de Estudios Avanzados del Instituto Politécnico Nacional (a very large covering array generation and its application to hardware malware detection), Lockheed Martin Corporation (the practical application of covering arrays), United States Marine Corps (USMC) Camp Pendleton (testing and fault location for the tactical data link TADIL-J protocol), University of Texas Dallas and East Carolina University (safety-critical systems testing), Duke University (analysis of software failures), the National Science Foundation (cybersecurity metrics and assurance building), the National Security Agency (NSA) Information Assurance Directorate (security automation standardization), the Department of Homeland Security (DHS) Cybersecurity and Communications (security automation standardization), and DHS (incident coordination). In particular, the SSAG led the NIST Security and Forensics Working Group that published draft NISTIR 8006, NIST Cloud Computing - Security Reference Architecture, that aggregates forensics challenges in a cloud ecosystem. The working group has been working on developing a draft of SP 800-173, Guidance for Applying the Risk Management Framework to Federal-based Information Systems (target release date: spring/summer 2016).

Five respondents requested that DoD harmonize the requirements of the rule with industry- and Government-led supply chain risk management regimes and initiatives in order to avoid inconsistencies. One respondent encouraged DoD to harmonize the requirements of the rule with the guidance issued by the Secretary of Defense memorandum dated October 10, 2013, entitled ·Safeguarding Unclassified Controlled Technical Information;· the Office of Management and Budget's circular M-14-13 dated November 18, 2013, entitled ·Enhancing the Security of Federal Information and Information Systems;· and other Departmental requirements. This respondent further recommends that the final rule include a statement that ·the rule complements rather than conflicts with other related requirements.· Another respondent further encouraged DoD to avoid the creation of unneeded duplication of certifications of these important assurance efforts, by affirming that the interim rule shall not impact the duties of contractors and vendors in assessing relevant procurements related to NSS. Response: DoD is involved in a myriad of efforts to address supply chain risks, specifically, as well as cybersecurity broadly. All of these policies and strategic efforts aim to improve the overall risk posture of the Federal Government's information systems and those of its industry partners. A patchwork of policies and regulations is sometimes necessary to address the variabilities of the system ownership and operation, and the risk tolerance of the mission. The rule is specific to DoD and narrowly scoped to NSS, which often have a lower risk tolerance due to the criticality of missions utilizing such systems. 9. Tracking Comment: One respondent commented

that DoD should catalog the number of source exclusions executed under the section 806 authority between 2013 and 2018. Response: DoD is required to submit a report on January 1, 2017, on the effectiveness of section 806 authorities, to include how frequently DoD exercises the authority.

III. Applicability to Acquisitions Not Greater Than the Simplified Acquisition Threshold (SAT) and Commercial Items, Including Commercially Available Off-the-Shelf (COTS) Items Consistent with 41 U.S.C. 1905, 1906, and 1907, the Director Defense Procurement and Acquisition Policy (DPAP), determined that it would not be in the best interest of the United States to exempt acquisitions not greater than the SAT and acquisitions of commercial items, including COTS items, from the applicability of section 806 of the NDAA for FY 2011 as amended by section 806 of the NDAA for FY 2013. A. Applicability to Contracts at or Below the SAT 41 U.S.C. 1905 governs the applicability of laws to contracts or subcontracts in amounts not greater than the SAT. It is intended to limit the applicability of laws to such contracts or subcontracts. 41 U.S.C. 1905

NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 protection of CUI. To reduce the risk of collusion, organizations consider rotating 454

AU.L2-3.3.8 · Audit Protection CMMC Assessment Guide · Level 2 | Version 2.13 88 FURTHER DISCUSSION Audit information is a critical record of what events occurred, the source of the events, and the outcomes of the events; this information needs to be protected. The logs must be properly secured so that the information may not be modified or deleted, either intentionally or unintentionally. Only those with a legitimate need -to-know should have access to audit information, whether that information is being accessed directly from logs or from audit tools. Example You are in charge of IT operations in a company that handles CUI. Your responsibilities include protecting audit information and audit logging tools. You protect the information from modification or deletion by having audit log events forwarded to a central server and by restricting the local audit logs to only be viewable by the system administrators [a,b,c]. Only a small group of security professionals can view the data on the central audit server [b,c,d]. For an additional layer of protection, you back up the server daily and encrypt the backups before sending them to a cloud data repository [a,b,c]. Potential Assessment Considerations · Is there a list of authorized users for audit systems and tools [a]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.3.8

3.3.1 | Cipher Suites... 3.3.1, grouped by certificate type and protocol version. 3.3.1 Cipher Suites Cipher suites specify the cryptographic algorithms that will be used for a session.

(Comment 164) Several comments state that the food distribution chain is comprised of multiple links or components, some of which will qualify as small or very small businesses, such as independent truck operators or some DSD operations. For example, some large national baked goods companies deliver products directly to stores through individuals who function as independent businesses (e.g., they own their own trucks, purchase the food from the vendor and sell it to the store, and hold licenses to the particular delivery routes). The comments state that, if these businesses are covered by the small business exemption, they will not be required to provide the information that larger businesses will be required to retain. The comments recommend that FDA either extend the exemption through all subsequent links in the distribution chain, or else recognize the interconnectedness of the systems and impose a single, more realistic compliance date with which all in the food distribution chain will be able to comply, e.g., establish a universal compliance date for the regulations of June 9, 2005. (Response) FDA does not agree that all businesses should be subject to a universal compliance date. FDA has considered the interconnectedness of the food distribution system and contractual relationships that exist between very small, small, and large businesses. FDA has determined that large, small, and very small businesses will have 12, 18, and 24 months, respectively, from the date of publication of this final rule, with which to comply. These timeframes represent an extra 6 months over the timeframes in the proposed rule for all business sizes to come into compliance. FDA believes that many large businesses and possibly many small businesses already establish and maintain records that contain most or all of the information required by these regulations, and thus should not require longer than 12 and 18 months, respectively, to come into compliance. Very small firms would have 24 months to comply. FDA anticipates that the very small and small businesses will be able to lower their compliance costs by learning from the experience of the large businesses. The extended compliance times for small and very small businesses are based on the total number of full-time equivalent employees within the

entire business, not just at each individual establishment. (Comment 165) One comment notes that small businesses doing business with large businesses would have to comply with the large business timeframe and asks FDA to reconsider this exception, and allow small businesses to comply on the 12 and 18 month schedule.

Control ES-1: Information on devices used from any location. The analysis should also lead to the identification of the type or types of storage encryption technologies that can meet the organization's security needs. Another outcome of the analysis is the documentation of the requirements for the storage encryption technologies themselves, including security capabilities (e.g., authentication, cryptography, key management), performance requirements, management requirements (including reliability, interoperability, scalability), the security of the technology itself, usability (by both administrators and users), and maintenance requirements (such as applying updates). In most cases, a single storage encryption product cannot meet all of the organization's identified needs. For example, the organization may need to protect information on devices running several different OSs, yet no appropriate product can work on all those platforms. Some devices might also not meet the minimum hardware requirements for storage encryption products. Organizations can solve this problem in several ways, such as acquiring multiple products, using multiple types of storage encryption technologies, replacing older devices, or identifying compensating controls to be used instead of storage encryption that provide the same level of protection. Appendix A discusses some potential alternatives to storage encryption. Organizations should ensure that effective solutions are identified for all the types of end user devices that need their stored information protected, if possible, and that a waiver process is created for unusual cases that cannot be addressed by the identified solutions. ## 4.2 Design the Solution Once the needs have been identified and the appropriate type(s) of storage encryption technology have been chosen, the next phase is to design a solution that meets the needs. If these design decisions are incorrect, then the storage encryption implementation will be more susceptible to compromise.

Control BM-650: Feedback . This approach to data-stream encryption is very similar to the internal feedback approach, the difference being that cipher bits, rather than "encrypting bits," are used as the DES input. Itote that this approach, Figure 5, if used in a one bit feedback mode, is "self synchronizing" because after 64 bit times the DES input register of the decryption device will contain the same data as does the input register of the encryption device. Note also that the approach provides garble extension, thus providing anti-spoofing protection. ## 6 . System Philosophies There are three basic approaches to incorporating encryption into a communications system: link-by-link, nodeby-node, and end-to-end encryption. Link-by-link encryption, figure 6, is the technique most commonly used today. It may be implemented in a transparent manner with currently available devices, which are placed in series with the circuit between data terminal equipment and data communications equipment. This approach has the disadvantage that it allows all traffic to pass through the CPU of any node in plain-text. Node-by-node encryption, figure 7, is a modified version of link-by-link encryption to overcome this disadvantage. Each link uses a unique key, but the "translation" from one key to the next occurs within a single "security module" which might serve as a peripheral device to the node's CPU In this way plain-text data does not traverse the node, but exists only within this physically secure module. Note that enough message data must remain encrypted so that the node's CPU can properly route the message. End-to-end encryption, figure 8, requires a "Key Control Center," located somewhere within the communication system. Each end-point in the system holds a unique "long-term" key, and this center alone holds a copy of each such key. When one end point wishes to communicate to another, a request to this effect is sent to the Key Control Center.

PART 1-GENERAL ENFORCEMENT REGULATIONS 1. The authority citation for 21 CFR part 1 continues to read as follows: Authority: 15 U.S.C. 1453 , 1454 , 1455 ; 19 U.S.C. 1490 , 1491 ; 21 U.S.C. 321 , 331 , 332 , 333 , 334 , 335a , 343 , 350c , 350d , 352 , 355 , 360b , 362 , 371 , 374 , 381 , 382 , 393 ; 42 U.S.C. 216 , 241 , 243 , 262 , 264 . 2. New subpart J (§§ 1.326 through 1.368) is added to part 1 to read as follows: Subpart J-Establishment, Maintenance, and Availability of Records General Provisions 1.326 Who is subject to this subpart? 1.327 Who is excluded from all or part of the regulations in this subpart? 1.328 What definitions apply to this subpart? 1.329 Do other statutory provisions and regulations apply? 1.330 Can existing records satisfy the requirements of this subpart? Requirements for Nontransporters to Establish and Maintain Records to Identify the Nontransporter and Transporter Immediate Previous Sources of Food 1.337 What information must nontransporters establish and

maintain to identify the nontransporter and transporter immediate previous sources of food? Requirements for Nontransporters to Establish and Maintain Records to Identify the Nontransporter and Transporter Immediate Subsequent Recipients of Food 1.345 What information must nontransporters establish and maintain to identify the nontransporter and transporter immediate subsequent recipients of food? Requirements for Transporters to Establish and Maintain Records 1.352 What information must transporters establish and maintain? General Requirements 1.360 What are the record retention requirements? 1.361 What are the record availability requirements? 1.362 What records are excluded from this subpart? 1.363 What are the consequences of failing to establish or maintain records or make them available to FDA as required by this subpart? Compliance Dates 1.368 What are the compliance dates for this subpart? Subpart J-Establishment, Maintenance, and Availability of Records General Provisions §1.326 Who is subject to this subpart? (a) Persons who manufacture, process, pack, transport, distribute, receive, hold, or import food in the United States are subject to the regulations in this subpart, unless you qualify for one of the exclusions in §1.327. If you conduct more than one type of activity at a location, you are required to keep records with respect to those activities covered by this subpart, but are not required by this subpart to keep records with respect to activities that fall within one of the exclusions in §1.327. (b) Persons subject to the regulations in this subpart must keep records whether or not the food is being offered for or enters interstate commerce. §1.327 Who is excluded from all or part of the regulations in this subpart? (a) Farms are excluded from all of the requirements in this subpart.

dd. Whether annual auditing of a regulated entity's compliance with the Security Rule is appropriate. ee. Whether the Department should specify the level of detail or standard required for the annual compliance audit. If so, please explain. ff. Whether the Department should require a regulated entity to obtain written verification of their business associates' implementation of the administrative and physical safeguards that are required by the Security Rule, in addition to the proposed requirement to obtain verification of implementation of the technical safeguards. If so, please explain. gg. Whether there are other requirements for which the Department should require that the person performing them have a specific level or type of expertise. If so, please explain.

E. Section 164.310-Physical Safeguards 1. Current Provisions A person with physical access to electronic media or a regulated entity's electronic information systems that create, receive, maintain, or transmit or that otherwise affect the confidentiality, integrity, and availability of ePHI might have the opportunity to change the configurations of its relevant electronic information systems, install malicious software or otherwise adversely affect technology assets in its relevant (printed page 958) electronic information systems, change information, or access ePHI or other sensitive information. [631] Any of these actions has the potential to adversely affect the confidentiality, integrity, or availability of ePHI, which means that physical safeguards for electronic media and a regulated entity's relevant electronic information systems are critical to protecting the security of ePHI. Thus, the physical safeguards standards address the essential requirements for regulated entities to apply to limit physical access to their relevant electronic information systems to only authorized workforce members. As discussed above, ePHI is increasingly transmitted using interconnected systems that rely on cloud computing. The shift to a cloud-based infrastructure may increase regulated entities' reliance on business associates to maintain and access ePHI stored in the cloud. [632] Additionally, the shift to cloud computing enables regulated entities' workforce members to access ePHI and relevant electronic information systems from a greater number of locations. Accordingly, regulated entities must appropriately expand and/or ensure that applied physical safeguards take into account these new arrangements. Section 164.310 includes the four standards with which a regulated entity must comply to physically secure relevant electronic information systems and the premises where they are located. These standards require regulated entities to implement physical safeguards for facility access controls, workstation use, workstation security, and device and media controls in a manner that conforms with 45 CFR 164.306(c) , the general compliance provision for the security standards.

(g) The DIB participant and the Government may each unilaterally limit or discontinue participation in this program at any time. Termination shall not relieve the DIB participant or the Government from obligations to continue to protect against the unauthorized use or disclosure of GFI, attribution information, contractor proprietary information, third-party proprietary information, or any other information exchanged under this program, as required by law, regulation, contract, or the FA. (h) Upon termination of the FA, and/or change of Facility Security Clearance status below Secret, GFI must be returned to the Government or destroyed pursuant to direction of, and at the

discretion of, the Government. (i) Participation in this program does not abrogate the Government's or the DIB participants' rights or obligations regarding the handling, safeguarding, sharing, or reporting of information, or regarding any physical, personnel, or other security requirements, as required by law, regulation, policy, or a valid legal contractual obligation. § 236.7 DIB participant eligibility requirements. To be eligible to participate in this program, a DIB company must: (a) Have or acquire DoD-approved medium assurance certificates to enable encrypted unclassified information sharing between the Government and DIB participants; (printed page 62438) (b) Have an existing active Facility Security Clearance (FCL) granted under the National Industrial Security Program Operating Manual (NISPOM) (DoD 5220.22-M) with approved safeguarding for at least Secret information, and continue to qualify under the NISPOM for retention of its FCL and approved safeguarding (<http://www.dtic.mil/whs/directives/corres/pdf/522022m.pdf>); (c) Have or acquire a Communication Security (COMSEC) account in accordance with the NISPOM Chapter 9, Section 4 (DoD 5220.22-M), which provides procedures and requirements for COMSEC activities; (d) Obtain access to DoD's secure voice and data transmission systems supporting the DIB CS/IA program, (e) Own or operate covered DIB system(s), and (f) Execute the standardized FA with the Government (available during the application process), which implements the requirements set forth in §§ 236.4 through 236.6. Dated: September 30, 2013. Patricia L. Toppings, OSD Federal Register Liaison Officer, Department of Defense. [FR Doc. 2013-24256 Filed 10-21-13; 8:45 am] BILLING CODE 5001-06-P

(Response) For the reasons stated in the previous paragraphs, FDA continues to believe that facilities that provide food to interstate conveyances should not be covered by the restaurant exclusion because they do not prepare and sell food directly to the consumer for immediate consumption. However, the comment's concern about having to go to unprecedented lengths to ensure strict batch preparation misconstrues the proposed requirement. In the final rule, FDA deleted the requirement in § 1.337(a) for a nontransporter to provide information reasonably available to identify the specific source of each ingredient used to make every lot of finished product, and instead put that requirement in § 1.345(b) of this final rule because it is unlikely that a person would have that information reasonably available at the time records are created to identify the immediate previous sources of the food. FDA acknowledges that certain business practices are not amenable to linking incoming ingredients with outgoing product and that it may not always be possible to identify the specific source of an ingredient that was used to make a lot of finished product. It is not FDA's intent to mandate reengineering of long-standing existing processes. Accordingly, the final rule requires linking incoming with outgoing product only when this information is reasonably available. Although the definition of restaurant has not changed from the proposed definition, FDA exercised its discretion and added language to the restaurant exclusion in § 1.327(b) of this final rule to account for incidental sales of food that a restaurant/retail facility does not prepare itself (e.g., food it purchases from a manufacturer for sale to consumers). See the discussion earlier in section III.E.14 of this document. 15. Retail Facility As explained in response to comment 40 of this document, for purposes of § 1.327(e) of this final rule, retail food establishment is defined to mean an establishment that sells food products directly to consumers as its primary function. The term consumers does not include businesses. A retail food establishment may manufacture/process, pack, or hold food if the establishment's primary function is to sell from that establishment food, including food that it manufactures/processes, packs, or holds, directly to consumers. A retail food establishment's primary function is to sell food directly to consumers if the annual monetary value of sales of food products directly to consumers exceeds the annual monetary value of sales of food products to all other buyers. A retail food establishment includes grocery stores, convenience stores, and vending machine locations. In addition, retail food establishments that employ 10 or fewer full-time equivalent employees are excluded from the requirements in subpart J of this final rule, except §§ 1.361 and 1.363. (See response to comment 38 of the document for a further discussion of FDA's rationale underlying this exclusion.) (

Agency records, which may include qualifying information received from non-federal entities, are subject to request under the Freedom of Information Act (5 U.S.C. 552) (FOIA), which is implemented in the Department of Defense by DoD Directive 5400.07 and DoD Regulation 5400.7-R (see 32 CFR parts 285 and 286 , respectively). Pursuant to established procedures and applicable regulations, the Government will protect sensitive nonpublic information under this Program against unauthorized public disclosure by asserting applicable FOIA exemptions, and will inform the non-Government source or submitter (e.g., DIB participants) of any such information that may be subject

to release in response to a FOIA request, to permit the source or submitter to support the withholding of such information or pursue any other available legal remedies. §-236.6 General provisions. (a) Confidentiality of information that is exchanged under this program will be protected to the maximum extent authorized by law, regulation, and policy. (b) The Government and DIB participants will conduct their respective activities under this program in accordance with applicable laws and regulations, including restrictions on the interception, monitoring, access, use, and disclosure of electronic communications or data. The Government and the DIB participant each bear responsibility for their own actions under this program. (c) Prior to sharing any information with the Government under this program pursuant to the FA, the DIB participant shall perform a legal review of its policies and practices that support its activities under this program, and shall make a determination that such policies, practices, and activities comply with applicable legal requirements. The Government may request from any DIB participant additional information or assurances regarding such DIB participant's policies or practices, or the determination by the DIB participant that such policies or practices comply with applicable legal requirements. (d) This voluntary DIB CS/IA program is intended to safeguard covered defense information. None of the restrictions on the Government's use or sharing of information under the DIB CS/IA program shall limit the Government's ability to conduct law enforcement, counterintelligence activities, or other activities in the interest of national security; and participation does not supersede other regulatory or statutory requirements. (e) Participation in the DIB CS/IA program is voluntary and does not obligate the DIB participant to utilize the GFI in, or otherwise to implement any changes to, its information systems. Any action taken by the DIB participant based on the GFI or other participation in this program is taken on the DIB participant's own volition and at its own risk and expense.

means any communication or representation of knowledge such as facts, data, or opinions in any medium or form, including textual, numerical, graphic, cartographic, narrative, electronic, or audiovisual forms (see Office of Management and Budget (OMB) Circular No. A-130, Managing Information as a Strategic Resource). Lawful Government purpose means any activity, mission, function, operation, or endeavor that the Government authorizes or recognizes as within the scope of its legal authorities or the legal authorities of non-executive branch entities such as state and local law enforcement. (b) Identifying and reporting information the contractor believes or has reason to know is potentially CUI. This contract does not identify CUI as being involved in the contract; nonetheless: (1) The Contractor shall notify the Contracting Officer within 8 hours of discovery if the Contractor discovers any information that the contractor believes, or has reason to know, is CUI. The potential unidentified CUI may be marked, unmarked, or improperly marked. The Contractor shall take action to appropriately safeguard any information the Contractor believes is CUI, until a Contracting Officer makes a determination. (2) If the Contractor discovers any information that the Contractor believes is CUI and it is involved in a suspected or confirmed CUI incident, the Contractor shall notify the Contracting Officer as outlined in paragraph (b)(1), determine and inventory what CUI was or could have been improperly accessed, created, collected, used, processed, stored, maintained, disseminated, disclosed, or disposed of as part of the incident, and follow any additional incident response requirements the Contracting Officer provides if the Government determines the information is CUI. (3) The reporting requirements of this clause do not relieve the Contractor from the requirement to follow any applicable laws, regulations, or policies outside of this clause. (c) Government-provided information. The Contractor is not entitled to use Government-provided information for its own purposes, whether or not the information is marked as CUI, unless the information is in the public domain, or unless the information was lawfully made available to the Contractor by someone other than the Government. (d) Contractor information. The Contractor shall appropriately identify information the Contractor owns and provides to the Government (i.e., contractor bid or proposal information, contractor-attributional information, or contractor proprietary business information). The Government will determine in accordance with agency procedures whether the information provided by the Contractor is CUI or entitled to other protections (e.g., contractor-attributional information associated with a CUI incident). (1) If it is CUI or entitled to other protections, the Government will protect against the improper use or release of the information to the extent required by law.

Control TG-15: cribed earlier, though primitive. having common objectives, generally require complicated programming to accomplish their goals using today's tools. access logs for audit purposes could be developed. Higher level software to Elements in the various tools are often not coordinated, e.g. tracing and mapping . used together, and facilities could be developed so that

they could be used together. These techniques are generally appropriate to be 11-20 · 10.

CONCLUSIONS AND RECOMMENDATIONS Information should be published for the benefit of auditors on "what" audit tools are available "where". for security audit should be developed. This catalog would provide details of components, and would be indexed according to techniques, hardware, and software required to use the tools. Comments about the level of difficulty would also be included. That is, a catalog of tools Security log data should be built into new systems during their development. development and design of systems, to insure auditability. Security oriented personnel should participate in planning, Secure logging hardware components should be explored, to provide tamper-proof recording capability for security audit purposes. 11. (iii) Final Level 3 (DIBCAC). The OSC has achieved the CMMC Status of Final Level 3 (DIBCAC) if the Level 3 certification assessment results in a passing score as defined in § 170.24. This score may be achieved upon initial certification assessment or as the result of a POA&M closeout certification assessment, as applicable. (iv) CMMC Status investigation. The DoD reserves the right to conduct a DCMA DIBCAC assessment of the OSC, as provided for under the 48 CFR 252.204-7020 . If the investigative results of a subsequent DCMA DIBCAC assessment show that adherence to the provisions of this part have not been achieved or maintained, these DCMA DIBCAC results will take precedence over any pre-existing CMMC Status. At that time, standard contractual remedies will be available and the OSC will be ineligible for additional awards with CMMC Status requirement of Level 3 (DIBCAC) for the information system within the CMMC Assessment Scope until such time as a new CMMC Status is achieved. (2) Affirmation. Affirmation of the Level 3 (DIBCAC) CMMC Status is required for all Level 3 certification assessments at the time of each assessment, and annually thereafter. Affirmation procedures are provided in § 170.22. (printed page 83231) (b) Contract eligibility. Prior to award of any contract or subcontract with requirement for CMMC Status of Level 3 (DIBCAC), the following two requirements must be met: (1) The OSC must achieve, as specified in paragraph (a)(1) of this section, a CMMC Status of either Conditional Level 3 (DIBCAC) or Final Level 3 (DIBCAC). (2) The OSC must submit an affirmation of compliance into SPRS, as specified in paragraph (a)(2) of this section. (c) Procedures ·(1) Level 3 certification assessment of the OSC. The CMMC Level 3 certification assessment process includes: (i) Final Level 2 (C3PAO). The OSC must achieve a CMMC Status of Final Level 2 (C3PAO) for information systems within the Level 3 CMMC Assessment Scope prior to the CMMC Level 3 certification assessment. The CMMC Assessment Scope for the Level 3 certification assessment must be equal to, or a subset of, the CMMC Assessment Scope associated with the OSC's Final Level 2 (C3PAO). Asset requirements differ for each CMMC Level. Scoping differences are set forth in § 170.19. (ii) Initiating the Final Level 3 (DIBCAC). The OSC (including ESPs that voluntarily elect to undergo a Level 3 certification assessment) initiates a Level 3 certification assessment by emailing a request to DCMA DIBCAC point of contact found at www.dcma.mil/DIBCAC . The request must include the Level 2 certification assessment unique identifier. DCMA DIBCAC will validate the OSC has achieved a CMMC Status of Level 2 (C3PAO) and will contact the OSC to schedule their Level 3 certification assessment. (iii) Conducting the Final Level 3 (DIBCAC).

Revising the date of the clause; and b. Redesignating paragraph (c)(1)(xxi) as (c)(1)(xxiii) and adding new paragraphs (c)(1)(xxi) and (xxii). (xxii) 52.239-XX Federal Information Systems Using Cloud Computing Services (DATE) (E.O. 14028) if flow down is required in accordance with paragraph (i) of FAR clause 52.239-XX. * * * * * [FR Doc. 2023-21327 Filed 10-2-23; 8:45 am] BILLING CODE 6820-EP-P

The Department currently has no plans for separate reimbursement of costs to acquire cybersecurity capabilities or a required cybersecurity certification that may be incurred by an offeror on a DoD

contract. Costs may be recouped via competitively set prices, as companies see fit. (printed page 89070) c. Alternative Implementation Comment: Multiple commenters requested that the government give small businesses time for CMMC compliance post-contract award. One commenter recommended that DoD consider only requiring government assessment of NIST SP 800-171 compliance (vice private third party) for small businesses, even at lower CMMC assessment levels, thus offsetting a higher burden level to small businesses. Several commenters commented on the need to include exemptions for small businesses that do not possess CUI and have never been contracted by the government. One added that DoD should identify portions of contracts which won't require CMMC so that small businesses are afforded maximum practicable opportunity regardless of their CMMC status. Response: The DoD has determined that the assessment of the ability of a prospective contractor to adequately protect FCI and CUI that will be processed, stored, or transmitted on information systems during contract performance is a requirement prior to award of any prime contract or subcontract. Failure to assess a prospective contractor's ability to comply with applicable information security protection requirements, such as NIST SP 800-171 Rev 2, risks significant performance delays if information cannot be shared immediately at contract award due to lack of compliance. As applicable, the awardee must be capable of processing, storing, and transmitting FCI and CUI at the start of the performance period, regardless of the business size of the awardee. The CMMC Program has simplified requirements for Level 1 and 2 assessments in some contracts. Specifically, although contractors must still implement and maintain the security requirements set forth in FAR 52.204-21 to protect FCI and set forth in the NIST SP 800-171 Rev 2 to protect CUI, the requirement to hire a third-party assessment organization for CMMC Level 1 was eliminated, and for some contracts, contractors may be permitted to self-assess compliance with CMMC Level 2. Annual affirmations are also required for CMMC Level 1 and 2. Prospective contractors must make a business decision regarding the type of DoD business they wish to pursue and understand the implications for doing so. If an offeror or current DoD contractor or subcontractor has self-assessed then later decides to pursue a contract or subcontract requiring a certification at CMMC Level 2 or 3, it will need to factor in the time and investment necessary to hire a third-party assessment organization and achieve certification as a condition of contract award.

3.8.2 Public Key-Transport Keys... 3.8.2 Public Key-Transport Keys Backup or archiving of the public key may be done but may not be necessary.

d levels of expertise and significant resources that allow it to create opportunities to achieve its objectives by using multiple attack vectors including, for example, cyber, physical, and deception. These objectives typically include establishing and extending footholds within the IT infrastructure of the targeted organizations for purposes of exfiltrating information, undermining or impeding critical aspects of a mission, program, or organization, or positioning itself to carry out these objectives in the future. The advanced persistent threat pursues its objectives repeatedly over an extended period; adapts to defenders' efforts to resist it; and is determined to maintain the level of interaction needed to execute its objectives. Note 1: While some sources define APT (or advanced cyber threat) as an adversary at Tier V or Tier VI in the threat model in [DSB13] in particular, to be a state actor the definition used here includes criminal actors. Note 2: For brevity, the APT refers to any adversary with the characteristics described above or to the set of all such adversaries; an APT actor refers to a representative member of that set. Note 3: The APT may establish its foothold by subverting the supply chain in order to compromise cyber resources. Thus, the APT may be able to achieve its objectives without executing a cyber-attack against the organization's systems (e.g., by inserting a logic bomb or time). Note 4: The term APT does not include the insider threat. However, if an APT actor establishes and extends its foothold by masquerading as a legitimate system user and taking advantage of that user's authorized access privileges, it may be indistinguishable from an insider threat.

(I) From subsection (f) because the agency's rules are inapplicable to those portions of the system that are exempt and would place the burden on the agency of either confirming or denying the existence of a record pertaining to a requesting individual might in itself provide an answer to that individual relating to an on-going investigation. The conduct of a successful investigation leading to the indictment of a criminal offender precludes the applicability of established agency rules relating to verification of record, disclosure of the record to that individual, and record amendment procedures for this record system. (J) From subsection (g) because this system of records should be exempt to the extent that the civil remedies relate to provisions of 5 U.S.C. 552 a from which this rule exempts the system. (iv) Exemption. (A) Investigative material compiled for law

enforcement purposes, other than material within the scope of subsection (j)(2), may be exempt pursuant to 5 U.S.C. 552a(k)(2). However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of such information, the individual will be provided access to such information except to the extent that disclosure would reveal the identity of a confidential source. (B) Investigative material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5), (printed page 14788) but only to the extent that such material would reveal the identity of a confidential source. (C) Therefore, portions of this system of records may be exempt pursuant to 5 U.S.C. 552a(k)(2) and/or (k)(5) from the following subsections of 5 U.S.C. 552a(c)(3), (d), (e)(1), (e)(4)(G), (H) and (I), and (f). (v) Authority. 5 U.S.C. 552a(k)(2) and (k)(5). (vi) Reasons. (A) From subsection (c)(3) because to grant access to the accounting for each disclosure as required by the Privacy Act, including the date, nature, and purpose of each disclosure and the identity of the recipient, could alert the subject to the existence of the investigation or prosecutable interest by the NRO or other agencies. This could seriously compromise case preparation by prematurely revealing its existence and nature; compromise or interfere with witnesses or make witnesses reluctant to cooperate; and lead to suppression, alteration, or destruction of evidence.

3.6.2 Security for Routing Protocols Routing protocols can be subject to threats such as unauthorized updates for either IPv4 or IPv6 routes.

Information as to current military addresses and assignments may be provided to military banking facilities who provide banking services overseas and who are reimbursed by the Government for certain checking and loan losses. For personnel separated, discharged, or retired from the Armed Forces, information as to last known residential or home of record address may be provided to the military banking facility upon certification by a banking facility officer that the facility has a returned or dishonored check negotiated by the individual or the individual has defaulted on a loan and that if restitution is not made by the individual, the U.S. Government will be liable for the losses the facility may incur. K. Routine Use-Disclosure of Information to the General Services Administration A record from a system of records maintained by a Component may be disclosed as a routine use to the General Services Administration (GSA) for the purpose of records management inspections conducted under authority of 44 U.S.C. 2904 and 2906. L. Routine Use-Disclosure of Information to the National Archives and Records Administration A record from a system of records maintained by a Component may be disclosed as a routine use to the National Archives and Records Administration (NARA) for the purpose of records management inspections conducted under authority of 44 U.S.C. 2904 and 2906. M. Routine Use-Disclosure to the Merit Systems Protection Board A record from a system of records maintained by a Component may be disclosed as a routine use to the Merit Systems Protection Board, including the Office of the Special Counsel, for the purpose of litigation, including administrative proceedings, appeals, special studies of the civil service and other merit systems, review of OPM or Component rules and regulations, investigation of alleged or possible prohibited personnel practices, including administrative proceedings involving any individual subject of a DoD investigation, and such other functions, promulgated in 5 U.S.C. 1205 and 1206 or as may be authorized by law. N. Routine Use-Counterintelligence Purposes A record from a system of records maintained by a Component may be disclosed as a routine use outside the Department of Defense (DoD) or the U.S. Government for the purpose of counterintelligence activities authorized by U.S. law or Executive Order or for the purpose of enforcing laws that protect the national security of the United States. (printed page 18785) Appendix D to Part 310-Provisions of the Privacy Act From Which a General or Specific Exemption May Be Claimed (See paragraph (d) of §310.26) Exemptions Section of the Privacy Act (j)(2) (k) (1-7) No No (b)(1) Disclosures within the Department of Defense. No No (2) Disclosures to the public. No No (3) Disclosures for a Routine Use. No No (4) Disclosures to the Bureau of Census. No No (5) Disclosures for statistical research and reporting. No No (6) Disclosures to the NARA. No No (7) Disclosures for law enforcement purposes. No No

(i) Copies of the request; (ii) Copies of the Component's action granting total or partial access. (Note: A separate Privacy case file need not be created in such cases.) (iii) Copies of the Component's action denying access. (iv) Copies of any appeals filed. (v) Copies of the reply to the appeal. (6) Privacy case files shall not be furnished or disclosed to anyone for use in making any determination about the individual other than determinations made under this part. §310.20

Reproduction fees. (a) Assessing fees. (1) Charge the individual only the direct cost of reproduction. (2) Do not charge reproduction fees if copying is: (i) The only means to make the record available to the individual (for example, a copy of the record must be made to delete classified information); or (ii) For the convenience of the DoD Component (for example, the Component has no reading room where an individual may review the record, or reproduction is done to keep the original in the Component's file). (iii) No fees shall be charged when the record may be obtained without charge under any other Regulation, Directive, or statute. (iv) Do not use fees to discourage requests. (b) No minimum fees authorized. Use fees only to recoup direct reproduction costs associated with granting access. Minimum fees for duplication are not authorized and there is no automatic charge for processing a request. (c) Prohibited fees. Do not charge or collect fees for: (1) Search and retrieval of records; (2) Review of records to determine releasability; (3) Copying records for the DoD Component convenience or when the individual has not specifically requested a copy; (4) Transportation of records and personnel; or (5) Normal postage. (d) Waiver of fees. (1) Normally, fees are waived automatically if the direct costs of a given request are less than \$30. This fee waiver provision does not apply when a waiver has been granted to the individual before, and later requests appear to be an extension or duplication of that original request. A DoD Component may, however, set aside this automatic fee waiver provision when, on the basis of good evidence, it determines the waiver of fees is not in the public interest. (2) Decisions to waive or reduce fees that exceed the automatic waiver threshold shall be made on a case-by-case basis. (e) Fees for Members of Congress. Do not charge members of Congress for copying records furnished even when the records are requested under the Privacy Act on behalf of a constituent (See § 310.22(i)). When replying to a constituent inquiry and the fees involved are substantial, consider (printed page 18771) suggesting to the Congressman that the constituent can obtain the information directly by writing to the appropriate offices and paying the costs. When practical, suggest to the Congressman that the record can be examined at no cost if the constituent wishes to visit the custodian of the record. (f) Reproduction fees computation. Compute fees using the appropriate portions of the fee schedule in

Details for completion of the annual affirmation, including wording of the affirmation statement, are addressed in the 48 CFR part 204 CMMC Acquisition rule. The affirmation signifies the requirements were implemented as of the date of the self-assessment or certification, and that the OSA has and intends to maintain the system as assessed. The DoD declines to require the use of an executive summary or the publication of metrics in the affirmation statement as part of the affirmation because that is not consistent with the purpose of the affirmation requirement. Regarding the alignment of assessments and affirmation timelines, the DoD declines to adopt recommended changes which would allow up to 3 years to elapse before DIB companies would be required to assess the status of their cybersecurity compliance. 25. CMMC Acceptance of Alternate Standards a. CMMC and Other Agency Standards or Acceptance of CMMC Assessments Comment: Several commenters asked for additional detail about § 170.20 Standards Acceptance. One commenter described discussions from various DoD industry engagements and suggested the rule is inconsistent with information provided at those information exchange events. Some commenters observed the rule does not describe DoD efforts to coordinate with other agencies regarding any additional cybersecurity requirements they choose to implement, which could conflict or add burden for companies that must also comply CMMC requirements. One comment suggested implementing the CMMC program government wide. An industry association submitted several comments regarding perceived duplication between this rule and cybersecurity requirements of other Federal agencies and foreign governments. They also recommended the DoD modify the rule to reflect other agency standards, such as TSA and CISA security directives requiring cyber incident reporting for natural gas utilities. Several commenters thought the rule did not adequately explain potential portability of CMMC assessments, referring to whether other agencies might recognize CMMC compliance as meeting or partially meeting their requirements. One specifically suggested CMMC affirmations could be accepted as evidence of compliance with any similar cybersecurity requirements other agencies may implement. One comment suggested that by assessing compliance of all applicable security requirements, the CMMC program will impede efforts to establish DoD information sharing agreements with other non-DoD organizations, including other agencies and foreign governments. Response: Some comments received lacked relevance to the rule's content, which is limited to specific CMMC Program requirements. The DoD declines to respond to speculative or editorial comments about private citizens or entities, all of which are not within the scope of this rule. Similar data security requirements are already applied to contractors across all Federal agencies, due to the applicability of FAR clause 52.204-21, and 32 CFR part 2002

From the NIST SP 800-172 Rev 3 Final Public Draft: NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 architectures can also include other information, such as user roles and the access 2424

There may be references in this publication to other publications currently under development by NIST in accordance with its assigned statutory responsibilities. The information in this publication, including concepts and methodologies, may be used by federal agencies even before the completion of such companion publications. Thus, until each publication is completed, current requirements, guidelines, and procedures, where they exist, remain operative. For planning and transition purposes, federal agencies may wish to closely follow the development of these new publications by NIST. The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the Nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology. ITL's responsibilities include the development of management, administrative, technical, and physical standards and guidelines for the cost-effective security and privacy of other than national security-related information in federal information systems. The Special Publication 800-series reports on ITL's research, guidelines, and outreach efforts in information system security, and its collaborative activities with industry, government, and academic organizations. Bluetooth was originally conceived by Ericsson in 1994. Ericsson, IBM, Intel, Nokia, and Toshiba formed the Bluetooth Special Interest Group (SIG), a not-for-profit trade association developed to drive development of Bluetooth products and serve as the governing body for Bluetooth specifications. 3 Bluetooth is standardized within the IEEE 802.15 Working Group for Wireless Personal Area Networks that formed in 1999 as IEEE 802.15.1-2002. 4

The IoT Cybersecurity Program coordinated outreach to a range of public and private sector stakeholders to inform them of NIST's IoT cybersecurity work and collect feedback to inform future work. This included sessions at the Cybersecurity Framework Workshop in 2017, the Industrial Internet Consortium (IIC) quarterly meeting, and planning a colloquium with industry, government, and academic participants. - FISMA Outreach Activity to Public and Private-Sector Organizations: Cybersecurity outreach briefings were conducted and support was provided to all levels of private sector organizations and government (including federal, state and local entities) on multiple information security topics of interest. These included, for example, an effective implementation of the NIST RMF, contingency planning, interconnection security agreements, security-focused configuration management, and information security for small businesses. In addition, the ITL FISMA Team responded to hundreds of inquiries from customers, served on cybersecurity advisory panels, conducted outreach activities with academic institutions, provided information on NIST's security standards and guidelines, and explored new areas of cybersecurity research and development. - Collaboration with JTF partners and other federal organizations: The FISMA Team worked closely with JTF partners to ensure that the five JTF publications remain current, and to designate additional Special Publications as JTF guidance. The five JTF publications are: 1. SP 800-30, Guide for Conducting Risk Assessments; 2. SP 800-37, Guide for Applying the Risk Management Framework to Federal Information Systems: a Security Life Cycle Approach; 3. SP 800-39, Managing Information Security Risk: Organization, Mission, and Information System View; 4. SP 800-53, Security and Privacy Controls for Federal Information Systems and Organizations; and 5.

s without permission. They also believe that the professional societies should take the lead in public education about the need for responsible use of critical data now stored extensively in computers. Similarly, system administrators have responsibilities to take steps that will minimize the risk of disruption: they should not tolerate trapdoors, which permit access without authentication; they should strengthen password authentication procedures to block guessed-password attacks; they should isolate their backup systems from any Internet connection; and they should limit participation in mutually trusting groups.

(ii) Any administrative access must be conducted using a hardware-based multifactor cryptographic

device authenticator. (2) Administrative accounts. (i) All systems and services provided shall have unique administrative accounts, with the exception of service accounts. (ii) Any accounts that administer any part of a system used in the performance of the contract, to include support systems and infrastructure, shall be considered part of the system authorization boundary and must have unique administrative accounts that are unique and exclusive to agency systems. Administrator accounts must be disclosed, upon request by the contracting officer. (3) Consent banners. Login and consent banners must be deployed on all systems and networks. Such banners must be consistent with CISA guidance at <https://www.cisa.gov/publication/guidance-consent-banners>. The contract may include more specific requirements for consent banners; such requirements will be consistent with the CISA guidance linked above. 39.X03 Contracting officer coordination. The contracting officer shall coordinate the following requests and submissions with the requiring activity (to enable coordination with the agency chief information security officer, senior agency official for privacy, and agency legal counsel, as necessary). (a) Any request for information or access pursuant to the clause at 52.239-ZZ, Incident and Threat Reporting and Incident Response Requirements for Products or Services Containing Information and Communications Technology (ICT); (b) A submission of a reportable incident pursuant to FAR clause 52.239-ZZ, when such incident involves a FIS; (c) The contractor's annual, independent assessment of the security of each FIS (52.239-YY(d)(1)(iii)). If received from the requiring activity, the contracting officer shall provide the contractor with the agency's request to implement or rationale for not implementing a recommendation for improvement or mitigation (52.239-YY(d)(1)(iv) and (v)); (d) A contractor's request to use Government-related data for a purpose other than to manage the operational environment that supports the Government data information (52.239-XX(d)(2)); (e) A contractor's submission of its system security plan, when requested by the agency (52.239-YY(e)(3)(ii)); (printed page 68417) (f) A contractor's submission of its continuous monitoring strategy for the FIS (52.239-YY(f)(7)); (g) A contractor's request to implement alternative, additional, or compensating security controls, to include those pertaining to cyber supply chain risk management, not otherwise identified in the contract (52.239-YY(g)); (h) A contractor's request to use Government metadata for a purpose other than to manage the operational environment that supports the Government data (52.239-YY(i)(2));

(E) An individual performing private security functions has come under attack including in cases where a weapon is discharged against an individual performing private security functions or personnel performing such functions believe a weapon was so discharged; or (F) Active, non-lethal counter-measures (other than the discharge of a weapon) are employed by PSC personnel in response to a perceived immediate threat in an incident that could significantly affect U.S. objectives with regard to the military mission or international relations. (Active non-lethal systems include laser optical distracters, acoustic hailing devices, electro-muscular TASER guns, blunt-trauma devices like rubber balls and sponge grenades, and a variety of riot-control agents and delivery systems). (vi) The independent review and, if practicable, investigation of incidents reported pursuant to paragraphs (a)(1)(v)(A) through (a)(1)(v)(F) of this section and incidents of alleged misconduct by PSC personnel. (vii) Identification of ultimate criminal jurisdiction and investigative responsibilities, where conduct of U.S.G.-funded PSCs or PSC personnel are in question, in accordance with applicable laws to include a recognition of investigative jurisdiction and coordination for joint investigations (i.e., other U.S.G. agencies, host nation, or third country agencies), where the conduct of PSCs and PSC personnel is in question. (viii) A mechanism by which a commander of a combatant command may request an action by which PSC personnel who are non-compliant with contract requirements are removed from the designated operational area. (ix) Interagency coordination of administrative penalties or removal, as appropriate, of non-DoD PSC personnel who fail to comply with the terms and conditions of their contract, as they relate to this part. (x) Implementation of the training requirements contained below in paragraph (a)(2)(ii) of this section. (2) Specifically cover: (i) Matters relating to authorized equipment, force protection, security, health, safety, and relations and interaction with locals in accordance with DoD Instruction 3020.41, Contractor Personnel Authorized to Accompany the U.S. Armed Forces. (ii) Predeployment training requirements addressing, at a minimum, the identification of resources and assistance available to PSC personnel as well as country information and cultural training, and guidance on working with host country nationals and military personnel. (iii) Rules for the use of force and graduated force procedures. (iv) Requirements and procedures for direction, control and the maintenance of communications with regard to the movement and coordination of PSCs and PSC personnel, including specifying interoperability requirements. These include coordinating with the Chief of Mission, as necessary, private security operations outside secure bases and U.S. diplomatic

properties to include movement control procedures for all contractors, including PSC personnel. (b)

a. Whether the Department should require a regulated entity to implement any additional administrative safeguards. If so, please explain. b. Whether the Department should not require a regulated entity to implement any of the existing or proposed standards for implementation specifications. If so, please explain. c. Whether there are additional implementation specifications that should be adopted for any of the standards for administrative safeguards. d. Whether the Department should provide any exceptions to the administrative safeguards or related implementation specifications. If so, please explain when and why any exceptions should apply. e. Whether once every 12 months is the appropriate frequency between reviews of policies, procedures, and other activities required by the other standards for administrative safeguards. f. Whether there are any special considerations for business associates and business associate agreements that the Department should be aware of with respect to administrative safeguards. g. Whether there are any requirements for business associates and business associate agreements that the Department should include in administrative safeguards that it did not propose. h. Whether the Department should require covered entities to report to their business associates (or business associates to their subcontractors) the activation of the covered entities' (or business associates') contingency plans. If so, please explain the appropriate circumstances of and the appropriate amount of time for such notification. i. Whether once every 12 months is an appropriate length of time in which a covered entity must verify and document that a business associate has deployed technical safeguards pursuant to the requirements. j. Whether the Department should require covered entities to obtain satisfactory assurances and verify that a business associate has implemented physical or other safeguards in addition to deploying technical safeguards before permitting it to create, receive, maintain, or transmit ePHI on its behalf. k. Whether on an ongoing basis, but at least once every 12 months and when there is a change to a regulated entity's environment or operations that affects ePHI, is the appropriate frequency for updating the technology asset inventory and network map? l. Whether on an ongoing basis, but at least once every 12 months and when there is a change to the regulated entity's environment or operations that affects ePHI, is the appropriate frequency for performing a risk analysis? m. Whether there are additional events for which the Department should require a regulated entity to update its risk analysis. If so, please explain. n. Whether the Department should include or exclude any specific circumstances from its explanation of environmental or operational changes when determining whether review or update of the written inventory of technology assets and network map or review of the risk analysis written assessment is warranted.

Audit record reduction is a process that manipulates collected audit information and organizes such information in a summary format that is more meaningful to analysts. Audit record reduction and report generation capabilities do not always emanate from the same system or organizational entities conducting auditing activities. Audit record reduction capability can include, for example, modern data mining techniques with advanced data filters to identify anomalous behavior in audit records. The report generation capability provided by the system can help generate customizable reports. Time ordering of audit records can be a significant issue if the granularity of the time stamp in the record is insufficient. 72 NIST SP 800-171A, p. 23. 73 NIST SP 800-171 Rev. 2, p. 19.

(iii) In accordance with § 170.19(c)(2), the OSC's on-premises infrastructure connecting to the CSP's product or service offering is part of the CMMC Assessment Scope. As such, the security requirements from the CRM must be documented or referred to in the OSC's SSP. (6) Level 2 certification assessment with the use of an External Service Provider (ESP), not a CSP. An OSA may use an ESP that is not a CSP to process, store, or transmit CUI in performance of a contract or subcontract with a requirement for the CMMC Status of Level 2 (C3PAO) under the following circumstances: (i) The use of the ESP, its relationship to the OSA, and the services provided are documented in the OSA's SSP and described in the ESP's service description and customer responsibility matrix. (ii) The ESP services used to meet OSA requirements are assessed within the scope of the OSA's assessment against all Level 2 security requirements. (iii) In accordance with § 170.19(c)(2), the OSA's on-premises infrastructure connecting to the ESP's product or service offering is part of the CMMC Assessment Scope, which will also be assessed. As such, the security requirements from the CRM must be documented or referred to in the OSA's SSP. § 170.18 CMMC Level 3 certification assessment and affirmation requirements. (a) Level 3 certification assessment. To comply with Level 3 certification assessment requirements, the OSC must meet the requirements set

forth in paragraphs (a)(1) and (2) of this section. An OSC undergoes a Level 3 certification assessment as detailed in paragraph (c) of this section to achieve a CMMC Status of either Conditional or Final Level 3 (DIBCAC). A CMMC Status of Final Level 2 (C3PAO) for information systems within the Level 3 CMMC Assessment Scope is a prerequisite to undergo a Level 3 certification assessment. CMMC Level 3 recertification also has a prerequisite for a new CMMC Level 2 assessment. Achieving a CMMC Status of Level 3 (DIBCAC) also satisfies the requirements for CMMC Statuses of Level 1 (Self), Level 2 (Self), and Level 2 (C3PAO) set forth in §§ 170.15 through 170.17 respectively for the same CMMC Assessment Scope. (1) Level 3 certification assessment requirements. The OSC must achieve a CMMC Status of Final Level 2 (C3PAO) on the Level 3 CMMC Assessment Scope, as defined in § 170.19(d), prior to initiating a Level 3 certification assessment, which will be performed by DCMA DIBCAC (www.dcmamil/DIBCAC)

(5) Within 30 working days, the Denial Authority will provide the following notification to the requester in writing if the decision is to deny the requester access to the information. (6) Included in the notification will be: (i) Denying Official's name, position title, and business address; (ii) Date of the denial; (iii) The specific reason for the denial, citing the appropriate subsections of the Privacy Act, the Freedom of Information Act, AR 25-55, The Department of the Army Freedom of Information Act Program and this part; and (iv) The individual's right to administratively appeal the denial within 60 calendar days of the mailing date of the notice, through the Denial Authority, to the Office of the General Counsel, Secretary of the Army, 104 (printed page 24502) Army Pentagon, Washington, DC 20310-0104. (7) The appeal must be in writing and the requester should provide a copy of the denial letter and a statement of their reasons for seeking review. (8) For denials made by the DA when the record is maintained in a Government-wide system of records, an individual's request for further review must be addressed to each of the appropriate government Privacy Act offices listed in the Privacy Act system of records notices. For a current listing of Government-wide Privacy Act system of records notices see the Defense Privacy Office's Web site <http://www.defenselink.mil/privacy> or DA PAM 25-51. (j) No records determinations. (1) Since a no record response may be considered an 'adverse' determination, the Denial Authority must make the final determination that no records exist. The originating agency shall notify the requester that an initial determination has been made that there are no responsive records, however the final determination will be made by the Denial Authority. A no records certificate must accompany a no records determination that is forwarded to the Denial Authority. (2) The Denial Authority must provide the requester with appeal rights. (k) Referral of requests. (1) A request received by a DA activity having no records responsive to a request shall be referred to another DOD Component or DA activity, if the other Component or activity confirms that they have the requested records, or verifies that they are the proper custodian for that type of record. The requester will be notified of the referral. In cases where the DA activity receiving the request has reason to believe that the existence or nonexistence of the record may in itself be classified, that

activity will consult the Component or activity having cognizance over the records in question before referring the request. If the Component or activity that is consulted determines that the existence or nonexistence of the records is in itself classified, the requester shall be so notified by the DA activity originally receiving the request that it can neither confirm nor deny the existence of the record, and no referral shall take place.

A 2023 Government Accountability Office report on medical device cybersecurity described the importance of robust cybersecurity controls to ensure medical device safety and effectiveness because of the increasing integration of wireless, internet- and network-connected capabilities, and the electronic exchange of health information. [190] The FDA has also acknowledged, As electronic medical devices become increasingly connected to each other and to other technologies, the ability of connected systems to safely, securely and effectively exchange and use the information becomes critical. [. . .] Cybersecurity concerns rise along with the increasing medical device interoperability. [191] Accordingly, in 2023, the FDA issued updated guidance for industry and FDA staff on requirements for cybersecurity in medical devices. [192] And then there are digital health applications. When an application is deployed by a covered entity, an application developer may be a business associate and subject to the Security Rule. An application developer may also meet the HIPAA Rules' definition of health care provider. [193] and be a covered entity. [194] But also, individuals are increasingly interested in accessing their ePHI using applications and transmitting information collected by health and wellness applications to (printed page 912) their health care providers. [195] Such applications may empower individuals to better manage their health and participate in their health care and provide health care providers and researchers with a more holistic view of the individual's health at a particular point in time and over an extended period of time. [196] This technology, while valuable for understanding an individual's overall health, introduces another potential vulnerability to the security of ePHI and the information systems that create, receive, maintain, or transmit it. EHRs, networked medical devices, and applications are only the beginning. Artificial intelligence (AI) in health care, particularly for diagnosis and treatment, is in the nascent stages of development, but many are eager to test its promise. [197] After all, many experts believe that AI promises opportunities to improve patient care, outcomes, and population health, as well as to reduce costs. [198] The use of AI in health care is increasing and is expected to continue to increase. [199] A 2023 Healthcare Information and Management Systems Society (HIMSS) survey of health care cybersecurity professionals reported that approximately 50 percent of respondents' organizations permitted the use of generative AI technology. [200] And other new technologies are expected shortly, as discussed below. For example, according to reports, quantum computing may be available in the near future, which may have ramifications for data privacy and security. [201] We also know that researchers are exploring methods for storing ePHI in biological material (e.g., DNA). [202]

Under CMMC Level 2 (NIST SP 800-171 Rev 3), organizations must implement specific controls addressing this area. Key considerations include: 1. The specific NIST SP 800-171 controls that apply to this scenario 2. Documentation requirements for the SSP 3. Evidence needed for C3PAO assessment 4. Cost-effective implementation options for different organization sizes Organizations should reference the specific control families in NIST SP 800-171 Rev 3 and consult the CMMC Assessment Guide Level 2 for detailed assessment objectives. A Registered Practitioner (RP) can provide organization-specific guidance.

Identify reasonably anticipated threats. The list of threat events and threat sources should include reasonably anticipated and probable human and natural incidents that can negatively affect the

regulated entity's ability to protect ePHI. The information gathered for the technology asset inventory should be used to identify reasonably anticipated threats to ePHI. Identify potential vulnerabilities and predisposing conditions. For any of the various threats identified above to result in a significant risk, each needs a vulnerability or predisposing condition that can be exploited. While it is necessary to review threats and vulnerabilities as unique elements, they are often considered at the same time. Organizations should consider a given loss scenario and evaluate both, such as what threat sources might initiate which threat events or what vulnerabilities or predisposing conditions those threat sources might exploit to cause an adverse effect. From this, the regulated entity should develop a list of vulnerabilities (i.e., flaws or weaknesses) that could be exploited by potential threat sources. Determine the likelihood that a threat would exploit a vulnerability. For each threat event/threat source identified, a regulated entity should consider: the likelihood that the threat would occur and the likelihood that an occurred threat would exploit an identified vulnerability and result in an adverse effect. A regulated entity might consider assigning a likelihood value (e.g., ·very low,· ·low,· ·moderate,· ·high,· or ·very high·) to each threat/vulnerability pairing. As an example, the regulated entity may determine that the likelihood of a phishing attack occurring is very high and that the likelihood of the event exploiting a human vulnerability is moderate, resulting in an overall likelihood rating of high. Determine the impact of a threat exploiting a vulnerability. As with likelihood determination, a regulated entity may choose to express this effect in qualitative terms or use any other scale that the entity chooses. When selecting an impact rating, the regulated entity may consider how the threat event can affect the loss or degradation of the confidentiality, integrity, or availability of ePHI. Some tangible impacts can be measured quantitatively in terms of lost revenue, the cost of repairing the system, or the level of effort required to correct problems caused by a successful threat action. Other impacts cannot be measured in specific units (e.g., the loss of public confidence, the loss of credibility, or damage to an organization's interests), but they can be qualitatively described. Determine the level of risk to ePHI while considering the information gathered and determinations made during the previous steps. The level of risk is determined by analyzing the values assigned to the overall likelihood of threat occurrence and the resulting impact of threat occurrence.

cannot be used, contact the Regulatory Secretariat Division at 202-501-4755 or GSARegSec@gsa.gov . Please cite FAR Case 2023-008. SUPPLEMENTARY INFORMATION: The final FAR rule 2022-010, Establishing FAR part 40, amended the FAR to establish a framework for a new information security and supply chain security FAR part, FAR part 40. The final rule does not implement any of the information security and supply chain security policies or procedures; it simply established FAR part 40. The final FAR rule was published in the Federal Register at 89 FR 22604 , on April 1, 2024. Relocation of existing requirements and placement of new requirements into FAR part 40 will be done through separate rulemakings. Currently, the policies and procedures for prohibitions, exclusions, supply chain risk information sharing, and safeguarding information that address security objectives are dispersed across multiple parts of the FAR, which makes it difficult for the acquisition workforce and the general public to understand and implement applicable requirements. FAR part 40 will provide the acquisition team with a single, consolidated location in the FAR that addresses their role in implementing requirements related to managing information security and supply chain security when acquiring products and services. The new FAR part 40 provides a location to cover broad security requirements that apply across acquisitions. These security requirements include requirements designed to bolster national security through the management of existing or potential adversary-based supply chain risks across technological, intent-based, or economic means (e.g., cybersecurity (printed page 25269) supply chain risks, foreign-based risks, emerging technology risks). The intent is to structure FAR part 40 based on the objectives of the regulatory requirement (similar to how environmental objectives are covered in FAR part 23, and labor objectives are addressed in FAR part 22). Security-related requirements that include and go beyond information and communications technology (ICT) will be covered under FAR part 40. An example of products and services that include and go beyond ICT are cybersecurity supply chain risk management requirements such as requirements related to section 889 of the John S. McCain National Defense Authorization Act for Fiscal Year 2019 (Pub. L. 115-232). Security-related requirements that only apply to ICT acquisitions will continue to be covered in FAR part 39. The test for whether existing regulations would be in FAR part 40 would be based on the following questions: Question 1: Is the regulation or FAR case addressing security objectives? · If yes, move to question 2 · If no, the regulation would be located in another part of the FAR. Question 2: Is the scope of the requirements limited to ICT? · If yes, the regulation would be located in FAR part 39 · If no, the

regulation would be located FAR part 40.

the National Bureau of Standards. rity audit project, Mrs. Ruthberg worked closely with Mr. McKenzie on the planning, acted as the Workshop arrangements chairman, and is co- editor of these Proceedings. in computer science at NBS and most recently has become active in the managerial procedures required for computer security. and the per record cost of a breach involving personally identifiable information (across all industries) was \$183. [967] These costs include detection and investigation activities, notification activities, post-breach response activities, and activities attempting to minimize the loss of business. Thus, the benefits of the proposed rule would be to reduce the harms of health care breaches described in the preamble. The Department believes that implementing the changes in the NPRM would reduce both the incidence of breaches in health care and the costs of mitigating breaches when they occur. The Department also analyzed the potential cost savings of proposals that (printed page 1002) correspond to major factors affecting the costs of large breaches as identified in published reports. [968] The Department estimates that, at a minimum, performing the following actions would quantifiably reduce costs: (1) encryption; (2) penetration testing; (3) requiring MFA and notification of termination of access to ePHI; (4) increasing employee training; and (5) reducing noncompliance with regulations. These factors would account for an estimated 23.6 percent decrease in large breach costs. [969] For health care breaches, this corresponds to an estimated cost savings of \$2.6 million per large breach in high incidence years, and \$2.1 million per large breach in low incidence years. Non-Quantitative Analysis of Benefits A fundamental benefit of the proposed rule would be to decrease the effects of breaches on individuals who are the subjects of ePHI, namely patients and health plan members. Breaches of ePHI may cause harm to individuals in many ways, including loss of reputation and personal dignity and financial and medical fraud, which may result in false debts, impaired credit, and even health threats from misuse of health insurance credentials by another individual. ·[H]ealthcare data, which includes medical histories and personal identification, can last a lifetime. The information collected can be used for ransom, to commit tax frauds, to provide supporting disability documentation, to send fake bills to insurance providers, to obtain healthcare, prescription drugs, medical treatment, and to obtain government benefits like Medicare and Medicaid.· [970] Hackers can use stolen personal, medical, and financial data to take out a bank loan in the victim's name and change direct deposit information in payroll systems, allowing them to steal wages as well. [971] In addition, medical identity fraud can impact the victim's credit score and health insurance premiums, and may result in unexpected legal fees. [972]

n NIST IR 8319. For example, NIST IR 8319 explored whether the AES block cipher behaves as a 'pseudo-random permutation' (PRP), so that the block cipher modes of operation can rely on this assumption. NIST IR 8319 already mentioned that certain properties, such as the impact of the 128-bit block size of AES, will be analyzed for the modes of operation. This report will also analyze whether certain security requirements of AES implementations (e.g., resistance against side-channel attacks) are still true when they are used in a particular mode of operation or give an indication of new problems that may appear when modes of operation are used in an application. The failure of the security properties of the block cipher modes and their implementations leading to attacks will be investigated, with a particular focus on attacks that lead to practical insecurities that are listed in the NIST National Vulnerability Database (NVD), such as the Sweet32 attack [16] that is listed in the NVD as CVE-2016-2183 [67]. In order to avoid inadvertently overlooking security problems, internal NIST feedback and public comments will be taken into consideration. As such, this report has the intention of complementing rather than supplementing other reports on the NIST-recommended modes of operation, such as the report by Rogaway [74]. For historical reasons, not all NIST-recommended modes were designed according to a predefined list of security requirements. An attempt to retrospectively formalize a set of security requirements would be difficult. Instead, the question raised by Richard Barnes at Real

The designated ITPSO will ensure that contractor program personnel assigned insider threat program responsibilities and all other cleared employees complete training consistent with applicable CSA provided guidance. (1) The contractor will provide training to insider threat program personnel, including the contractor's designated ITPSO, on: (i) CI and security fundamentals. (ii) Procedures

for conducting insider threat response actions. (iii) Applicable laws and regulations regarding the gathering, integration, retention, safeguarding, and use of records and data, including the consequences of misuse of such information. (iv) Applicable legal, civil liberties, and privacy policies and requirements applicable to insider threat programs. (2) The contractor will provide insider threat awareness training to all cleared employees on an annual basis. Depending upon CSA specific guidance, a CSA may instead conduct such training. The contractor must provide all newly cleared employees with insider threat awareness training before granting access to classified information. Training will address current and potential threats in the work and personal environment and will include at a minimum: (i) The importance of detecting potential insider threats by cleared employees and reporting suspected activity to the insider threat program designee. (ii) Methodologies of adversaries to recruit trusted insiders and collect classified information, in particular within information systems. (iii) Indicators of insider threat behavior and procedures to report such behavior. (iv) CI and security reporting requirements, as applicable. (3) The contractor will establish procedures to validate all cleared employees who have completed the initial and annual insider threat training. (h) Derivative classification. (1) Initial training. The contractor will ensure all employees authorized to make derivative classification decisions are trained in the proper application of the derivative classification principles, in accordance with CSA direction. Employees are not authorized to conduct derivative classification until they receive such training. (2) Refresher training. In addition to the initial training, contractors will ensure all employees who conduct derivative classification receive training at least once every two years. Contractors will suspend an employee's derivative classification authority for any employee who does not receive such training at least once every two years. Training will emphasize the avoidance of over-classification and address: (i) Classification levels. (ii) Duration of classification. (iii) Identification and markings. (iv) Classification prohibitions and limitations. (v) Sanctions and classification challenges. (vi) Security classification guides. (vii) Information sharing. (3) Record of training. Contractors will retain records of the date of the most recent training (initial or refresher) and type of training provided to employees. (i) Information systems security.

This proposed rule does not create any new provisions or clauses. The rule updates language used in the clause text to clarify its intent and conform with current contract line item structure terminology. This rule does not change the applicability of the affected clause. IV. Executive Orders 12866 and 13563 E.O.s 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804. V. Executive Order 13771 This rule is not subject to E.O. 13771, because this rule is not a significant regulatory action under E.O. 12866. VI. Regulatory Flexibility Act DoD does not expect this proposed rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, et seq., because the rule is not creating any new requirements for contractors or changing any existing policies and practices. However, an initial regulatory flexibility analysis has been performed and is summarized as follows: The Department of Defense is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to modify the text of DFARS clause 252.204-7002, Payment for Subline Items Not Separately Priced, to simplify and conform the clause text to current Government contract line item structure terminology, pursuant to action taken by the Regulatory Reform Task Force. The objective of this proposed rule is to clarify the intent of the clause for contractors, when submitting invoices under contracts that contain items that are not separately priced (NSP). The modification of these DFARS clauses implements a recommendation from the DoD Regulatory Reform Task Force. Based on an average of data for fiscal year 2016 through 2018 from the Federal Procurement Data System and Electronic Document Access, DoD awards annually approximately 12,435 contracts that include DFARS clause 252.204-7002 to 2,544 unique entities. Of the 12,435 awards, approximately 4,924 contracts (40 percent) are awarded to approximately 1,564 unique small business entities (60 percent). However, based on the available data and the objective of the rule, DoD does not anticipate that this proposed rule will significantly impact small business entities. This proposed rule does not include any new reporting, recordkeeping, or other compliance requirements for small businesses.

(Response) FDA acknowledges that, currently, the transporter may have limited knowledge of the contents of the packages that it carries and that an undue records retention burden would result if the default would be the longer retention period. FDA notes, however, that under this final rule transporters must know that they are transporting food and be able to record a description of that food. Nonetheless, FDA has relaxed the records retention requirement for transporters from the proposed rule to this final rule. Transporters, or nontransporters retaining records on behalf of a transporter, are required to retain records for 6 months for any food having a significant risk of spoilage, loss of value, or loss of palatability within 60 days after the date the food is received or released and 1 year for any food having a significant risk of spoilage, loss of value, or loss of palatability only after a minimum of 60 days after the date the food is received or released. FDA also has codified in this final rule an option for transporters to comply with recordkeeping requirements of this final rule by keeping records already required by the existing bill of lading requirements applicable to interstate transporters. (Comment 207) One comment expresses concern that differing knowledge of the contents of food packages between transporters and nontransporters would require standards of information exchange to be created to coordinate the contents of records maintained by the two types of entities. The comment suggests that without such standards, the coordination costs may be high, because certain records maintained by nontransporters would need to be exchanged with transporters for them to have the full knowledge of the contents and extent of the packaging. Failure to create these standards would result in elevated costs for transporters. (Response) FDA acknowledges the limited knowledge that transporters currently may have about the contents of the packages that they carry. FDA has included less detailed information requirements in the final rule to respond to these comments; however, FDA believes the information it is requiring is necessary to allow the FDA to conduct a tracing investigation efficiently and effectively. In addition, FDA included an option whereby transporters can fulfill their recordkeeping requirements by keeping records already required for interstate transporters. Furthermore, the final rule provides an option allowing transporters to enter into a contractual arrangement with the non-transporter immediate previous source located in the United States or with the non-transporter immediate subsequent recipient located in the United States; any contractual arrangements would redistribute the burden of establishing and maintaining transportation records between transporters and non-transporters but would not change the total recordkeeping costs since the same number of records would be established (printed page 71639)

means any information, document, media, or machine-readable material regardless of physical form or characteristics that is created or obtained by a contractor through the storage, processing, or communication of Government data. Government-related data does not include: (1) A contractor's business records (e.g., financial records, legal records) that do not incorporate Government data, or (2) Data such as operating procedures, software coding or algorithms that are not primarily applied to the Government data. High value asset means Government data or a Federal information system that is designated as a high value asset pursuant to OMB Memorandum M-19-03, Strengthening the Cybersecurity of Federal Agencies by enhancing the High Value Asset Program. Media means physical devices or writing surfaces including, but not limited to, magnetic tapes, optical disks, magnetic disks, large-scale integration memory chips, and printouts onto which information is recorded, stored, or printed within an information system (NIST SP 800-37). Metadata means information describing the characteristics of data including, but not limited to, structural metadata that describes data structures (e.g., data format, syntax, and semantics) and descriptive metadata that describes data contents (e.g., information security labels) (NIST SP 800-53). Service account means an account used by machines, e.g., an operating system, application, process, or service, not used by a human. 39.X02 Procedures. All FIS require protection as part of good risk management practices. A contract for services to develop, implement, operate, or maintain a FIS may require contractors to utilize cloud computing services, computing services other than cloud computing services (i.e., non-cloud computing services), or both service approaches in performing the contract. Each service approach requires certain compliances and standards to be met to ensure appropriate FIS protection. 39.X02-1 Federal information systems using non-cloud computing services. (a) Contracting officer verification. (1) Requirement criteria. When acquiring services to develop, implement, operate, or maintain a FIS using non-cloud computing services, the contracting officer shall verify with the requiring activity that the requirement: (i) Categorizes the FIS based on an impact analysis of the information processed, stored, and transmitted by the system (see the current version of Federal Information Processing Standards (FIPS) Publication 199, Standards for Security Categorization of Federal Information and

Information Systems, for additional information); (ii) Identifies a set of controls to protect the FIS based on an assessment of risk in accordance with- (A) The current version of FIPS Publication 200, Minimum Security Requirements for Federal Information and Information Systems;

In terms of security configurations, organizations should use sound host hardening principles. For example, organizations should follow the principle of least privilege, which refers to configuring hosts to provide only the minimum necessary rights to the appropriate users, processes, and hosts. Least privilege can be helpful in preventing malware incidents, because malware often requires administrator-level privileges to exploit vulnerabilities successfully. If an incident does occur, prior application of least privilege might minimize the amount of damage that the malware can cause. Organizations should also implement other host hardening measures that can further reduce the possibility of malware incidents, such as the following: and what data sources might record the information. For example, a host's current IP address is typically needed for remote actions; of course, a host's physical location is needed for local actions. One piece of information can often be used to determine others, such as mapping an IP address to a media access control (MAC) address, which could then be mapped to a switch serving a particular group of offices. If an IP address can be mapped to a host owner or user-for example, by recording the mapping during network login-the owner or user can be contacted to provide the host's location. The difficulty in identifying the physical location of an infected host depends on several factors. In a managed environment, identifying a host's location is often relatively easy because of the standardized manner in which things are done. For example, host names might contain the user's ID or office number, or the host's serial number (which can be tied to a user ID). Also, asset inventory management tools might contain current information on host characteristics. In other environments, especially those in which users have full control over their hosts and network management is not centralized, it might be challenging to link a machine to a location.

While these guidelines are primarily designed for federal users and system administrators to adequately protect sensitive but unclassified U.S. Federal Government data against serious threats on the Internet, they may also be used within closed network environments to segregate data. (The client-server model and security services discussed also apply in these situations). This Special Publication supersedes NIST Special Publication 800-52 Revision 1. This Special Publication should be used in conjunction with existing policies and procedures. TLS 1.3, specified in RFC 8446 [57], represents a significant change to TLS that aims to address threats that have arisen over the years. Among the changes are a new handshake protocol, a new key derivation process that uses the HMAC-based Extract-and-Expand Key Derivation Function (HKDF) [37], and the removal of cipher suites that use RSA key transport or static Diffie-Hellman (DH) key exchanges, the CBC mode of operation, or SHA-1. Many extensions defined for use with TLS 1.2 and previous versions cannot be used with TLS 1.3. Security is not a single property that is (or is not) possessed by a protocol. Rather, security includes a complex set of related properties that together provide the required information assurance characteristics and information protection services. Security requirements are usually derived from a risk assessment of the threats or attacks that an adversary is likely to mount against a system. The adversary is likely to take advantage of implementation vulnerabilities found in many system components, including computer operating systems, application software systems, and the computer networks that interconnect them. Thus, in order to secure a system against a myriad of threats, security must be judiciously placed in the various systems and network layers.

, October 21, 2016 implemented the DoD's requirement that contractors shall implement NIST SP 800-171 as soon as practical, but not later than December 31, 2017. Public comments related to costs for implementation were published with that final rule, along with DoD's responses. CMMC cost estimates are derived estimates based on internal expertise and public feedback in accordance with OMB Circular A-4 and are representative of average assessment efforts not actual prices of C3PAO services available in the marketplace. Market forces of supply and demand will determine C3PAO pricing for CMMC Level 2 certification assessments and how C3PAOs choose to distinguish their service offerings from other C3PAOs, including the timely availability of an assessment team, or re-assessments after an assessment failure. The size and complexity of the network within the scope of the assessment impacts the costs as well. The DoD declines to speculate about how OSCs and C3PAOs negotiate mutually (printed page 83153) acceptable terms and conditions for assessment agreements. OSA implementation of the requirements of FAR clause 52.204-21 and DFARS clause 252.204-7012 long predate CMMC and are not included in CMMC cost estimates, since those requirements are not driven by or attributable to CMMC, even for new or aspiring defense contractors, and have

been in force since 2017 on DoD contracts that include the processing, storing, or transmitting of FCI or CUI in the performance of a DoD contract. The DoD has taken measures to make a self-assessment as straight forward as possible and provided guidance to mitigate any variance in assessment scores. Additionally, the DoD has streamlined CMMC requirements to align directly to NIST guidelines and has eliminated unique security practices to ease the burden on smaller companies. DoD must enforce CMMC requirements uniformly across the Defense Industrial Base for all contractors and subcontractors who process, store, or transmit CUI. Creation of a grants and assistance programs are beyond the scope of this rule. DFARS clause 252.204-7012 requires protection of security protection assets and security protection data. Section 1.1 of NIST SP 800-171 R2 states: "The requirements apply only to components of nonfederal systems that process, store, or transmit CUI, or that provide security protection for such components." There is therefore no increase in the scope as described in the rule. Security protection data requires protection commensurate with the CUI it protects and is based on how and where the security protection data is stored. The FedRAMP requirements for handling security protection data is therefore the same as that for handling CUI. Any impact to the cost of serving Government customers across the DoD is beyond the scope of this rule.

) for the current version of this collection. A contract security classification specification with its attachments, supplements, and incorporated references, provides security classification guidance (lists the applicable security classification guides for a contractor to use) to a contractor in connection with a classified contract. It is designed to identify the classified areas of information involved in the classified effort and, particularly, to identify the specific items of information within these areas that require protection. This rule provides NISP contractors security requirements which align to 32 CFR part 2001, in a manner equivalent to the protection of classified information within the executive branch of the USG. If a GCA determines that additional safeguards are essential in specific contracts, the GCA can impose more operational security provisions above the requirements of this rule. The GCA can also determine that additional physical or technical security requirements are needed in a contract above the requirements of this rule. Even though the contract security classification is contract-specific, it is not always all-inclusive. Additional security requirements are sometimes included in other parts of a contract. All related materials for approved information collection are available at:

<https://www.reginfo.gov/public/do/PRAMain>. In addition, specific locations for finalized collection instruments, to include the designated OMB Control Number is included where information collections are cited in this rule. In addition, depending upon the CSA with security cognizance, an entity's legal headquarters may need to implement additional information collections, such as: DD Form 441, "DoD Security Agreement" for DoD is an agreement between DCSA and the cleared legal entity for the entity to comply with the NISPOM security requirements, to be subject to inspections and to allow for a 30 day notice by the entity or DCSA to terminate the agreement (e.g., if there is no longer a valid USG requirement for access to classified information (available at https://www.esd.whs.mil/Portals/54/Documents/DD/forms/dd/dd0441_2020.pdf); NRC Form 441, "Security Agreement" for NRC, the provisions of the NRC Form 441 are similar to those included in the DD Form 441 (available at <https://www.nrc.gov/reading-rm/doc-collections/forms/nrc441info.html>). DOE does not have a separate Form 441, but instead, binds the contractor to the FCL (and security requirements) via the contract, along with meeting all other requirements in this rule. As part of FCL processing, an entity must complete a Standard Form (SF) 328, "Certificate Pertaining to Foreign Interest," OMB Control number 0704-0579, (available at <https://www.gsa.gov/forms-library/certificate-pertaining-foreign-interests>),

From the DoD SP 800-171 Rev 3 Organization-Defined Parameters: Planning 3.15.2 System Security Plan a. Develop a system security plan that: 1. Defines the constituent system components; 2. Identifies the information types processed, stored, and transmitted by the system; 3. Describes specific threats to the system that are of concern to the organization; 4. Describes the operational environment for the system and any dependencies on or connections to other systems or system components; 5. Provides an overview of the security requirements for the system; 6. Describes the safeguards in place or planned for meeting the security requirements; 7. Identifies individuals that fulfill system roles and responsibilities; and 8. Includes other relevant information necessary for the protection of CUI. b. Review and update the system security plan [Ass

The National Institute of Standards and Technology (NIST) hosted an in-person, all-day workshop on February 27, 2024, to discuss existing and emerging cybersecurity threats and mitigation techniques for semiconductors throughout their life cycle. The workshop obtained valuable feedback from

industry, academia, and government to inform NIST's development of cybersecurity and supply chain standards, guidance, and recommended practices. The discussion focused on semiconductor development and highlighted cybersecurity measurements and metrics that utilize reference data sets to facilitate the testing, attestation, certification, verification, and validation of semiconductor components. It also emphasized the use of automated cybersecurity tools and techniques to secure manufacturing environments throughout the development life cycle. This report summarizes the content that was presented and discussed at the workshop. These activities range from physical protection mechanisms (e.g., tamper-resistant packaging) to strong encryption protocols to safeguard data. Secure boot processes ensure that only verified firmware runs, and maintaining supply chain integrity through verification and audits prevents counterfeit components. Life cycle management includes secure provisioning, updates, and end-of-life processes that are complemented by rigorous security testing and compliance with regulatory standards. Educating users on secure practices and continuously improving security measures further fortifies defenses against evolving threats and ensures that semiconductor devices operate securely throughout their life cycle. The last panel member was Matthew Areno, Senior Principal Engineer for Intel Corporation. Matthew admitted that there is no industry standard to describe the phases of the supply chain for ICs.

Appendix B to Part 505 Denial Authorities for Records Under Their Authority (Formerly Access and Amendment Refusal Authorities) (a) The Administrative Assistant to the Secretary of the Army is authorized to act for the Secretary of the Army on requests for all records maintained by the Office of the Secretary of the Army and its serviced activities, as well as requests requiring the personal attention of the Secretary of the Army. This also includes civilian Equal Employment Opportunity (EEO) actions. (See DCS, G-1 for Military Equal Opportunity (EO) actions.) The Administrative Assistant to the Secretary of the Army has delegated this authority to the Chief Attorney, OAASA (See DCS, G1 for Military Equal Opportunity (EO) actions). (b) The Assistant Secretary of the Army (Financial Management and Comptroller) is authorized to act on requests for finance and accounting records. Requests for CONUS finance and accounting records should be referred to the Defense Finance and Accounting Service (DFAS). The Chief Attorney, OAASA, acts on requests for non-finance and accounting records of the Assistant Secretary of the Army (Financial Management and Comptroller). (c) The Assistant Secretary of the Army (Acquisition, Logistics, & Technology) is authorized to act on requests for procurement records other than those under the purview of the Chief of Engineers and the Commander, U.S. Army Materiel Command. The Chief Attorney, OAASA, acts on requests for non-procurement records of the Assistant Secretary of the Army (Acquisition, Logistics and Technology). (d) The Deputy Assistant Secretary of the Army (Civilian Personnel Policy)/Director of Civilian Personnel, Office of the Assistant Secretary of the Army (Manpower and Reserve Affairs) is authorized to act on requests for civilian personnel records, personnel administration and other civilian personnel matters, except for EEO (civilian) matters which will be acted on by the Administrative Assistant to the Secretary of the Army. The Deputy Assistant Secretary of the Army (Civilian Personnel Policy)/Director of Civilian Personnel has delegated this authority to the Chief, Policy and Program Development Division (Note: Requests from former civilian employees to amend a record in an Office of Personnel Management system of records, such as the Official Personnel Folder, should be sent to the Office of Personnel Management, Assistant Director for Workforce Information, Compliance, and Investigations Group: 1900 E. Street, NW., Washington, DC 20415-0001). (e) The Chief Information Officer G-6 is authorized to act on requests for records pertaining to Army Information Technology, command, control communications and computer systems and the Information Resources Management Program (automation, telecommunications, visual information, records management, publications and printing). (f) The Inspector General is authorized to act on requests for all Inspector General Records.

3.2.4 Effects on Magnitude(s) of Impact of Threats... 3.2.4 Effects on Magnitude(s) of Impact of Threats ## How does the IoT device affect magnitude(s) of impact considered as part of a risk assessment? In addition to likelihood of occurrence, a risk assessment will consider the magnitude of impact.

Similar uses of generative AI by regulated entities, including the training of AI models on patient data, could result in impermissible uses and disclosures, including exposure to bad actors that can exploit the information. [909] As part of its risk analysis and risk management activities, a regulated entity must consider the risk associated with different uses and data. [910] Accordingly, we expect that a regulated entity interested in using AI would include the use of such tools in its risk analyses and associated risk management activities. The regulated entity's risk

analysis must include consideration of, among other things, the type and amount of ePHI accessed by the AI tool, to whom the data is disclosed, and to whom the output is provided. The NIST AI Risk Management Framework is a helpful resource for regulated entities to better (printed page 991) understand, measure, and manage risks, effects, and harms of AI. [911] The Security Rule requires a regulated entity to conduct repeated risk analyses that consider any changes to its environment or operations, such as updates or changes in technology or clinical administration, and to apply all reasonable updated protections to safeguard ePHI. [912] Accordingly, as technology such as AI evolves, the Department would expect a regulated entity to perform a risk analysis to consider the effects of such changes on the confidentiality, integrity, and availability of ePHI. As NCVHS observed, "[I]t is important to conduct risk analyses on AI throughout the life cycle of the system." [913] We believe the proposals in this NPRM would clarify our expectations for when and how regulated entities need to consider, prepare for, and address such changes. For example, the Department proposes to expressly require that a regulated entity develop a written inventory of its technology assets. Under this proposal, the Department would expect that AI software used to create, receive, maintain, or transmit ePHI or that interacts with ePHI, including where ePHI is used to train the AI software, would be listed as part of its technology asset inventory, which feeds into the regulated entity's risk analysis. Making AI safe and secure with respect to ePHI requires efforts in a variety of areas: biotechnology, cybersecurity, critical infrastructure to address risks. [914] The Federal Government seeks to ensure that the collection, use, and retention of ePHI is lawful and secure, and that it mitigates privacy and confidentiality risks. Across the administration, Federal agencies are considering potential uses for AI, as well as their benefits and risks, consistent with E.O. 11410 and its principles to advance and govern the development and use of AI. [915]

A director (MGMT5) for 16 hours ($\$190.52/\text{hr} \times 16\text{hrs} = \$3,048$) An external service provider (ESP) for 48 hours ($\$260.28/\text{hr} \times 48\text{hrs} = \$12,493$) Phase 3: Reporting of assessment results: \$2,851 A director (MGMT5) for 4 hours ($\$190.52/\text{hr} \times 4\text{hrs} = \762) An external service provider (ESP) for 8 hours ($\$260.28/\text{hr} \times 8\text{hrs} = \$2,082$) A staff IT specialist (IT4-SB) for 0.08 hours ($\$86.24/\text{hr} \times 0.08\text{hrs} = \7) Affirmation initial affirmation post assessment: \$1,459 Reaffirmations: It is estimated that the costs to reaffirm a CMMC Level 2 Self-Assessment annually is \$1,459 (three-year costs to reaffirm a CMMC Level 2 Self-Assessment annually is \$4,377, or $\$1,459 \times 3$): A director (MGMT5) for 4 hours ($\$190.52/\text{hr} \times 4\text{hrs} = \762) A staff IT specialist (IT4-SB) for 8.08 hours ($\$86.24/\text{hr} \times 8.08\text{hrs} = \697) The Level 2 Self-Assessment and Affirmations cost burden will be addressed as part of the 48 CFR acquisition rule. Summary: The following is the annual small entities total cost summary for CMMC Level 2 Self-Assessments and Affirmations over a ten-year period: (Example calculation, Year 2: ($\$34,277$ self-assessment per entity $\times 101$ entities) + ($\$1,459$ annual affirmation per entity $\times 20$ entities) = $\$3,491,193$). (printed page 89109) CMMC Level 2 Certification and Affirmation Costs for Small Business Entities The costs account for a CMMC Level 2 Certification assessment and affirmation costs of the applicable contractor information system(s) with NIST SP 800-171 Rev 2 requirements based on the assumptions defined. CMMC Level 2 certification assessments require hiring a C3PAO to perform the assessment. Nonrecurring or recurring engineering costs: There are no nonrecurring or recurring engineering costs associated with CMMC Level 2 C3PAO Certification since it is assumed the contractor has implemented NIST SP 800-171 Rev 2 requirements. Assessment Costs and Initial Affirmation Costs: It is estimated that the cost to support a CMMC Level 2 C3PAO Certification and affirmation for a small entity is $\$101,752$. The three-year cost is $\$104,670$ (as summarized in section 3(b), Table 1), and includes the triennial assessment + affirmation plus two additional annual affirmations ($\$101,752 + \$1,459 + \$1,459$). Phase 1: Planning and preparing for the assessment: \$20,699 A director (MGMT5) for 54 hours ($\$190.52/\text{hr} \times 54\text{hrs} = \$10,288$) An external service provider (ESP) for 40 hours ($\$260.28/\text{hr} \times 40\text{hrs} = \$10,411$) Phase 2: Conducting the C3PAO assessment: \$45,509 A director (MGMT5) for 64 hours ($\$190.52/\text{hr} \times 64\text{hrs} = \$12,193$) An external service provider (ESP) for 128 hours ($\$260.28/\text{hr} \times 128\text{hrs} = \$33,316$) Phase 3: Reporting of C3PAO Assessment Results: \$2,851 A director (MGMT5) for 4 hours ($\$190.52/\text{hr} \times 4\text{hrs} = \762) An external service provider (ESP) for 8 hours ($\$260.28/\text{hr} \times 8\text{hrs} = \$2,082$) A staff IT specialist (IT4-SB) for 0.08 hours ($\$86.24/\text{hr} \times 0.08\text{hrs} = \7) Affirmation initial affirmation post assessment: \$1,459 C3PAO Costs:

The National Bureau of Standards, with the support of the U.S. General Accounting Office, sponsored an invitational workshop on "Audit and Evaluation of Computer Security," held in Miami Beach, Florida on March 22-24, 1977. area and define appropriate subjects for future research. parts in the audit and computer communities were invited to discuss the subject in one of ten sessions,

each of which considered a different aspect. These reports form the body of these Proceedings. The ten topics reported on are: Internal Audit Standards, Qualifications and Training, Security Administration, Audit Considerations in Various System Environments, Administrative and Physical Controls, Program Integrity, Data Integrity, Communications, Post-Processing Audit Tools and Techniques, and Interactive Audit Tools and Techniques. KEYWORDS: training, communications security, computer controls, computer security, data integrity, interactive audit, internal audit, post-processing audit, program integrity. Internal Audit Standards Qualifications and Training Security Administration Audit Considerations in Various System Environments Administrative and Physical Controls Program Integrity Data Integrity Communications Post-Processing Audit Tools and Techniques Interactive Audit Tools and Techniques

(Public address by Dr. Jakob Kellenberger, President, International Committee of the Red Cross, 11 September 2009.) Again, contracting regulations are not the place to define terms that are not yet defined under international law. The Rule specifies that command rules for the use of force will be consistent with Chairman of the Joint Chiefs of Staff Instruction 3121.01B. This will provide commonality regarding the Rules for the Use of Force (RUF) but with the flexibility for commands to interpret it in accordance with local, and sometimes transitory, circumstances. Comment: The Rule may benefit from additional guidance on inter-agency cooperation Response: Interagency coordination is essential to successful contingency planning. The Rule, as written supports flexible, agile, and focused contingency planning and DoD, DoS and USAID believe the rule provides sufficient strategic direction for interagency coordination relative to PSC oversight and conduct. DoD disagrees with the respondent's assertion that many coordination issues will be common across AORs. Some may, many more may not. The flexibility to adapt procedures to local circumstances is essential. As the same respondent notes in this same section, guidance and procedures in the Iraq Memorandum of Agreement (MOA) are not easily transferrable to contingency operations outside of Iraq. The MOA between DoD and DoS in place in Iraq has proven to be extremely successful and serves as a good example of interagency coordination. It was referenced in the IFR as an example or point of departure for developing GCC guidance and procedures. However, to avoid confusion, in the Final Rule we have removed the last sentence in Section 159.6(d) which references the MOA. DoD, DoS and USAID recognize that some PSC or PSC personnel activities may require coordination with other Federal agency partners who contract for private security services. Comment: Confusion about Geographic Combatant Commander Delegation Authority to Subordinate Commander Response: Geographic combatant commands themselves do not follow a uniform organizational structure and commanders are free to assign different responsibilities to the most appropriate components of their staffs. The language in the Final Rule has been changed to provide more specificity as to the subordinate level to which GCCs can delegate responsibility for implementation. Through the Rule, the phrase 'Subordinate Commander' has been replaced with 'sub unified commanders or combined/joint task force commanders'. Comment: The rule needs to include reference to existing powers of removal of a PSC and personnel Response:

(C) To effect recovery of improper payments or delinquent debts from current or former beneficiaries. (3) The comparison of records must be computerized. Manual comparisons are not covered. (4) Any activity that expects to participate in a Computer Matching Program must contact the DA FOIA/P Office immediately. (5) In all cases, Computer Matching Agreements are processed by the Defense Privacy Office and approved by the Defense Data Integrity Board. Agreements will be conducted in accordance with the requirements of 5 U.S.C. 552a, and OMB Circular A-130. (b) Other matching. Several types of computer matching are exempt from the restrictions of the Act such as matches used for statistics, pilot programs, law enforcement, tax administration, routine administration, background checks, and foreign counterintelligence. The DA FOIA/P Office should be consulted if there is a question as to whether the Act governs a specific type of computer matching. §505.14 Recordkeeping requirements under the Privacy Act. (a) AR 25-400-2, The Army Records Information Management System (ARIMS). To maintain privacy records are required by the Army Records Information Management System (ARIMS) to provide adequate and proper documentation of the conduct of Army business so that the rights and interests of individuals and the Federal Government are protected. (b) A full description of the records prescribed by this part and their disposition/retention requirements are found on the ARIMS Web site at <https://www.arims.army.mil>. Appendix A to Part 505-References (a) The Privacy Act of 1974 (5 U.S.C. 552a, as amended). (b) OMB Circular No. A-130, Management of Federal Information Resources. 3.3.5 Remote Computing Security controls in a remote computing or inter- active environment are important because physical locks and keys alone may not provide for adequate accountability The minimum controls to be or deter unauthorized access.

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Defense Office of the Secretary 32 CFR Part 236 [DOD-2009-OS-0183/RIN 0790-AI60] AGENCY: Office of the DoD Chief Information Officer, DoD. ACTION: Interim final rule. SUMMARY: DoD is publishing an interim final rule to establish a voluntary cyber security information sharing program between DoD and eligible DIB companies. The program enhances and supplements DIB participants' capabilities to safeguard DoD information that resides on, or transits, DIB unclassified information systems. DATES: This rule is effective May 11, 2012. Comments must be received by July 10, 2012. ADDRESSES: You may submit comments, identified by docket number and/or RIN number and title, by any of the following methods: Federal Rulemaking Portal: <http://www.regulations.gov> . Follow the instructions for submitting comments. Mail: Federal Docket Management System Office, 4800 Mark Center Drive, East Tower, Suite 02G09, Alexandria, VA 22350-3100. Instructions: All submissions received must include the agency name and docket number or Regulatory Information Number (RIN) for this Federal Register document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information. FOR FURTHER INFORMATION CONTACT: DIB Cyber Security and Information Assurance Program Office: (703) 604-3167, toll free (855) 363-4227, email DIB.CS/IA.Reg@osd.mil . SUPPLEMENTARY INFORMATION: Background Cyber threats to DIB unclassified information systems represent an unacceptable risk of compromise of DoD information and pose an imminent threat to U.S. national security and economic security interests. DoD's voluntary DIB CS/IA program enhances and supplements DIB participants' capabilities to safeguard DoD information that resides on, or transits, DIB unclassified information systems. This rule is being published as an interim final rule to: (a) Allow eligible DIB companies to receive USG threat information and share information about network intrusions that could compromise critical DOD programs and missions. (b) Permit DIB companies and DOD to assess and reduce damage to critical DOD programs and missions when DOD information is compromised. (c) Fulfill statutory requirements to ensure the protection of DOD information.

The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the Nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology. ITL's responsibilities include the development of management, administrative, technical, and physical standards and guidelines for the cost-effective security and privacy of other than national security-related information in Federal information systems. - Physical Security - the protection of property, e.g. using fences and locks; - Personnel Security - e.g. using background checks; - Contingency Planning and Disaster Recovery - how to resume normal operations after an incident, also known as Business Continuity Planning; - Operational Security -

protecting business plans and processes, and - Privacy - protecting personal information. 2 Lacking any one of these components diminishes the effectiveness of the others. For example, good physical security measures mean little if the personnel you hire intend to harm your business (poor personnel security). Or, strong privacy policies can depend on cybersecurity practices that protect customer information that is electronically stored.

In the application deployment model, the integrity of sensitive data residing within the data owner's domain must be protected. Protection mechanisms for application data include data - [11] Rushby J (1992) Noninterference, transitivity, and channel-control security policies. 338] Since 2013, the role technology plays in the storage and transmission of information has changed, as have the types of media used to store and transmit such information. For example, traditional landlines [339] are rapidly being replaced with electronic communication technologies, such as Voice over internet Protocol (VoIP), [340] and mobile technologies that use electronic media, such as the internet, intra- and extranets, cellular, and Wi-Fi. [341] Some current electronic technologies that regulated entities use for remote communications may include communication applications on a smartphone or another computing device, VoIP technologies, technologies that electronically record or transcribe a telehealth session, and messaging services that electronically store audio messages. The definition of electronic media does not account for these changes because it excepts (printed page 922) transmissions via fax, and of voice, via telephone, from transmissions via electronic media, nor does the definition take into consideration new and emerging technologies. Accordingly, the Department believes that it is appropriate to reconsider this definition. 3. Proposals The Department proposes to modify the definition of 'electronic media' as follows. First, the Department proposes to revise paragraph (1) of the definition to clarify that electronic media includes not only media on which data may be recorded, but also media on which data may be maintained or processed. Generally, data is either at rest, in transit, or in process (e.g., being worked on, in use, being modified in memory, or being updated). [342] After the data is no longer in use, it is either maintained or transmitted. It is especially important for entities to protect data in process because generally, data must be unencrypted to be processed, making this a time when it is particularly vulnerable to a breach or other security incident. [343] To that end, the Department's proposal would clarify that the definition includes electronic media that is used to record, maintain, or process data. The Department also proposes to revise paragraph (1) to clarify and update terminology used in a non-exhaustive list of examples of electronic storage material. Additionally, to ensure that the definition includes future technology, the Department proposes to add to the list of examples 'any other form of digital memory or storage' on which data may be recorded, maintained, or processed. As discussed above, traditional landlines and fax machines are rapidly being replaced with electronic communication technologies and mobile technologies that use electronic media. The Security Rule applies when a regulated entity uses such electronic communication technologies. Therefore, regulated entities using telephone systems and fax equipment that transmit ePHI need to apply the Security Rule safeguards to those technologies. [344]

CIS Safeguard 7.2 · Establish and Maintain a Remediation Process Establish and maintain a risk-

based remediation strategy documented in a remediation process, with monthly, or more frequent, reviews. Implementation Groups: 1,2,3 Asset Type: applications Security Function: respond Parent Control: Continuous Vulnerability Management

During the staffing and coordination of actions to, from, and within components in conduct of daily business, exempt materials from other systems of records may in turn become part of the case record in this document control system. To the extent that copies of exempt records from those other systems of records are entered into this system, the Office of the Secretary of Defense hereby claims the same exemptions for the records from those other systems that are entered into this system, as claimed for the original primary system of which they are a part. (ii) Authority. 5 U.S.C. 552a (j)(2) and (k)(1) through (k)(7). (iii) Reasons. Records are only exempt from pertinent provisions of 5 U.S.C. 552a to the extent such provisions have been identified and an exemption claimed for the original record and the purposes underlying the exemption for the original record still pertain to the record which is now contained in this system of records. In general, the exemptions were claimed in order to protect properly classified information relating to national defense and foreign policy, to avoid interference during the conduct of criminal, civil, or administrative actions or investigations, to ensure protective services provided the President and others are not compromised, to protect the identity of confidential sources incident to Federal employment, military service, contract, and security clearance determinations, to preserve the confidentiality and integrity of Federal testing materials, and to safeguard evaluation materials used for military promotions when furnished by a confidential source. The exemption rule for the original records will identify the specific reasons why the records are exempt from specific provisions of 5 U.S.C. 552a. (c) Specific exemptions: All systems of records maintained by any OSD Component shall be exempt from the requirements of 5 U.S.C. 552a(d) pursuant to subsection (k)(1) of that section to the extent that the system contains any information properly classified under Executive Order 11265, 'National Security Information,' dated June 28, 1952, pursuant to subsection (k)(1) of that section to the extent that the system contains any information properly classified under E.O. 11265, 'National Security Information,' dated June 28, 1979, as amended, and required by the Executive Order to be kept classified in the interest of national defense or foreign policy. This exemption, which may be applicable to parts of all systems of records, is necessary because certain record systems not otherwise specifically designated for exemptions may contain isolated information which has been properly classified. The Secretary of Defense has designated the following OSD system of records described below specifically exempted from the appropriate provisions of the Privacy Act pursuant to the designated authority contained therein: (1) System identifier and name. DGC 16, Political Appointment Vetting Files. (i) Exemption.

To address the minor inconsistencies between the definitions of the safeguards and to ensure that each safeguard is afforded an equal weight of importance, the Department proposes similar but minor changes across the definitions. The Department proposes to add the word 'related' to the definition here, and below to add the words 'and related' when necessary, to more clearly connect the components that make up safeguards. In the case of administrative safeguards, the Department's proposal relates administrative actions to administrative policies and procedures. The Department believes that this change would reduce confusion and improve clarity about compliance obligations. We are proposing a similar change to the definitions of physical safeguards and technical safeguards below. Additionally, we are proposing to clarify that maintenance includes updating and modifying with respect to administrative safeguards. 3. Clarifying the Definition of 'Authentication' a. Current Provision and Issues To Address The Security Rule defines authentication as corroboration that a person is the one claimed. By limiting the definition of authentication to persons, the current definition neglects to acknowledge the importance to the security of ePHI of authenticating technology assets that are components of a regulated entity's electronic information systems that create, receive, maintain, or transmit ePHI or that otherwise affect the confidentiality, integrity, or availability of ePHI, or that the regulated entity intends to connect to such electronic information systems. [352] Absent such authentication, a bad actor could add technology assets (e.g., software) to a regulated entity's electronic information systems that enable the bad actor to compromise the security of ePHI. b. Proposal To modernize the definition of authentication to reflect best practices in cybersecurity today, the Department proposes to clarify the definition to mean corroboration that either a person or technology asset is the one they are claiming to be. The modified definition would also improve readability with minor changes in wording. The Department believes as proposed, the revised definition would more accurately reflect the role played by technology assets in electronic information systems today. For example, a covered health care

provider permits individuals to access their own PHI using an application that connects to the software that runs the covered health care provider's patient portal. Not only must the individual be authenticated as a user, but the application must be authenticated such that the covered entity's software can verify that the application is what it claims to be. In another example, a portable technology asset for retrieving and storing PHI in the cloud must be authenticated before retrieving data from cloud storage.

4. Clarifying the Definition of 'Availability'

a. Current Provision and Issues To Address

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details.

Department of Defense Defense Acquisition Regulations System [Docket Number DARS-2023-0015; OMB Control Number 0704-0225] **AGENCY:** Defense Acquisition Regulations System; Department of Defense (DoD). **ACTION:** Notice. **SUMMARY:** The Defense Acquisition Regulations System has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act. **DATES:** Consideration will be given to all comments received by July 24, 2023. **ADDRESSES:** Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to <https://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting 'Currently under 30-day Review-Open for Public Comments' or by using the search function. You may also submit comments, identified by docket number and title, by the following method: Federal eRulemaking Portal: <https://www.regulations.gov>. Follow the instructions for submitting comments. **FOR FURTHER INFORMATION CONTACT:** Angela Duncan, 571-372-7574, or whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil. **SUPPLEMENTARY INFORMATION:** Title and OMB Number: Defense Federal Acquisition Regulation Supplement (DFARS), Part 204, Administrative Matters and Related Clause at 252.204; OMB Control Number 0704-0225. **Affected Public:** Businesses or other for-profit and not-for profit institutions. **Respondent's Obligation:** Required to obtain or retain benefits. **Frequency:** On occasion. **Number of Respondents:** 236. **Responses per Respondent:** Approximately 1.56. **Annual Responses:** 369. **Average Burden per Response:** Approximately 3 hours. **Annual Burden Hours:** 1,107. **Needs and Uses:**

A covered entity or business associate must comply with the applicable standards, implementation specifications, and requirements of this subpart with respect to electronic protected health information of a covered entity.

§ 164.304 Definitions. As used in this subpart, the following terms have the following meanings: **Access** means the ability or the means necessary to read, write, modify, delete, transmit, or communicate data/information or otherwise use any component of an information system. (This definition applies to 'access' as used in this subpart, not as used in subpart D or E of this part.) **Administrative safeguards** are administrative actions and related policies and procedures to manage the selection, development, implementation, and maintenance (including updating and modifying) of security measures to protect electronic protected health information, and to manage the conduct of the covered entity's or business associate's workforce in relation to the protection of that information. **Authentication** means the corroboration that a person or technology asset is the one they are claiming to be. **Availability** means the property that data or information is accessible and useable upon demand by an authorized person or technology asset. **Confidentiality** means the property that data or information is not made available or disclosed to unauthorized persons, technology assets, or processes. **Deploy** means to configure technology for use and implement such technology. **Electronic information system** means interconnected set of electronic information resources under the same direct management control that shares common functionality. An electronic information system generally includes technology assets, such as hardware, software, electronic media, information, and data. **Encryption** means the use of an algorithmic process to transform data into a form in which there is a low probability of assigning meaning without use of a confidential process or key. **Facility** means the physical premises and the interior and exterior of a building(s). **Implement** means to put into effect and be in use, operational, and function as expected throughout the covered entity or business associate. **Information system** means an interconnected set of information resources under the same direct management control that shares common functionality. An information system generally includes hardware, software, information, data, communications, and people. **Integrity** means the property that data or information have not been altered or destroyed in an unauthorized manner. **Malicious**

software means software or firmware intended to perform an unauthorized action or activity that will have adverse impact on an electronic information system and/or the confidentiality, integrity, or availability of electronic protected health information. Examples include but are not limited to viruses, worms, Trojan horses, spyware, and some forms of adware. Multi-factor authentication

Some commenters suggested changes to prioritize different kinds of contracts, programs, or companies earlier or later in the implementation plan, rather than basing the phase-in on assessment type. For example, one suggested capping the number of contracts with CMMC requirements each year. Another suggested phasing in by increasing the numerical assessment score required for compliance, with additional time permitted for POA&M close-out beyond the current limit of 180 days. Another suggested reversing the phase-in to begin with CMMC Level 3. Several commenters requested extension of the phase-in plan to allow more time. One speculated that tens of thousands of contractors would require certification in less than 18 months. One commenter suggested the DoD modify the timing of implementation for CMMC levels 2 and 3, and that DoD consider allowing sufficient time to develop a robust CMMC ecosystem and demonstrate the CMMC model before full implementation. Flexibility in the implementation plan that allows Program Managers and requiring activities to include CMMC requirements earlier in the plan than will be mandated by policy also generated questions and comments. Some commenters asked whether this could result in the DoD applying CMMC requirements to previously awarded contracts or asked that the rule specify they will apply only to new contracts. Another asked about opportunities to renegotiate the contract ceiling price if CMMC assessments are required for option period exercise. One commenter asked that the rule be revised to exclude these flexibilities to result in an on/off approach to implementation. Another commenter asked what mechanisms the DoD would have to change the pace of implementation or monitor the contracts that include CMMC requirements. Response: The DoD lacks the authority to implement CMMC as a Federal-wide program. The 48 CFR part 204 CMMC Acquisition rule for CMMC will be updated to align with this 32 CFR part 170 CMMC Program rule and will modify DFARS clause 252.204-7021. CMMC Phase 1 implementation will commence when both the 32 CFR part 170 CMMC Program rule and the 48 CFR part 204 CMMC Acquisition rule are in effect. Some commenters may have overlooked that § 170.3(e) states Phase 1 begins on the effective date of this 32 CFR part 170 CMMC Program rule or the complementary 48 CFR part 204 CMMC Acquisition rule, whichever occurs later. The implementation plan describes when CMMC level requirements will appear in solicitations, it does not define a timeframe by which all contractors must be certified. During the first phases of the plan, a majority of CMMC requirements will be for self-assessment.

The CAICO has no FOCI requirement because they do not have knowledge of the OSC's network or potential vulnerabilities identified in the assessment process. Per § 170.9(b)(5), the CMMC Program implements the FOCI program that is managed by DCSA. Potential FOCI exemptions are outside the scope of this 32 CFR part 170 CMMC Program rule and must be addressed through international arrangements or agreements. 2. Personnel Security Comment: There were numerous comments regarding the Tier 3 Personnel Security requirements. Several comments recommended editorial clarification. Multiple comments requested clarification on what not eligible meant and what is the equivalent process. One comment recommended the Tier 3 background investigation be required for all authorized personnel while two comments recommended eliminating the Tier 3 background investigation requirement. Two other comments requested clarification on why a Tier 3 investigation is required when no secret information is handled and there is no clearance granted. Another comment requested clarification on the Tier 3 process. Three comments requested clarity on the citizenship requirements and how the Tier 3 requirement will be enforced for international C3PAO's. Another comment recommended adding a requirement for CMMC Instructors and Assessors to report to the CAICO within 30 days of conviction, or guilty pleas to certain crimes. Response: In coordination with the OUSD/I&S, the DoD CIO evaluated requirements for the CMMC Ecosystem. Based on the access to sensitive unclassified information, a Tier 3 background investigation that results in determination of national security eligibility is required as specified in this rule. The concept of not eligible in § 170.9(b)(4) is intended to cover those applicants who do not meet the entrance requirements for a DCSA Tier 3 background investigation, it is not an alternative for applicants who do not pass its Tier 3 background investigation. The DCSA maintains a record of all background investigation information in the Personnel Vetting Records system of records, DUSDI 02-DoD, as published in the Federal Register. The details of the Tier 3 background investigation are included in this rule to inform the public of the CMMC requirement and that the investigation will not result in a clearance. The DoD declines to remove reference to the Standard Form 86 from the rule. All documentation and records for the background investigation process must be provided in English; rulemaking as a

Federal regulation requires this level of detail to ensure clarity of understanding and interpretation. Details about background investigation equivalency is available from DCSA at www.dcsa.mil/Industrial-Security/International-Programs/Security-Assurances-for-Personnel-Facilities/. As stated in the 32 CFR part 170

Because outbreaks whose investigations are prematurely terminated may recur, the benefits from reducing that number may be high (if many people continue to become ill as a result of the recurrence). Based on FDA outbreak investigation information, the average number of reported illnesses in outbreaks that occurred between the years 2000 and 2003 was approximately 65. However, many illnesses from outbreaks go unreported, so the average total number of illnesses from an outbreak is much larger than the reported number. Using the estimated average ratio of total illnesses to reported illnesses reported earlier, we estimate that by avoiding just one outbreak recurrence, approximately 559 persons would avoid becoming ill. Traceback durations may be different for processed food sold in packages with labels with identifying barcodes than for fresh food items sold in packages with no labels. Eggs and fresh produce account for 90 percent of all outbreaks investigated by FDA, while labeled packaged foods account for only 10 percent (Ref. 2). To determine the likely length of time it takes to investigate a packaged food product, we use a range that includes the low end, where investigators are able to obtain the exact package that contains the identifying barcodes, and the high end that assumes the package, with the identifying barcodes, is not available. In the latter case, any subsequent recalls would likely include more foods than the implicated lot. The final rule relaxes the proposed requirement for lot codes to be established and maintained on all records. If FDA were to require all persons, including distributors, transporters, and retailers, to include lot numbers in the records they establish and maintain under this final rule, the traceback durations for many products would be reduced and would be comparable to those currently reported for tracebacks of packaged products that contain barcode information. If all retailers and distributors were required to establish and maintain lot codes for all processed products, then the duration of the traceback component of an outbreak investigation for many products could be reduced to 1 to 14 days. Examples of reported traceback times for fresh products and for packaged products that contain lot code information in bar code format are reported in table 9 of this document.

	Most Likely	Low	High
Eggs and fresh produce	6 to 8 weeks	2 to 5 weeks	12 weeks
Packaged products	3 days	1 day	14 days

1 Estimates reported in Ref. 2 of this document.

8. The Duration of Investigative Visits

3.3.1 | The find Comm and | 29 | | 3. 3.3.1 The find Command The^mf command [Sun88a, 183-185] is a general-purpose command for searching the file system. 3.3.1 .

(C) The first page, index, or table of contents will include a list, including page numbers, of all annexes and appendices. (D) The total number of pages will be stated on the first page. (E) All annexes or appendices will include the date of the original document and the purpose of the new text (addition or substitution) on the first page. (iii) One of the following markings will be applied to NATO documents that contain ATOMAL information: (A) This document contains U.S. ATOMIC Information (RESTRICTED DATA or FORMERLY RESTRICTED DATA) made available pursuant to the NATO Agreement for Cooperation Regarding ATOMIC Information, dated 18 June 1964, and will be safeguarded accordingly. (B) This document contains UK ATOMIC Information. This information is released to NATO including its military and civilian agencies and member states on condition that it will not be released by the recipient organization to any other organization or government or national of another country or member of any other organization without prior permission from H.M. Government in the United Kingdom. (iv) Working papers will be retained only until a final product is produced and in accordance with § 117.15(e)(3). (11) Classification guidance. Classification guidance will be in the form of a NATO security aspects letter and a security requirements checklist for NATO contracts, or a Contract Security Classification Specification, or equivalent. (i) If adequate classification guidance is not received, the contractor will contact the CSA for assistance. (ii) NATO classified documents and NATO information in other documents will not be declassified or downgraded without the prior written consent of the originating activity. (iii) Recommendations concerning the declassification or downgrading of NATO classified information will be forwarded to the CUSR. (12) Further distribution. The contractor will not release or disclose NATO classified information to a third party or outside the contractor's facility for any purpose without the prior written approval of the contracting agency. (printed page 83356) (13) Storage of NATO documents. NATO classified documents will be stored as prescribed for U.S. documents of an

equivalent classification level, except as follows: (i) NATO classified documents will not be comingled with other documents. (ii) Combinations for containers used to store NATO classified information will be changed annually. The combination also will be changed when an individual with access to the container departs or no longer requires access to the container, and if the combination is suspected of being compromised. (iii) When the combination is recorded it will be marked with the highest classification level of documents stored in the container as well as to indicate the level and type of NATO documents in the container. The combination record must be logged and controlled in the same manner as NATO classified documents. (14) International transmission.

(f) The Army system of records notices for a particular type of record will state whether the Secretary of the Army has authorized a particular general and specific exemption to a certain type of record. The Army system of records notices are published on the Defense Privacy and Civil Liberties Division's website:

<http://dpcl.dod.mil/Privacy/DODComponentArticleList/tabid/6799/Category/278/departments-of-the-army.aspx> .

(g) Exempt Army records. The following records may be exempt from certain parts of the Privacy Act: (1) System identifier and name. A0020-1 SAIG, Inspector General Records. (i) Exemption. (A) Investigatory material compiled for law enforcement purposes, other than material within the scope of subsection 5 U.S.C. 552a(j)(2) , may be exempt pursuant to 5 U.S.C. 552a(k)(2) . However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of such information, the individual will be provided access to such information except to the extent that disclosure would reveal the identity of a confidential source. (B) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. (C) Therefore, portions of this system of records may be exempt pursuant to 5 U.S.C. 552a(k)(2) and (k) (5) from subsections 5 U.S.C. 552a(c)(3) , (d), (e)(1), (e)(4)(G), (e)(4)(H), (e)(4)(I), and (f). (ii) Authority. 5 U.S.C. 552a(k)(2) and (k)(5) . (iii) Reasons. (A) From subsection (c)(3) because the release of the disclosure accounting would permit the subject of a criminal investigation or matter under investigation to obtain valuable information concerning the nature of that investigation which will present a serious impediment to law enforcement. (B) From subsection (d) because access to such records contained in this system would inform the subject of a criminal investigation of the existence of that investigation, provide the subject of the investigation with information that might enable him to avoid detection or apprehension, and would present a serious impediment to law enforcement. (C) From subsection (e)(1) because in the course of criminal investigations, information is often obtained concerning the violations of laws or civil obligations of others not relating to an active case or matter. In the interests of effective law enforcement, it is necessary that this valuable information is retained since it can aid in establishing patterns of activity and provide valuable leads for other agencies and future cases that may be brought.

Comments and recommendations on the proposed information collection should be sent to Ms. Susan Minson, DoD Desk Officer, at Oira_submission@omb.eop.gov . Please identify the proposed information collection by DoD Desk Officer, the Docket number, and title of the information collection. You may also submit comments, identified by docket number and title, by the following method: Federal eRulemaking Portal: <http://www.regulations.gov> . Follow the instructions for submitting comments. DoD Clearance Officer: Ms. Angela James. Requests for copies of the information collection proposal should be sent to Ms. Angela James at whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil . Jennifer D. Johnson, Regulatory Control Officer, Defense Acquisition Regulations System. [FR Doc. 2020-28774 Filed 12-28-20; 8:45 am] BILLING CODE 5001-06-P

, as amended. Specifically, in areas of operations which require enhanced coordination of PSC and PSC personnel working for U.S. Government (U.S.G.) agencies, the Secretary of Defense may designate such areas as areas of combat operations or other significant military operations for the limited purposes of this part. In such an instance, the standards established in accordance with this part would, in coordination with the Secretary of State, expand from covering only DoD PSCs and PSC personnel to cover all U.S.G.-funded PSCs and PSC personnel operating in the designated area. The requirements of this part shall not apply to a nonprofit nongovernmental organization receiving

grants or cooperative agreements for activities conducted within an area of other significant military operations if the Secretary of Defense and the Secretary of State agree that such organization may be exempted. An exemption may be granted by the agreement of the Secretaries under this paragraph on an organization-by-organization or area-by-area basis. Such an exemption may not be granted with respect to an area of combat operations. (b) Prescribes policies applicable to all: (1) DoD PSCs and PSC personnel performing private security functions during contingency operations outside the United States. (2) USG-funded PSCs and PSC personnel performing private security functions in an area of combat operations or, with the agreement of the Secretary of State, other significant military operations as designated by the Secretary of Defense. § 159.3 Definitions. Unless otherwise noted, these terms and their definitions are for the purpose of this part. Area of combat operations . An area of operations designated as such by the Secretary of Defense for the purpose of this part, when enhanced coordination of PSCs working for U.S.G. agencies is required. Contingency operation . A military operation that is either designated by the Secretary of Defense as a contingency operation or becomes a contingency operation as a matter of law (10 U.S.C. 101(a)(13)). It is a military operation that: (1) Is designated by the Secretary of Defense as an operation in which members of the Armed Forces are or may become involved in military actions, operations, or hostilities against an enemy of the United States or against an opposing military force; or (2) Results in the call or order to, or retention on, active duty of members of (printed page 49656) the uniformed services under section 688, 12301(a), 12302, 12304, 12305, 12406, of 10 U.S.C., chapter 15 of 10 U.S.C. or any other provision of law during a war or during a national emergency declared by the President or Congress. Contractor . The contractor, subcontractor, grantee, or other party carrying out the covered contract. Covered contract

NIST

adversarial proceedings that are subject to rules of evidence). Any information prepared in anticipation of such actions or proceedings, including information prepared to advise DoD officials of the possible legal or other consequences of a given course of action, is protected. The exemption is similar to the attorney work-product privilege except that it applies even when the information is prepared by non-attorneys. The exemption does not apply to information compiled in anticipation of criminal actions or proceedings. (c) Exempt Records Systems. Pursuant to 5 U.S.C. 552a(k)(1) , all systems of records maintained by DoD will be exempt from the access provisions of 5 U.S.C. 552a(d) and the notification of access procedures of 5 U.S.C. 522a(e)(4)(H) to the extent that the system contains any information properly classified under Executive Order 13526 , and is required by the Executive Order to be kept secret in the interest of national defense or foreign policy. This exemption, which may be applicable to parts of all DoD systems of records, is necessary because certain record systems not otherwise specifically designated for exemptions herein may contain isolated items of information which have been properly classified. (d) Exempt records in non-exempt systems. Exempt records temporarily in the custody of another DoD Component are considered the property of the originating DoD Component. Access to these records is controlled by the system notices and rules of the originating DoD Component. Exempt records that have been incorporated into a nonexempt system of records are still exempt but only to the extent to which the provisions of the Act for which an exemption has been claimed are identified. An exemption claimed for the system of records from which the record is obtained remains in effect when the purposes underlying the exemption for the record are still valid and necessary to protect the contents of the record. If a record is accidentally misfiled into a system of records, the system notice and rules for the system in which it should actually be filed shall govern. § 310.13 Exemptions for DoD-wide systems. (a) Use of DoD-wide exemptions. DoD-wide exemptions for DoD-wide systems of records are established pursuant to 5 U.S.C. 552a(j) and (k) of the Privacy Act. (b) Promises of confidentiality. (1) Only the identity of and information furnished by sources that have been given an express promise of confidentiality may be protected from disclosure under this section, consistent with (k)(2), (k)(5), and (k)(7) of the Privacy Act, as applicable. However, the identity

of sources who were given implied promises of confidentiality in inquiries conducted before September 27, 1975, also may be protected from disclosure.

Removing ~~program~~ and adding in its place ~~Program~~ in the section heading. b. In paragraph (a): i. Removing ~~DIB CS program~~ and adding in its place ~~DIB CS Program~~ wherever it appears. ii. Removing ~~DIB participants~~ and adding in its place ~~DIB CS Program participants~~. c. In paragraph (b): i. Removing ~~DIB CS participants~~ and adding in its place ~~DIB CS Program participants~~. ii. Removing ~~http://www.dhs.gov/enhanced-cybersecurity-services~~ and adding in its place ~~https://www.cisa.gov/enhanced-cybersecurity-services-ecs~~. d. In paragraph (c): i. Removing ~~DIB CS program~~ and adding in its place ~~DIB CS Program~~. ii. Removing ~~obligate the DIB participant~~ and adding in its place ~~obligate the DIB CS Program participant~~. iii. Removing ~~taken by the DIB participant~~ and adding in its place ~~taken by the DIB CS Program participant~~. iv. Removing ~~taken on the DIB participant's~~ and adding in its place ~~taken on the DIB CS Program participant's~~. e. In paragraph (d): i. Removing ~~DIB participant's participation~~ and adding in its place ~~DIB CS Program participant's participation~~. ii. Removing ~~DIB CS program~~ and adding in its place ~~DIB CS Program~~. iii. Removing ~~approval of the DIB participant~~ and adding in its place ~~approval of the DIB CS Program participant~~. f. In paragraph (e): i. Removing ~~DIB participant~~ and adding in its place ~~DIB CS Program participant~~ wherever it appears. ii. Removing ~~DIB CS program~~ and adding in its place ~~DIB CS Program~~. g. Adding ~~change of status as a defense contractor,~~ after ~~Upon termination of the FA,~~ in paragraph (f). h. In paragraph (g): i. Removing ~~DIB participants' rights~~ and adding in its place ~~DIB CS Program participants' rights~~. ii. Removing ~~DIB CS program~~ and adding in its place ~~DIB CS Program~~. iii. Removing ~~the requirement for DIB participants~~ and adding in its place ~~the requirement for DIB CS Program participants~~. 9. Revise § 236.7 to read as follows: § 236.7 DoD's DIB CS Program requirements. (a) To participate in the DIB CS Program, a contractor must own or operate a covered contractor information system and shall execute (printed page 27839) the standardized FA with the Government (available during the application process), which implements the requirements set forth in §§ 236.5 and 236.6 and this section. (b) In order for DIB CS Program participants to receive classified cyber threat information electronically, the company must be a cleared defense contractor and must: (1) Have an existing active facility clearance level (FCL) to at least the Secret level in accordance with 32 CFR part 117 ; (2) Have or acquire a Communication Security (COMSEC) account in accordance with 32 CFR part 117 , which provides procedures and requirements for COMSEC activities; (3) Have or acquire approved safeguarding for at least Secret information, and continue to qualify under 32 CFR part 117 for retention of its FCL and approved safeguarding; and

1.337, 1.345, and 1.352 (records redesign) \$205,239,000 1.337, 1.345, and 1.352 (additional records maintenance) \$114,701,000 1.337, 1.345, and 1.352 (learning for new firms) \$8,508,000 Discounted present value of total costs 2 \$1,406,356,000 1 The annual costs are reported in undiscounted terms. Records access planning costs and records retention costs are estimated to be zero and are not reported here. 2 The reported discounted present value of total costs assumes a 7-percent discount rate and a 20-year time horizon over which annual costs are summed. (printed page 71641) The final rule will help reduce the numbers of people who become ill during a foodborne outbreak by reducing the time required for preventive action. Furthermore, the final rule will reduce the recurrence of outbreaks that may have been prevented had nonexistent or poor records quality not resulted in prematurely terminating the initial traceback investigation. In addition to relaxing elements of the requirement for records to contain lot code information, the reduction in benefits from the final rule compared to the proposal results from excluding foreign facilities except those that transport food in the United States, relaxing recordkeeping requirements for food contact substance facilities, relaxing recordkeeping requirements for very small retail facilities, adopting retention requirements based on the NIST food shelf life definitions, and relaxing the records access requirement from 4 and 8 hours to as soon as possible, not to exceed 24 hours. The estimated costs and benefits of many policy options considered in this section summarize the details of the analyses based on the comments FDA received and are reported in the following tables. The costs for the options are reported in present value terms for both 7 percent-and 3-percent discount rates. We summed the discounted annual costs over a 20 year horizon to obtain the estimate of the total costs. A 20-year horizon for measuring the costs from the regulation is reasonable, given uncertainty in the regulatory environment and technological change. The reduction in benefits relative to the proposal from each modification is based on the impact that each option would likely have on traceback times and the rates of traceback completions. Again, the benefits are based solely on food safety concerns (i.e., typical traceback scenarios with which FDA has been involved) and do

not take into account food security concerns. In table 16 of this document we compare the costs of the options considered to the baseline option of the proposed rule, with the caveat that the provision requiring all records to contain lot code information, which was included in the proposed rule, is no longer in the baseline. All other provisions included in the proposed rule are in the baseline for this analysis.

When a request for records is received, DoD FOIA Offices shall open a file in a formal control system designed to ensure accountability and compliance with the FOIA. The control system should include the data elements needed to compile the statistics required in the annual FOIA report or other reports required by another authority. Each request shall be assigned a unique tracking number. (b) Multi-track processing. (1) When a FOIA Office has a significant number of pending requests, the requests shall be processed in a multi-track system. (2) DoD FOIA Offices shall establish a minimum of three processing tracks, all based on a first-in/first-out concept and with requests ranked by date of receipt. One track shall be for simple requests, one for complex requests, and one for expedited requests. Each FOIA Office shall determine whether a request is simple or complex. Requesters whose requests are categorized as 'complex' shall be given an opportunity to limit in writing the scope of the request in order to qualify for the simple track. (c) Expedited processing. Two circumstances merit expedited processing according to the procedures that follow. These same procedures apply to requests for expedited processing of administrative appeals. (1) Compelling need. Expedited processing shall be granted to a requester upon a specific request for such and demonstration of a compelling need for the information. The DoD Component shall respond to the requester with the determination whether to grant or deny expedited processing within 10 calendar days after receipt of the request. Once the DoD Component decides to grant expedited processing, the request shall be processed as soon as practicable. Actions by the DoD Components to initially deny or affirm the initial denial on appeal of a request for expedited processing, and failure to respond in a timely manner shall be subject to judicial review if the requester seeks relief in United States District Court. (i) 'Compelling need' is the failure to obtain the records on an expedited basis could reasonably be expected to pose an imminent threat to the life or physical safety of an individual, or that the information is urgently needed by an individual primarily engaged in disseminating information in order to inform the public concerning actual or alleged Federal Government activity. (A) 'An individual primarily engaged in disseminating information' is a person whose primary activity involves publishing or otherwise disseminating information to the public. To meet this criterion, an organization or person must establish that information dissemination is their principal professional activity or occupation, and not an incidental or secondary activity.

Additional information about this publication is available at <https://csrc.nist.gov/pubs/sp/800/63/A/4/final>, including related content, potential updates, and document history. 3.7. Additional Requirements for Federal Agencies 4.3.7. On-Site Attended Requirements · Colocated Agent

CIS Safeguard 5.2 · Use Unique Passwords Use unique passwords for all enterprise assets. Best practice implementation includes, at a minimum, an 8-character password for accounts using MFA and a 14-character password for accounts not using MFA. Implementation Groups: 1,2,3 Asset Type: users Security Function: protect Parent Control: Account Management

Estimates consist of costs for a contractor to submit to SPRS an initial and affirmation of compliance that the covered contractor information system is compliant with and will maintain compliance with the requirements of the applicable CMMC Level. Where POA&Ms are allowed, an affirmation must be submitted with the POA&M closeout. Except for Small Entities for Level 1 and Level 2, it is assumed the task requires the same labor categories and estimated hours as the final reporting phase of the assessment. (b) Comparison to the Initial CMMC Program Cost Analysis Public comments on the initial CMMC Program indicated that cost estimates were too low. Updated CMMC Program cost estimates account for that feedback with the following improvements: Allowance for outsourced IT services. Increased total time for the contractor to prepare for the assessment, including limited time for learning the reporting and affirmation processes. Allowance for use of consulting firms to assist with the assessment process. Time for a senior level manager to review the assessment and affirmation before submitting the results into SPRS. Updated government and contractor labor rates that include applicable burden costs. As a result, some cost estimates for the updated CMMC Program may be higher than those included in the initial CMMC Program. (c) Cost Analysis/Estimates by CMMC Level CMMC Level 1 Self-Assessment and Affirmation Costs for Small

Business Entities Nonrecurring and recurring engineering costs: There are no nonrecurring or recurring engineering costs associated with CMMC Level 1 since it is assumed the contractor has implemented basic safeguarding requirements. [63] Self-Assessment Costs and Initial Affirmation Costs: It is estimated that the cost to support a CMMC Level 1 assessment and affirmation is *\$5,977 (as summarized in table 1). A Level 1 self-assessment is conducted annually, and is based on the assumptions detailed below: · Phase 1: Planning and preparing for the assessment: \$1,803 A director (MGMT5) for 4 hours ($\$190.52/\text{hr} \times 4\text{hrs} = \762) An external service provider (ESP) [64] for 4 hours ($\$260.28 \times 4\text{hrs} = \$1,041$) · Phase 2: Conducting the self-assessment: \$2,705 A director (MGMT5) for 6 hours ($\$190.52/\text{hr} \times 6\text{hrs} = \$1,143$) An external service provider (ESP) for 6 hours ($\$260.28 \times 6\text{hrs} = \$1,562$) · Phase 3: Reporting of Assessment Results into SPRS: \$909 A director (MGMT5) for 2 hours ($\$190.52/\text{hr} \times 2\text{hrs} = \381) An external service provider (ESP) for 2 hours ($\$260.28/\text{hr} \times 2\text{hrs} = \521) A staff IT specialist (IT4) for 0.08 hours [65] ($\$86.24/\text{hr} \times 0.08\text{hrs} = \7) · Affirmation: initial affirmation post assessment: \$560 Reaffirmations: It is estimated that the costs to reaffirm a CMMC Level I annually for a small entity is \$560 · A director (MGMT5) for 2 hours ($\$190.52/\text{hr} \times 2\text{hrs} = \381) · A staff IT specialist (IT4) for 2.08 hours ($\$86.24/\text{hr} \times 2.08\text{hrs} = \179) Summary:

(Response) The agency does not agree completely that distribution centers and retail outlets do not know many of the information items. The agency agrees, however, that including information pertaining to lot or code numbers of foods in the required records is not practical for distribution centers and retail outlets, given current business practices. FDA has, therefore, deleted this requirement. Instead, the final regulation now only requires that persons who manufacture, process, or pack food keep records on the lot or code number or other identifier of the food, and only to the extent this information exists. Moreover, to minimize the burden this regulation may have on affected parties, FDA is not specifying the form or format of the records that must be established and maintained and is not requiring electronic records. (Comment 12) Several comments applaud the agency's efforts in proposing a rule that appears to be designed to work with the food industry as efficiently and effectively as possible to address credible threats without imposing undue burdens. One comment urges the agency to issue the final regulations as expeditiously as possible to enhance compliance with the provisions of the Bioterrorism Act. The comment states that, by finalizing the regulations in conjunction with the interim final rules entitled ·Registration of Food Facilities Under the Public Health Security and Bioterrorism Preparedness and Response Act of 2002· (the registration interim final rule) (68 FR 58894 , October 10, 2003) and ·Prior Notice of Imported Food Under the Public Health Security and Bioterrorism Preparedness and Response Act of 2002· (the prior notice interim final rule) (68 FR 58974 , October 10, 2003), the education and training that will be necessary for compliance with the regulations can be done together and the internal policy and procedures for companies can be designed to meet all of the obligations under the final rule. The comment further states that this is the reason that Congress intended regulations to be issued within 18 months of the effective date of the Bioterrorism Act. (Response) The agency has acted expeditiously in issuing all of the regulations under the Bioterrorism Act and has developed and published final regulations as quickly as possible. With respect to education and training, as stated previously, the agency intends to conduct extensive outreach to stakeholders for this final rule that is similar to outreach the agency conducted for the registration and prior notice interim final rules.

- 'Secure by Design': Uses Secure Code Storage; Secure Code Training (e.g., training starting on day one, and regularly ongoing); Secure Code Scanning (e.g., tracking vulnerabilities, hard-coded secrets, code leaks and binaries); Policy/Framework (e.g., using System Development Lifecycle (SDLC), Open Web Application Security Project(OWASP), NIST); Industry Maturity Model (using the Software Assurance Maturity Model (SAMM)); Application Lifecycle Management/Product Lifecycle Management (ALM/PLM) Integration into Development Model (using Quality Service Model Operating System (SMOS)); - 'Secure in Use': Employs mechanisms such as participating in the Bug90 program, penetration testing, and tracking metrics; and - 'Secure Thru Trust': Seeks to build connections with customers including a broad range of organizational partnerships, direct customer engagements, and the use of media to disseminate information about Zebra product security. When prompted by a participant question on whether all IoT companies need a CPSO, speaker David Barzilai, Karamba Security, indicated that would not always be the case. He suggested that in the case of OEMs focusing on 'low-security-awareness markets' or markets where attacks might not necessarily be an issue, the OEM could make a risk-based decision to allocate an architect from R&D who could serve in the CPSO capacity to assure the product security posture. Tools to analyze supply chain

outputs (e.g., binary analyzers and SBOMs) are also available, improving, and becoming more common. There was association between binary analysis for supply chain security following NIST recommendations for using SBOM, and vulnerability disclosure reports were viewed by the panel as an excellent source of security information.

Wearable devices made specifically for public safety are slowly being introduced to the marketplace. Outside of public safety specific wearable devices, PSCR Engineers also acquired wearable devices that may assist first responders in different ways, such as awareness, communication, and data sharing. Examples of wearable devices include the following: | Cybersecurity Framework Function | Guidance |

|-----|-----|
Identify | Identify your public safety needs and devices | | Protect | Protect yourself by applying security and training users | | Detect | Detect issues by logging and monitoring your devices | | Respond | Respond with a prepared plan | | Recover | Recover by implementing the plan and constantly improving | ## 5.1.2 Protect - yourself by applying security and training users

Therefore, the total estimated cost of labor, hardware, and software for 5,875 contractors to implement NIST SP 800-171 Revision 2 in the initial year is \$1,524,706,500, of which \$861,808,500 is attributed to 4,905 small businesses. The total estimated annual recurring maintenance costs are \$1,065,919,000, of which \$509,139,000 is attributed to 4,905 small businesses. b. Assess and Report Suspected CUI Incidents When the contractor discovers a suspected CUI incident, the contractor is required by the clause at FAR 52.204-XX and, when applicable, the clause at FAR 52.204-YY to: determine what CUI was or could have been improperly accessed, used, processed, stored, maintained, disseminated, disclosed, or disposed of; construct a timeline of user activity; and determine methods and techniques used to access CUI. The contractor shall report any suspected or confirmed CUI incident to the agency website or point of contact identified in the SF XXX, within 8 hours of discovery. The clause at FAR 52.204-XX also requires the contractor to include in the report as many of the applicable data elements located on the DIBNet website (<https://dibnet.dod.mil>) as are available and provide any remaining applicable data elements as soon as they become available. Subcontractors are required by FAR 52.204-XX(h) to notify the prime or next higher tier subcontractor within the same timeframe. When applicable, the clause at FAR 52.204-YY requires contractors to follow agency requirements related to the incident if it turns out CUI is involved. It is estimated that there may be 580 incident reports submitted each year and that it may take a contractor four hours to prepare and submit CUI incident reports to civilian agencies. The total estimated annual cost for CUI incident reporting for non-defense contractors is \$275,500 (580 non-defense contractors * 1 incident/non-defense contractor * 4 hours/response * \$95/hour), of which \$188,482 is attributed to 397 small businesses. c. Preserve and Protect Images for Suspected CUI Incidents and Submit Media and Data for Damage Assessments If a suspected or confirmed CUI incident has occurred on an information system, the contractor is required by the clause at FAR 52.204-XX to preserve and protect images of all known affected information systems and all relevant monitoring and packet capture data for at least 90 days from the submission of the report to allow the Government to request the media and data or decline interest during this 90 day period, after which, if no request has been made, the images need no longer be preserved.

Although the focus of [ISO 15288] is systems and software engineering processes, operational resilience, which includes cyber resiliency for systems that include or depend on cyber resources, is addressed indirectly by requiring organization-wide commitment, resources, practices, and processes. The interacting elements in the definition of a system include layers of resilience in hardware, software, data, information, humans, processes, procedures, facilities, materials, and naturally occurring physical entities. This is important because if the organization's missions or business functions require sustainability during perturbations, disruptions, disturbances, or cyber-attacks, then operational resilience practices and procedures must be applied to all of the system's assets. It would be of limited value to have resilience measures implemented in the software architecture if there is no redundancy and survivability in the hardware, if the communications networks are fragile, if critical personnel are not available (e.g., in a natural disaster or inclement weather) to operate and maintain the system, or if there are no facilities available for producing the organization's products and/or services. Providing satisfactory security controls in a computer system is in itself a system design problem. A combination of hardware, software, communications, physical, personnel and administrative- procedural safeguards is required for comprehensive security. In particular, software safeguards alone are not sufficient. An adversary

that possesses sophisticated levels of expertise and significant resources that allow it to create opportunities to achieve its objectives by using multiple attack vectors including, for example, cyber, physical, and deception.

(7) Regardless of age, all DA military personnel and all married persons are considered adults. The parents of these individuals do not have access to their medical records without written consent of the individual. (8) DOD 6025.18-R, DOD Health Information Privacy Regulation, issued pursuant to the Health Insurance Portability and Accountability Act (HIPAA) of 1996, has placed additional procedural requirements on the uses and disclosure of individually identifiable health information beyond those found in the Privacy Act of 1974 and this part. In order to be in compliance with HIPAA, the additional guidelines and procedures will be reviewed before release of an individual's identifiable health information. (e) Personal notes. (1) The Privacy Act does not apply to personal notes of individuals used as memory aids. These documents are not Privacy Act records and are not subject to this part. (2) The five conditions for documents to be considered personal notes are as follows: (i) Maintained and discarded solely at the discretion of the author; (ii) Created only for the author's personal convenience and the notes are restricted to that of memory aids; (iii) Not the result of official direction or encouragement, whether oral or written; (iv) Not shown to others for any reason; and (v) Not filed in agency files. (3) Any disclosure from personal notes, either intentional or through carelessness, removes the information from the category of memory aids and the personal notes then become subject to provisions of the Act. (f) Denial or limitation of individual's right to access. (1) Even if the information is filed and retrieved by an individual's name or personal identifier, his or her right to access may be denied if: (i) The records were compiled in reasonable anticipation of a civil action or proceeding including any action where DA expects judicial or administrative adjudicatory proceedings. The term 'civil action or proceeding' includes quasi-judicial, pre-trial judicial, and administrative proceedings, as well as formal litigation; (ii) The information is about a third party and does not pertain to the requester. A third party's SSN and home address will be withheld. However, information about the relationship between the individual and the third party would normally be disclosed as it pertains to the individual; (iii) The records are in a system of records that has been properly exempted by the Secretary of the Army from the access provisions of this part and the information is exempt from release under a provision of the Freedom of Information Act (See appendix C of this part for a list of applicable Privacy Act exemptions, exceptions, and 'Blanket' routine uses); (iv) The records contain properly classified information that has been exempted from the access provision of this part;

There may be references in this publication to other publications currently under development by NIST in accordance with its assigned statutory responsibilities. The information in this publication, including concepts and methodologies, may be used by federal agencies even before the completion of such companion publications. Thus, until each publication is completed, current requirements, guidelines, and procedures, where they exist, remain operative. For planning and transition purposes, federal agencies may wish to closely follow the development of these new publications by NIST. This report summarizes discussions held at the March 5, 2025 "Workshop on Foundational Cybersecurity Activities for IoT Device Manufacturers" organized by the NIST Cybersecurity for the Internet of Things (IoT) program. This workshop follows an earlier event held in December 2024 titled 'Workshop on Updating Manufacturer Guidance for Securable Connected Product Development' to identify major update areas to NIST IR 8259. Similarly, the purpose of this more recent workshop was to discuss planned updates to NIST IR 8259 and gather additional feedback on taking a product viewpoint with greater emphasis on the IoT product lifecycle, expanded discussion of risk analysis, application to industrial contexts, and cybersecurity considerations around data management to support privacy goals. Over time, NIST work has built upon the concepts introduced in the NIST IR 8259, as reflected in subsequent publications that elaborate on IoT cybersecurity for specific sectors and use cases (e.g., federal agency use of IoT, consumer use of IoT in the home or in small businesses). Internet of Things; IoT products; manufacturing; risk assessment; product lifecycle; securable products; security requirements; software development; threat modelling .

All such issued stablecoins are over-collateralized, which promotes the maintenance of the stablecoin peg since stablecoins can always be redeemed from the issuer at their pegged price. The price is further stabilized through arbitrage. If the price of the stablecoin on third-party markets falls below its peg, then borrowers of the stablecoin can purchase the stablecoin at a discount price and use it to pay off their debt positions (making a profit). When debt positions are paid

off, the provided stablecoins are burned. This reduces the overall supply, which puts an upward pressure on the price. If the price of the stablecoin on third-party markets rises above its peg, then borrowers will take on additional debt positions, which results in the minting of additional stablecoins. The borrowers can then immediately sell the newly minted stablecoins on third-party markets for a profit. This increases the overall supply, which puts a downward pressure on the price. The cryptocurrency-backed stablecoins minted through loan issuance (Section 4.2) require users to post cryptocurrency as collateral when borrowing. This mitigates the cryptocurrency losing its price peg since enough collateral should be maintained to cover all issued stablecoins. However, since the posted collateral is in the form of cryptocurrency, it may be extremely volatile. Thus, borrowers are required to over-collateralize. When borrowing, the stablecoin system will specify a minimum required collateral ratio. That is, the user must maintain a certain value of cryptocurrency collateral to cover the price of the borrowed stablecoins. If the user falls below that ratio (through the posted cryptocurrency losing value), then the user is required to post more collateral, or their collateral may be subject to liquidation. This is very similar to the maintenance of margin loans in the stock market. Margin investors in the stock market may be required to post additional collateral to cover stock market losses.

In the course of their day-to-day business dealings, warehouses may not be privy to a description of the type of food or details of its packaging sufficient to satisfy this regulation. To acquire this knowledge and maintain the required records, warehouses may incur costs in addition to those that would be incurred by the owners of the product. FDA assumes that as part of their normal business practices, warehouse facilities may be required to maintain a limited amount of information on the immediate previous source and immediate subsequent recipient of a comparable magnitude to that of the owners of the products. However, the detailed information on the product and its packaging required by the regulation may be more costly to obtain for warehouse personnel than for the owners of the product. For some products, warehouse facilities are assumed to have the same required knowledge of the required information on the stored product and its packaging as that of the owner of the product. For other products, the warehouse personnel's knowledge of the required information on the stored product and its packaging is less than that of the owner. We estimate that, for half of all food products stored, warehouse personnel have the same amount of the required knowledge of the food and its packaging as the owner of the product, and that the additional records maintenance costs would be comparable to those incurred by the product owners. For products for which warehouses currently lack the required knowledge, we assume that the additional records maintenance costs for warehouse facilities would be approximately 50 percent higher than those for owners of the products. Much of the extra cost may involve contracting with product owners to provide the required information. b. Interstate conveyances and catering services sector . (Comment 209) Several comments suggest that the costs to the interstate conveyance catering industry were greatly underestimated and that this sector should be excluded from the regulation. One comment states that for airline caterers, each flight typically includes hundreds of individual foods from scores of different sources and suppliers. The comment further states that this industry is further complicated by the large number of special meal requests by individual passengers on each flight.

(Response) The exclusion in § 1.327(d) of this final rule from establishing and maintaining records of immediate subsequent recipients for food distributed directly to consumers applies to sales of bagged feed, pet food, and feed ingredients/additives over-the-counter directly to consumers and final purchasers for their own animals, unless the feed is to be used in animals that will be sold as food. If the feed is to be fed to food-producing animals, then the purchasers are not considered consumers since they are purchasing the food for a business (i.e., for the food-producing operation). The feed will remain in the food distribution system, and FDA needs records to help address credible threats of serious adverse health consequences or death to humans or animals. Therefore, under § 1.327(e), persons who operate retail food establishments that distribute food to persons who are not consumers are subject to all of the requirements in subpart J of this final rule. However, for retail food establishments, the requirements in § 1.345 of this final rule to establish and maintain records to identify the nontransporter and transporter immediate subsequent recipients that are not consumers applies as to those transactions only to the extent the information is reasonably available. In addition, retail food establishments that employ 10 or fewer full-time equivalent employees are excluded from all of the requirements of subpart J in this final rule, except the record access provisions for existing records under §§ 1.361 and 1.363. (See response to comment 38 of this document for a further discussion of FDA's rationale underlying this exclusion.) 6. Retail Facility/Roadside Stands (Comment 53) One comment is concerned that the

retail exemption only applies to facilities, such as roadside stands that employ 10 or fewer (printed page 71582)

Consider a large regulated entity that may have thousands of workforce members accessing various networks and relevant electronic information systems, generating large amounts of log and audit data. Given the size, complexity, and capabilities of entities of such size, a reasonable and appropriate process for reviewing activity may include the adoption of an automated solution that performs rules-based enterprise log aggregation and analysis to identify anomalous or suspicious patterns of behavior in the regulated entity's relevant electronic information systems and the components thereof, including but not limited to workstations, in real-time and sends alerts of potential security incidents to a workforce member or team for further review and action. By contrast, for a small regulated entity, it might be reasonable and appropriate to have designated staff that manually review log files and audit trails multiple times per week. j. Section 164.308(a)(8)-Standard: Assigned Security Responsibility The Department proposes to redesignate the standard for assigned security responsibility at 45 CFR 164.308(a)(2) as proposed 45 CFR 164.308(a)(8) . OCR's enforcement experience demonstrates that, in practice, many regulated entities follow informal policies and procedures that are not documented, and have not documented the identification of the Security Official in writing. Based on OCR's enforcement experience, and consistent with existing guidance, we propose to modify the standard to specify that a regulated entity must identify in writing the Security Official who is responsible for the establishment and implementation of the policies and procedures, whether written or otherwise, and deployment of technical controls. These proposals are consistent with our general intention in this NPRM to propose to clarify that policies and procedures required by the Security Rule should be reduced to writing and to distinguish between the implementation of written policies and procedures and the deployment of technical controls. As we previously explained in guidance, [542] the purpose of this standard is to identify who would be operationally responsible for assuring that the regulated entity complies with the Security Rule. It is comparable to the Privacy Rule standard for personnel designations at 45 CFR 164.530(a)(1) , which requires all covered entities to designate a Privacy Official. The Security Official and Privacy Official can, but need not be, the same person. While one workforce member must be designated as having overall responsibility, other workforce members may be assigned specific security responsibilities (e.g.,

), the DoD published the proposed rule titled, "Department of Defense Privacy Program," with a 60-day public comment period. Two comments were received which commended the streamlining effort and expressed an interest in more detail of the proposed changes. The Department appreciates the comments and has provided additional description of the revisions to the Department of Defense Privacy Program rule above in the SUPPLEMENTARY INFORMATION . No changes were made to the regulatory text as a result of these comments. Public Comments Received on the Personnel Vetting Interim Final Exemption Rule As stated above, DoD is incorporating the final version of the Personnel Vetting Records System exemption rule published on October 17, 2018 into this DoD Privacy Program final rule in § 310.13. Two commenters submitted public comments in response to the interim final rule, neither of which required changes to § 310.13 of this final (printed page 14730) rule. One comment was not specific to the exemptions claimed for the Personnel Vetting Records System, but called attention generally to the importance of safeguarding and managing records. DoD agrees and has previously explained in its notice of the Personnel Vetting Records System, DUSDI 02-DoD (83 FR 52420 , 52425), the extensive physical, administrative, and technical safeguards that apply, as well as the records retention and disposal policies and practices. The other commenter submitted a single set of comments for both the Personnel Vetting system of records notice (83 FR 52420) and the interim final rule for the corresponding records system exemptions (83 FR 52317). DoD will respond separately to the comments pertaining specifically to the system of records notice in the electronic docket visible on Regulations.gov

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket

number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Defense Office of the Secretary 32 CFR Part 170 [Docket ID: DoD-2023-OS-0063] RIN 0790-AL49 AGENCY: Office of the Department of Defense Chief Information Officer (CIO), Department of Defense (DoD). ACTION: Proposed rule. SUMMARY: DoD is proposing to establish requirements for a comprehensive and scalable assessment mechanism to ensure defense contractors and subcontractors have, as part of the Cybersecurity Maturity Model Certification (CMMC) Program , implemented required security measures to expand application of existing security requirements for Federal Contract Information (FCI) and add new Controlled Unclassified Information (CUI) security requirements for certain priority programs. DoD currently requires covered defense contractors and subcontractors to implement the security protections set forth in the National Institute of Standards and Technology (NIST) Special Publication (SP) 800-171 Rev 2 to provide adequate security for sensitive unclassified DoD information that is processed, stored, or transmitted on contractor information systems and to document their implementation status, including any plans of action for any NIST SP 800-171 Rev 2 requirement not yet implemented, in a System Security Plan (SSP). The CMMC Program provides the Department the mechanism needed to verify that a defense contractor or subcontractor has implemented the security requirements at each CMMC Level and is maintaining that status across the contract period of performance, as required. DATES: Comments must be received by February 26, 2024. ADDRESSES: You may use the following methods to submit comments on: the proposed rule, identified by docket number DoD-2023-OS-0063 and/or Regulatory Identifier Number (RIN) 0790-AL49 and title the guidance in the Appendix documents, identified by docket number DoD-2023-OS-0096 and title the information collection requirements, identified by docket number DoD-2023-OS-0097 and title Comment Submission Methods include: Federal eRulemaking Portal: <https://www.regulations.gov> . Follow the instructions for submitting comments. Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Attn: Mailbox 24, Suite 08D09, Alexandria, VA 22350-1700. Instructions: All submissions received must include the agency name and docket number or RIN for this Federal Register

The Government considered whether or not to establish a new standard form to communicate CUI requirements specific to the contract. As an alternative, the FAR could prescribe only a solicitation provision and contract clause to establish offeror and contractor responsibilities related to marking and handling CUI involved in the contract but would not dictate how agencies communicate what types of CUI may be involved in the contract. Given the importance of protecting CUI, it was determined that a Standard Form is the best way to ensure the Government is properly communicating specific CUI requirements for each contract. Absent a standard form, there is a risk that agencies may not provide enough information for contractors to understand what CUI is involved in the contract and what responsibilities they have with regard to this CUI. The standard form also provides a means for contractors to uniformly communicate CUI requirements to its subcontractors.

3. 100 Percent Inspection Several aspects of this proposed rule require the contractor to provide information upon request. For example, contractors may be requested to submit supporting documentation to verify compliance with the system security plan required by NIST SP 800-171 Revision 2 in instances where the Government is dealing with a CUI incident that is a confirmed breach or an agency determines that it is necessary to verify a contractor's system security plan based on the criticality of a program and the CUI being handled on the contractor's information system (see sections B.1.e. and D.1.g. of the Regulatory Impact Analysis). Similarly, when such CUI incidents have occurred, the Government may require the contractor to submit information to verify that the contractor and its subcontractors have provided appropriate training to their employees that handle CUI, as required by the clause at FAR 52.204-XX (see sections B.1.c. and D.1.b of the Regulatory Impact Analysis). As an alternative, the Government considered whether to require contractors to submit evidence of its system security plan and evidence that employees have been trained on an annual basis. However, defense contractors should have already implemented system security plans in accordance with DFARS clause 252.204-7012 and non-defense contractors have incentive to ensure compliance with the requirements in FAR clause 52.204-XX to avoid liability for breaches of CUI that may result from improperly protecting CUI being handled on the contractor's information system. As such, implementing a 100 percent inspection requirement would unnecessarily and significantly increase the burden on contractors and the Government.

4. Implementation of NIST SP 800-171 Revision 3 This proposed rule requires contractors to implement the requirements of NIST SP 800-171 Revision 2. In May of 2024, NIST published Revision 3 to NIST SP 800-171 (see <https://csrc.nist.gov/pubs/sp/800/171/r3/final>)

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Defense Defense Acquisition Regulations System [Docket Number DARS-2025-0006; OMB Control Number 0704-0478] AGENCY: Defense Acquisition Regulations System; Department of Defense (DoD). ACTION: Supplemental notice. (printed page 1512) SUMMARY: The Defense Acquisition Regulations System has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act. This document updates the instructions for submission of comments. DATES: DoD will consider all comments received by January 14, 2026. ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to <https://www.reginfo.gov/public/do/PRAMain> . Find this particular information collection by selecting 'Currently under 30-day Review-Open for Public Comments' or by using the search function. You may also submit comments, identified by docket number and title, by the following method: Federal eRulemaking Portal: <https://www.regulations.gov> . Follow the instructions for submitting comments. FOR FURTHER INFORMATION CONTACT: Mr. Reginald T. Lucas, 571-372-7574, or whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil . SUPPLEMENTARY INFORMATION: In the Federal Register of January 5, 2026, in FR Doc. 2025-24248 , on page 255, this supplemental notice adds an ADDRESSES caption to include public comment instructions. Title and OMB Number: Safeguarding Covered Defense Information, Cyber Incident Reporting, and Cloud Computing; OMB Control Number 0704-0478. Affected Public: Businesses or other for-profit and not-for-profit institutions. Respondent's Obligation: Required to obtain or retain benefits. Reporting Frequency: On occasion. Number of Respondents: 1,971. Responses per Respondent: 8.2, approximately. Annual Responses: 16,223. Average Burden per Response: 0.42 hours. Annual Burden Hours: 6,770. Needs and Uses: Offerors and contractors must report cyber incidents on unclassified networks or information systems, within cloud computing services, and when they affect contractors designated as providing operationally critical support, as required by statute.

The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the Nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology. ITL's responsibilities include the development of management, administrative, technical, and physical standards and guidelines for the cost-effective security and privacy of other than national security-related information in federal information systems. The Special Publication 800-series reports on ITL's research, guidelines, and outreach efforts in information system security, and its collaborative activities with industry, government, and academic organizations. XACML and NGAC are ABAC standards for facilitating policy-preserving user executions of data service capabilities (data service operations on data service resources). In general, data services are a class of applications that provide users with capabilities to consume, manipulate, manage, and share data. Examples of data services include applications such as 'time and attendance reporting', payroll processing, corporate calendaring, and health benefits management, all with a strong need for access control. XACML and NGAC provide a single generic access control facility for applications, resulting in a dramatic alleviation of many of the administrative, interoperability, and usability challenges otherwise faced by enterprises. This is achieved by removing the access control logic from the access control mechanism in the operating environment of each application. Instead the access control logic is implemented using a common set of access control modules that provide access decision functionality, which support these applications using a centralized policy and attribute repository.

Several public commenters asked whether and how the CMMC rule content would apply to foreign based or international companies, either as companies seeking to comply with assessment requirements or as companies seeking to participate in the CMMC Ecosystem. Some questions asked for interpretation of requirements for specific scenarios, such as how CMMC requirements might affect Status of Forces Agreements for DoD installations overseas. Others asked about application of flow-down requirements to foreign subcontractors, including in circumstances when DFARS clauses do not apply or when international agreements supersede application of DFARS clause 252.204-7012. A few comments asked

how foreign or multinational corporations with facilities abroad can attain CAGE codes, access SPRS, or meet other aspects of CMMC requirements. Some asserted that specific systems contractors need to access, such as SPRS and PIEE, are not designed to accommodate foreign address formats and requested modifications or alternative options to facilitate submission of CMMC affirmations. One commenter suggested that assessment of foreign contractor information systems should only be conducted by the host country, and asked whether foreign contractors should be partially exempted from CMMC requirements. Response: CMMC Program requirements are applicable when DoD requires processing, storing, or transmitting of either FCI or CUI during performance of a DoD contract. CMMC Program requirements would not apply to a DoD Installation's communication with a Host Nation government on matters related to the Installation. CMMC program requirements apply to all DoD contractors alike when contract performance will require processing, storing, or transmitting of FCI or CUI on contractor-owned information systems. This 32 CFR part 170 CMMC Program rule does not permit partial exemption of assessment requirements for foreign contractors. Any discussion of exemptions or deviations for foreign businesses are outside the scope of the 32 CFR part 170 CMMC Program rule and must be addressed through government-to-government international arrangements or agreements. Pathways and timelines for achieving these agreements are outside the scope of this rule. CMMC requirements apply to both domestic and international primes and flow down to subcontractors throughout the supply chain if their information systems process, store, or transmit FCI or CUI. CMMC requirements are based upon the type of information processed and shared, regardless of where the company is headquartered or operates. Certification requirements for subcontractors are addressed in § 170.23(a)(1) through (4). For additional information about flow-down of contractual requirements, see the 48 CFR part 204

However, neither FAR clause 52.204-21 nor DFARS clause 252.204-7012 provide for DoD verification of a contractor's implementation of the basic safeguarding requirements specified in FAR 52.204-21 nor the security requirements specified in NIST SP 800-171 Rev 2, implementation of which is required by DFARS clause 252.204-7012, prior to contract award. As part of multiple lines of effort focused on the security and resilience of the DIB, the Department is working with industry to enhance the protection of FCI and CUI within the DoD supply chain. Toward this end, DoD has developed the CMMC Program. CMMC 2.0-Requirements The CMMC Program requirements will be implemented through the DoD acquisition and contracting process. With limited exceptions, the Department intends to require compliance with CMMC as a condition of contract award. Once CMMC is implemented, the required CMMC level for contractors will be specified in the solicitation. In accordance with the implementation plan described in 32 CFR 170.3(e), CMMC compliance or certification requirements will apply to new DoD solicitations and contracts, and shall flow down to subcontractors, based on the sensitivity of the FCI and CUI to be processed, stored or transmitted to or by the subcontractor. Before contract award, the offeror must achieve the specified CMMC level for the contractor information system (e.g., enterprise network, network enclave) that will process, store, or transmit the information to be protected. The contractor or subcontractor will also submit affirmations in the Supplier Performance Risk System (SPRS). An overview of requirements at each level is shown: CMMC Level 1-Self-Assessment CMMC Level 1 Self-Assessment requires compliance with basic safeguarding requirements to protect FCI are set forth in FAR clause 52.204-21. CMMC Level 1 does not add any additional security requirements to those identified in FAR 52.204-21. Organizations Seeking Assessment (OSAs) will submit the following information in SPRS prior to award of any prime contract or subcontract and annually thereafter: 1. the results of a self-assessment of the OSA's implementation of the basic safeguarding requirements set forth in 32 CFR 170.15 associated with the contractor information system(s) used in performance of the contract; and 2. an initial affirmation of compliance, and then annually thereafter, an affirmation of continued (printed page 89082) compliance as set forth in 32 CFR 170.22. 3. the Level 1 Self-Assessment cost burden will be addressed as part of the 48 CFR acquisition rule. CMMC Level 2-Self-Assessment CMMC Level 2 Self-Assessment requires compliance with the security requirements set forth in NIST SP 800-171 Rev 2 to protect CUI. CMMC Level 2 does not add any additional security requirements to those identified in NIST SP 800-171 Rev 2. OSAs will submit the following information in SPRS prior to award of any prime contract or subcontract:

(E) From subsection (e)(4)(I) because to the extent that this provision is construed to require more detailed disclosure than the broad, generic information currently published in the system notice, an exemption from this provision is necessary to protect the confidentiality of sources of information and to protect privacy and physical safety of witnesses and informants. (17) [Reserved] (18) System identifier and name. GNSA 25, NSA/CSS Operations Travel Records. (i) Exemption. (A)

Investigatory material compiled for law enforcement purposes, other than material within the scope of subsection 5 U.S.C. 552a(j)(2) , may be exempt pursuant to 5 U.S.C. 552a(k)(2) . However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of the information, the individual will be provided access to the information exempt to the extent that disclosure would reveal the identity of a confidential source. Note 1 to paragraph (c)(18)(i)(A). When claimed, this exemption allows limited protection of investigative reports maintained in a system of records used in personnel or administrative actions. (B) Records maintained solely for statistical research or program evaluation purposes and which are not used to make decisions on the rights, benefits, or entitlement of an individual except for census records which may be disclosed under 13 U.S.C. 8 , may be exempt pursuant to 5 U.S.C. 552a(k)(4) . (ii) Authority. 5 U.S.C. 552a(k)(2) (k)(4). (iii) Reasons. (A) From subsection (c)(3) because the release of the disclosure accounting would place the subject of an investigation on notice that they are under investigation and provide them with significant information concerning the nature of the investigation, thus resulting in a serious impediment to law enforcement investigations. (B) From subsections (d) and (f) because providing access to records of a civil or administrative investigation and the right to contest the contents of those records and force changes to be made to the information contained therein would seriously interfere with and thwart the orderly and unbiased conduct of the investigation and impede case preparation. Providing access rights normally afforded under the Privacy Act would provide the subject with valuable information that would allow interference with or compromise of witnesses or render witnesses reluctant to cooperate; lead to suppression, alteration, or destruction of evidence; enable individuals to conceal their wrongdoing or mislead the course of the investigation; and result in the secreting of or other disposition of assets that would make them difficult or impossible to reach in order to satisfy any Government claim growing out of the investigation or proceeding.

means the online repository for all information, guidance, policy, and requirements on handling CUI. Among other information, the CUI Registry identifies all approved CUI categories and subcategories, provides general descriptions for each, identifies the basis for controls, establishes markings, and includes guidance on handling procedures (see <https://www.archives.gov/cui>). * * * *

Federal information system means an information system (44 U.S.C. 3502(8)) used or operated by an agency, by a contractor of an agency, or by another organization on behalf of an agency. * * *

* * * Information system means a discrete set of information resources organized for the collection, processing, maintenance, use, sharing, dissemination, or disposition of information (44 U.S.C. 3502(8)). * * * * PART 3-IMPROPER BUSINESS PRACTICES AND PERSONAL CONFLICTS OF INTEREST 4. Amend section 3.104-4 by: a. Revising the section heading; b. Removing paragraph (c); c. Redesignating paragraph (b) as paragraph (c); d. Adding a new paragraph (b); e. Revising the newly redesignated paragraph (c); f. Revising paragraph (d); and g. Removing from paragraph (e)(1) the words ‘A contractor’ and adding ‘An offeror or contractor’ in its place. The revisions and additions read as follows: 3.104-4 Disclosure, protection, and marking of contractor information. * * * * (b)(1) The clause at 52.204-XX, Controlled Unclassified Information, directs offerors and contractors to indicate or otherwise identify any contractor bid or proposal information, contractor-attributable information, proprietary business information, and source selection information submitted to the Government. The contracting officer should consult with the contractor if the contracting officer is unsure whether information provided by the contractor falls into one of these categories. (2) Individuals responsible for preparing material that may be source selection information as described at paragraph (10) of the ‘source selection information’ definition in 2.101 must mark the cover page and each page that the individual believes contains source selection information with the legend ‘Source Selection Information-See FAR 2.101 and 3.104.’ Although the information in paragraphs (1) through (9) of the definition in 2.101 is considered to be source selection information whether or not marked, all reasonable efforts must be made to mark such material with the same legend. (c) Contractor bid or proposal information, contractor-attributable information, proprietary business information, and source selection information must be marked and protected from unauthorized disclosure in accordance with 4.403, 14.401, 15.207, applicable law, and regulations, including 32 CFR part 2002 . If the offeror or contractor submits information that could be controlled unclassified information (e.g.,

(F) From subsection (e)(8) because the requirement to serve notice on an individual when a record is disclosed under compulsory legal process could unfairly hamper law enforcement processes. It is the nature of law enforcement that there are instances where compliance with these provisions could

alert the subject of an investigation of the fact and nature of the investigation, and/or the investigative interest of intelligence or law enforcement agencies; compromise sensitive information related to national security; interfere with the overall law enforcement process by leading to the destruction of evidence, improper influencing of witnesses, fabrication of testimony, and/or flight of the subject; reveal a sensitive investigative or intelligence technique; or constitute a potential danger to the health or safety of law enforcement personnel, confidential informants, and witnesses. (G) From subsection (f) because requiring the Agency to grant access to records and establishing agency rules for amendment of records would compromise the existence of any criminal, civil, or administrative enforcement activity. To require the confirmation or denial of the existence of a record pertaining to a requesting individual may in itself provide an answer to that individual relating to the (printed page 14809) existence of an on-going investigation. The investigation of possible unlawful activities would be jeopardized by agency rules requiring verification of the record, disclosure of the record to the subject, and record amendment procedures. (H) From subsection (g) for compatibility with the exemption claimed from subsection (f), the civil remedies provisions of subsection (g) must be suspended for this record system. Because of the nature of criminal investigations, standards of accuracy, relevance, timeliness and completeness cannot apply to this record system. Information gathered in criminal investigations is often fragmentary and leads relating to an individual in the context of one investigation may instead pertain to a second investigation. (23) System identifier and name. DMDC 17 DoD, Continuous Evaluation Records for Personnel Security. (i) Exemption. In the course of carrying out records checks for continuous evaluation, exempt records from other systems of records may in turn become part of the case records maintained in this system. To the extent that copies of exempt records from those 'other' systems of records are maintained into this system, OSD claims the same exemptions for the records from those 'other' systems that are entered into this system, as claimed for the original primary system of which they are a part. (ii) Authority. 5 U.S.C. 552a(j)(2) , (k)(1), (k)(2), (k)(3), (k)(5), (k)(6), and (k)(7). (iii) Reasons. Records are only exempt from pertinent provisions of 5 U.S.C. 552a

(4) The CSA may consider other circumstances that may affect an individual's eligibility to serve effectively including the number of boards on which the individual serves, the length of time serving on any other governance boards, and other factors in accordance with CSA-provided guidance. (5) Trustees, proxy holders, and outside directors must be determined eligible for access to classified information at the level of the entity eligibility determination for access to (printed page 83334) classified information. Individuals who are serving as trustees, proxy holders, or outside directors as part of a mitigation measure for the entity are not considered to have prior involvement solely by performing that role for purposes of paragraph (f)(3) of this section. (g) Government security committee (GSC). Under a VT, PA, SSA, or SCA, the contractor is required to establish a permanent committee of its board of directors, known as the GSC. (1) Unless otherwise approved by the CSA, the GSC consists of trustees, proxy holders, or outside directors and those officer directors who have been determined to be eligible for access to classified information. (2) The members of the GSC are required to ensure that the contractor adheres to laws and regulations and maintains internal entity policies and procedures to safeguard classified information entrusted to it. The GSC ensures that violations of those policies and procedures are promptly investigated and reported to the appropriate authority when it has been determined that a violation has occurred. (3) The contractor's FSO will be the principal advisor to the GSC and attend GSC meetings. The chairman of the GSC must concur with the appointment and replacement of FSOs selected by management. The FSO functions will be carried out under the authority of the GSC. (h) Additional procedures for FOCI mitigation or negation measures. In addition to the basic requirements of the FOCI mitigation or negation agreement, the entity may be required to document and implement additional procedures based upon the circumstances of an entity's operations. Those additional procedures will be established in supplements to the FOCI mitigation agreement to allow for flexibility as circumstances change without having to renegotiate the entire agreement. When making use of supplements, the CSA does not consider the FOCI mitigation measure final until the CSA has approved the required supplements. These supplements may include: (1) Technology control plan (TCP).

Federal Cybersecurity Awareness Programs ## Federal Cybersecurity Awareness Programs Prior industry surveys and research studies have revealed that organizational cybersecurity awareness (hereafter shortened to 'security awareness') programs may face a number of challenges, including lack of: leadership support; resources; and staff with sufficient background and skills to implement an effective and engaging program. However, no prior research has explored security awareness

programs specifically in the United States (U.S.) government (federal) sector. To address this gap, NIST conducted a two-phase, mixed methods research study to understand the needs, challenges, and practices of federal security awareness programs. This report describes the research background and methodology, along with the characteristics of the participants, organizations, and programs represented in the study. Research results can serve as a resource for federal security awareness professionals, managers, and organizational decision makers to improve and advocate for their organizations' security awareness programs. Results can also inform the development of federal security awareness guidance, policies, sharing forums, and initiatives meant to aid programs in becoming more effective. While focused on the U.S. government, findings may also have implications for organizational security awareness programs in other sectors.

From the NIST SP 800-172 Rev 3 Final Public Draft: The Special Publication 800-series reports on ITL's research, guidelines, and outreach efforts in information system security, and its collaborative activities with industry, government, and academic organizations. NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 ii Audience 28 This publication serves a diverse group of individuals and organizations in the public and private sectors, including individuals with:

- System development life cycle responsibilities (e.g., program managers, mission/business owners, information owners/stewards, system designers and developers, system/security engineers, systems integrators)
- Acquisition or procurement responsibilities (e.g., contracting officers)
- System, security, or risk

Document the risk assessment results. Once the risk assessment has been completed as described above, the results of the risk assessment should be documented. Principally, the regulated entity should document all threat/vulnerability pairs (i.e., a scenario in which an identified threat can exploit a vulnerability) applicable to the organization, the likelihood and impact calculations, and the overall risk to ePHI for the threat/vulnerability pair. Regulated entities should consider sharing the risk assessment results with organizational leadership, whose review can be crucial to the organization's ongoing risk management. The Department has also published guidance that explains the differences between a risk analysis and a gap analysis, and the use of both in an entity's risk management program. [470] While a risk analysis is a comprehensive identification of risks and vulnerabilities to all ePHI, a gap analysis typically provides a partial assessment of an entity's enterprise and is often used to provide a high-level overview of what safeguards are in place (or missing) and may also be used to review a regulated entity's compliance with particular standards and implementation specifications of the Security Rule. Other NIST guidance on conducting risk assessments explains that the result of a risk analysis is a determination of risk posed to the regulated entity's ePHI and related information systems. [471] (printed page 940) Consistent with the discussion above, a key step is determining the risk level posed to such ePHI by threats and vulnerabilities and how critical it is to address and mitigate the identified risk. In general, the descriptive words ·very high· or ·critical· are used to indicate that a threat event could be expected to have multiple severe or catastrophic adverse effects on organizational operations, organizational assets, individuals, other organizations, or the country. [472] A ·high· risk would indicate that a threat event could be expected to have a severe or catastrophic adverse effect on the same, while a ·moderate· risk could indicate that the threat event could have a serious adverse effect on the same. Risks that are ·low· and ·very low· could be expected to have a limited and negligible effect, respectively, on organizational operations or assets, individuals, other organizations, or the country.

In general, location information provided to mobile applications will either be two- or three-dimensional. There are at least three factors that will influence to what extent public safety should use the location information being provided: accuracy, integrity, and confidentiality. Location information can be derived using various sources and techniques with each providing varying levels of accuracy. The integrity of the location information may need to be protected so that false location information is not provided that interferes with a timely response. Under certain circumstances, location information being generated may need to be kept confidential so as to not endanger public safety personnel. That said; seamless, efficient, and ubiquitous location communication stands to both empower and enrich public safety as they seek to fulfill their mission. Both public safety mobile application developers and users need to understand how accurate location information is and how that data is protected (integrity and confidentiality) in order to create and use applications in the most effective and secure manner.

1. What is considered sensitive data?
2. Is sensitive data sufficiently defined by legal/regulatory compliance requirements?
3. How is

sensitive data identified and labeled? 4. How is the type of data protection needed/required determined? 5. What types of data protection are needed/required? 6. What types of data need/require privacy protection? (such as personnel information, user/agency data)

(1) Document the policies and procedures required to comply with this subpart and how the covered entity or business associate considered the factors at § 164.306(b) in the development of such policies and procedures. (2) Document each action, activity, or assessment required by this subpart. (b) Implementation specifications (1) Time limit. Retain the documentation required by paragraph (a) of this section for 6 years from the date of its creation or the date when it last was in effect, whichever is later. (2) Availability. Make documentation available to those persons responsible for implementing the procedures to which the documentation pertains. (3) Updates. Review and update documentation at least once every 12 months and within a reasonable and appropriate period of time after a security measure is modified. § 164.318 Transition provisions. (a) Standard: Effect of prior contracts or other arrangements with business associates. Notwithstanding any other provisions of this subpart, a covered entity, or business associate with respect to a subcontractor, may allow a business associate to create, receive, maintain, or transmit electronic protected health information pursuant to a written contract or other arrangement with such business associate that does not comply with §§ 164.308(b) and 164.314(a), only in accordance with paragraph (b) of this section. (b) Implementation specification: Deemed compliance (1) Qualification. Notwithstanding other sections of this subpart, a covered entity, or business associate with respect to a subcontractor, is deemed to be in compliance with the documentation and contract requirements of §§ 164.308(b) and 164.314(a), with respect to a particular business associate relationship for the time period set forth in paragraph (b)(2) of this section, if both of the following apply: (i) Prior to [DATE OF PUBLICATION OF THE FINAL RULE IN THE Federal Register], such covered entity, or business associate with respect to a subcontractor, has entered into and is operating pursuant to a written contract or other written arrangement with the business associate that complies with the applicable provisions of §§ 164.308(b) and 164.314(a) that were in effect on such date. (ii) The contract or other arrangement is not renewed or modified from [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE Federal Register], until [DATE 240 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE Federal Register]. (2) Limited deemed compliance period. A prior contract or other arrangement that meets the qualification requirements at paragraph (b)(1) of this section shall be deemed compliant until the earlier of the following dates: (i) The date such contract or other arrangement is renewed on or after [DATE 240 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE Federal Register]. (ii) [DATE 1 YEAR AND 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE Federal Register]. (c) Covered entity and business associate responsibilities.

·Security,· a NISP CSA information collection, is assigned OMB Control Number: 1910-1800. This information collection, which includes facility security clearance information, is used by the DOE to exercise management, oversight, and control over its contractors' management and operation of DOE's Government-owned contractor-operated facilities, and over its offsite contractors. The contractor management, oversight, and control functions relate to the ways in which DOE contractors provide goods and services for DOE organizations and activities in accordance with the terms of their contracts and the applicable statutory, regulatory, and mission support requirements of the Department. Information collected from private industry and private individuals is used to protect national security and critical assets entrusted to the Department. (d) DoD collection. ·DoD Security Agreement,· is assigned OMB Control Number: 0704-0194. ·National Industrial Security System,· a CSA information collection, is assigned OMB Control Number: 0704-0571, and is a DoD information collection used to conduct its monitoring and oversight of contractors. Department of Defense ·Contract Security Classification Specification,· (available at: <https://www.esd.whs.mil/Portals/54/Documents/DD/forms/dd/dd0254.pdf> and available at: <https://www.dcsa.mil/is/nccs/>), is assigned OMB Control Number 0704-0567 and used by both DoD and agencies which have an industrial security agreement with DoD. ·Defense Information System for Security,· is assigned OMB Control Number: 0704-0573. Defense Information System for Security is a DoD automated system for personnel security, providing a common, comprehensive medium to record, document, and identify personal security actions within DoD including submitting adverse information, verification of security clearance status, requesting investigations, and supporting continuous evaluation activities. It requires personal data collection to facilitate the initiation, investigation and adjudication of information relevant to DoD security clearances and employment suitability (printed page 83320) determinations for active duty military, civilian employees and

contractors seeking such credentials. Joint Personnel Adjudicative System is assigned OMB Control Number: 0704-0496. Joint Personnel Adjudicative System is an information system which requires personal data collection to facilitate the initiation, investigation and adjudication of information relevant to DoD security clearances and employment suitability determinations for active duty military, civilian employees and contractors seeking such credentials. § 117.6 Responsibilities. (a) Under Secretary of Defense for Intelligence & Security (USD(I&S)). The USD(I&S), on behalf of the Secretary of Defense, and in accordance with E.O. 12829 , 32 CFR part 2004 , and DoDI 5220.22: (1) Carries out the direction in section 201 of E.O. 12829

), and allows DoD to consider the impact of supply chain risk in specified types of procurements related to national security systems. Section 806 defines supply chain risk as the risk that an adversary may sabotage, maliciously introduce unwanted function, or otherwise subvert the design, integrity, manufacturing, production, distribution, installation, operation, or maintenance of a covered system so as to surveil, deny, disrupt, or otherwise degrade the function, use, or operation of such system. II. Discussion and Analysis This DFARS change is necessary to implement the authorities provided to DoD by section 806, enabling DoD to establish a pilot program to mitigate supply chain risk, which is set to expire on September 30, 2018. These authorities are in addition to other available mitigations, which may not be adequate to protect against the malicious actions referred to in the definition of supply chain risk. Section 806 actions are permitted in procurements related to National Security Systems (NSS) (see 44 U.S.C. 3542(b)) that include a requirement relating to supply chain risk. This rule implements section 806's three supply-chain risk-management approaches as follows: (1) The exclusion of a source that fails to meet qualification standards established in accordance with the requirements of 10 U.S.C. 2319 , for the purpose of reducing supply chain risk in the acquisition of covered systems. (2) The exclusion of a source that fails to achieve an acceptable rating with regard to an evaluation factor providing for the consideration of supply chain risk in the evaluation of proposals for the award of a contract or the issuance of a task or delivery order. (3) The decision to withhold consent for a contractor to subcontract with a particular source or to direct a contractor for a covered system to exclude a particular source from consideration for a subcontract under the contract. The rule establishes a new provision and clause (see DFARS 239.7306) for inclusion in all solicitations and contracts, including contracts for commercial items or commercial off-the-shelf items involving the development or delivery of any information technology, whether acquired as a service or as a supply, because portions of these contracts may be used to support or link with one or more NSS. Another reason for including the provision and clause in all DoD solicitations and contracts for information technology is to manage the operational security risks of including the provision and clause only in procurements for very sensitive DoD procurements, thereby identifying those very procurements as a target for the risk section 806 aims to deter.

The Department of Homeland Security (DHS) is an especially important Federal actor that serves as a focal point for the security of cyberspace. It provides consolidated intrusion detection, incident analysis and cyber response capabilities to protect Federal agencies' external access points, including access to the Internet. While the Department of Defense (DOD) defends military and national security systems, DHS has the lead in securing federal civilian systems. DHS also works with public and private stakeholders to protect critical infrastructure and key resources (CIKR). [3] A number of entities within the Department of Justice, including the Federal Bureau of Investigation, as well as the United States Secret Service in DHS, track and prosecute cyber crimes. The National Science and Technology Council and its Committee on Technology serve as the coordinating organization over the Networking and Information Technology Research and Development (NITRD) program, which is the primary mechanism by which the U.S. Government coordinates its unclassified networking and IT research and development investments, including cybersecurity research and development. [4] The Department of Commerce has programs that complement and support these and other federal efforts. For example, the Department's National Institute of Standards and Technology (NIST) [5] develops standards and guides for securing non-national security Federal information systems. It defines minimum security requirements for federally held information and for information systems. NIST is also a primary contributor and member of the NITRD program, leading research and development in computer forensics tool testing, seamless mobility, trustworthy information systems, information security automation, combinatorial testing, next generation access control, and Internet infrastructure protection (with DHS funding). NIST also is responsible for the National Software Reference Library, National Vulnerability Database, and Security Content Automation Protocol. NIST identifies methods and metrics for assessing the

effectiveness of security requirements; evaluates private sector security policies for potential federal agency use; and provides general cybersecurity technical support and assistance to the private sector and federal agencies. Moreover, over the (printed page 44218) past two decades, the Department's National Telecommunications and Information Administration (NTIA), in its role as principal adviser to the President on telecommunications and information policies, has worked closely with other parts of government on broadband deployment, Internet policy development, securing the Internet namespace, and other issues. As an advocate for our nation's businesses, NTIA has played an instrumental role in developing policies that have helped commerce over the Internet flourish. [6]

The NIST Risk Management Framework (RMF), documented in NIST SP 800-37 Rev 2, provides a structured process for managing security and privacy risks. The RMF consists of seven steps: 1. ****Prepare****: Establish context and priorities 2. ****Categorize****: Determine information system impact level 3. ****Select****: Choose appropriate security controls 4. ****Implement****: Deploy the selected controls 5. ****Assess****: Evaluate control effectiveness 6. ****Authorize****: Accept residual risk (Authority to Operate) 7. ****Monitor****: Ongoing assessment and reporting While federal agencies use RMF directly, defense contractors implement a subset of RMF through NIST SP 800-171 and CMMC. Understanding RMF helps contractors appreciate the broader security framework their controls fit into.

From the NIST SP 800-172 Rev 3 Final Public Draft: recovery time, and reconstitution objectives; and organizational metrics consistent 1360 with contingency plan requirements. Reconstitution includes the deactivation of interim system capabilities that may have been needed during recovery operations. Reconstitution also includes assessments of fully restored system capabilities, the reestablishment of continuous monitoring activities, and activities to prepare the system and organization for future disruptions, breaches, compromises, or failures. Recovery and reconstitution capabilities can include automated mechanisms and manual procedures. Organizations establish recovery time and recovery point objectives as part of contingency planning. This requirement does not enhance a specific requirement in SP 800-171 but can be used to s

The CMMC implementation follows a phased approach: - Phase 1 (began November 10, 2025): DoD began incorporating CMMC requirements in applicable procurements via DFARS 252.204-7021. The first 12 months focus primarily on self-assessments. Phase 1 includes Level 1 (self-assessment) and Level 2 (self-assessment) for applicable contracts. - Phase 2 (scheduled November 10, 2026): Expands to include CMMC Level 2 requirements with both self-assessment and C3PAO certification assessments in solicitations and contracts. This is when third-party assessments become a contract requirement. - Full compliance: By October 31, 2026, CMMC compliance will be required for all new DoD contract awards involving CUI or FCI. Defense contractors should be preparing now for their target CMMC level, as the assessment pipeline is expected to be heavily subscribed once Phase 2 begins.

3.3.2 Authorization... 3.3.2 Authorization After verifying the identity of a remote access user, organizations may choose to perform checks involving the telework client device to determine which internal resources the user should be permitted to access.

(Comment 90) One comment states that some firms use carriers such as United Parcel Service, Federal Express, and the United States Postal Service to deliver their products and conduct all their transactions with these carriers via the Internet. The address and fax numbers of these carriers are not relevant. The comment requests that FDA revise the section on identifying information of the transporter to require only sufficient identifying information. (Response) FDA disagrees with this comment. In the event that FDA has a reasonable belief that an article of food is adulterated and presents a threat of serious adverse health consequences or death to humans or animals, FDA would need to determine from the source and recipient records who transported the subject food to complete the tracing investigation. Although the transportation may be arranged over the Internet, companies such as those mentioned in the comment have fixed addresses, such as a corporate headquarters, that would need to be included in the record so that if FDA had to access their existing records under section §.1.361 of this final rule, FDA would know where to go. (Comment 91) One comment states that wines produced in France are sold by someone other than the producer and that the producer never knows the destination of the wine. The comment states that the recordkeeping requirement is an unnecessary burden on the producer because much of the producer's wine may be sent to destinations other than the United States. (Response) There is no requirement for a person that manufactures or processes food to know the ultimate destination of its product. A person subject to

subpart J of this final rule is only required to establish and maintain records to identify the transporter and nontransporter immediate previous sources and transporter and nontransporter immediate subsequent recipients of food. Further, FDA notes that it has excluded all foreign persons, except foreign persons who transport food in the United States, from all of the regulations in subpart J. (Comment 92) One comment requests clarification on the records requirements for products produced before the regulations take effect. (Response) Covered persons are required to establish and maintain records to identify the immediate previous sources and the immediate subsequent recipients of all food as of the compliance date of this final rule, keeping in mind the staggered compliance dates provided in § 1.368 of this final rule. If a food was received before the compliance date of this final rule, then there is no obligation to keep records of the immediate previous sources of that food. If a food is released on or after the compliance date of this final rule, you must establish and maintain records of the immediate (printed page 71597) subsequent recipients of the food, regardless of when that food was produced or received. 2. Information Reasonably Available to Identify the Specific Source of Each Ingredient

(Response) The business described in the comment is not treated differently than other retailers. Persons who distribute food to businesses do not qualify for the exclusion for sales to consumers in § 1.327(d) of the final rule. Thus, sales of food to restaurants require the establishment and maintenance of records of the immediate subsequent recipient, as codified in § 1.345 of the final rule, to the extent that information is reasonably available to you. Information is reasonably available to you if you have a system in place to capture the information. FDA does not intend to require the reconfiguration of business operations. Thus, for example, information is reasonably available to you when the purchaser has an established commercial account to which the food purchases are charged in an identifiable manner. Accordingly, § 1.327(e) of the final rule provides that persons who operate retail food establishments that distribute food to persons who are not consumers are subject to all of the requirements in subpart J of this final rule. However, the requirements in § 1.345 of the final rule to establish and maintain records to identify the nontransporter and transporter immediate subsequent recipients that are not consumers applies as to those transactions only to (printed page 71576) the extent the information is reasonably available. For purposes of this section, 'retail food establishment' is defined to mean an establishment that sells food products directly to consumers as its primary function. The term 'consumers' does not include businesses. A retail food establishment may manufacture/process, pack, or hold food if the establishment's primary function is to sell from that establishment food, including food that it manufactures/processes, packs, or holds, directly to consumers. A retail food establishment's primary function is to sell food directly to consumers if the annual monetary value of sales of food products directly to consumers exceeds the annual monetary value of sales of food products to all other buyers. A 'retail food establishment' includes grocery stores, convenience stores, and vending machine locations.

Use the clause at 252.204-70XX, Expediting Contract Closeout, in solicitations and contracts, including solicitations and contracts using FAR part 12 procedures for the acquisition of commercial items, when the contracting officer intends to expedite contract closeout through the waiver of entitlement to any residual dollar amounts by the contractor and the Government at the time of final contract closeout. PART 212-ACQUISITION OF COMMERCIAL ITEMS 3. Amend section 212.301 by adding paragraph (f)(ii)(K) to read as follows: 212.301 Solicitation provisions and contract clauses for the acquisition of commercial items. (f) * * * (ii) * * * (K) Use the clause at 252.204-70XX, Expediting Contract Closeout, as prescribed in 204.804-70. * * * * * PART 252-SOLICITATION PROVISIONS AND CONTRACT CLAUSES 4. Add section 252.204-70XX to read as follows: 252.204-70XX Expediting contract closeout. As prescribed in 204.804-70, use the following clause: Expediting Contract Closeout (DATE) (a) Both the Government and the Contractor agree to waive any entitlement that otherwise might accrue to either party in any residual dollar amount of \$1,000 or less at the time of final contract closeout. (b) A residual dollar amount includes all money owed to either party at the end of the contract and as a result of the contract, excluding amounts connected in any way with taxation or a violation of law or regulation. (c) For purposes of determining residual dollar amounts, offsets (for example across multiple contracts or orders) may be considered to the extent permitted by law. (End of clause) [FR Doc. 2020-06724 Filed 4-7-20; 8:45 am] BILLING CODE 5001-06-P

) to presume that a regulated entity had implemented reasonable and appropriate compensating controls where the regulated entity has implemented the security measures prescribed and as

instructed by the FDA-authorized label for the device. The proposed language recognizes that while the device's label may not specifically require deployment of an MFA solution, it may provide for a specific compensating control and the manner in which that control is to be implemented. This would include any updates, such as patches, recommended or required by the manufacturer of the device. While not required, a regulated entity would be permitted to implement additional alternative security measures and compensating controls in accordance with best practices and/or its risk analysis. Additionally, the Department proposes at 45 CFR 164.312(f)(2)(iv)(B) (3) that during any period in which compensating controls are in use, the regulated entity's Security Official would be required to review the effectiveness of the compensating controls at securing its relevant electronic information systems. While regulated entities should review implemented compensating controls on a routine basis, the Department intends for a regulated entity to periodically review the implementation and effectiveness of implemented compensating controls to ensure the continued protection of ePHI. [788] For example, if a regulated entity's plan to migrate ePHI from hardware that does not support MFA changes such that the use of the non-MFA hardware continues for a longer period of time, the regulated entity should review implemented compensating controls to ensure ongoing effectiveness and whether new compensating controls should be implemented. We are proposing to require that the review be conducted at least once every 12 months or in response to an environmental or operational change, whichever is more frequent, and that the review be documented. Additionally, the Department proposes to require that the review be documented. If the regulated entity's Security Official review determines that certain compensating controls are no longer effective, the Department would expect the regulated entity to adopt other compensating controls that are effective to continue to meet the applicable proposed exception. As an example of how proposed 45 CFR 164.312(f)(2)(iii) would operate in concert with proposed 45 CFR 164.312(f)(2)(iv) , a regulated entity experiencing an emergency that adversely affects a relevant electronic information system and renders MFA infeasible would be required to document the following: The regulated entity has experienced an emergency that has adversely affected a relevant electronic information system, including the nature of the emergency and the specific circumstances that adversely affected the specific electronic information system. MFA has been rendered infeasible with respect to the specific relevant electronic information system adversely affected by the emergency.

3.3.3 Use Case 3: Sharing Data with Contractor... 3.3.3 Use Case 3: Sharing Data with Contractor A user wants to provide a contractor with copies of large data sets on a daily basis because the contractor has no direct access to the system containing the data.

In the following table, costs, food safety benefits, and cost effectiveness measures are reported for each of the coverage options described in the above table, and the final rule. Costs are reported in terms of annualized costs and incremental costs using a 7-percent discount rate over a 20-year horizon. Benefits are reported in terms of the annual number of food safety illnesses averted (reported and unreported), and the incremental number of illnesses averted. The estimates of the numbers of averted illnesses should be interpreted as minimum values because they relate to only the food safety benefits; bioterrorism considerations are not incorporated into the estimates. Cost effectiveness measures are in terms of the incremental costs per averted illness, and the average cost per averted illness. The incremental cost per averted illness is used to measure the relative cost effectiveness of an option when compared with successively more stringent requirements. It is computed by dividing the incremental costs from the option by the incremental benefits. Since option H averts a larger number of illnesses at lower cost than options A through F, option H dominates the other options and they can be eliminated from further consideration in an incremental cost effectiveness analysis. Thus, the cells for computing the incremental costs per averted illness for those options are left blank in table 18 of this document. Similarly, through the principle of weak (or extended) dominance, option I can be eliminated from the incremental cost effectiveness analysis. (For a full discussion of extended dominance in cost-effectiveness analysis, see Gold, M.L., J.E. Siegel, L.B. Russell, and M.C. Weinstein, · Cost Effectiveness in Health and Medicine: The Report of the Panel on Cost-Effectiveness in Health and Medicine, Oxford University Press, · New York, p. 286, 1996). Consequently, only options H, the final rule, and the adjusted comprehensive coverage are used to measure the incremental cost effectiveness. We assume that bioterrorism considerations would not alter the relative order of the number of illnesses averted across all options. The average costs per averted illness reported in table 18 of this document are calculated by dividing the annualized costs by the total number of illnesses averted for each option. The average costs per averted illness is the cost-effectiveness of each option relative to the baseline.

For the final rule, the average cost-effectiveness expressed in costs per illness prevented is \$110,000 discounted at 7 percent and \$108,000 discounted at 3 percent. Table 18. Costs, Food Safety Benefits, and Cost Effectiveness of Alternative Coverage Options

	Costs	Benefits	Cost Effectiveness
Annualized Costs	Incremental Cost	Illnesses averted	Incremental Benefit
Incremental Cost per Averted Illness	Average Cost per Averted Illness	Option A	\$40,975,852 245
\$167,248	Option C	\$56,753,102 316	\$179,598
	Option D	\$67,712,296 355	\$190,739
\$69,902,094 359	Option E	\$194,713	Option B

(E) Overall Level 2 self-assessment score (e.g., 105 out of 110). (F) POA&M usage and compliance status, if applicable. (ii) Conditional Level 2 (Self). The OSA has achieved the CMMC Status of Conditional Level 2 (Self) if the Level 2 self-assessment results in a POA&M and the POA&M meets all the CMMC Level 2 POA&M requirements listed in §170.21(a)(2). (A) Plan of Action and Milestones. A Level 2 POA&M is allowed only in accordance with the CMMC POA&M requirements listed in §170.21. (B) POA&M closeout. The OSA must remediate any NOT MET requirements, must perform a POA&M closeout self-assessment, and must post compliance results to SPRS within 180 days of the CMMC Status Date associated with the Conditional Level 2 (Self). If the POA&M is not successfully closed out within the 180-day timeframe, the Conditional Level 2 (Self) CMMC Status for the information system will expire. If Conditional Level 2 (Self) CMMC Status expires within the period of performance of a contract, standard contractual remedies will apply, and the OSA will be ineligible for additional awards with a requirement for the CMMC Status of Level 2 (Self), or higher requirement, for the information system within the CMMC Assessment Scope until such time as a new CMMC Status is achieved. (iii) Final Level 2 (Self). The OSA has achieved the CMMC Status of Final Level 2 (Self) if the Level 2 self-assessment results in a passing score as defined in §170.24. This score may be achieved upon initial self-assessment or as the result of a POA&M closeout self-assessment, as applicable. (iv) CMMC Status investigation. The DoD reserves the right to conduct a DCMA DIBCAC assessment of the OSA, as provided for under the 48 CFR 252.204-7020 . If the investigative results of a subsequent DCMA DIBCAC assessment show that adherence to the provisions of this part have not been achieved or maintained, these DCMA DIBCAC results will take precedence over any pre-existing CMMC Status. At that time, standard contractual remedies will be available and the OSA will be ineligible for additional awards with CMMC Status requirement of Level 2 (Self), or higher requirement, for the information system within the CMMC Assessment Scope until such time as a new CMMC Status is achieved. (2) Affirmation. Affirmation of the Level 2 (Self) CMMC Status is required for all Level 2 self-assessments at the time of each assessment, and annually thereafter. Affirmation procedures are set forth in §170.22. (b) Contract eligibility. Prior to award of any contract or subcontract with requirement for CMMC Status of Level 2 (Self), the following two requirements must be met: (1) The OSA must achieve, as specified in paragraph (a)(1) of this section, a CMMC Status of either Conditional Level 2 (Self) or Final Level 2 (Self). (2) The OSA must submit an affirmation of compliance into SPRS, as specified in paragraph (a)(2) of this section. (c) Procedures .(1) Level 2 self-assessment of the OSA.

te risk response, and communicate risk activities as part of an enterprise CSRM strategy. - NISTIR 8286C describes processes for aggregating information from CSRM activities throughout the enterprise. As that information is integrated and harmonized, organizational and enterprise leaders monitor achievement of risk objectives, consider any changes to risk strategy, and use the combined information to maintain awareness of risk factors and positive risks (or opportunities).

DFARS 252.204-7012 (Safeguarding Covered Defense Information and Cyber Incident Reporting) Core CUI protection clause requiring NIST SP 800-171 implementation, cyber incident reporting within 72 hours, and preservation of evidence. Non-compliance with 252.204-7012 can result in: loss of contract eligibility, termination for cause, False Claims Act liability (if contractor misrepresented compliance status), suspension or debarment from future DoD contracting, and in cases involving CUI spillage or breach, potential civil or criminal penalties.

on new, amended, altered, or deleted systems of records to inform the public of the Privacy Act systems of records that it maintains. The Privacy Act requires submission of new or significantly changed systems of records to OMB and both houses of Congress before publication in the Federal Register (See Appendix E of this part). (2) Systems managers must send a proposed notice at least 120 days before implementing a new, amended or altered system to the DA Freedom of Information and Privacy Office. The proposed or altered notice must include a narrative statement and supporting documentation. A narrative statement must contain the following items: (i) System identifier and

name; (ii) Responsible Official, title, and phone number; (iii) If a new system, the purpose of establishing the system or if an altered system, nature of changes proposed; (iv) Authority for maintenance of the system; (v) Probable or potential effects of the system on the privacy of individuals; (vi) Whether the system is being maintained, in whole or in part, by a contractor; (vii) Steps taken to minimize risk of unauthorized access; (viii) Routine use compatibility; (ix) Office of Management and Budget information collection requirements; and (x) Supporting documentation as an attachment. Also as an attachment should be the proposed new or altered system notice for publication in the Federal Register . (3) An amended or altered system of records is one that has one or more of the following: (i) A significant increase in the number, type, or category of individuals about whom records are maintained; (ii) A change that expands the types of categories of information maintained; (iii) A change that alters the purpose for which the information is used; (iv) A change to equipment configuration (either hardware or software) that creates substantially greater access to the records in the system of records; (v) An addition of an exemption pursuant to Section (j) or (k) of the Act; or (vi) An addition of a routine use pursuant to 5 U.S.C. 552a(b)(3) . (4) For additional guidance contact the DA FOIA/P Office. (5) On behalf of DA, the Defense Privacy Office maintains a list of DOD Components' Privacy Act system of records notices at the Defense Privacy Office's Web site <http://www.defenselink.mil/privacy> . (6) DA PAM 25-51 sets forth procedures pertaining to Privacy Act system of records notices. (7) For new systems, system managers must establish appropriate administrative, technical, and physical safeguards to ensure the security and confidentiality of records. This applies to all new systems of records whether maintained manually or automated.

title 32 of the Code of Federal Regulations , with the following new sections: Section 236.2 establishes the definitions of terms used in the new part, leveraging established definitions to the maximum extent possible (e.g., those provided in the Committee on National Security Systems Instruction No. 4009, "National Information Assurance Glossary") (http://www.cnss.gov/Assets/pdf/cnssi_4009.pdf); Section 236.4 sets forth the basic requirements and procedures of the voluntary program, including information collection requirements; Section 236.5 characterizes cyber security information sharing and collection procedures; Section 236.6 establishes the general provisions of the voluntary DIB CS/IA program; and Section 236.7 sets forth the eligibility (printed page 27617) requirements to participate in the voluntary program. Nothing in this rule or program is intended to be inconsistent with any other related or similar federal agency or private sector activity or requirement. For example, nothing in this rule or program abrogates the Government's or the DIB participants' rights or obligations regarding the handling, safeguarding, sharing, or reporting of information, or regarding any physical, personnel, or other security requirements, as required by law, regulation, policy, or a valid legal contractual obligation. Similarly, this rule and program are intended to be consistent and coordinated with, and updated as necessary to ensure consistency with and support for, other federal activities related to the handling and safeguarding of controlled unclassified information, such as those that are being led by the National Archives and Records Administration pursuant to Executive Order 13556 "Controlled Unclassified Information" (November 4, 2010) (see <http://www.archives.gov/cui/>). Executive Orders 12866, "Regulatory Planning and Review" and 13563, "Improving Regulation and Regulatory Review" . It has been certified that 32 CFR part 236 does not: (a) Have an annual effect on the economy of \$100 million or more, or adversely affect in a material way, the economy; a section of the economy; productivity; competition; jobs; the environment; public health or safety; or State, local, or tribal governments or communities; (b) Create a serious inconsistency, or otherwise interfere with, an action taken or planned by another Agency; (c) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (d) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles as set forth in these Executive Orders. Public Law 104-121 , "Congressional Review Act" (5 U.S.C. 801) It has been determined that 32 CFR part 236 is not a "major" rule under 5 U.S.C. 801 , enacted by Public Law 104-121

In addition, a foreign comment states that meat, poultry, and eggs are exempt under the proposed rule because the United States deems current risk management systems associated with these products to be sufficiently stringent. The comment states that, in Australia, these products are subject to strict regulatory and certification requirements as "prescribed goods" under Australian legislation (the Export Control Act 1982), which the USDA audits. A range of other Australian products, such as milk and fish, are also prescribed goods and are subject to the same certification process. The comment, therefore, argues that all prescribed goods should qualify for an exemption on these

grounds. (Response) The rule does not impose any requirements with regard to food to the extent it is within USDA's exclusive jurisdiction under FMIA, PPIA, or EPIA. Under the FMIA, USDA regulates cattle, sheep, swine, equines, goats, and meat food products. Under the PPIA, USDA regulates poultry and poultry products. Under the Egg Products Inspection Act, USDA regulates some eggs and egg products. Any person that manufactures, processes, packs, transports, distributes, receives, holds, or imports some foods subject to exclusive USDA jurisdiction is exempt from these regulations with respect to that food while it is under USDA's exclusive jurisdiction. FDA has decided not to attach an appendix to the final rules highlighting which foods are within the scope of this final rule. If questions remain, FDA will determine whether it needs to issue additional guidance on this subject. With respect to the comment regarding Australian meat, poultry, eggs, milk, and fish, FDA notes that all foreign persons, except for foreign persons who transport food in the United States, are excluded from all of the requirements of the final rule under § 1.327(h). However, domestic persons who import these foreign products are required to comply with these recordkeeping regulations to the extent that they are FDA-regulated food products. (Comment 55) One foreign comment requests that FDA identify the list of persons that are excluded from all or part of the regulation in accordance with § 1.327. (Response) Foreign persons, except for foreign persons who transport food in the United States, are excluded from all of the requirements of this final rule under § 1.327(h). The term person includes an individual, partnership, corporation, and association (section 201 of the FD&C Act (21 U.S.C. 321(e)).

8. Foreign Facilities if Food Undergoes Further Manufacturing/Processing There were no comments received on this issue. However, FDA has decided to exempt foreign persons, except foreign persons who transport food in the United States, from this rulemaking. This is discussed in detail under section III.C of this document entitled Comments on Who is Subject to This Subpart? (Proposed § 1.326).

9. Pet Food

Cryptographically-protected passwords use salted one-way cryptographic hashes of passwords. See NIST Cryptographic Standards and Guidelines. FURTHER DISCUSSION All passwords must be cryptographically protected using a one-way function for storage and transmission. This type of protection changes passwords into another form, or a hashed password. A one-way transformation makes it theoretically impossible to turn the hashed 116 NIST SP 800-171A, pp. 34-35. 117 NIST SP 800-171 Rev. 2, pp. 25-26. IA.L2-3.5.10 Cryptographically-Protected Passwords CMMC Assessment Guide Level 2 | Version 2.13 133 password back into the original password, but inadequate complexity (IA.L2-3.5.7) may still facilitate offline cracking of hashes. Example You are responsible for managing passwords for your organization. You protect all passwords with a one-way transformation, or hashing, before storing them. Passwords are never transmitted across a network unencrypted [a,b]. Potential Assessment Considerations Are passwords prevented from being stored in reversible encryption form in any company systems [a]? Are passwords stored as one-way hashes constructed from passwords [a]? KEY REFERENCES NIST SP 800-171 Rev. 2 3.5.10

The PIA provides detailed procedures for handling personally identifiable information (PII), attributional information about the strengths or vulnerabilities of specific covered contractor information systems, information providing a perceived or real competitive advantage on future procurement action, and contractor information marked as proprietary or commercial or financial information. In addition, personnel information is covered by Office of the Secretary of Defense (OSD) System of Records Notice (SORN) DCIO 01 (<https://dpcl.d.defense.gov/Portals/49/Documents/Privacy/SORNs/OSDJS/DCIO-01.pdf>). No changes to the PIA or SORN are being proposed in conjunction with this proposed rule. Expected Impact of the Proposed Rule Costs DoD believes the cost impact of the proposed changes to this proposed rule is not significant, as the changes primarily expand the availability of the established DIB CS Program to additional defense contractors. The newly eligible population of defense contractors may incur costs to familiarize themselves with the rule and those who elect to participate in the program will incur costs related to program participation. The Government will continue to incur costs related to operating the program. The DIB CS Program conducts outreach activities to defense contractors through press releases, participation in defense-oriented conferences, speaking engagements, and through digital media. The program will leverage pre-established channels to message changes to the program and engage with the eligible population of defense contractors. Based on the program growth experienced that during the last phase of program expansion the program is forecasting annual growth at just over 1% of the eligible population. At a growth rate of 1% per year it will take the program approximately 10 years to achieve the estimated 10% participation rate of the eligible DIB. Costs to DIB Participants In order to join the DIB CS Program there is an initial labor burden for a defense contractor to familiarize themselves with the rule and

subsequently apply to the program and provide POC information. In total, if it takes each contractor 30 minutes to read and familiarize him/herself with the rule, it will take contractors 4,000 hours to familiarize themselves with the rule (8,000 participants $\times$.5 = 4,000 hours). At an hourly wage of \$108.92, the total cost incurred by contractors for rule familiarization will amount to \$108,920 dollars ($\$108.92 \times .5 \text{ hours} = \$54.46 \times 4,000 \text{ hours} = \$217,840$). The hourly labor cost is based on the mean wage estimate from the Bureau of Labor Statistics for an Information Security Analysts, Occupational Employment and Wages, May 2021 and is covered under information collection 0704-0490. This hourly wage is adjusted upward by 100% to account for overhead and benefits, which implies a value of \$108.92 per hour.

Organizations that experience cybersecurity attacks can experience reputational harm and other monetary costs, such as those associated with providing breach notifications, paying fines to regulators and damages to individuals, and providing credit monitoring and identity theft-related services. [980] The harm to an organization's reputation is difficult to quantify, but it can also affect the quality of care administered to individuals. [981] Privacy and security of ePHI are paramount to individuals feeling safe and at ease sharing their IIHI with clinicians. Security breaches can negatively impact a patient's confidence in a health care organization if they believe their information and privacy may be compromised. This can cause them to delay seeking treatment or (printed page 1003) withhold information from health care practitioners, ultimately compromising the decision-making capacity of their health care provider to administer the best quality of care. [982] Decreasing the number and scope of health care breaches would reduce the harms of such breaches and would be a significant benefit of the proposals in the NPRM. 5. Comparison of Benefits and Costs Key inputs to the estimation of costs of this proposed rule include the numbers of regulated entities and health plan sponsors. The Department has not previously quantified the costs of Security Rule compliance for health plan sponsors because the existing requirements are for plan documents to require such sponsors to implement administrative, physical, and technical safeguards, but not necessarily to comply with the specific requirements of the Security Rule. Therefore, the proposed requirement to comply with the proposed changes to the Security Rule, along with the number of affected plan sponsors (approximately 740,000), results in a significant increase in overall cost estimates compared to the existing rule. The benefits of improved security for ePHI accrue to individuals, regulated entities, and health plan sponsors and are significant. The Department has discussed the benefits above. The Department seeks to reduce the risk and mitigate the effects of breaches of ePHI and related information systems through the proposals included in this NPRM. Because the frequency and magnitude of cybersecurity events are inherently difficult to predict, we chose to conduct a break-even analysis in lieu of a cost savings analysis. The Department solicits comments with any information and data on the incidence and negative consequences of cybersecurity breaches.

A number of organizations have established Supply Chain Risk Councils (or Supply Chain Leadership Risk Councils) that include executives from supply chain/procurement, information technology, cybersecurity, operations, legal, enterprise risk management (ERM), and other functional and leadership areas of the organization, depending on the organization's business and structure. These Councils proactively review relevant risks and risk mitigation plans, set priorities, direct sharing of best practices throughout the enterprise, and pilot initiatives. They also result in informal networks of leaders that facilitate trust and accountability in complex business environments. The benefit of Councils is the shared risk decision-making that ensures all perspectives are addressed. A formal C-SCRM program ensures organizational accountability for managing cyber supply chain risks. Mature organizations have formal programs with established governance, policies and procedures, processes, and tools.

The final rule revises DFARS 204.7602, Applicability, to align with the solicitation provision prescription at DFARS 204.7604 and the stated intent of the rule to move the coverage from part 213 to a new subpart 204.76, as described in the preamble of the proposed rule. Section 204.7602 states that use of SPRS risk assessments is required for the evaluation of quotations or offers in response to solicitations for supplies and services, including solicitations using FAR part 12 procedures for the acquisition of commercial products and commercial services. DFARS 204.7602, as revised, does not limit applicability of use of SPRS risk assessments to acquisitions using FAR part 13 simplified acquisition procedures; therefore, the recommended change to the solicitation provision prescription at DFARS 204.7604 will not be made. The solicitation provision is prescribed for use in solicitations for supplies and services, including solicitations using FAR part 12 procedures for

the acquisition of commercial products and commercial services. To clarify that the provision also applies to solicitations using FAR part 13 simplified acquisition procedures, the rule revises the language in part 213 at 213.106-2, paragraph (b)(i), to provide a cross-reference to 204.7603 and to require contracting officers to consider SPRS risk assessments as a basis of award for solicitations using FAR part 13 simplified acquisition procedures, and obsolete language is removed. Further, to more clearly reflect that the intended purpose of the provision extends beyond FAR part 13 actions, the provision title is revised to read as follows: 252.204-7024, Notice on the Use of the Supplier Performance Risk System. The proposed rule, at sections I. and II. of the preamble, stated that SPRS is required to be used to evaluate quotes and offers received under all solicitations for supplies and services. To further clarify applicability of the procedures at DFARS 204.7603 to Federal Supply Schedules, commercial acquisitions, acquisitions using FAR part 13 simplified acquisition procedures, evaluation of offers under part 215, and indefinite-delivery contracts, cross-references to DFARS 204.7603 are added to Subpart 208.4, Federal Supply Schedules; Subpart 212.2, Special Requirements for the Acquisition of Commercial Products and Commercial Services; Subpart 213.1, Procedures; 215.3, Source Selection; and Subpart 216.5, Indefinite-Delivery Contracts. b. SPRS Website Comment: One respondent commented that Government-Industry Data Exchange Program (GIDEP) alerts are not appropriate measures of quality performance and such data cannot be accurately translated into meaningful risk scores without dissecting each GIDEP report, including supplier letters and enclosures. Response:

. In exercising these authorities, the Government may consider information, public and non-public, including all-source intelligence, relating to an offeror and its supply chain. (c) If the Government exercises the authority provided in section 806 of Pub. L. 111-383 to limit disclosure of information, no action undertaken by the Government under such authority shall be subject to review in a bid protest before the Government Accountability Office or in any Federal court. (End of provision) 11. Add section 252.239-7018 to read as follows: 252.239-7018 Supply chain risk. As prescribed in 239.7306(b), use the following clause: SUPPLY CHAIN RISK (NOV 2013) (a) Definitions. As used in this clause Information technology (see 40 U.S.C 11101(6)) means, in lieu of the definition at FAR 2.1, any equipment, or interconnected system(s) or subsystem(s) of equipment, that is used in the automatic acquisition, storage, analysis, evaluation, manipulation, management, movement, control, display, switching, interchange, transmission, or reception of data or information by the agency. (1) For purposes of this definition, equipment is used by an agency if the equipment is used by the agency directly or is used by a contractor under a contract with the agency that requires (i) Its use; or (ii) To a significant extent, its use in the performance of a service or the furnishing of a product. (2) The term information technology includes computers, ancillary equipment (printed page 69273) (including imaging peripherals, input, output, and storage devices necessary for security and surveillance), peripheral equipment designed to be controlled by the central processing unit of a computer, software, firmware and similar procedures, services (including support services), and related resources. (3) The term information technology does not include any equipment acquired by a contractor incidental to a contract. Supply chain risk means the risk that an adversary may sabotage, maliciously introduce unwanted function, or otherwise subvert the design, integrity, manufacturing, production, distribution, installation, operation, or maintenance of a national security system (as that term is defined at 44 U.S.C. 3542(b)) so as to surveil, deny, disrupt, or otherwise degrade the function, use, or operation of such system. (b) The Contractor shall maintain controls in the provision of supplies and services to the Government to minimize supply chain risk. (c) In order to manage supply chain risk, the Government may use the authorities provided by section 806 of Public Law 111-383 . In exercising these authorities, the Government may consider information, public and non-public, including all-source intelligence, relating to a Contractor's supply chain. (d) If the Government exercises the authority provided in section 806 of Public Law 111-383

The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the Nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology. ITL's responsibilities include the development of management, administrative, technical, and physical standards and guidelines for the cost-effective security and privacy of other than national security-related information in federal information systems. Numerous panelists noted that consumers are widely adopting IoT devices and that IoT use within federal agencies is growing rapidly. The General Services Administration (GSA) has identified over

75 makes and 210 distinct models of IoT devices deployed in facilities they manage, spanning a broad range of IoT related services. IoT devices support many kinds of services that include network-connected surveillance equipment, irrigation control systems, physical access control systems, lighting control systems, and various types of environmental measuring systems, among others. 3 NIST SP 1900-202, Cyber-Physical Systems and Internet of Things, focuses on the meanings of the phrases 'cyber-physical systems' (CPS) and 'Internet of Things' (IoT), and on the relationship between them. This document examines 31 definitions for CPS and 30 definitions for IoT.

Patients and communities have a critical need for health care providers, including rural hospitals and other rural health care providers, to be resilient and remain operational, which depends in part on the cybersecurity of their electronic information systems. For rural health care providers, especially hospitals, a breach can significantly affect an entire community. [306] Rural health care providers often are separated by significant distances, which can have real consequences for someone experiencing a medical emergency. [307] A recent study comparing hospital characteristics and operations of rural and urban hospitals that experienced ransomware attacks between 2016 and 2021 found that rural hospitals experienced large declines in inpatient admissions and Medicare revenue, similar to those experienced by urban hospitals. [308] The study also found that the decline in volume and revenue of hospital outpatient and emergency room visits was more pronounced among rural facilities. [309] In fact, in June 2023, a hospital in rural Illinois announced that it would close, in part because a 2021 cyberattack prevented it from submitting claims to health plans for months. [310] According to a local elected official, the hospital's closure would require some residents to travel approximately 30 minutes for the nearest emergency room and obstetrics services. [311] Thus, implementing security measures to maintain facility operations is critical to minimize or avoid disruptions to patient care and patient safety activities in such facilities. Consistent with these examples, the Department believes that small and rural health care providers are also viewed as potential targets by cybercriminals, and such providers need to implement strong cybersecurity measures to secure the ePHI in their possession. In fact, in June 2024, the Administration announced a collaboration with the private sector to provide additional cybersecurity resources for rural health care providers in recognition of the importance of protecting the security of ePHI created, received, maintained, or transmitted by such entities. [312] We believe this collaboration will provide small and rural health care providers with additional support, particularly when coupled with other resources described in greater detail below. [313] Thus, we believe that small and rural health care providers have both the need to comply with the proposals in this NPRM and the capability of doing so. Additionally, we believe that the NPRM would continue to provide all regulated entities, including small and rural health care providers, the ability to take into account their circumstances when determining which security measures are reasonable and appropriate. [314] 5. A Strengthened Security Rule Is Critical to an Efficient and Effective Health Care System While the Security Rule generally continues to accomplish a primary goal of HIPAA, [315]

discussion. Shorter, more focused papers are encouraged and will be reviewed like any other paper. If you only need 2 or 4 pages (plus references) to clearly explain your work or idea, please submit a paper of that length. Reviewers will be instructed to assess the value of the talk to the workshop audience irrespective of the paper length; however, we stress again that the presentation should be sufficiently thorough for reviewers to make this evaluation.

plication Scheduling) that are all performed by multiple tools are incorporated - As depicted in Figure 1, the security functional layer spans all functional layers of the container technology stack. The security solutions covering these layers, however, must be implemented through the following components: - (a) Physical Host (i.e., hardware, since container hosting on VMs is out of scope for this document) - (b) Container OS (Host OS) interfaces - (c) Container Runtime interfaces - (d) Image Management and Registry Interfaces - (e) Orchestrator Interfaces

ows into the network. If the sensor registers activities that should be blocked, it indicates that the firewall is not configured securely. One limitation to network sniffing is the use of encryption. Many attackers take advantage of encryption to hide their activities-while assessors can see that communication is taking place, they are unable to view the contents. Another limitation is that a network sniffer is only able to sniff the traffic of the local segment where it is installed. This requires the assessor to move it from segment to segment, install multiple sniffers throughout the network, and/or use port spanning. Assessors may also find it challenging to locate an open

physical network port for scanning on each segment. In addition, network sniffing is a fairly labor-intensive activity that requires a high degree of human involvement to interpret network traffic.

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in this Executive Order. Section 202, Public Law 104-4, Unfunded Mandates Reform Act. It has been certified that 32 CFR part 286 does not contain a Federal mandate that may result in expenditure by State, local and tribal governments, in aggregate, or by the private sector, of \$100 million or more in any one year. Public Law 96-354, Regulatory Flexibility Act (5 U.S.C. 601) It has been certified that 32 CFR part 286 is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. Public Law 96-511, Paperwork Reduction Act (44 U.S.C. Chapter 35) It has been certified that 32 CFR part 286 does not impose reporting or recordkeeping requirements under the Paperwork Reduction Act of 1995. List of Subjects in 32 CFR Part 286 Freedom of information Accordingly, 32 CFR part 286 is proposed to be revised to read as follows: PART 286-DOD FREEDOM OF INFORMATION ACT (FOIA) PROGRAM REGULATION Subpart A-General Provisions 286.1 286.2 286.3 286.4 Subpart B-FOIA Reading Rooms 286.7 286.8 286.9 286.10 Subpart C-Exemptions 286.13 286.14 Subpart D-FOIA Request Processing 286.17 286.18 286.19 286.20 286.21 Subpart E-Fee Schedule 286.24 286.25 286.26 286.27 Subpart F-Education and Training 286.30 286.31 Appendix A to Part 286-DoD FOIA Program Components Appendix B to Part 286-Addressing FOIA Requests Authority: 5 U.S.C. 552 . Subpart A-General Provisions §-286.1 Purpose. This part promotes uniformity in the DoD FOIA Program. It shall take precedence over all DoD Component publications that supplement and implement the DoD FOIA Program. A list of the DoD FOIA Program Components is at Appendix A to this part. §-286.2 Definitions. The following terms and meanings shall apply for the purposes of this part: Administrative appeal. A request by a member of the public, made under the FOIA, asking the appellate authority of the DoD Component to reverse any adverse determination by an Initial Denial Authority (IDA). A requester may also appeal the failure of an agency to respond within the statutory time limits. Adverse determination. A decision by an IDA to withhold all or part of a requested record, deny a fee category claim by a requester, deny a request for waiver or reduction of fees, deny a request to review an initial fee estimate, deny a request for expedited processing, confirm that no records were located during the initial search, or any determination that a requester believes is adverse in nature. Agency record.

·To DoD officers and employees who have a need for the record in the performance of their official duties. This is the ·official need to know· concept. (B) 5 U.S.C. 552a(b)(2) ·FOIA requires release of the information pursuant to 5 U.S.C. 552 . (C) 5 U.S.C. 552a(b)(3) ·For an authorized Routine Use, i.e. the ·Routine Use Exception.· The Routine Use must be listed in the applicable system of records notice published in the Federal Register and the purpose of the disclosure must be compatible with the purpose for the published Routine Use. (D) 5 U.S.C. 552a(b)(4) ·To the Bureau of the Census to plan or carry out a census or survey, or related activity pursuant to Title 13 of the U.S. Code. (E) 5 U.S.C. 552a(b)(5) ·To a recipient who has provided the Department of the Army or DoD with advance adequate written assurance that the record will be used solely as a statistical research or reporting record, and the record is to be transferred in a form that is not individually identifiable. (F) 5 U.S.C. 552a(b)(6) ·To the National Archives and Records Administration as a record that has sufficient historical or other value to warrant its continued preservation by the U.S. Government, or for evaluation by the Archivist of the United States or the designee of the Archivist to determine whether the record has such value. Note 1 to paragraph (h)(3)(iii)(F). Records transferred to the Federal Records Centers for storage remain under the control of the Department of the Army and no accounting for disclosure is required under the Privacy Act. (G) 5 U.S.C. 552a(b)(7) ·To another agency or instrumentality of any governmental jurisdiction within or under the control of the United States for a civil or criminal law enforcement activity, if the activity is authorized by law, and if the head of the agency or instrumentality has made a written request to the Department of the Army or DoD specifying the particular portion desired and the law enforcement activity for which the record is sought. (H) 5 U.S.C. 552a(b)(8) ·To a person pursuant to a showing of compelling circumstances affecting the health or safety of an individual if upon such disclosure, notification is transmitted to the last known address of such individual. (I) 5 U.S.C. 552a(b)(9) ·To either House of Congress, or, to the extent the matter is within its jurisdiction, any committee or subcommittee thereof, or any joint committee of Congress or subcommittee of any such joint committee. Requests from a Congressional member acting on behalf of a constituent are not included in this exception, but may

be covered by a routine use exception to the Privacy Act (See applicable Army system of records notice). (J) 5 U.S.C. 552a(b)(10) ·To the Comptroller General or authorized representatives, in the course of the performance of the duties of the Government Accountability Office. (K) 5 U.S.C. 552a(b)(11) ·Pursuant to the order of a court of competent jurisdiction. The order must be signed by a judge. (L) 5 U.S.C. 552a(b)(12)

Privacy Act notification, access, and amendment rights relative to the records maintained in this system are available only to individuals who are the subject of records in this system. The individuals who are the subjects of the records stored in this system are the State or local officials who are currently commissioned, have applied for a commission, and/or were commissioned or rejected in the past. Although records in the system may contain personally identifiable information related to other individuals, only the specified commissioned or commission-seeking individuals are considered subjects of records in this system. F. Categories of Records in the System The records in this system will include: Full name, aliases, date of birth, home address, work address, telephone number, work or personal email address, photograph, educational history, job title, agency, division, area of expertise, employment history, supervisor's name, signature, and the outcome of the background investigation of individuals who apply for a commission. Should a commissioned individual with pocket credentials lose their credentials, he or she will typically file a police report and provide a copy of the report to FDA where it is kept in the individual's commissioning file. In addition, the records in the system will describe the nature of the authority granted to a commissioned individual, the relevant regulatory program area, the date the commission was issued, and date of expiration. G. Authority for Maintenance of the System The authorities for maintaining this system are: Section 702(a) of the FD&C Act, 44 U.S.C. 3101 , and 5 U.S.C. 301 . H. Purpose(s) of the System Relevant Agency personnel will use records from this system on a need-to-know basis to: Centrally gather data enabling FDA to determine the suitability, eligibility, and qualifications of State and local officials to whom FDA might offer commissions; enable FDA to securely commission and credential State and local officials who are particularly qualified to assist FDA in a special manner for which FDA credentials are required; ensure the safety and security of FDA facilities, systems, information, and of facility occupants and users; provide appropriate access to FDA information systems, networks, and resources; enhance FDA's ability to ensure the safety of FDA-regulated products through a secure commissioning process; and centrally gather data on commissioned officials, thereby enabling FDA to efficiently maintain the commissioning program and to support activities, such as quickly ascertaining which officials are particularly qualified to carry out official responsibilities and providing this information as necessary to our State and local counterparts. I. Routine Uses of Records Maintained in the System, Including Categories of Users and the Purposes of Such Uses These routine uses specify circumstances, in addition to those provided by the Privacy Act at 5 U.S.C. 552a(b)

As discussed in more detail later in the regulatory text, all requirements that are scored as NOT MET are identified in a Plan of Action and Milestones (POA&M) to meet the CMMC requirement. Organizations Seeking Assessment (OSAs) satisfy the CMMC requirements needed for contract award by successfully meeting all 110 security requirements of NIST SP 800-171 R2 or by receiving a Conditional CMMC Status when achieving the minimum passing score of 80 percent and only including permissible NOT MET requirements as described in §.170.21 on the POA&M. All requirements that were scored ·NOT MET· and placed on the POA&M must be remedied within 180 days of receiving their Conditional CMMC Status. Proper implementation of these requirements must be verified by a second assessment, called a POA&M closeout assessment. If the POA&M closeout assessment finds that all requirements have been met, then the OSA will achieve a CMMC Status of Final Level 2 (Self) or Final Level 2 (C3PAO) as applicable. However, if the POA&M closeout assessment does not validate all requirements have been met by the end of the 180 days, then the CMMC Status of Conditional Level 2 (Self) or Conditional Level 2 (C3PAO) will expire and at this point, standard contractual remedies will apply for any current contract. DoD has created a series of guidance documents to assist organizations in better understanding the CMMC Program and the assessment process and scope for each CMMC level. These guidance documents are available on the DoD CMMC website at <https://dodcio.defense.gov/·CMMC/·Documentation/·> and on the DoD Open Government website at <https://open.defense.gov/·Regulatory-Program/·Guidance-Documents/·> . The CMMC Program has also been incorporated in the Department's 2024 Defense Industrial Base Cybersecurity Strategy. [10] The strategy requires the Department to coordinate and collaborate across components to identify and close gaps (printed page 83094) in protecting DoD networks, supply chains, and other critical resources. Other prongs of the Department's cybersecurity strategy are described in the Department's

National Industrial Security Program Operating Manual (NISPOM) which address implementation of the Security Executive Agent Directive (SEAD) 3 [11] procedures for the protection and reproduction of classified information; controlled unclassified information (CUI); National Interest Determination (NID) requirements for cleared contractors operating under a Special Security Agreement for Foreign Ownership, Control, or Influence; and eligibility determinations for personnel security clearance processes and requirements. [12] Overview of Revised CMMC Program Current Requirements for Defense Contractors and Subcontractors Currently, Federal contracts (including defense contracts) involving the transfer of FCI to a non-Government organization follow the requirements specified in 48 CFR 52.204-21 (Federal Acquisition Regulation (FAR) clause 52.204-21),

PE.L2-3.10.6 · Alternative Work Sites CMMC Assessment Guide · Level 2 | Version 2.13 191 include physical protections, such as locked file drawers, as well as electronic protections such as encryption, audit logging, and proper access controls. Example Many of your company's project managers work remotely as they often travel to sponsor locations or even work from home. Because the projects on which they work require access to CUI, you must ensure the same level of protection is afforded as when they work in the office. You ensure that each laptop is deployed with patch management and anti-virus software protection [b]. Because data may be stored on the local hard drive, you have enabled full-disk encryption on their laptops [b]. When a remote staff member needs access to the internal network you require VPN connectivity that also disconnects the laptop from the remote network (i.e., prevents split tunneling) [b]. The VPN requires multifactor authentication to verify remote users are who they claim to be [b]. Potential Assessment Considerations · Do all alternate sites where CUI data is stored or processed meet the same physical security requirements as the main site [b]? · Does the alternate processing site provide information security measures equivalent to those of the primary site [b]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.10.6

(6) There are no approved filing procedures for the disclosure of accounting records; however, system managers must be able to retrieve upon request. With this said, keep disclosure accountings for 5 years after the disclosure, or for the life of the record, whichever is longer. (7) When an individual requests such an accounting, the system manager or designee will respond within 20 working days. §-505.8 Training requirements. (a) Training . (1) The Privacy Act requires all heads of Army Staff agencies, field operating agencies, direct reporting units, Major Commands, subordinate commands, and installations to establish rules of conduct for all personnel involved in the design, development, operation, and maintenance of any Privacy Act system of records and to train the appropriate personnel with respect to the privacy rules including the penalties for non-compliance (See 5 U.S.C. 552a(e)(9)). (2) To meet the training requirements, three general levels of training must be established. They are: (i) Orientation. Training that provides basic understanding of this part as it applies to the individual's job performance. This training will be provided to personnel, as appropriate, and should be a prerequisite to all other levels of training; (ii) Specialized training. Training that provides information as to the application of specific provisions of this part to specialized areas of job performance. Personnel of particular concern include, but are not limited to, personnel specialists, finance officers, DOD personnel who may be expected to deal with the news media or the public, special investigators, paperwork managers, individuals working with medical and security records, records managers, computer systems development personnel, computer systems operations personnel, statisticians dealing with personal data and program evaluations, contractors and anyone responsible for implementing or carrying out functions under this part. Specialized training should be provided on a periodic basis; and (iii) Managerial training. Training designed to identify for responsible managers (such as senior system managers, Denial Authorities, and functional managers described in this section) issues that they should consider when making management decisions affected by the Privacy Act Program. (b) Training tools. Helpful resources include: (1) Privacy Act training slides for Major Commands and Privacy Act Officers: Contact the DA FOIA/P Office, or slides can be accessed at the Web site <https://www.rmda.belvoir.army.mil/rmdaxml/rmda/FPHomePage.asp> . (2) The 'DOJ Freedom of Information Act Guide and Privacy Act Overview': The U.S. Department of Justice, Executive Office for United States Attorneys, Office of Legal Education, 600 E. Street, NW., Room 7600, Washington, DC 20530, or training programs can be accessed at the Web site <http://www.usdoj.gov/usao/eousa/ole.html> . §-505.9 Reporting requirements.

d their connected resource consumers are the primary concerns of an RM. 3. Resource consumers (RCs)

are client applications that accept user requests for resources and forward those requests to an RM. Ideally, an RP should only have to communicate with one RM because the dissemination of shared resources is achieved by the RM. Only one connection between an RM and an RC is expected as well because the discovery of resource locations should be done by an RM, as illustrated in Fig. 11.

From the NIST SP 800-172 Rev 3 Final Public Draft: Purpose and Applicability This publication provides federal agencies with a set of recommended enhanced security requirements 8 The term requirements is used in this guideline to describe the stakeholder protection needs of a particular system or organization. Stakeholder protection needs and corresponding security requirements may be derived from many sources (e.g., laws, Executive Orders, directives, regulations, policies, standards, mission and business needs, or risk assessments). for protecting the confidentiality, integrity, and availability of CUI when such information is resident in nonfederal systems and organizations and where there are no specific safeguarding requirements prescribed by the authorizing law, regulation, or government-wide policy for the CUI category I

CMMC Level 3 scoring does not utilize varying values like the scoring for CMMC Level 2. All CMMC Level 3 security requirements use a value of 1 point for each security requirement. As a result, the maximum score achievable for a CMMC Level 3 is equivalent to the total number of CMMC Level 3 security requirements. The maximum score is reduced by one (1) point for each security requirement NOT MET. The CMMC Level 3 scoring methodology reflects the fact that all CMMC Level 2 security requirements must already be MET (for the Level 3 CMMC Assessment Scope). A maximum CMMC Level 2 assessment score is required to be eligible for conduct of a CMMC Level 3 Certification Assessment. The CMMC Level 3 assessment score is equal to the number of CMMC Level 3 security requirements that are assessed as MET. Appendix A to Part 170-Guidance. Guidance Documents include: (a) CMMC Model Overview available at <https://DoDcio.defense.gov/CMMC/> . (b) CMMC Assessment Guide-Level 1 available at <https://DoDcio.defense.gov/CMMC/> . (c) CMMC Assessment Guide-Level 2 available at <https://DoDcio.defense.gov/CMMC/> . (d) CMMC Assessment Guide-Level 3 available at <https://DoDcio.defense.gov/CMMC/> . (e) CMMC Scoping Guide-Level 1 available at <https://DoDcio.defense.gov/CMMC/> . (f) CMMC Scoping Guide-Level 2 available at <https://DoDcio.defense.gov/CMMC/> . (g) CMMC Scoping Guide-Level 3 available at <https://DoDcio.defense.gov/CMMC/> . (h) CMMC Hashing Guide available at <https://DoDcio.defense.gov/CMMC/> . See these guidance documents in docket number DoD-2023-OS-0096 for specific details and to provide comments on the guidance. Patricia L. The POA requirement described under DFARS clause 252.204-7012 is different from a Plan of Action and Milestones (POA&M) requirement in CMMC as POAs do not require milestones. Back to Citation 10.

Web services span many applications and domains. Consequently, any vulnerability in one service can be exploited to affect more than one service. In Web Services architecture it is a challenge to investigate the nature and source of an attack. We propose a framework referred to - [1] A. Vorobiev and H. Jun, "Security Attack Ontology for Web Services," in Semantics, Knowledge and Grid, 2006. SKG '06. Second International Conference on , 2006, pp. 4242. - [2] Y. Demchenko, L. Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Health and Human Services Food and Drug Administration [Docket No. FDA-2011-D-0730] AGENCY: Food and Drug Administration, HHS. ACTION: Notice. SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of a draft guidance entitled ·Class II Special Controls Guidance Document: In Vitro Diagnostic Devices for Yersinia Species Detection· This draft guidance document describes a means by which in vitro diagnostic devices for Yersinia species (spp.) detection may comply with the requirement of special controls for class II devices. This draft guidance is not final nor is it in effect at this time. DATES: Although you can comment on any guidance at any time (see 21 CFR 10.115 (g)(5)), to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance, submit either electronic or written comments on the draft guidance by February 6, 2012. ADDRESSES: Submit written requests for single copies of the draft guidance document entitled ·Class II Special Controls Guidance Document: In Vitro Diagnostic Devices for Yersinia spp. Detection· to the Division of Small Manufacturers, International, and Consumer Assistance, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave. Bldg. 66, rm. 4613, Silver Spring, MD 20993-0002. Send one self-addressed adhesive label to assist that office in processing your request, or fax your request to (301) 847-8149. See the SUPPLEMENTARY INFORMATION section for information on electronic access to the guidance. Submit electronic comments on the draft guidance to <http://www.regulations.gov> . Submit written comments to the Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane rm. 1061, Rockville, MD 20852. Identify comments with the docket number found in brackets in the heading of this document. FOR FURTHER INFORMATION CONTACT: Beena Puri, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave. Bldg. 66, Rm. 5553, Silver Spring, MD 20993-0002, (301) 796-6202. SUPPLEMENTARY INFORMATION: I. Background Elsewhere in this issue of the Federal Register , FDA is publishing a proposed rule to classify in vitro diagnostic devices for Yersinia spp. detection into class II (special controls). This draft special controls guidance document was developed to support the proposed classification of in vitro diagnostic devices for Yersinia

CMVP Approved Authentication Mechanisms: ## CMVP Approved Authentication Mechanisms: NIST Special Publication (SP) 800-140E replaces the approved authentication mechanism requirements of ISO/IEC 19790 Annex E and ISO/IEC 24759 paragraph 6.17. As a validation authority, the Cryptographic Module Validation Program (CMVP) may supersede ISO/IEC 19790 Annex E and ISO/IEC 24759 paragraph 6.17 in its entirety with its own list of approved authentication mechanisms.

OSCs may submit appeals to C3PAOs as addressed in §.170.9(b)(20). The Accreditation Body provides all plans related to potential sources of revenue, to include but not limited to: fees, licensing, processes, membership, and/or partnerships to the Government's CMMC PMOs addressed in §.170.8(b)(13). C3PAOs maintain records for a period of six years of monitoring, education, training, technical knowledge, skills, experience, and authorization of each member of its personnel involved in inspection activities; contractual agreements with OSCs and organizations for whom consulting services were provided; and working papers generated from Level 2 Certification Assessments as addressed in §.170.9(b)(10). CAICOs maintain records for a period of six (6) years of all procedures, processes, and actions related to fulfillment of the requirements set forth in §.170.10(b)(9). OSCs must retain artifacts used as evidence for the assessment for the duration of the validity period of the certificate of assessment, and at minimum, for six (6) years from the

date of certification assessment as addressed in § 170.17(c)(4). The public respondent burden and labor cost for the information collection reporting and recordkeeping requirements under the CMMC Level 2 Certification Assessment are as follows: Note: This respondent burden and labor cost does not include the requirement for the OSC to upload the affirmation in SPRS (addressed in Title 48 acquisition rule and ICR). (printed page 89113) (printed page 89114) (printed page 89115) CMMC Level 3 Certification Assessment Collection The Level 3 Certification Assessment information collection reporting and recordkeeping requirements are included in this part with the exception of the requirement for the OSC to upload the affirmation in SPRS that will be included in the Title 48 acquisition rule and an update to the DFARS collection approved under OMB Control Number 0750-0004, Assessing Contractor Implementation of Cybersecurity Requirements. Additionally, the information collection reporting requirements for the CMMC instantiation of eMASS are included in a separate ICR for this part and cover only those requirements pertaining to the CMMC process. The information collection reporting requirements for eMASS include: DCMA DIBCAC submits pre-assessment and planning material, final assessment reports, and appropriate CMMC certificates of assessment into the CMMC instantiation of eMASS as addressed in § 170.7 of this part. The DCMA DIBCAC uploads assessment data compliant with the CMMC assessment data standard into the CMMC instantiation of eMASS as addressed in § 170.7(a)(5) of this part. DCMA DIBCAC posts POA&M closeout assessment compliance results into the CMMC instantiation of eMASS in accordance with § 170.18(a)(1)(ii)(B) of this part. DCMA DIBCAC uploads artifacts (list of artifacts, hash of artifacts, and hashing algorithm used) into the CMMC instantiation of eMASS as addressed in § 170.7(a)(5) of this part.

(D) From subsections (e)(4)(G) and (e)(4)(H) because portions of this system of records have been exempted from the access provisions of subsection (d), making these subsections not applicable. (E) From subsection (e)(4)(I) because the identity of specific sources must be withheld in order to protect the confidentiality of the sources of criminal and other law enforcement information. This exemption is further necessary to protect the privacy and physical safety of witnesses and informants. (F) From subsection (f) because portions of this system of records have been exempted from the access provisions of subsection (d). (34) System identifier and name. A0025-2 PMG (DFBA) DoD, Defense Biometrics Identification Records System. (i) Exemption. (A) Investigatory material compiled for law enforcement purposes may be exempt pursuant to 5 U.S.C. 552a(k)(2) . However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of such information, the individual will be provided access to such information except to the extent that disclosure would reveal the identity of a confidential source. (B) Exempt materials from other sources listed above may become part of the case records in this system of records. To the extent that copies of exempt records from other sources listed above are entered into these case records, the Department of the Army hereby claims the same exemptions, (j)(2) and (k)(2), for the records as claimed by the source systems, specifically to the extent that copies of exempt records may become part of these records from JUSTICE/FBI-019 Terrorist Screening Records System, the Department of the Army hereby claims the same exemptions for the records as claimed at their source (JUSTICE/FBI-019, Terrorist Screening Records System). (C) Therefore, portions of this system of records may be exempt pursuant to 5 U.S.C. 552a(j)(2) and (k) (2) from subsections 5 U.S.C. 552a(c)(3) , (c)(4), (d), (e)(1), (e)(2), (e)(3), (e)(4)(G), (e)(4)(H), (e)(4)(I), (e)(5), (e)(8), (f), and (g). (ii) Authority. 5 U.S.C. 552a(j)(2) and (k)(2) . (iii) Reasons. (A) From subsection (c)(3) because the release of the disclosure accounting would permit the subject of a criminal investigation or matter under investigation to obtain valuable information concerning the nature of that investigation which will present a serious impediment to law enforcement. (B) From subsection (c)(4) because an exemption is being claimed for subsection (d), making this subsection not applicable. (C) From subsection (d) because access to such records contained in this system would inform the subject of a criminal investigation of the existence of that investigation, provide the subject of the investigation with information that might enable him to avoid detection or apprehension, and would present a serious impediment to law enforcement.

New suppliers are subject to a cybersecurity assessment by the Mayo Clinic's OIS. The OIS interviews the supplier's information security staff and reviews internal policy, cybersecurity attestations, and process documents to determine whether the vendor is conformant to the cybersecurity requirements established for the relevant supply category group. Particular emphasis is placed on the supplier's handling of regulated data, third-party network access, and secure software development practices. Moreover, complex medical devices invoke specialized requirements, such as detailed design diagrams, evidence of rigorous vulnerability assessments, and supporting

documentation.

The revisions and addition read as follows: 52.204-16 Commercial and Government Entity Code Reporting. * * * * * (printed page 40064) Commercial and Government Entity Code Reporting (Aug 2020) * * * * * (b) The Offeror shall provide its CAGE code with its offer with its name and location address or otherwise include it prominently in its proposal. The CAGE code must be for that name and location address. Insert the word 'CAGE' before the number. The CAGE code is required prior to award. * * * * * (e) When a CAGE code is required for the immediate owner and/or the highest-level owner by Federal Acquisition Regulation (FAR) 52.204-17 or 52.212-3(p), the Offeror shall obtain the respective CAGE code from that entity to supply the CAGE code to the Government. * * * * * (g) If the solicitation includes FAR clause 52.204-2, Security Requirements, a subcontractor requiring access to classified information under a contract shall be identified with a CAGE code on the DD Form 254. The Contractor shall require a subcontractor requiring access to classified information to provide its CAGE code with its name and location address or otherwise include it prominently in the proposal. Each location of subcontractor performance listed on the DD Form 254 is required to reflect a corresponding unique CAGE code for each listed location unless the work is being performed at a Government facility, in which case the agency location code shall be used. The CAGE code must be for that name and location address. Insert the word 'CAGE' before the number. The CAGE code is required prior to award. (End of provision) 8. Amend section 52.204-17 by revising the title and the date of the provision and removing from paragraph (a)(1) 'entity; or' and adding 'entity by unique location; or' in its place. The revision reads as follows: 52.204-17 Ownership or Control of Offeror. * * * * * Ownership or Control of Offeror (Aug 2020) * * * * * 9. Amend section 52.204-18 by: a. Revising the date of the clause; b. Removing from paragraph (a)(1) 'entity; or' and adding 'entity by unique location; or' in its place; c. Revising the first sentence of paragraph (b); and d. Adding paragraph (f). The revisions and addition read as follows: 52.204-18 Commercial and Government Entity Code Maintenance. * * * * * Commercial and Government Entity Code Maintenance (Aug 2020) * * * * * (b) Contractors shall ensure that the CAGE code is maintained throughout the life of the contract for each location of contract, including subcontract, performance. * * * * * (f) If the contract includes Federal Acquisition Regulation clause 52.204-2, Security Requirements, the contractor shall ensure that subcontractors maintain their CAGE code(s) throughout the life of the contract. (End of clause) 10. Amend section 52.204-20 by: a. Revising the date of the provision; and b. Removing from paragraph (a)(1) 'entity; or' and adding 'entity by unique location; or' in its place. The revision reads as follows: 52.204-20 Predecessor of Offeror. * * * * * Predecessor of Offeror (Aug 2020) * * * * * PART 53-FORMS 11.

) of unclassified information that requires safeguarding or dissemination controls. NARA's CUI Registry identifies the organizational index grouping and related categories of information and specifies how the information should be marked and disseminated, among other actions that must be taken. NARA's rule codified uniform policies and procedures for marking, safeguarding, disseminating, decontrolling, and disposing of CUI for Federal executive branch agencies at 32 CFR part 2002 . These policies also affect contractors that are expected to collect, develop, receive, transmit, use, handle, or store CUI during contract performance. To apply the policies to contractors, the CUI Program must be incorporated into the acquisition process, specifically, when agencies define their requirements, issue solicitations, and award contracts. In order to do so, Government and contractor roles and responsibilities for safeguarding, using, marking, disseminating, and decontrolling CUI residing on both Federal and non-Federal information systems must be identified. DoD has implemented the requirements of the CUI Program within the clause at Defense Federal Acquisition Regulation Supplement (DFARS) 252.204-7012, Safeguarding Covered Defense Information and Cyber Incident Reporting. DoD has also proposed amending the DFARS to incorporate contractual requirements associated with the Cybersecurity Maturity Model Certification program (CMMC) in order to verify contractor implementation of security controls through a proposed rule published in the Federal Register on August 15, 2024, at 89 FR 66327 . Separately, the CMMC program was established in Title 32 of the Code of Federal Regulations through a final rule published in the (printed page 4279) Federal Register on October 15, 2024, at 89 FR 83092 . DoD, GSA, and NASA are proposing to revise the FAR to implement NARA's final rule on the Federal CUI Program as it relates to performance under Federal contracts. The Privacy Act requirements at FAR part 24 are not changed by this rulemaking. DoD, GSA, and NASA propose to create a common mechanism, the Standard Form XXX, Controlled Unclassified Information (CUI) Requirements, to enable a uniform process for communicating the information contractors must manage and safeguard as well as

identify where a CUI incident must be reported and when there are CUI incident reporting requirements that differ from or are in addition to those in the clause at FAR 52.204-XX(g). Currently laws, Federal regulations, and Government-wide policies already mandate these protections, but there is not a standard way these requirements are identified and shared with contractors. This proposed rule is just one element of a larger strategy to improve the Government's efforts to identify, deter, protect against, detect, and respond to increasingly sophisticated criminals and adversaries targeting Federal information and information systems. II. Discussion and Analysis

From the NIST SP 800-172 Rev 3 Final Public Draft: Every system and system component has a point of origin and may be changed throughout its existence. Provenance is the chronology of the origin, development, ownership, location, and changes to a system or system component and associated data. It may also include personnel and processes used to interact with or make modifications to the system, component, or associated data. Organizations have methods to document, monitor, and maintain valid provenance baselines for systems, system components, and related data. These actions help track, assess, and document any changes to the provenance, including changes in supply chain elements or configuration, and help ensure non-repudiation of provenance information and the provenance change records. This requirement does not enhance a

Appropriate management practices are essential to operating and maintaining a secure mail server. Security practices entail the identification of an organization's information system assets and the development, documentation, and implementation of policies, standards, procedures, and guidelines that help to ensure the confidentiality, integrity, and availability of information system resources. Organizations often want to protect the confidentiality and integrity of some of their email messages, such as preventing the exposure of personally identifiable information in an email attachment. Email messages can be protected by using cryptography in various ways, such as the following: - GLYPH; - Sign an email message to ensure its integrity and confirm the identity of its sender. - GLYPH; Encrypt the body of an email message to ensure its confidentiality. - GLYPH; Encrypt the communications between mail servers to protect the confidentiality of both the message body and message header.

Based on the discussion in paragraphs IV.B.2.i. through IV.B.2.x. below, the total annual estimated cost for 28 contractors, as applicable, awarded a contract to develop, implement, operate, or maintain an existing or custom-build, non-cloud FIS on behalf of the Government, to comply with NIST guidelines in year one is approximately \$19.6 million, and approximately \$12 million each subsequent year for annual maintenance to remain compliant with existing NIST guidelines. The cost for complying with NIST guidelines accounts for the time it takes contractors to closely read through the documents, analyze the requirements against the current state and identify any necessary changes, and implement and document the change, as needed. i. NIST SP 800-53. The effort and resources a contractor will expend to comply with NIST SP 800-53 will also vary depending on whether the affected FIS is an existing system or a system that will be custom built to Government specifications. Existing systems already implement some of the guidelines required by the clause or their implementation has been accepted by the Government, while custom-built systems have no pre-existing controls in place and will require a greater amount of effort and resources to be compliant with the clause. The Government estimates that of the 28 contractors annually awarded a contract to develop, implement, operate, or maintain a non-cloud FIS, approximately six contractors (20 percent) are awarded a contract involving a custom-build system, while the remaining 22 contractors (80 percent) are awarded a contract involving an existing system. Contractors awarded a contract involving an existing non-cloud FIS are anticipated to expend between 2,300 and 6,500 hours and \$218,000 and \$683,000 in labor and materials in year one to implement, and between \$127,000 and \$478,000 each following year to maintain compliance with NIST SP 800-53. The cost and effort to implement and maintain compliance will vary by contractor depending on various factors, including: the complexity of the information system; the availability of employees with the requisite knowledge and skills to implement the necessary controls; the need to install hardware or software, and the chosen solution, as well as the number of users impacted, the types of devices used, and the complexity of the contractor's network. Contractors awarded a contract involving a custom build non-cloud FIS will expend between 3,000 and 7,300 hours and between \$308,000 and \$976,000 in labor and materials in year one to implement, and between \$126,000 and \$478,000 each following year to maintain compliance with NIST SP 800-53. The cost and effort to maintain compliance will vary by contractor based on the factors discussed above. ii. NIST SP 800-213.

- The SP 800-53, Revision 5 low baseline is a defined map of controls to secure a system defined as a low-impact information system. The loss of confidentiality, integrity, or availability could be expected to have a limited adverse effect on organizational operations, organizational assets, or individuals. - The SP 800-53, Revision 5 moderate baseline is a defined map of controls to secure a system defined as a moderate-impact information system. The loss of confidentiality, integrity, or availability could be expected to have a serious adverse effect on organizational operations, organizational assets, or individuals. - The SP 800-53, Revision 5 high baseline is a defined map of controls to secure a system defined as a high-impact information system. The loss of confidentiality, integrity, or availability could be expected to have a severe or catastrophic adverse effect on organizational operations, organizational assets, or individuals. offer a convenient, Apple-supported mechanism for applying security settings to a macOS environment. Additionally, they can be cryptographically signed to ensure integrity and authenticity. These factors make configuration profiles the preferred vehicle for configuration delivery. However, mobileconfig files cannot modify all macOS settings, so a configuration script is needed for those settings that are not supported. See the developer documentation page for an example configuration profile and brief descriptions of its properties. This example is for Tenable, Inc. They automated the conversion of mSCP YAML rules into their . audit format using Python and YAML libraries. Programmatically approaching this conversion allows for faster future releases and greater consistency, and it also maintains the integrity of the source content. Because the YAML content is all command-driven, it is converted to Tenable's CMD_EXEC check type for use with the Unix plugin.

An official charged with the responsibility to rule on administrative appeals of initial denials of requests for notification, access, or amendment of records. Additionally, the Office of Personnel Management is the review authority for civilian official personnel folders or records contained in any other OMP record. (bb) Routine Use. Disclosure of a record outside DOD without the consent of the subject individual for a use that is compatible with the purpose for which the information was collected and maintained by DA. A routine use must be included in the notice for the Privacy Act system of records published in the Federal Register . (cc) Statistical record. A record in a system of records maintained for statistical research or reporting purposes and not used in whole or in part in making determinations about specific individuals. (dd) System Manager. An official who has overall responsibility for policies and procedures for operating and safeguarding a Privacy Act system of records. (ee) Third-party cookies. Cookies placed on a user's hard drive by Internet advertising networks. The most common third-party cookies are placed by the various companies that serve the banner ads that appear across many Web sites. (ff) Working Days. Days excluding Saturday, Sunday, and legal holidays. [FR Doc. 06-6799 Filed 8-9-06; 8:45 am] BILLING CODE 3710-08-P

Instead, the Department proposed to require that each covered entity assess its own security needs and risks and devise, implement, and maintain appropriate security to address its business requirements. The Department believed that this approach would leave a significant amount of flexibility for covered entities and balance the needs of securing health data against risk with the economic cost of doing so. [79] 2. 2003 Final Rule The Department issued the final Security Rule [80] on February 20, 2003 (-2003 Final Rule-). In accordance with the Administrative Simplification provisions of HIPAA, the 2003 Final Rule adopted standards for the security of ePHI to be implemented by covered entities. The Department reiterated the purposes and guiding principles it articulated in the 1998 Proposed Rule and repeated that the protection of the privacy of information depends in large part on the existence of security measures to protect that information. [81] The Department noted that there were still no standard measures in the health care industry that address all aspects of the security of ePHI while it is being stored or during the exchange of that information between entities. [82] The Department explained that the use of the security standards would improve the Medicare and Medicaid programs, other Federal health programs and private health programs, and the effectiveness and efficiency of the health care industry in general by establishing a level of protection for ePHI. [83] Provisions of the 2003 Final Rule did not mirror the 1998 Proposed Rule; rather, the Department finalized only certain changes. The Department noted, for example, that to maintain consistency with the use of terms as they appear in the statute and other previously released HIPAA Rules (i.e., the HIPAA Privacy and Transactions Rules), it was changing some terminology from the 1998 Proposed Rule, replacing the terms ·requirement· with ·standard· and ·implementation feature· with ·implementation specification·. [84] According to the Department, the comments received in response to the

1998 Proposed Rule overwhelmingly validated its basic assumptions that the covered entities were so varied in terms of installed technology, size, resources, and relative risk, that it would be impossible to dictate a specific solution or set of solutions that would be usable by all covered entities. [85] Similarly, we received numerous comments expressing the view that the security standards should not be overly prescriptive because the speed with which technology is evolving could make specific requirements obsolete and might in fact deter technological progress. Accordingly, the Department framed the standards in the 2003 Final Rule in terms that were as generic as possible and that could generally be met through a variety of approaches or technologies. [86] The standards, we (printed page 905) explained, do not allow organizations to make their own rules, only their own technology choices. [87]

what, if any, federal government support is needed to improve authentication/identity management controls, mechanisms, and supporting infrastructures? Do the authentication and/or identity management controls employed by commercial organizations or business sectors, in general, provide adequate assurance? If not, what improvements are needed? What specific controls and mechanisms should be implemented? What role should authentication and identity management controls play in a comprehensive set of cybersecurity measures available to commercial organizations? Are the basic infrastructures that underlie the recommended controls and mechanisms already in place? What, if any, new tools or technologies for authentication or identify management are available or are being developed that may address these needs? How can the expense associated with improved authentication/identity management controls and mechanisms be justified financially? How can the U.S. Government best support improvement of authentication/identity management controls, mechanisms, and supporting infrastructures? Is there a continuing need for limited revelation identity systems, or even anonymous identity processes and credentials? If so, what would be the potential benefits of wide-scale adoption of limited revelation identity systems or anonymous credentialing from a cybersecurity perspective? What would be the drawbacks? How might government procurement activities best promote development of a market for more effective authentication tools for use by government agencies and commercial entities? Could a private marketplace for identity brokers (i.e., organizations that can be trusted to establish identity databases and issue identity credentials adequate for authorizing financial transactions and accessing private sector components of critical infrastructures) fulfill this need effectively? What would be some of the issues or potential impacts of establishing standards and best practices for private sector identity brokers? Should the government establish a program to support the development of technical standards, metrology, test beds, and conformance criteria to take into account user concerns such as how to: (1) Improve interoperability; (2) strengthen authentication methods; (3) improve privacy protection through authentication and security protocols; and (4) improve the usability of identity management systems? What are the privacy issues raised by identity management systems and how should those issues be addressed? Are there particular privacy and civil liberties questions raised by government involvement in identity management system design and/or operations? What other considerations should factor into government's efforts in this area? 5. Global Engagement

Total recordkeeping burden hours: 122,904. This estimate is based on one recordkeeper who spends one hour per month (or 12 hours per year) maintaining the system security plan. 2. Preserve, Protect, and Submit Media and Data. Public reporting burden for this collection of information is estimated to average 2.5 hours per response including the time to prepare and complete the submission. The annual reporting burden is estimated as follows: Respondents: 48. Total annual responses: 48. Total burden hours: 120. This estimate is based on approximately one response per respondent. The annual recordkeeping burden is estimated as follows: Recordkeepers: 580. Total annual records: 580. Total recordkeeping burden hours: 4,350. This estimate is based on one recordkeeper who spends 7.5 hours per year to preserve and protect images of all known affected information systems and all relevant monitoring and packet capture data, assuming 0.5 hours to image, 2 hours to preserve monitoring and packet capture data, and 5 hours to upload images and set up storage space. 3. CUI Incident Reporting. Public reporting burden for this collection of information is estimated to average 5 hours per response including the time to prepare and submit a CUI incident report. The annual reporting burden is estimated as follows: Respondents: 580. Total annual responses: 580. Total burden hours: 2,900. This estimate is based on approximately one response per respondent. 4. Training Records. Public reporting burden for this collection of information is estimated to average 15 minutes (0.25 hour) per response including the time to prepare and submit the evidence of training. The annual reporting burden is estimated as follows: Respondents: 1,430. Total annual responses: 1,430. Total burden hours: 357.5. This estimate is

based on approximately one response per respondent. The annual recordkeeping burden is estimated as follows: Recordkeepers: 53,225. Total annual records: 2,191,400. Total recordkeeping burden hours: 181,886. (printed page 4290) This estimate is based on one recordkeeper who spends 5 minutes (0.083 hours) per record maintaining the employee training certificates. 5. Prepare and Distribute the SF XXX. Public reporting burden for this collection of information is estimated to average 2 hours per response including the time to prepare and distribute the SF XXX. The annual reporting burden is estimated as follows: Respondents: 22,680. Total annual responses: 517,392. Total burden hours: 1,034,784. B. Request for Comments Regarding Paperwork Burden Submit comments on this collection of information no later than March 17, 2025 through <https://www.regulations.gov>

(5) Add appropriate Privacy and Security Notices at major Web site entry points. Refer to AR 25-1, para 6-4n for requirements for posting Privacy and Security Notices on public Web sites. Procedures related to the establishing, operating, and maintaining of unclassified DA Web sites can be accessed at http://www.defenselink.mil/webmasters/policy/DOD_web_policy. (6) Ensure public Web sites comply with policies regarding restrictions on persistent and third party cookies. The Army prohibits both persistent and third part cookies. (see AR 25-1, para 6-4n) (7) A Privacy Advisory is required on Web sites which host information systems soliciting personally identifying information, even when not maintained in a Privacy Act system of records. The Privacy Advisory informs the individual why the information is solicited and how it will be used. Post the Privacy Advisory to the Web site page where the information is being solicited, or to a well marked hyperlink stating Privacy Advisory-Please refer to the Privacy and Security Notice that describes why this information is collected and how it will be used. (d) Protecting records containing personal identifiers such as names and Social Security Numbers. (1) Only those records covered by a Privacy Act system of records notice may be arranged to permit retrieval by a personal identifier (e.g., an individual's name or Social Security Number). AR 25-400-2, paragraph 6-2 requires all records covered by a Privacy Act system of records notice to include the system of record identification number on the record label to serve as a reminder that the information contained within must be safeguarded. (2) Use a coversheet or DA Label 87 (For Official Use Only) for individual records not contained in properly labeled file folders or cabinets. (3) When developing a coversheet, the following is an example of a statement that you may use: The information contained within is FOR OFFICIAL USE ONLY (FOUO) and protected by the Privacy Act of 1974. (e) Notification of Individuals when personal information is lost, stolen, or compromised. (1) Whenever an Army organization becomes aware the protected personal information pertaining to a Service member, civilian employee (appropriated or non-appropriated fund), military retiree, family member, or another individual affiliated with Army organization (e.g., volunteer) has been lost, stolen, or compromised, the organization shall inform the affected individuals as soon as possible, but not later than ten days after the loss or compromise of protected personal information is discovered. (2) At a minimum, the organization shall advise individuals of what specific data was involved; the circumstances surrounding the loss, theft, or compromise; and what protective actions the individual can take.

Listeria monocytogenes and *Vibrio parahaemolyticus* were less than the reported total from those pathogens, so we used the reported total instead of the estimated total. Case hospitalization rates for chemical poisoning and for other toxins are not reported in the CDC report, and (because such cases are unusual and characterized by severe acute distress) we assumed that half of such cases would be hospitalized. Finally, we assumed that the total number of illnesses from unknown agents is the same fraction of the estimated total summed over all pathogens, as the reported total summed over all pathogens. The estimated ratio of the total number of illnesses to reported illnesses was computed by dividing the estimated total by the reported total summed of all pathogens. The average estimate of the ratio of total illnesses to reported illnesses from all pathogens, as well as the high and low estimates representing the 95 percent and 5 percent levels are reported in the following table. We estimate a total of 71,928 reported and unreported illnesses from outbreaks monitored by FDA from 2000 to 2003. This total reflects 8,325 illnesses that were reported, and approximately 63,603 that were estimated to be unreported. (printed page 71621) Table 4. Estimated ratio of the total number of illnesses to reported number of illnesses Mean Low (greater than 5% of the range) High (greater than 95% of the range) 8.64 7.89 9.51 5. The Costs of Each Illness We estimate the direct medical costs as well as the indirect costs of illnesses from outbreaks monitored by FDA. The direct medical costs include the costs of any doctor visits and hospitalizations that are required. Indirect costs are from the loss in productivity and quality of life as a result of the symptoms and severity of the illness. We estimate the indirect and direct costs of each illness for mild, moderate, and severe cases. Mild cases are assumed to remain untreated with no direct medical costs. We assume that persons with moderate cases visit a physician and that those with severe cases require hospitalization. The average costs of \$64 for a physician visit was obtained from the online source, Medical Economics (Ref. 4), and hospitalization costs were obtained from the Health Cost and Utility Project's (HCUP) Nationwide Inpatient Sample (Ref. 5) by type of illness. The numbers of days that symptoms persist for each illness and severity were estimated from the FDA-Center for Food Safety and Applied Nutrition (CFSAN) Bad Bug Book (Ref. 6), CDC's National Center for Infectious Diseases, Infectious Disease Information fact sheets (Ref. 7), and from a CFSAN report entitled 'Estimating the Value of Consumers' Loss from Foods Violating the FD&C Act' (Ref. 8). These estimates were assumed to be uniformly distributed with the means reported in table 5 of this document. Table 5. Duration of the illness for mild, moderate, and severe cases Mild Moderate Severe Bacteria Campylobacter 4 8 8 E. coli 0157 3 8 18 Listeria 4 30 37 Salmonella 4 12 16 Shigella

(2) Do not claim an exemption for classified material for individual systems of records. The blanket exemption applies. (See paragraph (c) of § 310.26.) § 310.32 System notices. (a) Contents of the system notices. (1) The following data captions are included in each system notice: (i) Systems identifier. (see paragraph (b) of this section). (ii) System name. (see paragraph (c) of this section). (iii) System location. (see paragraph (d) of this section). (printed page 18777) (iv) Categories of individuals covered by the system. (see paragraph (e) of this section). (v) Categories of records in the system. (see paragraph (f) of this section). (vi) Authority for maintenance of the system. (see paragraph (g) of this section). (vii) Purpose(s). (see paragraph (h) of this section). (viii) Routine uses of records maintained in the system, including categories of users and the purposes of such uses. (see paragraph (i) of this section). (ix) Disclosure to Consumer Reporting Agencies. This element is optional but required when disclosing to consumer

reporting agencies (See paragraph (l) of § 310.22.) (x) Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system. (see paragraph (j) of this section). (xi) Systems manager(s) and address. (see paragraph (k) of this section). (xii) Notification procedure. (see paragraph (l) of this section). (xiii) Record access procedures. (see paragraph (m) of this section). (xiv) Contesting records procedures. (see paragraph (n) of this section). (xv) Record source categories. (see paragraph (o) of this section). (xvi) Exemptions claimed for the system. (see paragraph (p) of this section). (2) The captions listed in paragraph (a)(1) of this Section have been mandated by the Office of Federal Register and must be used exactly as presented. (3) A sample system notice is shown in Appendix E of this part. (b) System Identifier. The system identifier must appear on all system notices and is limited to 21 positions, unless an exception is granted by the DPO, including Component code, file number and symbols, punctuation, and spacing. (c) System Name. (1) The name of the system reasonably identifies the general purpose of the system and, if possible, the general categories of individuals involved. (2) Use acronyms only parenthetically following the title or any portion thereof, such as, 'Joint Uniform Military Pay System (JUMPS)'. Do not use acronyms not commonly known unless they are preceded by an explanation. (3) The system name may not exceed 55 character positions, unless an exception is granted by the DPO, including punctuation and spacing. (4) The system name should not be the name of the database or the IT system if the name does not meet the criteria in paragraph (c)(1) of this section. (d) System Location. (1) For systems maintained in a single location provide the exact office name, organizational identity, and address.

Several commenters suggested that defense contractors and subcontractors should be more engaged in the formulation of the rule and better informed in how the rule will be applied. They indicated that guidance is unclear, ad hoc, and inconsistent, and requested an authoritative source of information, such as FAQs, that are kept up to date and provide reliable responses to questions. They also expressed a desire for more transparency in how ambiguities are being resolved in early assessments. Response: In September 2019, the CMMC PMO released the first draft publication of the CMMC Model v 0.4. The CMMC PMO received over 2,000 comments from individuals and industry associations. These comments informed changes included in CMMC Model 1.0 released in January 2020. In addition, DFARS Case 2019-D041 generated over 750 additional public comments that informed changes to the rule text and influenced the transition to CMMC 2.0. The Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)) held over 100 industry listening sessions in 2020 and 2021, engaged with the DIB through briefings and discussions with defense industry trade associations, academia, and government-based organizations with industry members (e.g., National Industrial Security Program Policy Advisory Committee). Many sessions were recorded and shared with the public on the internet in social media, news releases, and the CMMC PMO website (<https://DoDcio.defense.gov/CMMC/>), which was completely updated in 2021 and contains new information, FAQs, and allows the public direct contact with the CMMC PMO. As always, FAQs are to clarify content only, and do not interpret, define, or otherwise change the meaning of the regulatory text. The CMMC PMO continues to communicate with defense contractors and subcontractors, to include small businesses, and other members of the public. The official website of the DoD CMMC Program is <https://DoDcio.defense.gov/CMMC/> . This website contains links to CMMC documents including, but not limited to, the CMMC Model Overview, CMMC Scoping Guidance (by level), CMMC Level 1 Self-Assessment Guide, CMMC Level 2 Assessment Guide, and the CMMC Glossary. 17. C3PAO Consistency Comment: One commenter expressed concerns that C3PAOs would not conduct CMMC assessments in a uniform manner, leading to inconsistent results. Response: C3PAOs use only certified CMMC assessors to perform CMMC assessments. To ensure assessments are conducted in a uniform manner, assessors are trained by certified instructors and required to pass CMMC assessor tests before becoming certified. The accredited CAICO manage and oversee the training, testing, authorizing, and certifying of candidate assessors and instructors. A CAICO must meet the DoD requirements set forth in § 170.10 and achieve compliance with ISO/IEC 17024:2012, Conformity Assessment-General Requirements for Bodies Operating Certification of Persons Conformity Assessment. 18. CMMC Cost Impacts

), by expressly limiting the scope of the requirement to provide DoD with access to only such information that is 'necessary to conduct a forensic analysis,' and by affirmatively requiring the Government to safeguard any contractor attributional/proprietary information that has been shared (or derived from information that has been shared) against any unauthorized access or use. In the event that the contractor believes that there is information that meets the criteria for mandatory reporting, but the contractor desires not to share that information due to its sensitivity, then the

contractor should immediately raise that issue to the DoD points of contact (i.e., contracting officer, contracting officer's representative, or requiring activity) for the contract(s) governing the activity in question. Comment: The respondent commented that the ·rapidly reporting· requirement at DFARS 252.204-7012(c)(1)(2) is extremely burdensome on contractors. The respondent recommends either extending the period to report or, otherwise, amending the clause to explain that the 72-hour reporting period begins to run once a contractor knows or should have known that covered defense information (CDI) was adversely impacted or it is ·highly likely· that CDI was adversely impacted. The respondent also recommends that a medium assurance certificate need not be required for initial reporting, since this limits the person(s) within the entity who may report and may impede the ability to report within the requisite time period. Response: The contractor is required to report known or potential cyber incidents within 72 hours of discovery. Timeliness in reporting cyber incidents is a key element in cybersecurity and provides the clearest understanding of the cyber threat targeting DoD information. The 72-hour period has proven to be an effective balance of the need for timely reporting while recognizing the challenges inherent in the initial phases of investigating a cyber incident. Contractors should report available information within the 72-hour period and provide updates if more information becomes available. The requirement to have medium assurance certificates is important to communicate securely with DoD and to securely access DoD's reporting website. Comment: The respondent commented that there is often ambiguity as to what is considered CDI under specific contracts, which ought to be resolved by the Government, as agency personnel are best suited to identify the CDI being provided to a contractor and make appropriate notifications. The respondent recommended that DoD develop processes and procedures for engaging with contractors on the designation of information as CDI during the solicitation process or otherwise before the contract is finalized. Response: Processes already exist for the contractor to engage with DoD personnel to request clarification regarding CDI, both during the solicitation phase and during contract performance. Comment:

* * * In the case of any person (excluding farms and restaurants) who manufactures, processes, packs, transports , distributes, holds, or imports foods, the inspection shall extend to all records or other information described in section 414 when the Secretary has a reasonable belief that an article of food is adulterated and presents a threat of serious adverse health consequences or death to humans or animals * * *. (Emphasis added.) FDA is imposing a record establishment and maintenance requirement on transporters to ensure that transporters have records that would assist FDA in a tracing investigation in a food-related emergency. (Comment 127) Numerous comments state that a requirement for specificity as to brand names, specific variety names (e.g., ·romaine lettuce· rather than ·lettuce·), lot numbers, and the way the food is packaged would require information neither readily available to transporters, nor routinely recorded by transporters. They further state that, if needed, such information could be obtained from both the shipper and receiver. They contend that these requirements are not necessary to effectuate the purposes of the statute. Other comments state that air carriers typically rely on information from those tendering the freight and, in some instances, shipments may not even be identified as containing food, particularly since chewing gum and pet foods are included in the definition of food. (Response) The final rule does not require transporters to establish and maintain records with brand name or lot numbers. However, FDA believes it is necessary to obtain some information about the shipment of food from transporters to conduct tracing investigations. Transporters are responsible for knowing that they are transporting food. (Comment 128) Some comments state that requiring brand name descriptions raises cargo security concerns because having more detailed descriptions on paperwork will increase the risk of theft and make it easier for bioterrorists to target certain shipments. (Response) FDA does not agree with this comment. Interstate transporters are already required to keep similar records under the DOT regulations, and FDA is not aware of these records presenting a security risk; thus, there should not be any increased security risks as a result of this rulemaking. Furthermore, FDA notes that the final rule does not require transporters to establish and maintain records of brand name, specific variety names, or lot numbers. K. Comments on What are the Record Retention Requirements? (Proposed §1.360)

5. Maintenance Agency. Department of Commerce, National Institute of Standards and Technology, Information Technology Laboratory (ITL). 6. Applicability. This standard is applicable to all Federal agencies that use cryptography-based security systems to protect sensitive information in computer and telecommunication systems (including voice systems) as defined in Section 5131 of the Information Technology Management Reform Act of 1996, Public Law 104-106. This standard shall be used in designing and implementing cryptographic modules that Federal departments and agencies

operate or are operated for them under contract. Cryptographic modules that have been approved for classified use may be used in lieu of modules that have been validated against this standard. The adoption and use of this standard is available to private and commercial organizations. 7. Applications. Cryptography-based security systems may be utilized in various computer and telecommunication applications (e.g., data storage, access control and personal identification, network communications, radio, facsimile, and video) and in various environments (e.g., centralized computer facilities, office environments, and hostile environments). The cryptographic services (e.g., encryption, authentication, digital signature, and key management) provided by a cryptographic module are based on many factors that are specific to the application and environment. The security level to which a cryptographic module is validated must be chosen to provide a level of security appropriate for the security requirements of the application and environment in which the module will be utilized and the security services that the module will provide.

including efforts to reduce risks from physical privacy and security threats, insider threats, and other related human risk management concerns. Such efforts are outside of the scope of this document. For ease of use, the remainder of this document will use the term 'CPLP' to refer to all elements of cybersecurity and privacy awareness, training, and educational activities to include other programs with titles such as awareness training, practical exercises (e.g., tabletop exercises, role-playing simulations, cyber ranges, or phishing campaigns), topic-based training, role-based training, and educational programs. It is not necessary for organizations to rename their programs as CPLP; this term is applied generically. The previous version of SP 800-50 defined awareness, training, and education as separate elements in a learning continuum. Research efforts [6][7] conducted with Federal Government training managers have shown that these terms have different meanings and can lead to confusion when describing the broader purpose of building a CPLP. While some managers may refer to programs as 'awareness and training' or 'awareness training,' the terms are applied inconsistently across organizations. Regardless of what an organization calls its program, the overarching goal of a CPLP is to provide opportunities for learning at all levels or stages of one's career. It is about creating programs where learning can take place. This Special Publication also uses the term 'learner' to describe individuals in any of the learning program audience segments. The term 'learner' can be found in SP 800-181r1 [5], where it refers to an individual who is acquiring specialized knowledge or developing a skill. This definition is useful here since it describes all participants in a 'learning program.' This document will refer to the program as a CPLP or CPLPs, as some organizations may require multiple programs to fulfill the learning requirements of the entire workforce.

Individual access . Access to information pertaining to the individual by the individual or his or her designated agent or legal guardian. (j) Lost, stolen, or compromised information . Actual or possible loss of control, unauthorized disclosure, or unauthorized access of personal information where persons other than authorized users gain access or potential access to such information for an other than authorized purpose where one or more individuals will be adversely affected. Such incidents also are known as breaches . (k) Maintain . To maintain, collect, use, or disseminate records contained in a system of records. (l) Non-Federal agency . Any state or local government, or agency thereof, which receives records contained in a system of records from a source agency for use in a computer matching program. (m) Official use . Within the context of this part, this term is used when officials and employees of a DoD Component have a demonstrated a need for the record or the information (printed page 18760) contained therein in the performance of their official duties, subject to DoD 5200.1-R. [5] (n) Personal information . Information about an individual that identifies, links, relates, or is unique to, or describes him or her, e.g., a social security number; age; military rank; civilian grade; marital status; race; salary; home/office phone numbers; other demographic, biometric, personnel, medical, and financial information, etc. Such information also is known as personally identifiable information (i.e., information which can be used to distinguish or trace an individual's identity, such as their name, social security number, date and place of birth, mother's maiden name, biometric records, including any other personal information which is linked or linkable to a specified individual). (o) Privacy Act request . A request from an individual for notification as to the existence of, access to, or amendment of records pertaining to that individual. These records must be maintained in a system of records. (p) Member of the public . Any individual or party acting in a private capacity to include Federal employees or military personnel. (q) Recipient agency . Any agency, or contractor thereof, receiving records contained in a system of records from a source agency for use in a computer matching program. (r) Record . Any item, collection, or grouping of information, whatever the

storage media (e.g., paper, electronic, etc.), about an individual that is maintained by a DoD Component, including, but not limited to, his or her education, financial transactions, medical history, criminal or employment history, and that contains his or her name, or the identifying number, symbol, or other identifying particular assigned to the individual, such as a finger or voice print or a photograph. (s) Risk assessment . An analysis considering information sensitivity, vulnerabilities, and cost in safeguarding personal information processed or stored in the facility or activity. (t) Routine use

The estimated Government costs utilize the entity numbers and phased roll-out detailed in the Public cost section. The DIBCAC estimated the detailed hours for all activities and other costs in a manner similar to the details shown in the Public cost section. Labor efforts for the Government are focused on Level 3. For purposes of the cost estimate, Government labor is based on the average of step one, five, and ten for GS-11 through GS-15 labor elements for the Washington DC area. The cost of labor was increased by a factor of approximately 51 percent which includes an estimated fringe factor (fringe factor includes estimated average insurance and pension benefits) plus overhead (overhead factor represents supervision and management of the labor) to arrive at the estimated labor rates. The Government labor in this estimate is performed by DCMA, which is a labor-intensive agency with limited overhead expenses. Therefore, the overall added factor of 51 percent is appropriate versus a typical full overhead factor of 100 percent. CMMC Database Infrastructure Costs The Government will develop the operational CMMC instantiation of eMASS. The cost analysis assumes that the nonrecurring engineering (NRE) cost includes the requirements development, architecture design, security, prototyping and testing, and approvals or certifications. [52] Nonrecurring engineering costs is a one-time fee of \$4,631,213 and is reflected here as incurred in the initial year of the estimate. The Year 1 amount is based on the actual cost incurred in FY2020 with adjustment for inflation to arrive at base year (BY) 1 dollars (2023). The recurring engineering (RE) cost includes database management, data analysis, cybersecurity, storage and backups, licensing, and infrastructure. [53] The cost for recurring engineering in Year 1 (\$2,336,038) and Year 2 (\$1,804,480) are based on historical (printed page 83191) amounts incurred for FY 2020 and FY 2021 with adjustment for inflation to arrive at base year 1 and Year 2 dollars (2023 and 2024). The estimated recurring engineering for Year 3 forward is calculated as the average of the Year 1 and Year 2 amounts $(\$2,336,038 + \$1,804,480)/2 = \$2,070,259$. The table summarizes the nonrecurring engineering (NRE) and recurring engineering (RE) costs for Year 1 through Year 5: Total Government Costs The following is a summary of the total Government costs over a ten-year period: Total Public and Government Costs The following is a summary of the total estimated annual Public and Government cost associated with implementation of the CMMC Program over a ten-year period: (printed page 83192) Alternatives

Contractors will advise all cleared employees, including those assigned to USG locations or operations outside the United States, of their individual responsibility for classification management and for safeguarding classified information. Contractors will provide security training to cleared employees consisting of initial briefings, refresher briefings, and debriefings in accordance with §.117.12. (h) Security reviews .(1) USG reviews. The applicable CSA will conduct recurring oversight reviews of contractors' NISP security programs to verify that the contractor is protecting classified information and implementing the provisions of this rule. The contractor's participation in the security review is required for maintaining the entity's eligibility for access to classified information. (i) Review cycle. The CSA will determine the scope and frequency of security reviews, which may be increased or decreased consistent with risk management principles. (ii) Procedures. (A) The CSA will generally provide notice to the contractor of a forthcoming review, but may also conduct unannounced reviews at its discretion. The CSA security review may subject contractor employees and all areas and receptacles under the control of the contractor to examination. (B) The CSA will make every effort to avoid unnecessary intrusion into the personal effects of contractor personnel. (C) The CSA may conduct physical examinations of the interior space of containers not authorized to secure classified material. Such examinations will always be accomplished in the presence of a representative of the contractor. (iii) Controlled unclassified information (CUI). 32 CFR part 2002 requires agencies to implement CUI requirements, but compliance with CUI requirements is outside the scope of the NISP and this rule. However, CSAs may conduct CUI assessments in conjunction with NISP USG reviews when: (A) The contractor is a participant in the NISP based on a requirement to access classified information; (B) A classified contract under the CSA's cognizance includes provisions for access to, or protection or handling of, CUI; and (C) The CSA has provided the contractor with specific guidance

regarding the assessment criteria and methodology it will use for overseeing protection of the CUI being accessed, stored or transmitted by the contractor as part of the classified contract. (2) Contractor reviews. Contractors will review their security programs on a continuing basis and conduct a formal self-inspection at least annually and at intervals consistent with risk management principles.

The study found that the academic medical center experienced, among other things, significant increases in the number of patients admitted, ambulance arrivals, waiting room times, and patients leaving without being seen. The study's authors concluded that their findings suggested that health care cyberattacks such as ransomware are associated with greater disruptions to regional hospitals and should be treated as disasters, necessitating coordinated planning and response efforts. [155] Thus, implementing reasonable and appropriate security measures better protects not only the regulated entity and its ePHI, but other regulated entities with whom it interacts, and may reduce the effects of cyberattacks and other security incidents that adversely affect the confidentiality, integrity, or availability of ePHI. As discussed above, several industry organizations have published and maintained compilations of voluntary standards, guidelines, best practices, methodologies, procedures, and processes for protecting the security of sensitive and confidential information, including PHI. Additionally, certain Federal health programs now either require or recommend the adoption of specific criteria that are intended to protect the confidentiality, integrity, and availability of ePHI. For example, the Health IT Certification Program maintained by the Assistant Secretary for Technology Policy and Office of the National Coordinator for Health Information Technology (ASTP/ONC) [156] sets minimum requirements for certified health IT, including criteria that pertain to cybersecurity. [157] These criteria are included in the Health IT Certification Program's Health IT Privacy and Security Framework, [158] which identifies when technical capabilities to support the privacy and security of electronic health information [159] must be included in certified health IT products. Additionally, health care providers that participate in certain Federal health programs must use health IT certified to these requirements. [160] Regulated entities also may want to consider adoption of certified health IT because it could contribute to compliance with the Security Rule. We will continue to work across the Department to ensure the adoption of consistent requirements for Federal programs that support the secure electronic exchange of health information to the extent that such consistency is appropriate. Throughout this preamble, we provide examples of how a regulated entity's participation in other Federal programs that require the use of health IT certified through the ONC Health IT Certification Program, or adoption of other Federal recommendations, such as the HHS CPGs, might support their compliance with the proposals in this NPRM.

3.2.1. 3.2.1 Improving Estimation Based on Knowledge of Prior Events Information about previous risk events may be helpful when estimating the likelihood and impact of those in the future.

Neither FAR clause 52.204-21 nor DFARS clause 252.204-7012 provide for DoD assessment of a defense contractor or subcontractor's implementation of the information protection requirements within those clauses. Defense contractors represent that they will implement the requirements in NIST SP 800-171 R2 upon submission of their offer. Findings from DoD Inspector General report (DODIG-2019-105 -Audit of Protection of DoD Controlled Unclassified Information on Contractor-Owned Networks and Systems-) indicate that DoD contractors did not consistently implement mandated system security requirements for safeguarding CUI and recommended that DoD take steps to assess a contractor's ability to protect this information. CMMC adds new assessment requirements for contractor implementation of underlying information security requirements, to allow DoD to assess a defense contractor's cybersecurity posture using authorized or accredited C3PAOs. The contractor and subcontractor must achieve the required CMMC Level as a condition of contract award. Inadequate Implementation of Cybersecurity Requirements Under DFARS clause 252.204-7012 and DFARS clause 252.204-7020, defense contractors and subcontractors must document implementation of the security requirements in NIST SP 800-171 R2 in a system security plan and may use a plan of action to describe how and when any unimplemented security requirements will be met. For the CMMC Program, the solicitation and resulting contract, will specify the required CMMC Status, which will be determined considering program criticality, information sensitivity, and severity of cyber threat. Although the security requirements in NIST SP 800-171 R2 address a range of threats, additional requirements are needed to significantly reduce the risk posed by APTs. An APT is an adversary that possesses sophisticated levels of expertise and significant resources that allow it to create opportunities to achieve its objectives by using multiple attack vectors (e.g., cyber, physical, and deception). CMMC Level 3 requires

implementation of selected security requirements from NIST SP 800-172 Feb2021 to reduce the risk of APT threats. The CMMC Program will require prime contractors to flow the appropriate CMMC Status requirement down throughout the entire supply chain relevant to a particular contract. Defense contractors or subcontractors that handle FCI, must meet the requirements for CMMC Level 1. Defense contractors that handle CUI must meet the requirements for CMMC Level 2 or higher, depending on the sensitivity of the information associated with a program or technology being developed.

Insufficient Scale and Depth of Resources To Verify Compliance

In addition, FDA recognizes that an activity such as placing a raw agricultural commodity directly into consumer-ready packages is likely to provide better protection to fragile produce, such as berries, than placing the produce into a larger bin or box for transport off the farm, with consumer packaging of the produce further down the distribution chain. ·Manufacturing/processing· as defined in § 1.328 means ·making food from one or more ingredients, or synthesizing, preparing, treating, modifying or manipulating food, including food crops or ingredients.· Thus, simply placing produce into containers (such as clamshells, baskets, mesh bags, or plastic bags) is more akin to packing, even if the containers are ultimately received by the consumer. Under § 1.328 of this final rule, a farm may engage in this packing activity so long as all of the involved produce is grown or consumed on the farm or a farm (printed page 71588) under the same ownership. Accordingly, a farm that simply places a raw agricultural commodity into containers, such as placing berries in clamshells, is not ·manufacturing/processing.· Finally, a farm that transports its products from the field does not cease to be a ·farm· because such transportation is considered incidental to traditional farming activities. (Comment 68) One comment states that FDA's definition of ·farm· should be size-neutral, and apply equally to integrated livestock and poultry facilities, as long as the activities engaged in at such locations are limited to ·growing or raising· farm animals for human food, but do not extend to further processing of food-producing animals into meat, milk, or eggs (such as occurs at food processing and packing plants and rendering facilities) for subsequent commercial sale for humans or animals. (Response) The proposed rule's definition of ·farm· had no size limitation, and neither does the final rule's definition. FDA agrees that integrated livestock and poultry facilities are ·farms,· to the extent that these operations are devoted to raising animals for food, the growing of crops, or both, and otherwise engage in only those activities included in the farm definition. FDA considers milking cows and collecting eggs from chickens to be ·harvesting· when applied to animals, because these activities are akin to harvesting crops. 5. Food

printed page 71593) 16. Transporter There were no comments on this definition. However, FDA is changing the definition to make clear that foreign persons that transport food in the United States are subject to these requirements regardless of whether they have possession, custody, or control of that food for the sole purpose of transporting that food. 17. Transporter's Immediate Previous Source There were no comments on this definition. 18. Transporter's Immediate Subsequent Recipient There were no comments on this definition. 19. You There were no comments on this definition. F. Comments on Do Other Statutory Provisions and Regulations Apply? (Proposed § 1.329) There were no comments on this issue. G. Comments on Can Existing Records Satisfy the Requirements of This Subpart? (Proposed § 1.330) (Comment 79) Several comments state that the final rule requires additional or more detailed data than what is already maintained and recommend that the FDA and CBP work together with industry to avoid any unnecessary burdens. A few comments requested that we also work closely with TSA and FAA as those agencies consider modifications of their own rules. The comments urge close coordination between the FDA and those other agencies to avoid inconsistent or redundant regulations. Several comments state that the proposed regulations do not strike a proper balance in that some of the data elements requested are unnecessary (redundant) and too burdensome on an industry already highly regulated by several agencies requiring the same or similar information. For example, the air cargo industry currently establishes and maintains industry air waybills, bills of lading and commercial invoices, which are required by CBP to be maintained for a period of 5 years. Moreover, CBP will be proposing a new set of mandatory advanced notice information, including other data elements, that could satisfy FDA in its effort to establish a complete tracing of activities. (Response) FDA based the requirements of the final rule on what records are needed by the Secretary for inspection to help the Secretary identify the immediate previous sources and the immediate subsequent recipients of food, including its packaging, to address credible threats of serious adverse health consequences or death to humans or animals. Section 1.330 of subpart J of this final rule states that duplication of existing records is not required if those records contain all of the information required by subpart J. If a person keeps records of all of the information as required by subpart J to comply with other Federal, State, or

local regulations (including those of TSA or FAA), or for any other reason, then those records may be used to meet these requirements. In addition, where a person currently has existing records that contain some, but not all, of the required information, only records for the nonexisting information needs to be created.

3.2.2 includes a more complete discussion of factors to consider when determining monitoring frequencies. 3.2.2. 3.2.2 ESTABLISH MONITORING AND ASSESSMENT FREQUENCIES Determining frequencies for security status monitoring and for security control assessments are critical functions of the organization's ISCM program.

The analysis also considers logging data, data in media, and issues associated with time, location, and sensitive data. In addition, the relevance of topics such as rapid elasticity, multi-tenancy, and hypervisor/virtual machine layers is discussed. These 62 challenges support the criminal justice and civil litigation systems, security incident response, and internal enterprise operations. Information Systems Audit and Control Association CSA designed the EA with the understanding that business requirements must guide the architecture. In the case of the EA, these requirements come from a controls matrix driven by regulations (e.g., Sarbanes-Oxley [17] and Gramm-Leach-Bliley [18]), standards frameworks (e.g., ISO-27002 [7], Payment Card Industry Data Security Standards [19]), and IT Audit Frameworks (e.g., COBIT [20]), all in the context of cloud service delivery models, such as SaaS, platform as a service (PaaS), and infrastructure as a service (IaaS). From these requirements, a set of security capabilities have been defined and organized according to the following best practice architecture frameworks:

For an IoT device such as a smart appliance, a device cybersecurity capability could be the ability to establish, manage, and enforce authentication and authorization for entities that attempt to access the device or its data. A corresponding non-technical supporting capability could be manufacturer-provided instructions on how authentication and authorization policies can be established and managed through or for the device. 1. Does the organization require Personal Identity Verification (PIV) card-based authentication or does it allow password-based authentication in limited circumstances? Support for critical cybersecurity technologies and operations that are used to implement security controls may be important for an organization in deciding which, if any, IoT device to use for a particular purpose. Organizations should note that some of this support, such as support for PIV may be related to standards and guidelines like the Federal Information Processing Standards (FIPS) 15 . 2. Does the organization purchase products from particular manufacturers or 3 rd parties? Such situations may limit the IoT devices readily available to the organization. This may, in turn, limit availability of IoT devices that best support the needs and goals of the organization. 3. Are there any environmental considerations (e.g., exposure to the elements, human presence, sensitive data that could be collected) in the environment of operation? Environmental considerations can help guide device cybersecurity requirements, particularly around physical protections. For example, if an IoT device is meant to be placed outdoors, a durable housing may be needed to withstand excessive heat, cold, and moisture while still providing data availability and integrity. 2. Does the IoT device lack key device cybersecurity requirements?

ives), there need to be different tiers of metrics based on the audience or user. For example, the CWE structure could be used to define security requirements that lead to associated security metrics. Jason noted that CWEs for hardware are relatively new, starting around 2020, compared to CWEs' long track record for software, which started around 2006. Since CWEs point out common root cause weaknesses that lead to vulnerabilities, they foster a more proactive approach by allowing security issues to be discovered and mitigated earlier in the hardware development life cycle, thus lowering the financial impact. Having good metrics that can be used to inform design and business decisions would be helpful to the semiconductor community. Finally, Mark Tehranipoor from the University of Florida emphasized the importance of thinking about security and associated metrics in the early stages of the hardware development life cycle. Specifically, this involves conducting a security and risk assessment and developing a

Transclassified Foreign Nuclear Information TP transportation plan UK United Kingdom UL Underwriters' Laboratories U.S.C. United States Code USD (I&S) Under Secretary of Defense for Intelligence and Security USG United States Government USML United States Munitions List VAL visit authorization letter VT voting trust (b) Definitions. Unless otherwise noted, these terms and their definitions are for the purposes of this rule. Access means the ability and opportunity

to gain knowledge of classified information. Access Permittee means the holder of an Access Permit issued pursuant to the regulations set forth in 10 CFR part 725, Permits For Access to Restricted Data. ACCM are security measures used by USG agencies to safeguard classified intelligence or operations when normal measures are insufficient to achieve strict need-to-know controls and where SAP controls are not required. Adverse information means any information that adversely reflects on the integrity or character of a cleared employee, that suggests that his or her ability to safeguard classified information may be impaired, that his or her access to classified information clearly may not be in the interest of national security, or that the individual constitutes an insider threat. Affiliate means each entity that directly or indirectly controls, is directly or indirectly controlled by, or is under common control with, the ultimate parent entity. Agency(ies) means any Executive agency as defined in 5 U.S.C. 105; any Military department as defined in 5 U.S.C. 102; and any other entity within the executive branch that releases classified information to private sector entities. This includes component agencies under another agency or under a cross-agency oversight office (such as ODNI with CIA), which are also agencies for purposes of this rule. Alarm service company means an entity or branch office from which all of the installation, service, and maintenance of alarm systems are provided, and the monitoring and investigation of such systems are either provided by its own personnel or with personnel assigned by this location. Alarm system description form means a form describing an alarm system and monitoring information. Approved security container means a GSA approved security container originally procured through the Federal Supply system. The security containers bear the GSA Approval label on the front face of the container, which identifies them as meeting the testing requirements of the assigned federal specification and having been maintained according to Federal Standard 809. Approved vault means a vault built to Federal Standard 832 and approved by the CSA. AUS community consists of the Government of Australia entities and Australian non-governmental facilities identified on the DDTC website (<https://pmdtdc.state.gov/>) at the time of export or transfer. Authorized person

The DoD has reviewed § 170.17(c)(2)(ii) and does not agree that a noun is missing. The lead-in paragraph provides the noun, and it is not necessary to repeat the phrase. The DoD disagrees that portions of § 170.18(c)(1) are redundant and therefore did not delete the lower level paragraphs, however revisions were made to clarify that a Level 2 certification assessment is needed prior to Level 3 certification assessment. Recommended edits to § 170.24(9) that would change the meaning were not accepted. During the assessment process, the Lead Assessor/Assessor must view any prior DoD CIO adjudication of proposed variances to security requirements in the system security plan to ensure correct implementation and render a determination of MET if there have been no changes in the environment. The DoD did not modify § 170.10 to permit CCAs, CCPs, and CCIs to retrain or recertify, instead of both, upon significant change to DoD's CMMC Program requirements under this rule. The DoD disagreed with one commenter's assertion that the summary within the preamble to the rule implies CMMC assessments address all DFARS clause 252.204-7012 requirements, therefore no edits were necessary. The rule indicates that the applicable CMMC Level 2 security requirements are those in NIST SP 800-171 R2 as implemented in DFARS clause 252.204-7012. Revisions suggesting that all objectives identified in NIST SP 800-171A Jun2018 need not be met are not accurate and not incorporated. Each assessment objective in NIST SP 800-171A Jun2018 must yield a finding of MET or NOT APPLICABLE for the overall security requirement to be scored as MET. Assessors exercise judgment in determining when sufficient and adequate evidence has been presented to make an assessment finding. This is consistent with current DIBCAC High Assessments and assessments conducted under the Joint Surveillance Voluntary Assessment Program (JSVAP). A security requirement can be applicable, even with assessment objectives that are N/A. The security requirement is NOT MET when one or more applicable assessment objectives is NOT MET. Recommendations to address specific contractual matters were not addressed, because this is a 32 CFR part 170 CMMC Program rule and not an acquisition regulation. Any comments related to contract requirements should be provided in response to the 48 CFR part 204 CMMC Acquisition rule. The CMMC rule does not specify the number of POA&Ms that may be used to address one or more CMMC security requirement that were NOT MET during a CMMC assessment. The OSA may choose to use a single POA&M or multiple POA&Ms.

Disclosures for law enforcement purposes. (1) Records may be disclosed to another Agency or an instrumentality of any Governmental jurisdiction within or under the control of the United States for a civil or criminal law enforcement activity, provided: (i) The civil or criminal law enforcement activity is authorized by law; (ii) The head of the law enforcement activity or a designee has made a written request specifying the particular records desired and the law

enforcement purpose (such as criminal investigations, enforcement of a civil law, or a similar purpose) for which the record is sought; and (iii) There is no Federal statute that prohibits the disclosure of the records. (2) Blanket requests for any and all records pertaining to an individual shall not be honored absent justification. (3) When a record is released to a law enforcement activity under this subparagraph, the disclosure accounting (see § 310.25) for the release shall not be made available to the individual to whom the record pertains if the law enforcement activity requests that the disclosure not be disclosed. (4) The blanket routine use for law enforcement (Appendix C, Section A) applies to all DoD Component systems notices (see paragraph (b)(6) of this section). This permits Components, on their own initiative, to report indications of violations of law found in a system of records to a law enforcement activity. (5) Disclosures may be made to Federal, State, or local, but not foreign law enforcement agencies. Disclosures to Foreign law enforcement agencies may be made if a routine use has been established for the system of records (printed page 18773) from which the records are to be released. (h) Emergency disclosures. (1) Records may be disclosed if disclosure is made under compelling circumstances affecting the health or safety of any individual. The affected individual need not be the subject of the record disclosed. (2) When such a disclosure is made, the Component shall notify the individual who is the subject of the record. Notification sent to the last known address of the individual as known to the Component is sufficient. (3) The specific data to be disclosed is at the discretion of the Component. (4) Emergency medical information may be released by telephone. (i) Disclosures to Congress. (1) Records may be disclosed to either House of the Congress or to any committee, joint committee or subcommittee of Congress if the release pertains to a matter within the jurisdiction of the committee. Disclosure is only authorized when in response to an official request on behalf of either House, committee, subcommittee, or joint committee. (2) Requests from members of Congress who are seeking records in their individual capacity or on behalf of a constituent. (i) Requests made in their individual capacity. Request for records shall be processed under the provisions of DoD 5400.7-R. (ii) Requests made on behalf of constituents.

Each of the legal U.S. cleared entities must comply no more than six months from the effective date of this NISPOM rule. During that six months, each legal cleared entity has the opportunity to review existing classified contracts to determine if there is any impact that they want to discuss with the applicable GCAs about possible equitable adjustment. Decisions on any requests for equitable adjustment will be made by the applicable contracting officer. Legal entities enter into contracts, licenses or grants; it is estimated that the average of 8,036 small business cleared entities are each a legal entity. It is estimated that each of those small business cleared legal entities will review an average of 3 existing classified contracts for possible equitable adjustment for a total of 24,108 contracts requiring 3 hours each for review in 2021. Using the published Office of Personnel Management GS salary schedule for FY20, the estimated labor rate for an FSO of a small business entity firm is the equivalent of a GS11 step 5 and for an FSO of a large business entity as the equivalent of a GS13, step 5. Of the large business entities, it is estimated that 2,100 large business cleared entities are legal entities, while the remaining large business entities are divisions or branch offices. It is estimated that each of those large business cleared legal entities will review an average of 30 existing classified contracts for possible equitable adjustment for a total of 63,000 contracts requiring 8 hours each for review in 2021. It is estimated that it will take more time for review by the (printed page 83307) large business cleared entities due to more complicated contracts. These assumptions imply costs of \$54.96 million in year one and no further costs as this action is taken only in the first year. c. Train SECRET cleared employees on requirements to submit foreign travel reports. The FSO at each entity (small or large) must ensure that its SECRET cleared employees are trained on the requirements. Such training by the FSO is estimated to take 1 hour in 2021 and a half an hour in each of the following years up to year 20. Using the published Office of Personnel Management GS salary schedule for FY20, the estimated labor rate for an FSO of a small business entity firm is the equivalent of a GS11 step 5 and for an FSO of a large business entity as the equivalent of a GS13, step 5. These assumptions imply total costs of \$0.99 million in 2021 as year one; and, \$0.49 million in each year 2 through 20. d. Submit foreign travel reports and receive any pre-travel threat briefings or post travel briefings based on the threat.

Preserve and protect images for suspected CUI incidents and submit media and data for damage assessments. If a suspected or confirmed CUI incident has occurred on an information system, the CUI clause requires the Contractor shall preserve and protect images of all known affected information systems and all relevant monitoring and packet capture data for at least 90 days from

the submission of the report to allow the Government to request the media and data or decline interest during this 90-day period, after which, if no request has been made, the images need no longer be preserved. Cooperate with Validation Actions for Non-Federal Information Systems. The CUI clause requires the Contractor to cooperate with validation actions conducted by an agency in accordance with NIST SP 800-171A, Assessing Security Requirements for Controlled Unclassified Information, and if applicable, NIST SP 800-172A for enhanced security requirements. These types of validation actions are similar to the DoD's Strategic High Confidence Level Assessments being conducted by DoD pursuant to the clause at DFARS 252.204-7020, and NIST SP 800-171 DoD Assessment Requirements, whereby the Government reviews the system security plan description of how (printed page 4289) each security requirement is met and the contractor demonstrates its implementation. While cooperating with validation actions, a contractor may need to provide the Government access to its facilities, systems, and personnel. Comply with NIST SP 800-53. The CUI clause requires the Contractor, when it is operating an information system identified in the SF XXX as a Federal information system that processes, stores, or transmits CUI identified in the contract, to comply with agency-identified security controls from NIST Special Publication 800-53 and any CUI Specified requirements identified in the SF XXX. In addition, cloud service providers must meet security requirements established by the Government for the Federal Risk and Authorization Management Program (FedRAMP) Moderate Baseline (<https://www.fedramp.gov/documents/>). The total estimated cost of compliance for small businesses is \$937,017,841 in the initial year of implementation and \$564,187,237 in each subsequent year. The cost per entity is dependent on whether the small business is required to implement NIST SP 800-171 Revision 2 or NIST SP 800-172 on their information systems. For more information on the specific compliance requirements and the expected cost impact on contractors, see section IV.C. of this preamble. A Regulatory Impact Analysis that includes a detailed discussion and explanation about the assumptions and methodology used to estimate the cost of this regulatory action, including the specific impact and costs for small businesses, is available at www.regulations.gov (search for FAR Case 2017-016 click Open Docket, and view Supporting Documents).

, 251 F. 3d 219, 224 (D.C. Cir. 2001). Section 306 of the Bioterrorism Act amends the FD&C Act by adding section 414 to the FD&C Act. In section 414, food is used in conjunction with other words to describe which FDA-regulated articles are subject to recordkeeping and access requirements. In describing the conditions for record access by FDA, section 414(a) of the FD&C Act requires a reasonable belief as to an article of food. In describing the purpose for which recordkeeping may be required, section 414(b) of the FD&C Act refers to food, including its packaging. Elsewhere in the recordkeeping provisions, section 414 of the FD&C Act refers to food, food safety, a food to the extent it is within the exclusive jurisdiction of [USDA], and recipes for food. The Bioterrorism Act is silent as to the meaning of food. Congress did not specify whether it intended the definition in section 201(f) of the FD&C Act to apply, one of the other possibilities noted in the previous paragraph, or another meaning. Where, as here, the statutory language on its face does not clearly establish Congressional intent, it is appropriate to consider not only the particular statutory language at issue, but also the language and design of the statute as a whole. *Martini v. Federal Nat'l Mortgage Association*, 178 F. 3d 1336, 1345 (D.C. Cir. 1999), citing *K Mart Corp. v. Cartier, Inc.*, 486 U.S. 281 (1988). Indeed, the analysis should not be confined to the specific provision in isolation because the meaning or ambiguity of a term may be evident only when considered in a larger context. *FDA v. Brown & Williamson Tobacco Corp.*, supra at 132 (2000). FDA has considered other sections of the Bioterrorism Act and has concluded that the meaning of food in the Bioterrorism Act is ambiguous. FDA previously considered the meaning of food in section 305 of the Bioterrorism Act, governing registration of food facilities, and concluded that it is ambiguous (68 FR 58894). Section 305 of the Bioterrorism Act amends the FD&C Act by adding section 415 to the FD&C Act (21 U.S.C. 350d). In section 415(a)(1) of the FD&C Act, the word food is modified by the phrase for consumption in the United States. It is not clear whether this modifying phrase limits the definition of food to food that is ingested, a narrower definition of food than that in section 201(f) of the FD&C Act. In addition, the definition of facility in section 415(b)(1) of the FD&C Act exempts farms; restaurants; other retail establishments. It is not clear whether the phrase other retail establishments includes retailers of food contact materials; the legislative history indicates that it does not, (printed page 71585) thereby giving rise to additional ambiguity about which definition of food applies to section 415. FDA also considered the meaning of food in section 307 of the Bioterrorism Act, governing prior notice of imported food shipments, and concluded that it is ambiguous (68 FR 58974

Requesters may obtain a copy of the supporting statement from the General Services Administration, Regulatory Secretariat Division by calling 202-501-4755 or emailing GSARegSec@gsa.gov. Please cite OMB Control Number 9000-XXXX, Controlled Unclassified Information, in all correspondence. List of Subjects in 48 CFR Parts 1, 2, 3, 4, 5, 7, 9, 11, 12, 15, 27, 33, 42, 52, and 53 Government procurement William F. Clark, Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy. Therefore, DoD, GSA, and NASA propose amending 48 CFR parts 1, 2, 3, 4, 5, 7, 9, 11, 12, 15, 27, 33, 42, 52, and 53 as set forth below: 1. The authority citation for 48 CFR Parts 1, 2, 3, 4, 5, 7, 9, 11, 12, 15, 27, 33, 42, 52, and 53 continues to read as follows: Authority: 40 U.S.C. 121(c); 10 U.S.C. chapter 4 and 10 U.S.C. chapter 137 legacy provisions (see 10 U.S.C. 3016); and 51 U.S.C. 20113. PART 1-FEDERAL ACQUISITION REGULATIONS SYSTEM 2. In section 1.106 amend in the table following the introductory text, by adding in numerical order, entries for 52.204-WW and 52.204-XX to read as follows: 1.106 OMB approval under the Paperwork Reduction Act. * * * * * FAR segment OMB control No. *...*...*...*...* 52.204-WW 9000-XXXX 52.204-XX 9000-0182 and 9000-XXXX *...*...*...*...* * * * * PART 2-DEFINITIONS OF WORDS AND TERMS 3. Amend section 2.101 by: a. Adding in alphabetical order the definitions for Contractor-attributional information, Controlled unclassified information (CUI), CUI incident, CUI Registry, Federal information system, and Information system; and b. Removing the definition for Federally controlled information system. The additions read as follows: 2.101 Definitions. * * * * * Contractor-attributional information means information that identifies the contractor or its employees directly or identifies them indirectly by grouping information that can be traced back to the contractor (e.g., program description or facility locations). * * * * * Controlled unclassified information (CUI) means information that the Government creates or possesses, or that an entity creates or possesses for or on behalf of the Government, that a law, regulation, or Governmentwide policy requires or permits an agency to handle using safeguarding or dissemination controls. CUI does not include: (1) Classified information; (2) Covered Federal information (see 4.404-1); (3) Information a contractor possesses and maintains in its own systems that did not come from, or was not created or possessed by or for, an executive branch agency or an entity acting for an agency (see 32 CFR 2002.4); or (4) Federally-funded basic and applied research in science, technology, and engineering at colleges, universities, and laboratories in accordance with National Security Decision Directive 189. * * * * * (printed page 4291) CUI incident means suspected or confirmed improper access, use, disclosure, modification, or destruction of CUI, in any form or medium. CUI Registry

'Since we have a lot of our personnel in remote areas, we've been doing it through our learning management system primarily for the annual security awareness training.' (D05) 'For our main enterprise network, it's computer-based training that's taken annually. But for those who don't have access to the enterprise network often for certain other networks that we might maintain, those are physical briefings done by the ISSOs [information system security officers] to those personnel. And then they sign an acknowledgment form.' (D03) 'You've got IT security, physical security, personnel security, etc. And they have their own training requirements-It's inefficient.' (S11)

Provide a marketplace with usage-based models for users to identify and implement the infrastructure solutions based on their business requirements with an appropriate chargeback model. Accelerate Cloud Adoption: Empower users with cloud offerings to meet their mission needs, e.g., scalability and agility. Provide best practice guidance on cloud models, e.g., hybrid and transition strategies based on the unique needs across Centers and Offices. Ensure Service Availability: Provide stable access to IT services through proactive, continuous monitoring of IT infrastructure service performance (e.g., Service Level Agreements, Operating Level Agreements) and feedback from FDA users to identify potential problems and implement targeted improvements. Implement Zero Trust Approach: Establish a comprehensive zero trust and risk-based approach to obtain optimal maturity level by upgrading, modernizing, and enhancing FDA's security and cyber defenses. Goal 3: Modernize Enterprise Services and Capabilities: Optimize the IT services portfolio to support everyday needs with cross-cutting, mission-critical offerings and benefit from economies of scale. Ensure enterprise IT services are stable, resilient, and adaptive, with opportunities for stakeholders to tailor solutions, where appropriate, and feedback loops to drive continuous improvement. Objectives Increase Business Alignment: Lead with a business-first approach to modernizing enterprise services and capabilities to ensure technology enables the capabilities defined in FDA's Business Capability Model and supporting business processes. Scale Operations:

Develop and drive adoption of enterprise solutions for standard capabilities, e.g., Finance/Budget, Human Resources, Acquisitions, Inspections, Freedom of Information Act requests, and Complaints Management with continuous user testing, while providing flexibility for customization where relevant. Manage the lifecycle of applications within the enterprise portfolio. Increase Digital Maturity: Maximize the use of technology (e.g., data, automation) in core business areas and enable processes to improve their ability to adapt to changes and scale. Improve Customer Experience: Create customer-centric solutions that enhance satisfaction by improving accessibility to IT solutions, including external-facing systems (e.g., Electronic Submission Gateway Next Generation), streamlining processes, and easing adoption. Increase stakeholder engagement with FDA IT services by prioritizing customer and employee feedback and establishing formal feedback loops. Modernize FDA Cybersecurity Defenses: Upgrade, enhance, and modernize FDA's critical cyber defenses and practices to address the evolving threat landscape where risks to FDA's critical assets, industry, and sensitive data exist. Reduce Technology Debt: Decommission legacy systems, applications, and End-of-Life devices and reinvest in enterprise solutions and business process improvements to minimize technical debt and enterprise risk. Goal 4:

Sources of cybersecurity risks include individual criminals, organized crime, terrorists, and nation-states. Cyber intrusions and attacks are mounted against commercial and individual users, as well as against government, military, and critical infrastructure networks (e.g., energy, water, sewage, transportation, banking, and financial networks). These intrusions and attacks often seek to steal, manipulate, destroy, or deny access to sensitive data and sometimes attempt to disable or disrupt individual systems. [1] Media outlets regularly report on the activities of those who disseminate viruses, spyware, and other malware, as well as those who spoof e-mail addresses, distribute spam, phish for sensitive personal information, and create botnets. [2] Cyber threats can originate from anywhere in the world. They not only target computers, but also mobile phones and other devices connected to the Internet. Cybersecurity risks seem to evolve as rapidly as the Internet expands, and those risks are becoming increasingly global in nature. Keeping pace with cybersecurity risks requires all users, even the most sophisticated users, to be aware of the threats and improve upon their security practices on an ongoing basis. Creating incentives to motivate all parties in the Internet economy to make appropriate security investments in response to risks they face requires a careful balance of technical and public policy measures. The constantly evolving nature of the threats and vulnerabilities not only affects individual firms and their customers, but collectively the threats pose a persistent economic and national security challenge. Computing devices are highly and increasingly interconnected, meaning that security deficiencies in a limited number of systems can be exploited to launch cyber intrusions or attacks on other systems. Put another way, poor cyber ·hygiene· on one Internet-connected computer negatively impacts other connected computers. Given the breadth and importance of this challenge, government and private sector actors have for many years been pursuing a range of mitigation strategies. Currently at the Federal level, the White House's Cybersecurity Coordinator is responsible for setting a national agenda and for coordinating Executive Branch cybersecurity activities. Specific Federal activities in this area include research and training, threat reporting and analysis, information collection and dissemination, consumer awareness, and policy development. In addition, the Director of the Office of Management and Budget (OMB) is responsible for overseeing Federal agency information security policies and practices under the Federal Information Security Management Act of 2002.

The OSA must complete and achieve a MET result for all security requirements specified in §·170.14(c)(2). No POA&Ms are permitted for CMMC Level 1. The OSA must conduct a self-assessment in accordance with the procedures set forth in paragraph (c)(1) of this section and submit assessment results in SPRS. To maintain compliance with CMMC Level 1 Self-Assessment requirements, the OSA must conduct a self-assessment of CMMC Level 1 on an annual basis and submit the results in SPRS. (i) SPRS inputs. The self-assessment results in the Supplier Performance Risk System (SPRS) shall include, at minimum, the following items: (A) CMMC Level. (B) Assessment Date (C) Assessment Scope. (D) All industry CAGE code(s) associated with the information system(s) addressed by the CMMC Assessment Scope (E) Compliance result. (ii) CMMC status revocation. If the CMMC PMO determines that the provisions of Level 1 of this rule have not been achieved or maintained, as addressed in §·170.6, a revocation of the validity status of the CMMC Level 1 Self-Assessment may occur. At that time, standard contractual remedies will apply and the OSA will be ineligible for additional awards with CMMC Level 1 Self-Assessment or higher requirements for the information system within the CMMC Assessment Scope until such time as a valid CMMC Level 1 Self-Assessment is achieved. (2) Affirmation. Affirmations are required for all CMMC Level 1 Self-Assessments.

Affirmation procedures are set forth in § 170.22. (b) Contract eligibility. Prior to award of any contract or subcontract with a CMMC Level 1 requirement, OSAs must comply with all CMMC Level 1 Self-Assessment requirements and have submitted an affirmation of compliance into SPRS for all information systems within the CMMC Assessment Scope. (c) Procedures. (1) Self-Assessment. The OSA must perform a CMMC Level 1 Self-Assessment scored in accordance with the CMMC Scoring Methodology described in § 170.24. The Level 1 Self-Assessment must be performed in accordance with the CMMC Level 1 scope requirements set forth in § 170.19(a) and (b) and the following: (i) NIST SP 800-171A. The CMMC Level 1 Self-Assessment must be performed using the objectives defined in NIST SP 800-171A (incorporated by reference, see § 170.2) for the security requirement that maps to the CMMC Level 1 security requirement as specified in table 1 to paragraph (c)(1)(ii) of this section. In any case where an objective addresses CUI, FCI should be substituted for CUI in the objective. (ii) Mapping Table for CMMC Level 1 security requirements to the NIST SP 800-171A objectives. Table 1 to § 170.15(c)(ii). CMMC Level 1 Security Requirements to NIST SP 800-171A CMMC Level 1 security requirements as set forth in § 170.14(c)(2) NIST SP 800-171A AC.L1-b.1.i 3.1.1 AC.L1-b.1.ii 3.1.2 AC.L1-b.1.iii 3.1.20 AC.L1-b.1.iv 3.1.22 IA.L1-b.1.v 3.5.1 IA.L1-b.1.vi 3.5.2 MP.L1-b.1.vii 3.8.3 PE.L1-b.1.viii 3.10.1 First phrase of PE.L1-b.1.ix (FAR b.1.ix.*) 3.10.3 Second phrase of PE.L1-b.1.ix (FAR b.1.ix.*) 3.10.4

The authors, Tim Grance and Joan Hash of the National Institute of Standards and Technology (NIST), and Marc Stevens, Kristofor O'Neal, and Nadya Bartol, of Booz Allen Hamilton (BAH), wish to thank their colleagues who reviewed the many drafts of this document and contributed to its technical content. We also gratefully acknowledge and appreciate the many comments we received from readers of the public and private sectors, whose valuable insights improved the quality and usefulness of this document. The authors would like to specifically acknowledge some key organizations whose extensive feedback substantially contributed to the development of the document. These organizations include: Environmental Protection Agency, Department of Treasury, Tennessee Valley Authority, and Electronic Data Systems. The authors would also like to acknowledge Ron Ross, Gary Stoneburner, Curtis Barker, Ron Tencati, Marianne Swanson, and Bill Burr of NIST, Alexis Feringa, Don Ottinger, Skip Hirsh, and Robert Young, BAH, and Shirley Radack for their extensive review and comment and keen and insightful assistance throughout the development of the document. Organizations frequently must evaluate and select a variety of information technology (IT) security services in order to maintain and improve their overall IT security program and enterprise architecture. IT security services, which range from security policy development to intrusion detection support, may be offered by an IT group internal to an organization, or by a growing group of vendors. Organizations can benefit when choices among services and service providers stimulate competition and bring innovation to the marketplace. However, it is difficult and challenging to determine service provider capabilities, measure service reliability and navigate the many complexities involved in security service agreements.

IA.L2-3.5.7 · Password Complexity CMMC Assessment Guide · Level 2 | Version 2.13 127 FURTHER DISCUSSION Password complexity means using different types of characters as well as a specified number of characters. This applies to both the creation of new passwords and the modification of existing passwords. Characters to manage complexity include numbers, lowercase and uppercase letters, and symbols. Minimum complexity requirements are left up to the organization to define. Define the lowest level of password complexity required. Define the number of characters that must be changed when an existing password is changed. Enforce these rules for all passwords. Salting passwords adds a string of random characters (salt) to a password prior to hashing. This ensures the randomness of the resulting hash value. Example You work with management to define password complexity rules and ensure they are listed in the company's security policy. You define and enforce a minimum number of characters for each password and ensure that a certain number of characters must be changed when updating passwords [a,b]. Characters include numbers, lowercase and uppercase letters, and symbols [a]. These rules help create hard-to-guess passwords, which help to secure your network. Potential Assessment Considerations · Is a degree of complexity specified for passwords, (e.g., are account passwords a minimum of 12 characters and a mix of upper/lower case, numbers, and special characters), including minimum requirements for each type [a,b,c]? · Is a change of characters required when new passwords are created [d]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.5.7

DoD is proposing to add a new DFARS contract clause that allows for an expedited contract closeout agreement between the contractor and the Government that will save administrative costs for both the

contractor and the Government. The clause will be used when the contracting officer intends to expedite the contract closeout process by having the contractor and the Government waive entitlement to any residual dollar amounts up to \$1,000 at the time of final contract closeout. The objective of the rule is to reduce the amount of time and money expended on reconciling small dollar residual dollar amounts in order to close out contracts.

II. Discussion and Analysis The proposed DFARS clause 252.204-70XX, Expediting Contract Closeout, provides an agreement by the Government and contractor to waive any entitlement that otherwise might accrue to either party in any amount of \$1,000 or less at the time of final contract closeout. The new clause will be prescribed at DFARS 204.804-70 for use in solicitations and contracts, including those under FAR part 12 procedures for acquisition of commercial items, when the contracting officer intends to expedite contract closeout through such a waiver.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold and for Commercial Items, Including Commercially Available Off-the-Shelf Items This rule proposes to create a new clause DFARS 252.204-70XX, Expediting Contract Closeout. DoD plans to apply this clause to solicitations and contracts for the acquisition of commercial items, including commercially available off-the-shelf items, and to acquisitions valued at or below the simplified (printed page 19720) acquisition threshold. These categories of acquisitions are those most likely to benefit from expedited contract closeout.

IV. Executive Orders 12866 and 13563 Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, or reducing costs, or harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866 , Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804 .

V. Executive Order 13771 This rule is not expected to be subject to E.O. 13771 , because this rule is not a significant regulatory action.

VI. Regulatory Flexibility Act DoD does not expect this proposed rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601 , et seq. An initial regulatory flexibility analysis (IRFA) has been performed and is summarized as follows:

(9) SP 800-171 revision 2, Protecting Controlled Unclassified Information in Nonfederal Systems and Organizations, published February 2020 (includes updates as of January 28, 2021); IBR approved for §§ 170.4(b); 170.14(a), (b), and (c). (10) SP 800-171A, Assessing Security Requirements for Controlled Unclassified Information, published June 2018; IBR approved for §§ 170.11(a), 170.14(d), 170.15(c), 170.16(c), 170.17(c). (11) SP 800-172, Enhanced Security Requirements for Protecting Controlled Unclassified Information: A Supplement to NIST Special Publication 800-171, published February 2021; IBR approved for §§ 170.5(a) and 170.14(a) and (c). (12) SP 800-172A, Assessing Enhanced Security Requirements for Controlled Unclassified Information, published March 2022; IBR approved for §§ 170.4(b), 170.14(d), and 170.18(c).

(1) ISO/IEC 17011:2017, Conformity assessment-Requirements for accreditation bodies accrediting conformity assessment bodies, published 2017; IBR approved for §§ 170.8(b) and 170.98(b). (2) ISO/IEC 17020:2012, Conformity assessment-Requirements for the operation of various types of bodies performing inspection, published 2012; IBR approved for §§ 170.8(a) and (b) and 170.9(a) and (b). (3) ISO/IEC 17024:2012, Conformity assessment-General requirements for bodies operating certification of persons, published 2012; IBR approved for §§ 170.8(b) and 170.10(a) and (b). Note to § 170.2(c): The American National Standards Institute (ANSI) IBR Portal provides access to standards that have been incorporated by reference in the U.S. Code of Federal Regulations at <https://ibr.ansi.org> . These standards incorporated by the U.S. government in rulemakings are offered at no cost in read only format and are presented for online reading. There are no print or download options. All users will be required to install the FileOpen plug-in and accept an online end user license agreement prior to accessing any standards.

§ 170.3 Applicability. (a) The requirements of this part apply to: (1) All DoD contract and subcontract awardees that will process, store, or transmit information that meets the standards for FCI or CUI on contractor information systems; and, (2) Private-sector businesses or other entities comprising the CMMC Assessment and Certification Ecosystem, as

specified in subpart C of this part.

From the NIST SP 800-172 Rev 3 Final Public Draft: 9 Nonfederal organizations that collect or maintain information on behalf of a federal agency or that use or operate a system on behalf of an agency must comply with the requirements in FISMA [11]. The enhanced security requirements address the protection of CUI by promoting penetration-resistant architecture, damage-limiting operations, and cyber resiliency.¹⁰ 10 Protecting the integrity and availability of the means used to achieve confidentiality protection is within the scope of this publication. While outside of the explicit purpose of this publication, the APT may seek to harm organizations, individuals, or the Nation by compromising the integrity and availability of CUI upon which mission and business functions depend, such as software that is categorized as CUI. The securi

Cryptographic Standards Data Encryption Validation Tests Message Authentication Code (MAC) Validation System Key Management Validation System (KMVS) . General Section 6 contains information regarding validated products for FIPS PUB 46-1, Data Encryption Standard (DES), FIPS PUB 113, Computer Data Authentication (Implements Message Authentication Code, ANSI X9.9), and FIPS PUB 171, Key Management Using ANSI X9.17. Product: Microsoft* Wndows NT· POSIX Subsystem Version 3.5.1 PCD: Microsoft* Wndows NT· POSIX Subsystem POSIX Conformance

Disclosure of records in the system could reveal the identity of confidential sources and result in an unwarranted invasion of the privacy of others. Disclosure may also reveal information relating to actual or potential criminal investigations. Disclosure of classified national security information would cause damage to the national security of the United States. Disclosure could also interfere with a civil or administrative action or investigation; reveal the identity of confidential sources incident to Federal employment, military service, contract, and security clearance determinations; and reveal the confidentiality and integrity of Federal testing materials and evaluation materials used for military promotions when furnished by a confidential source. (D) Subsection (d)(2). Amendment of the records could interfere with ongoing criminal or civil law enforcement proceedings and impose an impossible administrative burden by requiring investigations to be continuously reinvestigated. (E) Subsections (d)(3) and (4). These subsections are inapplicable to the extent exemption is claimed from subsections (d)(1) and (2). (F) Subsection (e)(1). It is often impossible to determine in advance if investigatory records contained in this system are accurate, relevant, timely and complete, but, in the interests of (printed page 14735) effective law enforcement and counterintelligence, it is necessary to retain this information to aid in establishing patterns of activity and provide investigative leads. (G) Subsection (e)(2). To collect information from the subject individual could serve notice that he or she is the subject of a criminal investigation and thereby present a serious impediment to such investigations. (H) Subsection (e)(3). To inform individuals as required by this subsection could reveal the existence of a criminal investigation and compromise investigative efforts. (I) Subsection (e)(4)(G), (H), and (I). These subsections are inapplicable to the extent exemption is claimed from subsections (d)(1) and (2). (J) Subsection (e)(5). It is often impossible to determine in advance if investigatory records contained in this system are accurate, relevant, timely and complete, but, in the interests of effective law enforcement, it is necessary to retain this information to aid in establishing patterns of activity and provide investigative leads. (K) Subsection (e)(8). To serve notice could give persons sufficient warning to evade investigative efforts. (L) Subsection (g). This subsection is inapplicable to the extent that the system is exempt from other specific subsections of the Privacy Act. (iv) Exempt records from other systems.

(E) The fee provisions of E.O. 12600 apply when requesters ask for information about themselves under the Privacy Act of 1974. In these cases, the only assessable processing fees are for duplication. Components are reminded in these cases requesters may also be eligible for a waiver or reduction of fees if the fee waiver criteria are met. (3) To be as responsive as possible to FOIA requests while minimizing unwarranted costs to the taxpayer, the Components shall adhere to the following procedures: (i) Analyze each request to determine the category of the requester. If the Component determination regarding the category of the requester is different than that claimed by the requester, the Component shall: (A) Notify the requester to provide additional justification to warrant the category claimed, and that a search for responsive records will not be initiated until agreement has been attained relative to the category of the requester. Absent further category justification from the requester, and within a reasonable period of time (e.g., 30 calendar days), the Component shall render a final category determination and notify the requester of such determination, to include normal administrative appeal rights of the determination. (B) Advise the requester, notwithstanding any appeal, a search for responsive records will not be initiated until the requester indicates a willingness to pay assessable costs appropriate for the category determined by the Component. (ii) If these conditions are not met the request need not be processed and the requester shall be so informed. (iii) The Components must be prepared to provide an estimate of assessable fees if desired by the requester. While it is recognized that search situations will vary among Components, and that an estimate is often difficult to obtain prior to an actual search, requesters who desire estimates are entitled to such before committing to a willingness to pay. If Components' actual costs exceed the amount of the estimate or the amount agreed to by the requester, the amount in excess of the estimate or the requester's agreed amount shall not be charged without the requester's agreement. Even though Components do not need to advise requesters of their appeal rights when provided fee estimates, such estimates may be appealed and litigated by the requester. (iv) No DoD Component may require advance payment of any fee; i.e., payment before work starts or continued on a request, unless either of the following conditions are met: (A) The requester has a history of failing to pay fees in a timely fashion (within 30 days of the billing date) on a previous request (B) The Component determines that the fee will exceed \$250.00.

- Adaptable configurations : allowing for quick and secure changing of configurations within a security zone to support flexible manufacturing requirements. - Increased network resiliency : helping to provide and maintain an acceptable level of service availability in the face of misconfiguration and faults. Security zone-based architecture provides a standardized way of designing a scalable and consistent security architecture. It offers increased network resiliency, meaning it helps keep communications working in the face of misconfiguration and faults. Security segmentation can help mitigate the vulnerabilities listed above and should be part of a comprehensive cybersecurity plan.

Three commenters asked about sustainment of CMMC certification during the three-year certificate validity period. They wanted to know how sustainment will be monitored and whether demonstrating continuous monitoring capabilities would be considered in lieu of a strict three-year recertification period. There were also questions about what the criteria or triggers would be that would lead to a loss of accreditation during this period, including what happens when a company with a certification is acquired by another company, and whether contractors are required to notify the DoD if systems fall out of compliance with CMMC requirements. Response: The validity period is one (1) year for CMMC Level 1 and three (3) years for CMMC Levels 2 and 3. Contractors must continue to meet CMMC requirements during the period of performance of the contract. Under CMMC, contractors must submit affirmations into SPRS for each assessment, attesting that they have met the CMMC requirements and will maintain the applicable information systems at the required CMMC level as specified in § 170.22. Monitoring contractor compliance with the terms of the contract is the responsibility of the contractor, with the government contracting officer. DoD is not utilizing a continuous monitoring capability in lieu of compliance requirements. DoD understands that information systems operating in a CMMC Assessment Scope will require upgrades and maintenance. For systems certified at CMMC Level 2 or above, a plan for addressing deficiencies is defined in § 170.21. It is possible for an organization to need a new assessment during the validity period. CMMC self-assessments and certifications are valid for a defined CMMC Assessment Scope. If the CMMC Assessment Scope changes due to infrastructure modifications or expansion of the CMMC Assessment Scope due to new acquisition, a new assessment may be required. The original CMMC certification remains valid for the original CMMC Assessment Scope. The information system(s) in the new CMMC Assessment Scope may not be used to process, store, or transmit CUI for any contract until it is validated via a new CMMC assessment. The same applies to the annual affirmations. During the annual affirmation process, a senior organization official affirms that the organization is satisfying and will maintain the requirements of the specified CMMC level (e.g., CMMC Level 2 Self-Assessment). The affirmation applies to the CMMC Assessment Scope. At the time of a new self-assessment or certification, a new affirmation is submitted into SPRS affirming that the organization meets the CMMC requirements and will maintain the applicable information system (within the CMMC Assessment Scope) at the required CMMC level. For CMMC Levels 2 and 3, an affirmation is required to be submitted in SPRS annually for the duration of the triennial validity period and at the conclusion of any POA&M closeout assessments. Affirmation requirements are set forth in § 170.22.

State Medicaid agencies), would be required to: conduct a Security Rule compliance audit; report to covered entities or business associates, as applicable, upon activation of their contingency plan; deploy multi-factor authentication (MFA) in and penetration testing of relevant electronic information systems; complete network segmentation; disable unused ports and remove extraneous software; update cybersecurity policies and procedures; revise business associate agreements; and update workforce training. Business associates would be required to conduct an analysis and provide verification of their compliance with technical safeguards and covered entities would be required to obtain verification from business associates (and business associates from their subcontractors). Additionally, group health plans would need to revise plan documents to require plan sponsors to comply with administrative, physical, and technical safeguards according to the Security Rule standards. Finally, through contractual language, health plan sponsors would need to enhance safeguards for electronic protected health information (ePHI) according to the Security Rule standards. Costs for all regulated entities to change their policies and procedures alone would increase costs above the UMRA threshold in one year, and costs of health plan sponsors would increase total costs further. Although Medicaid makes Federal matching funds available for States for certain administrative costs, these are limited to costs specific to operating the Medicaid program. There are no Federal funds directed at Health Insurance Portability and Accountability Act of 1996 (HIPAA) compliance activities. The Department believes that pursuant to Subtitle E of the Small Business Regulatory Enforcement (printed page 993) Fairness Act of 1996, [938] the Office of Management and Budget's (OMB's) Office of Information and Regulatory Affairs would be likely to determine that when finalized, this rule meets the criteria set forth in 5 U.S.C. 804(2) because it is projected to have an annualized effect on the economy of more than \$100,000,000. The Justification for this Rulemaking and Summary of Proposed Rule Provisions section at the beginning of this preamble contain a summary of this rule and describe the reasons it is needed. We present a detailed analysis below. 1. Summary of Costs and Benefits

During Fiscal Year 2019 (FY 2019), from October 1, 2018 through September 30, 2019, the NIST

Information Technology Laboratory (ITL) Cybersecurity and Privacy Program successfully responded to numerous challenges and opportunities in security and privacy. This annual report highlights the FY 2019 research agenda and activities for the ITL Cybersecurity and Privacy Program, including: the ongoing participation and development of international standards; the enhancement of privacy and security risk management models, including those for the protection of controlled unclassified information (CUI), systems engineering and cyber resiliency, supply chains, and mobile technologies; the continued advancement of cryptographic technologies, including updates to Federal Information Processing Standard (FIPS) Publication 140-3, Security Requirements for Cryptographic Modules, and preparation for post-quantum cryptographic methods; and improved infrastructure protection in areas such as zero trust architectures and advanced networking security. NIST maintained a strong focus on supporting small and medium-sized businesses (SMBs), including updates to the Small Business Cybersecurity Corner website to make resources easier to find and use, and drawing on contributed cybersecurity resources and feedback received from federal partners and the public. - ISO JTC 1/SC 41, IoT architecture and vocabulary, IoT Interoperability, and IoT Applications; - ISO JTC 1/SC 27, IoT aspects of Security and Privacy; and - IETF, Software Updates for Internet of Things Security Area. Notable achievements during FY 2019 included updates to several NIST endeavors that are described below.

1. the results of a self-assessment of the OSA's implementation of the NIST SP 800-171 Rev 2 requirements set forth in 32 CFR 170.16 associated with the covered contractor information system(s) used in performance of the applicable contract. 2. an initial affirmation of compliance, and, if applicable, a POA&M closeout affirmation, and then annually thereafter, an affirmation of continued compliance set forth in 32 CFR 170.22 . 3. the Level 2 Self-Assessment cost burden will be addressed as part of the 48 CFR acquisition rule. CMMC Level 2-Certification Assessment CMMC Level 2 Certification requires compliance with the security requirements set forth in 32 CFR 170.17 to protect CUI. CMMC Level 2 does not add any additional security requirements to those identified in NIST SP 800-171 Rev 2. A CMMC Level 2 Certification Assessment of the applicable contractor information system(s) provided by an authorized or accredited C3PAO is required to validate implementation of the NIST SP 800-171 Rev 2 security requirements prior to award of any prime contract or subcontract and exercise of option. The C3PAO will upload the CMMC Level 2 results in eMASS which will feed the information into SPRS. OSCs will submit in SPRS an initial affirmation of compliance, and, if necessary, a POA&M closeout affirmation, and then annually thereafter, an affirmation of continued compliance as set forth in 32 CFR 170.22 . The Level 2 Certification Assessment cost burdens are included in this part with the exception of the requirement for the OSC to upload the affirmation in SPRS that is included in the Title 48 acquisition rule and an update to DFARS collection approved under OMB Control Number 0750-0004, Assessing Contractor Implementation of Cybersecurity Requirements. Additionally, the information collection reporting requirements for the CMMC instantiation of eMASS are included in a separate ICR for this part and cover only those requirements pertaining to the CMMC process. CMMC Level 3-Certification Assessment CMMC Level 3 Certification Assessment requires a CMMC Level 2 Final Certification Assessment and compliance with the security requirements set forth in 32 CFR 170.18 to protect CUI. CMMC Level 3 adds additional security requirements to those required by existing acquisition regulations as specified in this rule. A CMMC Level 3 Certification Assessment of the applicable contractor information system(s) provided by the DCMA Defense Industrial Base Cybersecurity Assessment Center (DIBCAC) is required to validate implementation of the DoD-defined selected security requirements set forth in NIST SP 800-172. A CMMC Level 2 Final Certification is a prerequisite to schedule a DIBCAC assessment for CMMC Level 3. DCMA DIBCAC will upload the CMMC Level 3 results into the CMMC instantiation of eMASS, which will feed the information into SPRS.

result in clients electing to use their own tools and products in lieu of the managed service provider. This commenter attached a list of more than a dozen commercial product and tools they use as examples associated with this concern. One commenter used their public comment submission to submit materials marketing services their company can provide, while another commenter suggested the rule direct readers to a website listing all software, tools, and applications deemed safe and cost effective by virtue of CMMC assessment. Another commenter asserted that all companies need access to cybersecurity solutions from DHS/CISA and grants to assist them in buying Zero Trust technologies to protect CUI. Similarly, some commenters recommended various other cybersecurity tools, programs, or technologies that could be used to meet CMMC security requirement and provide threat intelligence to DIB companies. Such recommendations included portals used in conjunction with perimeter and privileged access management systems. One commenter proposed delaying implementation of the CMMC

rule until all DoD contractors' system architectures could be analyzed for possible implementation of Virtual Machines, or Blockchain for secure data transmission, or hosting of all CUI on DoD hosted platforms. Response: The government cannot comment on specific products or vendors, including marketing materials submitted via public comment. However, companies that act as ESPs should note this rule does not require CMMC assessment or certification of ESPs that do not process, store, or transmit CUI. Services provided by an ESP are in the OSA's assessment scope. Comments pertaining to solutions available from other Federal agencies or expressing a desire for grants to obtain Zero Trust solutions or other cybersecurity solutions are also beyond the scope of the CMMC rule. A wide range of technologies may be used to implement CMMC requirements. DoD will not comment on specific OSA technology choices. The Department declines the recommendation to review the system architectures of all DoD contractors. The DoD did not modify the rule to identify a repository of ·safe and cost effective· software, applications, and tools because a CMMC assessment does not evaluate commercial products or services for those characteristics and the government does not provide product endorsements. 10. Applicability a. Systems Operated on Behalf of DoD and National Security Systems Comment:

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Health and Human Services Food and Drug Administration [Docket No. FDA-2012-N-0911] AGENCY: Food and Drug Administration, HHS. ACTION: Notice of a new system of records. SUMMARY: In accordance with the requirements of the Privacy Act of 1974 and the Food and Drug Administration's (FDA) regulations for the protection of privacy, FDA is publishing notice of a Privacy Act system of records entitled, ·FDA User Fee System, HHS/FDA,· System Number 09-10-0021. FDA utilizes the User Fee System (UFS) to collect fees pursuant to Federal law and FDA's implementing regulations. The records kept in this system relate to fees assessed under the Freedom of Information Act (FOIA), the Prescription Drug User Fee Act, the Medical Device User Fee and Modernization Act, the Animal Drug User Fee Act, the Animal Generic Drug User Fee Act, the Mammography Quality Standards Act, the Family Smoking Prevention and Tobacco Control Act, the Food Safety Modernization Act, the Biosimilar User Fee Act, the Generic Drug User Fee Act, and other fees assessed by FDA under its Federal Food, Drug and Cosmetic Act authority such as color additive certification fees and export certificate fees. For purposes of this notice, these fees are collectively referred to as user fees. DATES: Effective Date: The new system of records will be effective on November 14, 2012, with the exception of the routine uses. The routine uses will become effective on December 31, 2012. Submit either electronic or written comments by December 31, 2012. ADDRESSES: You may submit comments, identified by Docket No. FDA-2012-N-0911, by any of the following methods: Electronic Submissions Submit electronic comments in the following way: Federal eRulemaking Portal: <http://www.regulations.gov> . Follow the instructions for submitting comments. Written Submissions Submit written submissions in the following ways: Fax: 301-827-6870. Mail/Hand delivery/Courier (for paper or CD-ROM submissions): Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. Instructions: All submissions received must include the Agency name and Docket No. FDA-2012-N-0911 for this notice. All comments received may be posted without change to <http://www.regulations.gov> , including any personal information provided. For additional information on submitting comments, see the ·Comments· heading of the SUPPLEMENTARY INFORMATION section of this document. Docket:

(f) If you are a transporter or nontransporter retaining records on behalf of a transporter, you must retain for 6 months after the dates you receive and release the food all required records for any food having a significant risk of spoilage, loss of value, or loss of palatability within 60 days after the date the transporter receives or releases the food. If you are a transporter, or nontransporter retaining records on behalf of a transporter, you must retain for 1 year after the dates you receive and release the food, all required records for any food for which a significant risk of spoilage, loss of value, or loss of palatability occurs only after a minimum of 60 days after the date the transporter receives or releases the food. (g) You must retain all records at the establishment where the covered activities described in the records occurred (onsite) or at a reasonably accessible location. (h) The maintenance of electronic records is acceptable. Electronic records are considered to be onsite if they are accessible from an onsite location. §1.361 What

are the record availability requirements? When FDA has a reasonable belief that an article of food is adulterated and presents a threat of serious adverse health consequences or death to humans or animals, any records and other information accessible to FDA under section 414 or 704(a) of the act (21 U.S.C. 350c and 374(a)) must be made readily available for inspection and photocopying or other means of reproduction. Such records and other information must be made available as soon as possible, not to exceed 24 hours from the time of receipt of the official request, from an officer or employee duly designated by the Secretary of Health and Human Services who presents appropriate credentials and a written notice. §1.362 What records are excluded from this subpart? The establishment and maintenance of records as required by this subpart does not extend to recipes for food as defined in §1.328; financial data, pricing data, personnel data, research data, or sales data (other than shipment data regarding sales). (printed page 71655) §1.363 What are the consequences of failing to establish or maintain records or make them available to FDA as required by this subpart? (a) The failure to establish or maintain records as required by section 414(b) of the act and this regulation or the refusal to permit access to or verification or copying of any such required record is a prohibited act under section 301 of the act. (b) The failure of a nontransporter immediate previous source or a nontransporter immediate subsequent recipient who enters an agreement under §1.352(c) to establish, maintain, or establish and maintain, records required under §1.352(a) or (b), or the refusal to permit access to or verification or copying of any such required record, is a prohibited act under section 301 of the act.

(Comment 150) Several comments state that the Bioterrorism Act only provides authority to access and copy records for the purpose of determining whether a food believed to be adulterated is actually so and for conducting a tracing investigation in regard to such an adulterated food. Comments express concern over possible unlawful conduct and abuse of discretion by FDA field inspectors and other officials. They urge FDA to clearly define legal violations concerning recordkeeping and record access requirements so corporate officers can make responsible decisions. They also urge FDA to integrate the constitutionally required safeguards into the regulations. Comments recommend that FDA establish procedural safeguards to protect manufacturers and their customers by providing the affected company with a reasonable written notice that explains how the 'reasonable belief' standard is being met and identifies the type of records being requested. According to comments, this would inform the affected company which records are being sought and the legal basis for the request. Several comments also request that FDA develop procedures requiring that the written notice be examined and approved by the District Director in whose district the implicated food is located, or by any FDA official senior to such District Director. They urge FDA to develop guidelines to define 'reasonable belief' and base a decision to access records on laboratory analyses confirming adulteration and/or on an affidavit sworn under penalty of perjury. Other comments state that FDA should issue interim final regulations with an opportunity for comment on the procedural protections that will be utilized to implement the record maintenance and inspection provisions of the Bioterrorism Act. Specifically, the comments state that the regulations should at least delineate agency procedures for authorizing the review, those officials who are permitted to review the documents, the standard for when such review may occur, an appellate procedure for those who disagree with the agency's determination, and the reasonable times, limits and circumstances to which the Bioterrorism Act limits FDA's review, as well as the procedures FDA must implement to prevent the unauthorized disclosure of any trade secret or confidential information that is obtained by FDA under the Bioterrorism Act. Others urge FDA to incorporate these procedures into regulations and ask that the public be granted an additional 60 days to comment.

This draft special controls guidance document was developed to support the proposed classification of in vitro diagnostic devices for *Bacillus* spp. detection, a previously unclassified preamendments device, into class II (special controls). On March 7, 2002, the Microbiology Devices Panel (the Panel) recommended that in vitro diagnostic devices for *Bacillus* spp. detection be classified into class II. The Panel believed that class II with the special controls (guidance document and limitations on the distribution) would provide reasonable assurance of the safety and effectiveness of the device. After the panel meeting, FDA found three additional in vitro diagnostic devices for *Bacillus* spp. detection to be substantially equivalent to another device within that type. This device has the same intended use as its predicate device but makes use of newer nucleic acid amplification technology (NAAT). While NAAT detection devices exhibit technological differences from the preamendments *Bacillus* spp. detection devices, FDA has determined that they are as safe and effective as, and do not raise different questions of safety and effectiveness than, their predicates. (See section 513(i) of the Federal Food, Drug, and

Cosmetic Act (21 U.S.C. 360c(i)).) This draft guidance document identifies the proposed classification regulation and product code and issues of safety and effectiveness that require special controls. Elsewhere in this Federal Register , in its publication of the proposed classification regulation, FDA is including proposed distribution limitations as another special control. FDA believes that the special controls described in the draft guidance and the proposed regulation when combined with general controls will be sufficient to provide reasonable assurance of the safety and effectiveness of these devices. II. Significance of Special Controls Guidance Document FDA believes that adherence to the recommendations described in this guidance document, if finalized, in addition to general controls, and the special control in the proposed rule, if finalized, will provide reasonable assurance of the safety and effectiveness of in vitro diagnostic devices for *Bacillus* spp. detection classified under § 866.3045 (21 CFR 866.3045). If classified as a class II device under § 866.3045, an in vitro diagnostic device for *Bacillus* spp. detection will need to comply with the requirement for special controls; manufacturers will need to address the issues requiring special controls as identified in the guidance document or by some other means that provides equivalent assurances of safety and effectiveness as well as comply with any additional controls specified in the classification regulation itself. III. Electronic Access Persons interested in obtaining a copy of the draft guidance may do so by using the Internet. A search capability for all CDRH guidance documents is available at <http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/default.htm> .

Twenty-two comments requested the government provide more guidance, preferably within RFPs or contracts, to better identify what will be considered CUI for that contract, and how it should be appropriately marked. One comment specifically noted a need for contractual instructions on whether data created in performance of a contract rises to the level of CUI. Another person asked when is does information created or possessed by a contractor become CUI. One comment asked whether digital or physical items derived from CUI are treated as CUI while another asked what specific information qualifies as CUI for OT and IoT assets. Another comment asked whether FCI and or CUI created or provided under a non-DoD agency contract, but which is also used in support of a DoD contract, would be subject to the applicable CMMC level requirement. Another comment noted that DoD focuses too narrowly on data security aspects of major system acquisition and largely fails to address securing data generated by operational and/or maintenance operations, such as invoices and bills of lading for operational support purchases. One comment stated there was a need for CUI policy guidance for the entire Federal Government. Another comment inferred, incorrectly, that the CMMC Accreditation Body makes determinations about what is and what is not CUI and stated that the Government should make those determinations. Another comment stated that to better address the needs of contractors tasked with safeguarding (printed page 83104) CUI, NARA should initiate a public comment period to reevaluate its CUI Registry. The comment also noted that NARA should identify when a CUI designation automatically applies to contractor-created information and revise the CUI Registry to stipulate that a specific basis in statute (or a contract) is required for information to be considered CUI. Another comment recommended a study be conducted on protections for systems and data at Confidential and higher classification levels and should assess whether NARA's CUI protection requirements (32 CFR part 2002) have yielded any real benefits in protecting critical data. Another comment stated that the CUI program is a costly proposition whose security value is questionable given data can still be compromised, even over systems with a CMMC assessment. The comment stated that if data is to be controlled for Critical Items, then the existing system used for CONFIDENTIAL information should suffice. Finally, another comment suggested that CUI information should be under the control of the Federal Government and access granted only to appropriately trained, and qualified contractors through a portal. Response: Neither the CUI program (established in E.O. 13556) nor the safeguarding requirements codified in its implementing directives are changed by virtue of the compliance assessment framework established by this rule.

(1) The list shall be considered Government data. At a minimum, the list shall include-

- (i) The identification and description of any controllers, relays, sensors, pumps, actuators, Open Platform Communications Unified Architecture devices, and other industrial control system devices; including, when available, the manufacturer, part number, software version, communication protocols, and all static IP addresses assigned to the different hardware components used in performance of the contract;
- (ii) An explanation of whether the device is password protected and, if so, whether the password can be changed from the default password provided by the manufacturer;
- (iii) An explanation of whether the device is accessible remotely (e.g., through internet or another network connection);
- (iv) Location information in enough detail to affirmatively locate the

operational technology equipment, if necessary; and (v) Whether multi-factor authentication is present and enabled. (2) The Contractor shall update the list to track any movement of the equipment during contract performance, as software or firmware updates are applied, when equipment is removed or taken out of service; or when equipment is added or placed into service. (3) Upon request by the Contracting Officer, the Contractor shall provide the Government a copy of the current and/or historical list(s). (l) Binding Operational Directives and Emergency Directives. (1) Except as identified in paragraph (l)(2) of this clause, the Contractor shall comply with the Binding Operational Directives (BODs) and Emergency Directives (EDs) issued by CISA and having a specific applicability to a FIS used or operated by a contractor. The list of BODs and EDs can be found at <https://www.cisa.gov/-directives>. (2) The following BODs and EDs that have a specific applicability to a FIS used or operated by a contractor will not apply to this contract: _____. [Contracting Officer to list any BODs or EDs not applicable to the contract, as specified by the requiring activity] (3) BODs and EDs with specific applicability to a FIS used or operated by a contractor that are issued after the date of award will be applied to this contract, at the Contracting Officer's discretion, through appropriate modification of the contract. (m) Indemnity for potential or actual loss or damage of Government data.

printed page 23533) a. The clause at DFARS 252.204-7012, Safeguarding Covered Defense Information and Cyber Incident Reporting, covers cyber incident reporting requirements for incidents that affect a covered contractor information system or the covered defense information residing therein, or that affects the contractor's ability to perform the requirements of the contract that are designated as operationally critical support and identified in the contract. b. DFARS provision 252.204-7008, Compliance with Safeguarding Covered Defense Information Controls, requires an offeror that proposes to vary from any of the security controls of National Institute of Standards and Technology (NIST) Special Publication (SP) 800-171 in effect at the time the solicitation is issued to submit to the contracting officer a written explanation of how the specified security control is not applicable or an alternative control or protective measure is used to achieve equivalent protection. c. DFARS provision 252.239-7009, Representation of Use of Cloud Computing, requires contractors to report that they ~~anticipate~~ or ~~do not anticipate~~ utilizing cloud computing service in performance of the resultant contract. The representation will notify contracting officers of the applicability of the cloud computing requirements at DFARS clause 252.239-7010 of the contract. d. DFARS clause 252.239-7010, Cloud Computing Services, requires reporting of cyber incidents that occur when DoD is purchasing cloud computing services. These DFARS provisions and clauses facilitate mandatory cyber incident reporting requirements in accordance with statutory regulations. When reports are submitted, DoD will analyze the reported information for cyber threats and vulnerabilities in order to develop response measures as well as improve U.S. Government understanding of advanced cyber threat activity. In addition, the security requirements in NIST SP 800-171 are specifically tailored for use in protecting sensitive information residing in contractor information systems and generally reduce the burden placed on contractors by eliminating Federal-centric processes and requirements. The information provided will inform the Department in assessing the overall risk to DoD covered defense information on unclassified contractor systems and networks. Affected Public: Businesses or other for-profit and not-for-profit institutions. Respondent's Obligation: Required to obtain or retain benefits. Number of Respondents: 2,017. Responses per Respondent: Approximately 17.35. Annual Responses: 34,974. Average Burden per Response: .29 hours. Annual Burden Hours: 10,071. Frequency: On occasion. Jennifer Lee Hawes, Regulatory Control Officer, Defense Acquisition Regulations System. [FR Doc. 2019-10459 Filed 5-21-19; 8:45 am] BILLING CODE 5001-06-P

There may be references in this publication to other publications currently under development by NIST in accordance with its assigned statutory responsibilities. The information in this publication, including concepts and methodologies, may be used by federal agencies even before the completion of such companion publications. Thus, until each publication is completed, current requirements, guidelines, and procedures, where they exist, remain operative. For planning and transition purposes, federal agencies may wish to closely follow the development of these new publications by NIST. The cybersecurity workforce shortfall is well documented. According to CyberSeek.org 1, there were 313 735 open cybersecurity-related positions from September 2017 through August 2018. The 2017 Global Information Security Workforce Study states that 1.8 million more cybersecurity professionals will be needed to accommodate the predicted global shortfall by 2022 [1]. The National Initiative for Cybersecurity Education (NICE) is addressing this critical issue by energizing and promoting a robust network and ecosystem of cybersecurity education, training, and workforce development. Supporting this mission, objective 3.3 of the NICE Strategic

Plan emphasizes guiding career development and workforce planning by facilitating state and regional consortia to identify cybersecurity pathways addressing local workforce needs [2]. - Industry Day - invite employers to learn more about the region's cybersecurity education initiatives, learn how to 'plug in' and assist, and network with area faculty and administrators. - Exhibit Booth - seek out industry stakeholders at established events or conferences to find a champion of the company and encourage employers to provide experiential learning if they want to hire experienced candidates.

One respondent stated that when DoD issued the proposed rule under DFARS case 2017-D019, DoD explained that the proposed rule would relieve the administrative burden on contractors by deleting the current regulations relating to performance-based payments at DFARS subpart 232.10 and the associated clauses at DFARS 252.232-7012 and 252.232-7013. This respondent recommended that DoD should repeal in their entirety the current DFARS regulations related to PBPs and the associated clauses, and any associated Procedures, Guidance, and Information (PGI), because existing FAR regulations are sufficient. Response: It is the intent of this rule to implement section 831 of the NDAA for FY 2017. The prior DFARS Case 2017-D019 presented a cohesive approach to contract financing, in order to increase DoD's business effectiveness and efficiency as well as to provide an opportunity for both small and other than small entities to qualify for increased customary progress payment rates and maximum performance-based payment rates, based on whether the offeror/contractor has met certain performance criteria. The provisions of that rule were interdependent upon each other, and DoD cannot segregate out specific aspects of that rule in the absence of the criteria that were intended to motivate performance. In response to the comment that DoD should repeal in their entirety the current DFARS regulations relating to performance-based payments, DoD does not consider this to be in the best interest of DoD or of contractors. DFARS coverage, as modified by this final rule, provides needed clarification and also provides flexibility with regard to security for performance-based payments. The following discussion will address more specific concerns about the proposed rule.

2. Make PBPs the Preferred Method of Contract Finance Many respondents stated that DoD should clearly establish PBPs as the default choice for contract financing.

a. Benefits of performance-based payments. Comment: Several respondents particularly emphasized the benefits of PBPs. These respondents stated that PBPs better align the interests of the Government and the contractors. According to these respondents, by effectively attributing the payments to the work performance, rather than just costs incurred, the Government receives tangible product deliverables and the (printed page 19683) contractor receives cash payment tied to performance, which encourages the timely execution of the contract. One respondent stated that PBPs may reduce costs for Government oversight and compliance, encourage nontraditional and small business entities to enter the Federal marketplace, and facilitate contractor financing and performance of contracts.

Response:

- for selecting the security controls necessary to satisfy the minimum security requirements. - SP 800-18 Guide for Developing Security Plans for Systems , describes the procedures for developing a system security plan, provides an overview of the security requirements of the system, and describes the controls in place or planned for meeting those requirements. - SP 800-30 Guide for Conducting Risk Assessments , provides guidance for conducting risk assessments of federal systems and organizations. - SP 800-34 Contingency Planning Guide for Federal Information Systems , assists organizations in understanding the purpose, process, and format of information system contingency plans (ISCPs) development with practical, real-world guidelines. - SP 800-37 Guide for Applying the Risk Management Framework to Systems: A Security Life Cycle Approach , provides guidelines for applying the Risk Management Framework to federal systems, including conducting the activities of security categorization, security control selection and implementation, security control assessment, system authorization, and security control monitoring. - SP 800-39 Managing Information Security Risk: Organization, Mission, and Information System View , provides guidelines to establish an integrated, organizationwide program for managing information security risk to organizational operations (e.g., mission, functions, image, and reputation), assets, individuals, other organizations, and the Nation resulting from the operation and use of federal systems. - SP 800-53 Security and Privacy Controls for Systems and Organizations , provides guidelines for selecting and specifying security controls for organizations and systems supporting the executive agencies of the Federal Government to meet the requirements of FIPS Publication 200.

The rule implements DoD statutory authorities and responsibilities to establish a program to protect DoD information and information systems, including information systems operated and maintained by contractors or others in support of DoD activities (see 10 U.S.C. 2224 ; and the Federal

Information Security Management Act (FISMA), codified at 44 U.S.C. 3541 et seq.). No change is made to the rule. Comment: Three comments asserted the rule should create an oversight and accountability structure that includes public, congressional, and executive branch reporting. One comment recommended using DHS oversight procedures as a model to ensure the program's compliance with regulations and relevant guidelines. Response: The DIB CS/IA program is subject to numerous procedures, (printed page 62432) requirements, and oversight to ensure compliance with DoD and national policies for collecting, handling, safeguarding, and sharing sensitive information with non-Government organizations in accordance with DoD Directive 5500.1, DoD Privacy Program and 5400.11-Regulation, Department of Defense Privacy Program, which proscribes uniform procedures for the DoD Privacy Program. For additional information regarding the Government's safeguarding of information received from the DIB companies, with specific focus on PII, see the Privacy Impact Assessment (PIA) for the DIB CS/IA Program (http://DoDcio.defense.gov/Portals/0/Documents/DIB%20CS-IA%20PIA_FINAL_signed_30jun2011_VMSS_GGMR_RC.pdf). In addition, DoD annually reports to Congress on the progress of DoD in defending the DoD and the Defense Industrial Base from cyber events. No additional oversight is warranted at this time. No change is made to the rule. Comment: One comment recommended distinguishing between classified and unclassified GFI, and that classified GFI should be handled per the NISPOM. Response: As stated in § 236.4(f) of the rule, GFI will be issued via both unclassified and classified means, and that handling and safeguarding of classified GFI shall be in compliance with the National Industrial Security Program Operating Manual (NISPOM) (DoD 5220.22-M). No change is made to the rule. Comment: One comment recommended not to apply sharing limitations under the rule to non-sensitive GFI. Response: As defined in the rule at § 236.2(j), Government Furnished Information (GFI) means information provided by the Government under the voluntary DIB CS/IA program, including but not limited to cyber threat information and information assurance practices. GFI is typically nonpublic information that is sensitive based either on the content of the information itself or the context in which the information is relevant (e.g., cyber threat information). Accordingly, the handling requirements applicable to GFI are designed to protect sensitive information. No change is made to the rule. Comment:

3.3.3 Perform Risk Assessment The Contractor shall collect the data required to support the risk assessment methodology and perform the risk assessment.

governs the applicability of laws to acquisitions at or below the SAT. Section 1905 generally limits the applicability of new laws when agencies are making acquisitions at or below the SAT, but provides that such acquisitions will not be exempt from a provision of law under certain circumstances, including when the FAR Council makes a written determination and finding that it would not be in the best interest of the Federal Government to exempt contracts and subcontracts in amounts not greater than the SAT from the provision of law. At the time of the final rule the FAR Council does not intend to make a determination to apply 15 U.S.C. 278g-3e to acquisitions at or below the SAT because paragraph (a)(2) of 15 U.S.C. 278g-3e expressly states that it applies to acquisitions in amounts not greater than the SAT; therefore, no additional determination is necessary under 41 U.S.C. 1905 . B. Applicability to Contracts for the Acquisition of Commercial Products and Commercial Services, Including Commercially Available Off-the-Shelf (COTS) Items 41 U.S.C. 1906 governs the applicability of laws to contracts for the acquisition of commercial products and commercial services, and is intended to limit the applicability of laws to contracts for the acquisition of commercial products and commercial services. Section 1906 provides that if the FAR Council makes a written determination that it is not in the best interest of the Federal Government to exempt commercial item contracts, the provision of law will apply to contracts for the acquisition of commercial products and commercial services. 41 U.S.C. 1907 states that acquisitions of COTS items will be exempt from certain provisions of law unless the Administrator for Federal Procurement Policy makes a written determination and finds that it would not be in the best interest of the Federal Government to exempt contracts for the procurement of COTS items. At the time of the final rule the FAR Council intends to make a determination to apply 15 U.S.C. 278g-3e to acquisitions for commercial products and commercial services. At the time of the final rule, the Administrator for Federal Procurement Policy intends to make a determination to apply 15 U.S.C. 278g-3e to acquisitions for COTS items. C. Determination(s) This rule applies to acquisitions for commercial products, including COTS items, and commercial services, because Government data and systems require protection regardless of dollar value or commerciality of the product or service. IV. Expected Impact of the Rule The Government anticipates that this rule will reduce administrative costs for contractors interested in providing services to develop, implement,

operate, or maintain a FIS. Over time, the FAR Council anticipates this proposed rule, once finalized, will increase competition by establishing a common set of policies and procedures that apply to FISs.

(Response) As discussed in response to comment 82 of this document, transporters are not required to establish and maintain the detailed information about a particular shipment of food that nontransporters are required to establish and maintain under §§ 1.1337 and 1.1345 of this final rule. The final rule provides five alternatives for interstate and intrastate transporters to meet their obligation to establish and maintain required records. (Comment 125) One comment notes that air transporters may have a record of the consignee (immediate subsequent recipient), but may not have a record of the truck transporter the consignee sent to pick up the freight. The comment believes that the consignee who arranged for the pickup should be responsible for the record, not the air transporter who released the shipment to the agent of the consignee. (Response) The final rule provides five alternatives for transporters to meet their obligation to establish and maintain records. Failure by the immediate previous source or immediate subsequent recipient who enters into an agreement under § 1.1352(e) of this final rule to keep such records is a prohibited act. The requirements for transporters in the final rule ensure that FDA has records identifying how a food traveled between a nontransporter supplier and nontransporter recipient when multiple transportation companies or multiple modes of transportation are used. FDA does not believe that the nontransporter will always have this information. For example, if a trucking company that picks up the food from a manufacturer in State A for delivery to a grocery store in State B subcontracts with an airline and subsequent trucking company to deliver the food to the grocery store, the manufacturer may have no knowledge that the food was transported on the airline and subsequent trucking company. Similarly, the grocery store is aware that the second trucking company delivered the food, but may not be aware that before that, the food was transported on an airline and a different trucking company. In the event that FDA has a reasonable belief that food is adulterated and presents a threat of serious adverse health consequences or death to humans or animals, such records could be critical to determining whether such adulteration occurred during transportation, and if so, during which leg. (Comment 126) One comment observes that the Bioterrorism Act does not mention "transporters" in providing the Secretary with record access. The comment concludes that Congress chose not to give the Secretary access to the records of transporters and asks why there is a recordkeeping requirement for those transporters. (Response) FDA disagrees with this comment's assertion that the statute does not provide FDA with access to transporters' records. Section 306 of the Bioterrorism Act amends section 704(a) of the FD&C Act, Factory Inspection, to read:

Enterprise Campus Network (red de las instalaciones de la empresa). Internal App Server (servidor de aplicaciones interno). Database (base de datos). Internet (Internet). Employees (empleados). Employee (empleado). Contractor Service Tech (técnico de servicio de contratistas). Contracted HVAC (contratación de climatización). Conference Center (centro de conferencias). Visitors (visitantes).

CMMC Acquisition rule, while one similar comment suggested that CMMC level 3 certification costs should be allowable when CMMC level 3 requirements are initially implemented. One comment addressed cyber incident reporting timelines for cloud service providers and recommended that the DoD's FedRAMP moderate equivalency policy be revised to align with DFARS clause 252.204-7012 timelines. Another asked whether the rule inadvertently omitted requirements to assess compliance with DFARS clause 252.204-7012 cyber incident requirements. Other commenters asked for the CMMC contract clause verbiage, as was subsequently published in the related 48 CFR part 204 CMMC Acquisition rule. For example, some people asked whether CMMC requirements would be levied in ID/IQ contract awards versus task order awards, and GSA schedules. They asserted that adding CMMC clauses in GSA schedules might inadvertently allow contracting officers to include them in non-DoD issued task orders. Another opined that ID/IQ contracting procedures might necessitate changing the CMMC level needed for the base contract after its initial award, based on the needs of a task order. One commenter incorrectly inferred that a single Program Manager would make the CMMC level and type determination for every task order issued against an ID/IQ. In addition, two comments suggested that the DoD communicate with every current DoD contractor to identify which CMMC level would apply to their existing contracts. One company identified their specific DoD contract and asked whether it would be cancelled absent CMMC compliance. Another asked whether a current DFARS clause 252.204-7020 self-assessment score could be submitted to meet a CMMC level 2 self-assessment requirement. They also recommended elimination of the DFARS clause 252.204-7020 requirements when CMMC is implemented. One commenter speculated about whether DoD's CMMC contract clauses can be applied to DoD contractors

that also make and sell the same product to other US Government agencies. They noted that export licenses do not restrict companies from providing product data to other parties and posited that this might conflict with CMMC requirements. One person asked about the potential for conflicts between CMMC clauses and the Berry amendment and suggested that Berry amendment compliance take precedence over CMMC clauses. Response: Some comments received lacked relevance to the rule's content, which is limited to specific CMMC program requirements. Changes to FAR and DFARS requirements are out of scope of the 32 CFR part 170 CMMC Program rule, as contractual changes would occur under the 48 CFR part 204 CMMC Acquisition rule. This rule does not discuss the Berry Amendment. The rule does not address recovery of assessment costs because it does not make any change to 48 CFR 31.201-2. This 32 CFR part 170

DCMA DIBCAC assessors are trained and qualified to conduct assessment against NIST SP 800-171 R2 for the DoD. DoD determined that C3PAOs conducting assessments on other C3PAOs introduced a significant conflict of interest. Given the sensitivity of the programs requiring Level 3 assessments, the DoD determined that those assessments must be completed by a DoD entity. The DoD declines to respond to speculative or editorial comments regarding DCMA DIBCAC assessments. The CMMC model (§170.14) only incorporates requirements from FAR clause 52.204-21, NIST SP 800-171 R2, and NIST SP 800-172 Feb2021. C3PAOs are only responsible for assessing the requirements of §170.17. DCMA DIBCAC operates under different authorities and can address all the requirements of DFARS clause 252.204-7012. d. Validity Period for Standards Acceptance Comment: Two comments asked how SPRS would be updated to reflect CMMC Level 2 certification when based on standards acceptance. One asked whether that update would be automatic. One comment asked whether CMMC standards acceptance for (printed page 83148) DIBCAC joint surveillance assessments would result in certifications being issued to the OSA by the C3PAO or by DIBCAC. Some comments, including those from three industry associations, objected to the start date for the 3-year validity of CMMC certification based on standards acceptance of prior DIBCAC assessments. Those comments requested the validity period begin with the effective date of the 32 CFR part 170 CMMC Program rule. Along these lines, another commenter asked whether C3PAOs may certify an OSA based on evidence of a perfect 110-scored DIBCAC High Assessment. One comment requested a 1-year extension of the validity period to 4 years. Response: The DoD has considered the recommendation to modify the validity period for certifications resulting from standards acceptance and declines to revise the rule text. It is important that contractors maintain security compliance for systems that process, store, or transmit DoD CUI. Given the evolving cybersecurity threat, DoD's best interests are served by ensuring that CMMC Level 2 assessments remain valid for no longer than a 3-year period, regardless of who performs the assessment. A C3PAO may not simply read the DIBCAC assessment score in SPRS and grant a completed CMMC Level 2 certification assessment. C3PAOs may only submit certification assessment results based on having conducted a certification assessment. An OSA is free to seek a C3PAO certification assessment, but this would be unnecessary, because a valid DIBCAC High assessment with a 110 score will automatically be converted in SPRS to reflect a CMMC Final Level 2 certification assessment provided all requirements of §170.20(a)(1) are met. A DIBCAC High assessment conducted after the rule is effective is not eligible for standards acceptance. 26. CMMC Requirements and International Entities a. Applicability to International Entities Comment:

Nonrecurring and recurring engineering costs: There are no nonrecurring or recurring engineering costs associated with CMMC Level 1 since it is assumed the contractor or subcontractor has already implemented the basic safeguarding requirements set forth in FAR 52.204-21, which are the CMMC Level 1 security requirements. Self-Assessment Costs and Initial Affirmation Costs: It is estimated that the cost to support a CMMC Level 1 assessment and affirmation is *\$5,977 (as summarized in Table 1) A Level I Self-Assessment is conducted annually, and is based on the assumptions detailed: Phase 1: Planning and preparing for the assessment: \$1,803 A director (MGMT5) for 4 hours (\$190.52/hr × 4hrs = \$762) An external service provider (ESP) for 4 hours (\$260.28 × 4hrs = \$1,041) Phase 2: Conducting the self-assessment: \$2,705 A director (MGMT5) for 6 hours (\$190.52/hr × 6hrs = \$1,143) An external service provider (ESP) for 6 hours (\$260.28 × 6hrs = \$1,562) Phase 3: Reporting of Assessment Results into SPRS: \$909 A director (MGMT5) for 2 hours (\$190.52/hr × 2hrs = \$381) An external service provider (ESP) for 2 hours (\$260.28/hr × 2hrs = \$521) A staff IT specialist (IT4-SB) for 0.08 hours [60] (\$86.24/hr × 0.08hrs = \$7) Affirmation: initial affirmation post assessment: \$560 Reaffirmations: It is estimated that the costs to reaffirm a CMMC Level I annually for a small entity is \$560 A director (MGMT5) for 2 hours (\$190.52/hr × 2hrs = \$381) A staff IT specialist (IT4-SB) for 2.08 hours (\$86.24/hr × 2.08hrs = \$179) The Level 1 Self-Assessment and Affirmations cost burden will be addressed as part of the 48 CFR acquisition rule.

Summary: The following is the annual small entities total cost summary for CMMC Level 1 self-assessments and affirmations over a ten-year period: (printed page 89108) (Example calculation, Year 1: *\$5,977 per entity × 699 entities (cumulative) = \$4,177,845). CMMC Level 2 Self-Assessment and Affirmation Costs for Small Business Entities The costs account for a CMMC Level 2 Self-Assessment of the applicable contractor information system(s) with NIST SP 800-171 Rev 2 requirements based on assumptions defined. Nonrecurring and recurring engineering costs: There are no nonrecurring or recurring engineering costs associated with a CMMC Level 2 Self-Assessment since it is assumed the contractor or subcontractor has implemented the NIST SP 800-171 Rev 2 security requirements. Assessment Costs and Initial Affirmation Costs: It is estimated that the cost to support a CMMC Level 2 self-assessment and affirmation for a small entity is *\$34,277. The three-year cost is \$37,196 (as summarized in 4.1.2, Table 2), which includes the triennial assessment + affirmation, plus two additional annual affirmations (\$34,277 + \$1,459 + \$1,459). Phase 1: Planning and preparing for the self-assessment: \$14,426 A director (MGMT5) for 32 hours (\$190.52/hr × 32hrs = \$6,097) An external service provider (ESP) for 32 hours (\$260.28/hr × 32hrs = \$8,329) Phase 2: Conducting the self-assessment: \$15,542

The Crypto Publication Review Board identifies standards and guidelines to be reviewed in order to reaffirm, update, revise, convert, or withdraw the standard or guideline. 1 As explained in NIST IR 8319 [55], the review process presents an opportunity to retrospectively examine the development of the standard or guideline under review with a focus on the technical properties that are likely to be much better understood in the years since the standard or guideline was finalized. This report will mainly focus on the technical merits, although it is important to also provide editorial comments to determine whether the standards or guidelines are correct, complete, consistent, and unambiguous. NIST IR 8319 discussed the scope of a review, which needs to be broad enough to capture possible issues with the standard or guideline but narrow enough to provide concrete recommendations within a reasonable amount of time. More specifically, reviews focus on the resources available on the NIST website related to the standard or guideline combined with academic publications and other publicly available resources to understand the security properties of a cryptographic algorithm or implementation. By analyzing how the resources available on the NIST website related to the standard or guideline are organized, the implicit and explicit guarantees and assumptions between different standards and guidelines can become apparent. The instantiation of the block cipher modes of operation requires an approved block cipher, such as AES; therefore, the report of the block cipher modes of operation can be based on technical assumptions that were evaluated in NIST IR 8319. For example, NIST IR 8319 explored whether the AES block cipher behaves as a 'pseudo-random permutation' (PRP), so that the block cipher modes of operation can rely on this assumption.

(A) A requirement to prepare a TP will be included in each arrangement that involves the international transfer of classified material as freight. The TP will: (1) Describe requirements for the secure shipment of the material from the point of origin to the ultimate destination. (2) Provide for security requirements in the event the transfer cannot be made promptly. (B) The U.S. and recipient government DGRs will be identified in the TP as well as any requirement for an escort. When there are to be repetitive shipments, a notice of classified consignment will be used. (ii) Government agency arrangements. Classified material to be furnished to a foreign government under such transactions normally will be shipped via government agency-arranged transportation and be transferred to the foreign government's DGR within the recipient government's territory. (A) The government agency that executes the arrangement is responsible, in coordination with the recipient foreign government, for preparing a TP. (B) When the point of origin is a U.S. contractor facility, the GCA will provide the contractor with a copy of the TP and the applicable letter of offer and acceptance. If a freight forwarder will be involved in processing the shipment, the GCA will provide a copy of the TP to the freight forwarder. (C) Commercial arrangements. (1) The contractor will prepare a TP in coordination with the receiving government. This requirement applies whether the material is moved by land, sea, or air, and applies to U.S. and foreign classified contracts. (2) After the CSA approves the TP, the CSA will forward it to the recipient foreign government security authorities for final coordination and approval. The CSA will notify the contractor upon the concurrence by the respective parties. (D) International carriers. The international transfer of classified material will be made using only ships, aircraft, or other carriers that: (1) Are owned or chartered by the USG or under U.S. registry; (printed page 83351) (2) Are owned or chartered by or under the registry of the recipient government; or (3) Are other than those described that are expressly authorized to perform this function in writing by the Designated Security Authority of the GCA and the security

authorities of the foreign government involved. This authority cannot be delegated and this exception may be authorized only when a carrier described in paragraph (d)(2)(iv)(A) or (d)(2)(iv)(B) in this section is not available and an urgent operational requirement dictates use of the exception. (E) Escorts. (1) The contractor must provide escorts for international shipments of SECRET or CONFIDENTIAL material by air. (2) Escorts must have an eligibility determination and access to classified information at the classification level of the material being shipped. (3

CMMC Program rule is not an acquisition regulation, however, a CMMC Conditional Certification meets the CMMC program certification requirements. Any comments related to contract requirements should be directed to the related 48 CFR part 204 CMMC Acquisition rule. CMMC requirements apply to contracts that include FAR clause 52.204-21 or DFARS clause 252.204-7012 and result in processing, storing, or transmitting of FCI or CUI on a contractor owned information system. The CMMC program is not a verification program for compliance with all requirements of DFARS clause 252.204-7012, rather, its purpose is to ensure compliance with FAR clause 52.204-21, NIST SP 800-171 R2, and NIST 800-172 Feb2021 when applicable. The DoD does not provide detailed instruction on how to implement specific solutions to meet security requirements identified in the FAR clause or applicable NIST requirements, which is determined by the OSA. Any deviation from or change to the DFARS clause 252.204-7012 clause is beyond the scope of this rule. Each of the teams responsible for developing these two CMMC rules has reviewed both documents. There are no CMMC requirements for reviewing FCI or CUI solicitation material. Recommendations to adopt standard contracting procedures for award of DoD contracts (i.e., to exclude CUI information in the basic award) are out the scope of this 32 CFR part 170 CMMC Program rule. In support of the 32 CFR part 170 CMMC Program final rule, DoD issued policy guidance to its program managers and acquisition workforce to identify the appropriate CMMC requirement in solicitations and contracts. The CMMC assessment level required does not change based on acquisition lifecycle phase and is based on whether FCI and CUI are processed, stored, or transmitted on contractor owned information systems used in the performance of a contract. Discussion of DoD's willingness to provide advance notice of CMMC requirements or to remove the PM's discretion to include the CMMC level that best suits program requirements is a 48 CFR part 204 CMMC Acquisition rule matter and outside the scope of this rule. The CMMC Level will be identified in the solicitation. Once attained, a CMMC self-assessment or certification can be used in support of any number of proposals and solicitations. 5. Litigation and False Claims Comment:

As a result, while the technology may be new or developing, securing ePHI involved with the technology can be successfully executed through compliance with the Security Rule. Before implementing new and emerging technologies, a regulated entity must conduct an accurate and thorough assessment of the potential risks and vulnerabilities to the confidentiality, integrity, and availability of ePHI. [878] It must then implement security measures sufficient to reduce risks and vulnerabilities to a reasonable and appropriate level. [879] Such administrative, physical, and technical safeguards apply to all instances of ePHI maintained or transmitted by the regulated entity, regardless of the technology used. Below, we discuss some examples of new technologies, such as quantum computing, AI, and virtual and augmented reality (VR and AR), and (printed page 989) how the Security Rule would apply in each case. 1. Quantum Computing Several Federal agencies have considered the potential benefits and drawbacks of quantum information science, [880] that is, the study of the impacts of quantum physics properties on information science. Those properties can increase computational power and speed significantly over classical computers, provide precision measurements; enhance sensing capabilities; and increase the accuracy of position, navigation, and timing services. [881] According to NIST, In recent years, there has been a substantial amount of research on quantum computers machines that exploit quantum mechanical phenomena to solve mathematical problems that are difficult or intractable for conventional computers. [882] However, the increase in computational capability threatens the security of asymmetric cryptography, [883] which is critical to encryption solutions, a key protection for ePHI and other sensitive information today. Scientists warn that when such quantum computers are built, they will have the ability to break many of the systems for asymmetric cryptography that are in use today. [884] Thus, experts anticipate that quantum computing will adversely affect the confidentiality and integrity of digital communications. [885] The goal of post-quantum cryptography (also called quantum-resistant cryptography) is to develop cryptographic systems that are secure against both quantum and classical computers, and can interoperate with existing communications protocols and networks. [886] A recent National Security Memorandum affirmed that alongside its potential benefits, quantum computing also poses

significant risks to the economic and national security of the United States. . . . [including the potential to break] much of the public-key cryptography used on digital systems across the United States and around the world. [887]

·To the Bureau of the Census to plan or carry out a census or survey, or related activity pursuant to Title 13 of the U.S. Code. (5) 5 U.S.C. 552a(b)(5) ·To a recipient who has provided DA or DOD with advance adequate written assurance that the record will be used solely as a statistical research or reporting record, and the record is to be transferred in a form that is not individually identifiable. (6) 5 U.S.C. 552a(b)(6) ·To the National Archives and Records Administration as a record that has sufficient historical or other value to warrant its continued preservation by the U.S. Government, or for evaluation by the Archivist of the United States or the designee of the Archivist to determine whether the record has such value. Note: Records transferred to the Federal Records Centers for storage remain under the control of the DA and no accounting for disclosure is required under the Privacy Act. (7) 5 U.S.C. 552a(b)(7) ·To another agency or instrumentality of any governmental jurisdiction within or under the control of the United States for a civil or criminal law enforcement activity, if the activity is authorized by law, and if the head of the agency or instrumentality has made a written request to the Army or the DOD specifying the particular portion desired and the law enforcement activity for which the record is sought. (8) 5 U.S.C. 552a(b)(8) ·To a person pursuant to a showing of compelling circumstances affecting the health or safety of an individual if upon such disclosure, notification is transmitted to the last known address of such individual. (9) 5 U.S.C. 552a(b)(9) ·To either House of Congress, or, to the extent the matter is within its jurisdiction, any committee or subcommittee thereof, or any joint committee of Congress or subcommittee of any such joint committee. Requests from a Congressional member acting on behalf of a constituent are not included in this exception, but may be covered by a routine use exception to the Privacy Act (See applicable Army system of records notice). (10) 5 U.S.C. 552a(b)(10) ·To the Comptroller General or authorized representatives, in the course of the performance of the duties of the Government Accountability Office. (11) 5 U.S.C. 552a(b)(11) ·Pursuant to the order of a court of competent jurisdiction. The order must be signed by a judge. (12) 5 U.S.C. 552a(b)(12) ·To a consumer reporting agency in accordance with section 3711(e) of Title 31 of the U.S. Code. The name, address, SSN, and other information identifying the individual; amount, status, and history of the claim; and the agency or program under which the case arose may be disclosed. However, before doing so, agencies must complete a series of steps designed to validate the debt and to offer the individual an opportunity to repay it. (d) DOD Blanket Routine Uses.

to the extent that the systems contain any information properly classified under Executive Order 13526 and that is required by that Executive Order to be kept secret in the interest of national defense or foreign policy. This exemption is applicable to parts of all systems of records including those not (printed page 24132) otherwise specifically designated for exemptions herein which contain isolated items of properly classified information. (c) Exemption for Anticipation of a Civil Action or Proceeding. All systems of records maintained by the NGB shall be exempt under section (d)(5) of 5 U.S.C. 552a , to the extent that the record is compiled in reasonable anticipation of a civil action or proceeding. (d) General Exemptions. No SOR within the NGB shall be considered exempt under subsection (j) or (k) of 5 U.S.C. 552a until the exemption rule for the SOR has been published as a final rule in the FR. (e) Specific exemptions. (1) System identifier and name: INGB 001, Freedom of Information Act (5 U.S.C.) and Privacy Act (5 U.S.C. 552a) Case Files. (i) Exemption: During the course of a 5 U.S.C. 552 or 5 U.S.C. 552a action, exempt materials from other systems of records may, in turn, become part of the case records in this system. To the extent that copies of exempt records from those other systems of records are entered into this 5 U.S.C. 552 or 5 U.S.C. 552a case record, the NGB hereby claims the same exemptions for the records from those other systems that are entered into this system, as claimed for the original primary SOR which they are a part. (ii) Authority: 5 U.S.C. 552a , sections (j)(2), (k)(1), (k)(2), (k)(3), (k)(4), (k)(5), (k)(6), and (k)(7). (iii) Reasons: Records are only exempt from pertinent provisions of 5 U.S.C. 552a to the extent such provisions have been identified and an exemption claimed for the original record and the purposes underlying the exemption for the original record still pertain to the record which is now contained in this SOR. In general, the exemptions were claimed in order to protect properly classified information relating to national defense and foreign policy, to avoid interference during the conduct of criminal, civil, or administrative actions or investigations, to ensure protective services provided the President and others are not compromised, to protect the identity of confidential sources incident to Federal

employment, military service, contract, and security clearance determinations, to preserve the confidentiality and integrity of Federal testing materials, and to safeguard evaluation materials used for military promotions when furnished by a confidential source. The exemption rule for the original records will identify the specific reasons why the records are exempt from specific provisions of 5 U.S.C. 552a . (2) System identifier and name: INGB 005, Special Investigation Reports and Files. (i) Exemption: Investigatory material compiled for law enforcement purposes, other than material within the scope of subsection

n binary analysis for supply chain security following NIST recommendations for using SBOM, and vulnerability disclosure reports were viewed by the panel as an excellent source of security information. This provided viewpoints related to a participant question in chat who asked, "Is the EO sufficient in imposing awareness/compliance obligations across the Supply Chain-producers, component producers, acquirers, users (government and industry)?"

3.1.1 Credential Theft or Compromise ... 3.1.1 Credential Theft or Compromise Credentials are used to verify the identity of users, authenticate them, and grant access to storage systems and tools.

This rule proposes standards for the security of individual health information and electronic signature use by health plans, health care clearinghouses, and health care providers. The health plans, health care clearinghouses, and health care providers would use the security standards to develop and maintain the security of all electronic individual health information. The electronic signature standard is applicable only with respect to use with the specific transactions defined in the Health Insurance Portability and Accountability Act of 1996, and when it has been determined that an electronic signature must be used. The use of these standards would improve the Medicare and Medicaid programs, and other Federal health programs and private health programs, and the effectiveness and efficiency of the health care industry in general. This rule would implement some of the requirements of the Administrative Simplification subtitle of the Health Insurance Portability and Accountability Act of 1996.

In summary, the CMMC Program enforces and validates implementation of DoD's required cyber protection standards for companies in the DIB, preserving U.S. technical advantage. In addition, CMMC increases security for the most sensitive CUI by applying additional requirements at Level 3. Implementation of CMMC will help protect FCI and CUI upon which DoD systems and critical infrastructure rely, making it vital to national security. CMMC is focused on securing the Department's supply chain, including the smallest, most vulnerable innovative companies. The security risks that result from the significant loss of FCI and CUI, including intellectual property and proprietary data, make implementation of the CMMC Program vital, practical, and in the public interest. III. Regulatory Compliance Analysis A. Executive Order 12866 , 'Regulatory Planning and Review' and Executive Order 13563 , 'Improving Regulation and Regulatory Review,' as Amended by Executive Order 14094 , 'Modernizing Regulatory Review' These Executive Orders direct agencies to assess all costs, benefits, and available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health, safety effects, distributive impacts, and equity). These Executive Orders emphasize the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. The Office of Management and Budget (OMB) has determined this final rule is significant as defined by Section 3(f)(1) for purposes of Executive Order 12866 , as amended by Executive Order 14094 . B. Congressional Review Act (5 U.S.C. 801 et seq.) As defined by 5 U.S.C. 804(2) , a major rule is a rule that the Administrator of the Office of Information and Regulatory Affairs of the Office of Management and Budget finds has resulted in or is likely to result in-(a) an annual effect on the economy of \$100,000,000 or more; (b) a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or (c) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets. This rule has been designated a major rule as it is expected to have annual effect on the economy of \$100M dollars or more. C. Public Law 96-354, 'Regulatory Flexibility Act' (5 U.S.C. 601) The Department of Defense Chief Information Officer certified that this rule is subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would, if promulgated, have a significant economic impact on a substantial number of small entities.

CMMC Acquisition final rule. Additionally, the information collection burden requirements for the CMMC instantiation of eMASS are addressed in a separate 32 CFR part 170 CMMC Program final rule information collection request (ICR). OSCs follow procedures as defined in § 170.17 to prepare for CMMC Level 2 certification assessment. Certified Assessors assigned by C3PAOs follow requirements and procedures as defined in § 170.17 to conduct CMMC assessments on defense contractor information systems to determine conformance with the information safeguarding requirements associated with CMMC Level 2. This is an assessment to validate implementation of the 110 security requirements from NIST SP 800-171 R2. Prospective C3PAOs must complete and submit the Standard Form (SF) 328 Certificate Pertaining to Foreign Interests (OMB control number 0704-0579) upon request from Defense Counterintelligence and Security Agency (DCSA). C3PAOs must generate and collect pre-assessment and planning material (contact information for the OSC, (printed page 83210) information about the C3PAO and assessors conducting the assessment, the level of assessment planned, the CMMC Model and Assessment Guide versions, and assessment approach), artifact information (list of artifacts, hash of artifacts, and hashing algorithm used), final assessment reports, appropriate CMMC certificates of assessment, and assessment appeal information. C3PAOs submit the data they generate and collect into the CMMC instantiation of eMASS, the information collection required for this submission is addressed in a separate CMMC eMASS ICR for the 32 CFR part 170 CMMC Program rule. OSCs may have a POA&M at CMMC Level 2 as addressed in § 170.21. C3PAOs perform a POA&M closeout assessment. The C3PAO process to conduct a POA&M Close-out Assessment, where applicable, is the same as the initial assessment with the same information collection requirements. OSCs must retain artifacts used as evidence for the assessment for the duration of the validity period of the certificate of assessment, and at minimum, for six years from the date of certification assessment as addressed in § 170.17(c)(4). The OSC is responsible for compiling relevant artifacts as evidence and having knowledgeable personnel available during the assessment. The organizational artifacts are proprietary to the OSC and will not be retained by the assessment team unless expressly permitted by the OSC. To preserve the integrity of the artifacts reviewed, the OSC creates a hash of assessment evidence (to include a list of the artifact names, the return values of the hashing algorithm, and the hashing algorithm used) and retains the artifact information for six years. The information obtained from the artifacts is an information collection and is provided to the C3PAO for uploading into the CMMC instantiation of eMASS (addressed in a separate CMMC eMASS ICR for the 32 CFR part 170

There may be references in this publication to other publications currently under development by NIST in accordance with its assigned statutory responsibilities. The information in this publication, including concepts and methodologies, may be used by federal agencies even before the completion of such companion publications. Thus, until each publication is completed, current requirements, guidelines, and procedures, where they exist, remain operative. For planning and transition purposes, federal agencies may wish to closely follow the development of these new publications by NIST. The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the Nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology. ITL's responsibilities include the development of management, administrative, technical, and physical standards and guidelines for the cost-effective security and privacy of other than national security-related information in federal information systems. The rapid development and wide application of distributed network systems have made network security - especially access control and data privacy - ever more important. Blockchain technology offers features such as decentralization, high confidence, and tamper-resistance, which are advantages to solving auditability, resource consumption, scalability, central authority, and trust issues - all of which are challenges for network access control by traditional mechanisms.

for CMMC Level 1, the security requirements set forth in FAR clause 52.204-21, and for CMMC Level 2, the security requirements set forth in NIST SP 800-171 R2. DoD did not consider the cost of implementing the security requirements themselves because implementation is already required by FAR clause 52.204-21, effective June 15, 2016, and by DFARS clause 252.204-7012, requiring implementation by Dec. 31, 2017, respectively; therefore, the costs of implementing the security requirements for CMMC Levels 1 and 2 should already have been incurred and are not attributed to this rule. As such, the nonrecurring engineering and recurring engineering costs to implement the security requirements defined for CMMC Level 1 and Level 2 are not included in this economic analysis. However, cost estimates to implement CMMC Level 3, are included, as that CMMC level will

require defense contractors and subcontractors, as applicable, to implement a DoD-defined subset of the security requirements set forth in NIST SP 800-172 Feb2021, a new addition to current security protection requirements. In estimating the public cost for a defense contractor small entity to comply with CMMC Program requirements for each CMMC level, DoD considered non-recurring engineering costs, recurring engineering costs, assessment costs, and affirmation costs for each CMMC Level. These costs include labor and consulting. Estimates include size and complexity assumptions to account for typical organizational differences between small entities and other than small entities with respect to the handling of Information Technology (IT) and cybersecurity: small entities are likely to have a less complex, less expansive operating environment and IT/Cybersecurity infrastructure compared to larger defense contractors small entities are likely to outsource IT and cybersecurity to an External Service Provider (ESP) entities (small and other than small) pursuing Level 2 self-assessment are likely to seek consulting or implementation assistance from an ESP to either help them prepare for the assessment technically or participate in the assessment with the C3PAOs. Estimates do not include the cost to implement (Non-recurring Engineering Costs (NRE)) or maintenance costs (Recurring Engineering (RE)) associated with the security requirements prescribed in current regulations.

Information such as the specific name of the food will allow FDA to limit its investigation to the implicated food. For example, if FDA has a reasonable belief that a shipment of cheddar cheese is contaminated, traceback or trace forward would be better facilitated if the records contained the identifier 'cheddar.' This would help FDA narrow its investigation and increase the speed of the trace. The information would also help the involved firm limit the scope of any recall, should it be necessary. However, FDA does recognize the diversity of the food chain and has allowed for flexibility in the final rule. For example, the requirement to record lot/code number or other identifier applies only to persons who manufacture, process, or pack food and only to the extent that information exists. Also, the final rule allows covered persons to use existing abbreviations or codes currently used to identify the food. However, if these abbreviations and/or codes are used, they must be readily deciphered for FDA upon request so that an 'adequate description' of the food is recorded. (Comment 88) One comment questions the need for the extensive recordkeeping requirements in the regulations and suggests that much of the facility information required in the recordkeeping rule is already required in the registration interim final rule. The comment gives as an example the duplicate requirements that the nontransporter must maintain a record of the

responsible individual, fax number, and e-mail address for: (1) The facility that shipped product to your facility, (2) the transportation company that delivered the product, (3) the transportation company that picked up product from your facility, and (4) the facility where your product is being shipped.

SI.L2-3.14.4 · Update Malicious Code Protection [CUI Data] CMMC Assessment Guide · Level 2 | Version 2.13 255 Traditional malicious code protection mechanisms cannot always detect such code. In these situations, organizations rely instead on other safeguards including secure coding practices, configuration management and control, trusted procurement processes, and monitoring technologies to help ensure that software does not perform functions other than the functions intended. FURTHER DISCUSSION Malware changes on an hourly or daily basis, and it is important to update detection and protection mechanisms frequently to maintain the effectiveness of the protection. Example You have installed anti-malware software to protect a computer from malicious code. Knowing that malware evolves rapidly, you configure the software to automatically check for malware definition updates every day and update as needed [a]. Potential Assessment Considerations · Is there a defined frequency by which malicious code protection mechanisms must be updated (e.g., frequency of automatic updates or manual processes) [a]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.14.4 · FAR Clause 52.204-21 b.1.xiv

CIS Safeguard 2.1 · Establish and Maintain a Software Inventory Establish and maintain a detailed inventory of all licensed software installed on enterprise assets. The software inventory must document the title, publisher, initial install/use date, and business purpose for each entry; where appropriate, include the Uniform Resource Locator (URL), app store(s), version(s), deployment mechanism, and decommission date. Review and update the software inventory bi-annually, or more frequently. Implementation Groups: 1,2,3 Asset Type: applications Security Function: identify Parent Control: Inventory and Control of Software Assets

Direct search and duplication cost for any record not described in this paragraph shall be computed in the manner described for audiovisual documentary material. (g) Costs for special services. Complying with requests for special services is at the discretion of the Components. Neither the FOIA nor its fee structure covers these kinds of services. Therefore, Components may recover the costs of special services requested by the requester after agreement has been obtained in writing from the requester to pay for one or more of the following services: (1) Certifying that records are true copies. (2) Sending records by special methods such as express mail, etc. § 286.26 Fees for technical data. (a) Technical data is recorded information related to experimental, developmental, or engineering works that can be used to define an engineering or manufacturing process or to design, procure, produce, support, maintain, operate, repair, or overhaul material. The data may be graphic or pictorial delineations in media, such as drawings or photographs, text in specification or related performance or design type documents, or computer printouts. Examples of tech data include research and engineering data, engineering drawings, and associated lists, specifications, standards, process sheets, manuals, technical reports, catalog item identification, and related information and computer software documentation. (b) Unless technical data qualifies for withholding from public release under one or more of the FOIA exemptions, it shall be released to the requester after all reasonable costs attributed to search, duplication, and review are paid as authorized by 10 U.S.C. 2328 . All reasonable costs are the full costs to the Federal Government for rendering the service, or fair market value of the service, whichever is higher. Fair market value shall be determined in accordance with commercial rates in the local geographic area. In the absence of a known market value, charges will be based on recovery of all direct and indirect costs to conduct the search, review, and duplicate the documents. This cost is to be differentiated from the direct costs allowable under § 286.24 for other types of information released under the FOIA. (1) The DoD Components shall retain the amounts received by such a release, and it shall be merged with and available for the same purpose and the same time period as the appropriation from which the costs were incurred in complying with request. (2) The DoD Components that process FOIA requests for technical data and are eligible to recoup the direct costs for providing the records shall establish an appropriate fee schedule taking into account the prevailing commercial rates. (c) Waiver. The DoD Components shall waive the payment of costs required in § 286.24(a) which are greater than the costs that would be required for release of this same information under § 186.25(a) of this subchapter if:

(iii) The manufacturer name, make, model number, model year, and serial number for all aircraft

under FSCs 1510 and 1520. (iv) Appropriate Federal Condition Codes. See Appendix 2 of DoD 4000.25-2, Military Standard Transaction Reporting and Accounting Procedures manual, edition in effect as of the date of this contract. Information on Federal Condition Codes can be obtained at http://www.DLA.Mil/J-6/DLMSO/Elibrary/Manuals/Milstrap/AP2_Index.asp. (2) If the schedules are acceptable, the plant clearance officer shall complete and send the Contractor a DD Form 1637, Notice of Acceptance of Inventory. (c) Proceeds from sales of surplus property. Unless otherwise provided in the contract, the proceeds of any sale, purchase, or retention shall be: (1) Forwarded to the Contracting Officer; (2) Credited to the Government as part of the settlement agreement; (3) Credited to the price or cost of the contract; or (4) Applied as otherwise directed by the Contracting Officer. (d) Demilitarization, mutilation, and destruction. If demilitarization, mutilation, or destruction of contractor inventory is required, the Contractor shall demilitarize, mutilate, or destroy contractor inventory, in accordance with the terms and conditions of the contract and consistent with Defense Demilitarization Manual, DoDM 4160.28-M, edition in effect as of the date of this contract. The plant clearance officer may authorize the purchaser to demilitarize, mutilate, or destroy as a condition of sale provided the property is not inherently dangerous to public health and safety. (e) Classified Contractor inventory. The Contractor shall dispose of classified contractor inventory in accordance with applicable security guides and regulations or as directed by the Contracting Officer. (f) Inherently dangerous Contractor inventory. Contractor inventory dangerous to public health or safety shall not be disposed of unless rendered innocuous or until adequate safeguards are provided. (g) Contractor inventory located in foreign countries. Consistent with contract terms and conditions, property disposition shall be in accordance with foreign and U.S. laws and regulations, including laws and regulations involving export controls, host nation requirements, Final Governing Standards, and Government-to-Government agreements. The Contractor's responsibility to comply with all applicable laws and regulations regarding export-controlled items exists independent of, and is not established or limited by, the information provided by this clause. (h) Disposal of scrap. (1) Contractor with scrap procedures.

Persons who manufacture, process, pack, transport, distribute, receive, hold, or import food are subject to §§ 1.361 and 1.363 with respect to its packaging (the outer packaging of food that bears the label and does not contact the food). All other persons who manufacture, process, pack, transport, distribute, receive, hold, or import packaging are excluded from all of the requirements of subpart J of this final rule. Persons who manufacture, process, pack, transport, distribute, receive, hold, or import food contact substances other than the finished container that directly contacts the food are excluded from all of the requirements of subpart J, except §§ 1.361 and 1.363. Persons who place food directly in contact with its finished container are subject to all of the requirements of subpart J of this final rule as to the finished container that directly contacts that food. All other persons who manufacture, process, pack, transport, distribute, receive, hold, or import the finished container that directly contacts the food are excluded from the requirements of subpart J as to the finished container, except §§ 1.361 and 1.363. Persons who receive or hold food on behalf of specific individual consumers and who are not also parties to the transaction and who are not in the business of distributing food are excluded from all of the requirements of subpart J. Transporters can meet their obligation to establish and maintain records in the following ways: (1) Keeping the records listed in § 1.352(a); (2) keeping the records listed in § 1.352(b), which contain information also currently required of roadway interstate transporters under the FMCSA regulations as of the date of publication of this final rule; (3) keeping the records listed in § 1.352(c), which contain information also currently required of rail and water interstate transporters under the STB regulations as of the date of publication of this final rule; (4) keeping the records listed in § 1.352(d), which contain information also currently required of international air transporters on air waybills under the Warsaw Convention; or (5) entering into an agreement with a nontransporter immediate previous source in the United States or a nontransporter immediate subsequent recipient in the United States to keep records for them. The agreement must contain certain elements specified in § 1.352(c). Intrastate transporters must also establish and maintain records under this final rule and can meet this obligation by complying with either § 1.352(a), (b), (c), (d), or (e). Foreign persons who transport food in the United States, whether or not (printed page 71565) they have possession, custody, or control of the food for the sole purpose of transporting, must comply with § 1.352 of subpart J of this final rule. The exclusion for pet food not subject to the recordkeeping provisions of the animal proteins prohibited in ruminant feed regulation (BSE rule) (62 FR 30935, June 5, 1997) has been deleted.

From the NIST SP 800-172 Rev 3 Final Public Draft: Monitoring for unauthorized or misconfigured components may be accomplished on an ongoing basis or by the periodic scanning of systems for that purpose. Automated mechanisms may also be used to prevent the connection of unauthorized or misconfigured system components. Automated mechanisms can be implemented in systems or in separate system components. When acquiring and implementing automated mechanisms, organizations consider whether such mechanisms depend on the ability of the system component to support an agent or supplicant in order to be detected since some types of components do not have or cannot support agents (e.g., IoT devices, sensors). Isolation can be achieved, for example, by placing unauthorized system components in separate domains or subnets or quarantining suc

(a) whether the proposed collections of information are necessary for the proper performance of the functions of DoD, including whether the information will have practical utility; (b) the accuracy of the estimate of the burden for both information collections; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden on respondents, including the use of automated collection techniques or other forms of information technology. Specific information on both collections is below. DoD's Defense Industrial Base (DIB) Cybersecurity (CS) Activities Cyber Incident Reporting-OMB Control Number 0704-0489 Title: DoD's Defense Industrial Base (DIB) Cybersecurity (CS) Activities Cyber Incident Reporting. Type of Request: Revision. Number of Participants: Number of DoD contractors eligible to participate in the voluntary program is 80,000. DoD estimates that approximately 1% of the newly eligible population will elect to join the program each year with program growth plateauing at approximately 10% of the population by Year 9. Based on this estimate, after the first three years of the program expansion, 2,400 defense contractors will join the existing 980 participating companies resulting in 3,380 defense contractors submitting voluntary cyber threat information reports. Projected Responses per Participant: Five reports per participant. Annual Total Responses: 16,900. Average Burden per Response: Two hours. (printed page 27837) Annual Total Burden Hours: 33,800 hours for all voluntary submissions. Needs and Uses: DoD designated DC3 as the single focal point for receiving all cyber incident reporting affecting the unclassified networks of DoD contractors from industry and other government agencies. DoD collects cyber incident and threat reports using the Defense Industrial Base Network (DIBNet) portal (<https://dibnet.dod.mil>). Cyber threat reports are analyzed by experts at DC3 and they, in turn, develop written products that include analysis of the threat, mitigations, and indicators of adversary activity. These anonymized products are shared with authorized DoD personnel, authorized personnel from other Federal agencies, and authorized POCs from the DIB CS Program. Affected Public: Business or other for-profit and not-for-profit institutions. Frequency: On occasion. Respondent's Obligation: Voluntary. DoD's Defense Industrial Base (DIB) Cybersecurity (CS) Points of Contact (POC) Information-OMB Control Number 0704-0490 Title: DoD's Defense Industrial Base (DIB) Cybersecurity (CS) Activities Points of Contact (POC) Information. Type of Request: Revision. Number of Participants:

(Response) FDA acknowledges considerable uncertainty in the estimates of the numbers of mixed-type facilities that engage in farming and is receptive to comments from industry that can improve them. There is likely to be more uncertainty in the estimates of the number of mixed-type facilities that engage in any individual category of nut farming than that for the estimate of the number of mixed-type facilities that engage in nut farming over all categories of nuts. FDA will use the estimate provided by the comment to revise its estimate of mixed-type facilities that engage in nut farming from 2 percent to 6 percent. The total number of mixed type facilities that engage in farming is revised upward to 31,077 from 30,497 used in the PRIA. Table 13 of this document is a revised table of mixed-type facilities that engage in farming. Table 13. Mixed-Type Facilities Engage in Farming

Commodity	Total No. of Farms	Percent Mixed-Type	No. of Mixed-Type Farms
Pig farms (feed mixing)	46,353	1.5%	695
Cattle (feed mixing)	785,672	1.0%	7,857
Poultry (feed mixing)	36,944	1.0%	369
Other animal production (feed mixing)	110,580	1.0%	1,106
Dairy	86,022	1.1%	903
Grain, rice, and beans	462,877	1.0%	4,629
Apples	10,872	1.5%	163
Oranges	9,321	1.5%	140
Peaches	14,459	1.5%	217
Cherries	8,423	1.5%	126
Pears	8,062	1.5%	121
Other fruit	29,413	1.5%	441
Nuts	14,500	6.0%	870
Berries	6,807	1.5%	102
Grapes	11,043	10.5%	1,160
Olives	1,363	3.5%	48
Vegetables and melons	31,030	0.5%	155
Organic vegetables	6,206	50.0%	3,103
Honey	7,688	50.0%	3,844
Syrup	4,850	100.0%	4,850
Herbs	1,776	10.0%	

178 Total 31,077 (Comment 185) One comment states that FDA mistakenly omitted the number of food grade warehouses that are subject to the regulation included in NAICS code 49311. Consequently, FDA's estimate that a total of 76,952 wholesaler and public warehouse companies are affected by the regulation is too low, and these additional warehouses should be included in the cost calculation of the final rule. (Response) FDA agrees that public warehouses included in NAICS code number 49311 were omitted from the count of total warehouse facilities. Table 14 of this document describes the primary activities performed by the warehouses included in this classification. Table 14. Description of Primary Activities Performed by Warehouses by NAICS Code NAICS SIC Corresponding Index Entries 493110 4225 Bonded warehousing, general merchandise 493110 4225 General warehousing and storage 493110 AUX Private warehousing and storage, general merchandise 493110 4225 Public warehousing and storage (except self storage), general merchandise 493110 4226 Warehousing (including foreign trade zones), general merchandise 493110 4225 Warehousing and storage, general merchandise

Workstations are essential for workforce members to perform their assigned functions, such as clinicians entering an individual's health history and treatment plan or billing staff preparing claims. Workstations are one of the key entry points for users to access a regulated entity's information systems. Thus, the Security Rule contains provisions requiring that regulated entities secure not only their information systems, but also individual workstations. [405] However, as discussed above, the health care environment has changed. It now includes both the physical and virtual environment and is replete with mobile devices and other types of devices that may serve as multi-functional workstations. Clinicians and other workforce members often rely on smart phones, smart watches, tablets, laptops, and even personal digital assistants, among other devices. These devices have proliferated, and so has their ability to perform a wide variety of functions with increasing sophistication. The Department believes that it is necessary to update the definition to reflect the evolved nature of the landscape. b. Proposal In recognition of this changed environment, the Department proposes to modify the definition of workstation to provide additional examples of what constitutes a workstation. Specifically, we propose to add the examples of a server, virtual device, and a mobile device such as a smart phone or tablet. Virtual devices could include a virtual medical device, virtual server, or virtual desktop computer. The proposed definition also would clarify that technology properly considered as a ·workstation· is not limited to the proposed regulatory examples. 23. Request for Comment The Department requests comment on all the foregoing proposed definitions, including any benefits, drawbacks, or unintended consequences. We also request comment on the following considerations in particular: a. Whether any of the proposed definitions would be problematic for regulated entities or result in unintended adverse consequences. If so, please explain. b. Whether the Department should consider an alternative definition for any terms the Department proposes to define in the rule. If the answer is yes, please propose such an alternative definition and a reference or supporting rationale. c. Whether the Department should define any additional terms within the rule. If the answer is yes, please propose such additional terms and definitions, along with any reference or supporting rationale. d. With respect to the definitions of ·information system· and ·electronic information system·, the extent of a covered entity's direct management control over applications in cloud computing environments, such as a cloud-based EHR system.

termination for cause, reduction in force, involuntary transfer, criminal or disciplinary actions)? Is there a standard checklist for all action items that should be completed when a workforce member leaves (e.g., return of all access devices, deactivation of accounts, and delivery of any needed data solely under the workforce member's control)? Do other organizations need to be notified to deactivate accounts to which that the workforce member had access in the performance of their employment duties? However, regulated entities often do not establish or implement written procedures, nor, even in instances where they have established or implemented them, have they done so in an appropriate fashion to protect ePHI from improper access by current or former workforce members. Consistent with the guidance described above and other proposals in this NPRM, the Department proposes to redesignate the workforce security standard at 45 CFR 164.308(a)(3)(i) as proposed 45 CFR 164.308(a)(9)(i) , to add a paragraph heading to clarify the organization of the regulatory text, and to modify the regulatory text clarify that a regulated entity must implement written policies and procedures ensuring that workforce members have appropriate access to ePHI and to relevant electronic information systems. The regulated entity must also implement written policies and procedures preventing workforce members from accessing ePHI and relevant electronic information systems if they are not authorized to do so. The modifications we propose to the

implementation specification for authorization and/or supervision would clarify that a regulated entity is required to establish and implement written procedures for the authorization and/or supervision of workforce members who access ePHI or relevant electronic information systems or who work in facilities where ePHI or relevant electronic information systems might be accessed. [562] We propose similar modifications to the implementation specification for workforce clearance procedure, which would require a regulated entity to establish and implement written procedures to determine that the access of a workforce member to ePHI or relevant electronic information systems is appropriate, in accordance with written policies and procedures for granting and revising access to ePHI and relevant electronic information systems as required by proposed 45 CFR 164.308(a)(10)(ii)(B) . [563] Additionally, we propose several clarifications to the implementation specification for termination procedures. Specifically, the proposed implementation specification for modification and termination procedures at proposed 45 CFR 164.308(a)(9)(ii)(C) would require procedures for terminating a workforce member's access to ePHI and relevant electronic information systems, and to facilities where ePHI or relevant electronic information systems might be accessed. Proposed paragraph (a)(9)(ii)(C)(1

From the NIST SP 800-172 Rev 3 Final Public Draft: DISCUSSION 1167 Identity providers (both internal and external to the organization) manage user, 1168 device, and non-person entity authenticators and issue statements (often called identity assertions) that attest to the identities of other systems or system components. Authorization servers create and issue access tokens to identified and authenticated users and devices that can be used to gain access to organizational systems or information resources. For example, single sign-on (SSO) provides identity provider and authorization server functions. This requirement does not enhance a specific requirement in SP 800-171 but can be used to strengthen the protection of CUI associated with critical programs or high value assets. PROTECTION STRATEGY PRA ADVERSARY EFFECTS Preclude

) To the extent that a covered entity or business associate is implementing compensating controls under this paragraph (f)(2)(iv)(B), the effectiveness of compensating controls must be reviewed and documented by the designated Security Official at least once every 12 months or in response to environmental or operational changes, whichever is more frequent, to continue securing electronic protected health information and its relevant electronic information systems. (v) Maintenance. Review and test the effectiveness of the technical controls required by this paragraph (f) at least once every 12 months or in response to environmental or operational changes, whichever is more frequent, and modify as reasonable and appropriate. (g) Standard: Transmission security. Deploy technical controls to guard against unauthorized access to electronic protected health information that is being transmitted over an electronic communications network; and review and test the effectiveness of such technical controls at least once every 12 months or in response to environmental or operational changes, whichever is more frequent, and modify as reasonable and appropriate. (h) Standard: Vulnerability management .(1) General. Deploy technical controls in accordance with the covered entity's or business associate's patch management policies and procedures required by §.164.308(a)(4)(ii)(A) to identify and address technical vulnerabilities in the covered entity's or business associate's relevant electronic information systems. (2) Implementation specifications .(i) Vulnerability scanning. (A) Conduct automated vulnerability scans to identify technical vulnerabilities in the covered entity's or business associate's relevant electronic information systems in accordance with the covered entity's or business associate's risk analysis required by §.164.308(a)(2) or at least once every six months, whichever is more frequent. (B) Review and test the effectiveness of the technology asset(s) that conducts the automated vulnerability scans required by paragraph (h)(2)(i)(A) of this section at least once every 12 months or in response to environmental or operational changes, whichever is more frequent, and modify as reasonable and appropriate. (ii) Monitoring. Monitor authoritative sources for known vulnerabilities on an ongoing basis and remediate such vulnerabilities in accordance with the covered entity's or business associate's patch management program under §.164.308(a)(4). (iii) Penetration testing. Perform penetration testing of the covered entity's or business associate's relevant electronic information systems by a qualified person. (A) A qualified person is a person with appropriate knowledge of and experience with generally accepted cybersecurity principles and methods for ensuring the confidentiality, integrity, and availability of electronic protected health information.

(C) A communication plan, to include a description of how relevant threat information will be shared between PSC personnel and U.S. military forces and how appropriate assistance will be provided to

PSC personnel who become engaged in hostile situations. DoD contractors performing private security functions are only to be used in accordance with DoD Instruction 1100.22, "Guidance for Determining Workforce Mix," [12] that is, they are limited to a defensive response to hostile acts or demonstrated hostile intent. (D) Documentation of individual training covering weapons familiarization and qualification, rules for the use of force, limits on the use of force including whether defense of others is consistent with host nation Status of Forces Agreements or local law, the distinction between the rules of engagement applicable to military forces and the prescribed rules for the use of force that control the use of weapons by civilians, and the Law of Armed Conflict. (E) Written acknowledgment by the PSC and its individual PSC personnel, after investigation of background of PSC personnel by the contractor, verifying such personnel are not prohibited under U.S. law to possess firearms. (F) Written acknowledgment by the PSC and individual PSC personnel that: (1) Inappropriate use of force by contractor personnel authorized to accompany the U.S. Armed Forces may subject such personnel to United States (printed page 49658) or host nation prosecution and civil liability. [13] (2) Proof of authorization to be armed must be carried by each PSC personnel. (3) PSC personnel may possess only U.S.G.-issued and/or -approved weapons and ammunition for which they have been qualified according to paragraph (a)(1)(iii)(E) of this section. (4) PSC personnel were briefed about and understand limitations on the use of force. (5) Authorization to possess weapons and ammunition may be revoked for non-compliance with established rules for the use of force. (6) PSC personnel are prohibited from consuming alcoholic beverages or being under the influence of alcohol while armed. (iv) Registration and identification in the Synchronized Predeployment and Operational Tracker (or its successor database) of armored vehicles, helicopters, and other vehicles operated by PSC personnel. (v) Reporting alleged criminal activity or other incidents involving PSCs or PSC personnel by another company or any other person. All incidents involving the following shall be reported and documented: (A) A weapon is discharged by an individual performing private security functions; (B) An individual performing private security functions is killed or injured in the performance of their duties; (C) A person other than an individual performing private security functions is killed or injured as a result of conduct by PSC personnel; (D) Property is destroyed as a result of conduct by a PSC or PSC personnel;

AU.L2-3.3.2 · User Accountability CMMC Assessment Guide · Level 2 | Version 2.13 76 FURTHER DISCUSSION Capturing the necessary information in audit logs ensures that you can trace actions to a specific user. This may include capturing user IDs, source and destination addresses, and time stamps. Logging from networks, servers, clients, and applications should be considered in ensuring accountability. This requirement, AU.L2-3.3.2, which ensures logging and traceability of user actions, supports the control of non-privileged users required by AC.L2-3.1.7 as well as many other auditing, configuration management, incident response, and situation awareness requirements. Example You manage systems for a company that stores, processes, and transmits CUI. You want to ensure that you can trace all remote access sessions to a specific user. You configure the VPN device to capture the following information for all remote access connections : source and destination IP address, user ID, machine name, time stamp, and user actions during the remote session [b]. Potential Assessment Considerations · Are users uniquely traced and held responsible for unauthorized actions [a]? · Does the system protect against an individual denying having performed an action (non- repudiation) [b]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.3.2

The discussion below includes an Executive Summary, a description of relevant statutory and regulatory authority and history, the justification for this proposed regulation, a section-by-section description of the proposed modifications, and a regulatory impact analysis and other required regulatory analyses. The Department solicits public comment on all aspects of the proposed rule. The Department requests that persons commenting on the provisions of the proposed rule label their discussion of any particular provision or topic with a citation to the section of the proposed rule being addressed and identify the particular request for comment being addressed, if applicable. Table of Contents I. Executive Summary A. Overview B. Applicability C. Table of Abbreviations/Commonly Used Acronyms in This Document II. Statutory Authority and Regulatory History A. Statutory Authority and History 1. Health Insurance Portability and Accountability Act of 1996 (HIPAA) 2. Health Information Technology for Economic and Clinical Health (HITECH) Act B. Regulatory History 1. 1998 Security Rule Notice of Proposed Rulemaking 2. 2003 Final Rule 3. 2009 Delegation of Authority 4. 2013 Omnibus Rulemaking III. Justification for This Proposed Rulemaking A. Strong Security Standards Are Essential to Protecting the Confidentiality, Integrity, and Availability of ePHI and Ensuring Quality and Efficiency in the Health Care System B. The Health

opportunities to help me in my security awareness role. Strongly disagree - Disagree - Neither Agree nor Disagree - Agree - Strongly Agree ## Final Thoughts In this last section, we'll give you the opportunity to share your own lessons learned and any other information you think would be useful for us to know. 50. What are the most important pieces of advice or lessons learned you might pass on to someone just starting a security awareness program in an organization like yours? <openended text box>; 51. What could help your organization's security awareness program be more successful? <open-ended text box>; 52. Please describe anything else related to your organization's experiences or challenges with security awareness that you'd like us to know. <open-ended text box>;

FAR 52.204-21 (Basic Safeguarding of Covered Contractor Information Systems) establishes 15 basic safeguarding requirements that all federal contractors must implement when handling Federal Contract Information (FCI). These 15 requirements form the basis of CMMC Level 1. The 15 requirements cover: 1. Limit system access to authorized users 2. Limit system access to authorized functions 3. Verify and control connections to external systems 4. Control information posted on public systems 5. Identify, report, and correct information flaws 6. Provide protection from malicious code 7. Update malicious code protection mechanisms 8. Perform periodic scans and real-time scans 9. Physical access protections 10. Escort visitors and monitor visitor activity 11. Sanitize or destroy information system media 12. Limit physical access to information systems 13. Authenticate identity before system access 14. Monitor, control, and protect communications 15. Control use of removable media and portable devices FAR 52.204-21 requirements are much less comprehensive than NIST SP 800-171 (110 requirements for CUI).

DCMA DIBCAC must generate and collect pre-assessment and planning material (contact information for the OSC, information about the assessors conducting the assessment, the level of assessment planned, the CMMC Model and Assessment Guide versions, and assessment approach), artifact information (list of artifacts, hash of artifacts, and hashing algorithm used), final assessment reports, appropriate CMMC certificates of assessment, and assessment appeal information. DCMA DIBCAC submits the data it generates and collects into the CMMC instantiation of eMASS (addressed in a separate CMMC eMASS ICR for the 32 CFR part 170 CMMC Program final rule). OSCs may have a POA&M at CMMC Level 3 as addressed in § 170.21. DCMA DIBCAC performs a POA&M closeout assessment. The DCMA DIBCAC process to conduct a POA&M close-out assessment, where applicable, is the same as the initial assessment with the same information collection requirements. OSCs must retain artifacts used as evidence for the assessment for the duration of the validity period of the certificate of assessment, and at minimum, for six years from the date of certification assessment as addressed in § 170.18(c)(4). The OSC is responsible for compiling relevant artifacts as evidence and having knowledgeable personnel available during the assessment. Assessors will not permanently retain assessment artifacts. To preserve the integrity of the artifacts reviewed during the assessment, the OSC creates a hash of assessment evidence (to include a list of the artifact names, the return values of the hashing algorithm, and the hashing algorithm used) and retains the artifact information for six years. The information obtained from the artifacts is an information collection and DCMA DIBCAC uploads the information into the CMMC instantiation of eMASS; the artifacts themselves are not an information collection. The OSC process to support a POA&M close-out assessment, where applicable, is the same as the initial assessment with the same information collection requirements. If an OSC does not agree with the assessment results, it may formally dispute the assessment and initiate an Assessment Appeal process with DCMA DIBCAC. DCMA DIBCAC submits assessment appeals using eMASS. Appeals are tracked in the CMMC instantiation of eMASS and any resulting changes to the assessment (printed

page 83211) results are uploaded into CMMC eMASS. DCMA DIBCAC maintains records for a period of six years of monitoring, education, training, technical knowledge, skills, experience, and authorization of each member of its personnel involved in inspection activities and working papers generated from Level 3 Certification Assessments. Use of Information Technology CMMC assessment data and results are collected using information technology. C3PAOs and DCMA DIBCAC electronically upload assessment data and results into the CMMC instantiation of eMASS (addressed in a separate CMMC eMASS ICR for the 32 CFR part 170

We considered not proposing revisions to the Security Rule. However, the Department believes that not revising the Security Rule would result in continued increases in both the number and size of breaches. Such increases would result in an exponential increase in costs as shown in table 8 above. If the modifications to the Security Rule result in even modest improvements to the security of ePHI, the reduction in the number and/or size of breaches would reduce the overall costs associated with breaches, including the costs of mitigating harm resulting from such breaches. Email Security The Department considered proposing a separate standard for regulated entities to secure email transmissions. In the Department's Cybersecurity Performance Goals, [986] the Department identifies email security as an essential goal for reducing risk from common email-based threats such as email spoofing, phishing, and fraud. Therein, the Department points to basic email protection controls identified in the Health Industry Cybersecurity Practices, such as spam/virus checking and real-time deny lists, as well as strategies that may be deployed across small, medium, and large organizations, including MFA for email access, email encryption, workforce education, and advance tooling (e.g., URL click protection via analytics, attachment sandboxing). [987] The Department is aware of the threat that email poses to the information systems of regulated entities and to the confidentiality, integrity, and availability of ePHI. [988] However, the Department believes that it is important that the Security Rule remain technology-neutral and that the security measures we propose in this NPRM apply to a regulated entity's information systems broadly, including email programs. For example, in this NPRM, the Department proposes to require regulated entities to encrypt all ePHI at rest and in transit and proposes a transmission security standard in which regulated entities would be required to deploy technical controls to guard against unauthorized access to ePHI that is being transmitted over an electronic communications network. [989] Therefore, the Department believes it is unnecessary to promulgate a separate standard for email security. Because the other technical controls, such as encryption and MFA, are already incorporated into the requirements that would protect relevant electronic information systems, the Department believes that adopting a separate secure email standard would duplicate costs without creating a net benefit. (printed page 1005) Additionally, the Department considered whether to heighten the existing expectation [990] for regulated entities to inform individuals before transmitting ePHI to the individual via unencrypted email in response to a request for access under 45 CFR 164.524 by this means. We considered whether to require such notification for different types of requests, such as different categories of PHI (e.g.,

FDA received a number of comments regarding using the definition of 'food' in section 201(f) of the FD&C Act, which includes food contact substances within its scope. These comments are addressed in section III.D.10, entitled 'Food Contact Materials.' For the reasons stated therein, FDA has decided to retain the definition of food as proposed; however, the final rule exempts persons who manufacture, pack, transport, distribute, receive, hold, or import food contact substances, other than the finished container that directly contacts the food, from all requirements of subpart J of this final rule, except §§ 1.361 and 1.363. Further, persons who place food directly in contact with its finished container are subject to all of the requirements of subpart J as to the finished container that directly contacts that food. All other persons who manufacture, process, pack, transport, distribute, receive, hold, or import the finished container that directly contacts the food are excluded from the requirements of subpart J as to the finished container, except §§ 1.361 and 1.363 (regarding access to existing records). 6. Foreign Facility (Comment 69) One comment asks whether 'foreign facility' includes warehouses in ports belonging to shipping companies, land transport or air lines, sealed container deposits, public organization facilities of the foreign government and of other federal agency representatives (such as FDA or USDA) in the country of origin and/or shipment. Another comment states that FDA's definition of foreign facility is too inclusive. The comments suggest that only foreign manufacturers and exporters should be required to keep records of their partners, such as packing facilities and holding facilities. (Response) FDA has deleted the definition of foreign facility in the final rule. FDA notes that foreign persons, except foreign persons who transport food in the United States, are excluded from all of these

regulations in subpart J of this final rule. 7. Manufacturing/Processing There were no comments on this issue. 8. Nontransporter

Protecting CUI in Nonfederal Systems and Organizations. Contractors are also required to flow down DFARS clause 252.204-7012 to all subcontracts for operationally critical support or for which subcontractor performance will involve covered defense information. However, neither FAR clause 52.204-21 nor DFARS clause 252.204-7012 provide for DoD assessment of a contractor's implementation of the information protection requirements required by those clauses. The Department developed the CMMC Program to verify implementation of cybersecurity requirements in DoD contracts and subcontracts, by assessing adequacy of contractor information system security compliance prior to award and during performance of the contract. With limited exceptions, the Department intends to require compliance with CMMC as a condition of contract award. Once CMMC is implemented, the required CMMC Status will be specified in the solicitation and resulting contract. Contractors handling FCI or CUI will be required to meet the CMMC Status specified in the contract. There are three different levels of CMMC assessment, starting with basic safeguarding of FCI at Level 1, moving to the broad protection of CUI at Level 2, and culminating with higher level protection of CUI against risk from Advanced Persistent Threats (APTs) at Level 3. The benefits and costs associated with implementing this final rule, as well as alternative approaches considered, are as follows: Costs A Regulatory Impact Analysis (RIA) that includes a detailed discussion and explanation about the assumptions and methodology used to estimate the cost of this regulatory action follows and is available at www.regulations.gov (search for 'DoD-2023-OS-0063,' click 'Open Docket,' and view 'Supporting Documents'). Background The Department of Defense (DoD or Department) requires a secure and resilient supply chain to ensure the development, production, and sustainment of capabilities critical to national security. The DoD supply chain is targeted by adversaries with increasing frequency and sophistication, and to devastating effect. Therefore, implementation of cybersecurity standards and enforcement mechanisms are critically important. Executive Order (E.O.) 14028, 'Improving the Nation's (printed page 83172) Cybersecurity,' emphasizes the need to strengthen cybersecurity protections for both the Federal Government and the private sector. Nation-state adversaries attack the U.S. supply chain for a myriad of reasons, including exfiltration of valuable technical data (a form of industrial espionage); disruption to control systems used for critical infrastructure, manufacturing, and weapons systems; corruption of quality and assurance across a broad range of product types and categories; and manipulation of software to achieve unauthorized access to connected systems and to degrade the integrity of system operations. For example, since September 2020, major cyber-attacks such as the SolarWinds, [31] Colonial Pipeline, Hafnium, [32]

, including the date, nature, and purpose of each disclosure and the identity of the recipient, could alert the subject to the existence of the investigation. This could seriously compromise case preparation by prematurely revealing its existence and nature; compromise or interfere with witnesses or make witnesses reluctant to cooperate; and lead to suppression, alteration, or destruction of evidence. (B) From subsections (d) and (f) of 5 U.S.C. 552a because providing access to investigative records and the right to contest the contents of those records and force changes to be made to the information contained therein would seriously interfere with and thwart the orderly and unbiased conduct of the investigation and impede case preparation. Providing access rights normally afforded under 5 U.S.C. 552a would provide the subject with valuable information that would allow interference with or compromise of witnesses or render witnesses reluctant to cooperate; lead to suppression, alteration, or destruction of evidence; enable individuals to conceal their wrongdoing or mislead the course of the investigation; and result in the secreting of or other disposition of assets that would make them difficult or impossible to reach in order to satisfy any Government claim growing out of the investigation or proceeding. (C) From subsection (e)(1) of 5 U.S.C. 552a because it is not always possible to detect the relevance or necessity of each piece of information in the early stages of an investigation. In some cases, it is only after the information is evaluated in light of other evidence that its relevance and necessity will be clear. (D) From subsections (e)(4)(G) and (H) of 5 U.S.C. 552a because this SOR is compiled for investigative purposes and is exempt from the access provisions of subsections (d) and (f). (E) From subsection (e)(4)(I) of 5 U.S.C. 552a because to the extent that this provision is construed to require more detailed disclosure than the broad, generic information currently published in the system notice, an exemption from this provision is necessary to protect the confidentiality of sources of information and to protect privacy and physical safety of witnesses and informants. § 310.26 National Reconnaissance Office (NRO) exemptions. (a) All systems of records maintained by

the NRO shall be exempt from the requirements of 5 U.S.C. 552a(d) pursuant to 5 U.S.C. 552a(k)(1) to the extent that the system contains any information properly classified under Executive Order 12958 and which is required by the Executive Order to be withheld in the interest of national defense of foreign policy. This exemption, which may be applicable to parts of all systems of records, is necessary because certain record systems not otherwise specifically designated for exemptions herein may contain items of information that have been properly classified.

For the purposes of this analysis, it is assumed that the cost to a civilian agency to validate a contractor's system security plan (see section IV.C.2.e. of this preamble) will be similar to the cost for DoD to perform a strategic High Confidence Level Assessment, approximately \$51,097 per action. Therefore, the total annual estimated cost for civilian agencies to perform these validations is \$5,620,670 (110 non-defense contractor system security plan reviews * \$51,097/review). 7. Training Government Employees on New Requirements for CUI It is expected that the Government contracting officers, contract specialists, contracting officer representatives, and others involved in the acquisition process, such as program managers and those involved in the development of requirements documents, will be required to become familiar with the technical requirements of this rule and receive additional training. While the requirement to remain current on policies for Government procurement, such as changes to the FAR, is considered a part of the normal duties of such individuals, there is expected to be specialized Government training on this topic, the cost of which is attributed to this rule. It is estimated that 250,000 Government employees may need to take 30 minutes of specialized training at an average wage rate equivalent to a GS-12, step 5, Government employee. Therefore, the estimated annual training cost is \$9,000,000 (250,000 employees * 0.5 hours/employee * \$72/hour). E. Total Costs The total estimated costs (in billions) associated with this FAR rule over a ten-year period are as follows: Government Cost Undiscounted 2 percent Present Value \$22.32 \$20.10 Annualized 2.23 2.24 Undiscounted public and Government costs (in billions) by year over the ten-year period are summarized in the following table: (printed page 4286) Year 1 Year 2 Year 3 Year 4 Year 5 Year 6 Year 7 Year 8 Year 9 Year 10 \$2.75 \$2.17 \$2.17 \$2.17 \$2.17 \$2.17 \$2.17 \$2.17 \$2.17 \$2.17 F. Alternatives Considered 1. Status Quo Absent this FAR rule, agencies will continue to employ ad hoc, agency-specific policies to manage CUI. This approach can cause agencies to mark and handle this information inconsistently and inefficiently, and forces defense and non-defense contractors to establish procedures and internal controls to meet different civilian and defense agency approaches for marking and handling CUI. This approach was determined to be counter to the purpose of the Federal Acquisition Regulations System, which was established for the codification and publication of uniform policies and procedures for acquisition by all executive agencies (see FAR 1.101). 2. No Standard Form

3.1.1. 3.1.1. 3.1.1) - Agencies will benefit if their MFA solutions support multiple authenticator types and methods.

5.1.2.3.Updates Participants were asked how updates to standards impacted their product lifecycle. Sometimes, updates to standards specifications can be disruptive: Two participants commented on interdependencies of standards, and that problems with updates to all applicable documents aren't always closely coordinated:

. However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of such information, the individual will be provided access to such information except to the extent that disclosure would reveal the identity of a confidential source. (B) Records maintained in connection with providing protective services to the President and other individuals under 18 U.S.C. 3506 , may be exempt pursuant to 5 U.S.C. 552a(k)(3) . (C) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be, exempt pursuant to 5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. (D) Any portion of this system that falls under the provisions of 5 U.S.C. 552a(k)(2) , (k)(3), (k)(5) may be exempt from the following subsections of 5 U.S.C. 552a(c)(3) ; (d); (e)(1); (e)(4)(G), (H) and (I); and (f). (ii) Authority. 5 U.S.C. 552a(k)(2) , (k)(3), (k)(5). (iii) Reasons. (A) From subsection (c)(3) because it will enable DSS to conduct certain investigations and relay law enforcement information without compromise of the information, protection of investigative techniques and efforts employed,

and identities of confidential sources who might not otherwise come forward and who furnished information under an express promise that the sources' identity would be held in confidence (or prior to the effective date of the Act, under an implied promise); (B) From subsections (e)(1), (e)(4)(G), (H), and (I) because it will provide protection against notification of investigatory material including certain reciprocal investigations and counterintelligence information, which might alert a subject to the fact that an investigation of that individual is taking place, and the disclosure of which would weaken the on-going investigation, reveal investigatory techniques, and place confidential informants in jeopardy who furnished information under an express promise that the sources' identity would be held in confidence (or prior to the effective date of the Act, under an implied promise); (C) From subsections (d) and (f) because requiring DSS to grant access to records and agency rules for access and amendment of records would unfairly impede the agency's investigation of allegations of unlawful activities. To require DSS to confirm or deny the existence of a record pertaining to a requesting individual may in itself provide an answer to that individual relating to an on-going investigation. The investigation of possible unlawful activities would be jeopardized by agency rules requiring verification of record, disclosure of the record to the subject, and record amendment procedures. (2) System identifier and name. V5-01, Investigative Files System. (i) Exemption.

The five functions are Identify, Protect, Detect, Respond, and Recover. NIST SP 800-37, REVISION 2 RISK MANAGEMENT FRAMEWORK FOR INFORMATION SYSTEMS AND ORGANIZATIONS A System Life Cycle Approach for Security and Privacy

APPENDIX B PAGE 96 This publication is available free of charge from:

<https://doi.org/10.6028/NIST.SP.800-37r2> cybersecurity framework profile [NIST CSF] A representation of the outcomes that a particular system or organization has selected from the Framework Categories and Subcategories. cybersecurity framework subcategory [NIST CSF] The subdivision of a Category into specific outcomes of technical and/or management activities. derived requirements [SP 800-160 v1] A requirement that is implied or transformed from a higher-level requirement. Note 1: Implied requirements cannot be assessed since they are not contained in any requirements baseline. The decomposition of requirements throughout the engineering process makes implicit requirements explicit, allowing them to be stated and captured in appropriate baselines and allowing associated assessment criteria to be stated. Note 2: A derived requirement must trace back to at least one higher-level requirement. detect (CSF function) [NIST CSF] Develop and implement the appropriate activities to identify the occurrence of a cybersecurity event. developer A general term that includes developers or manufacturers of systems, system components, or system services; systems integrators; vendors; and product resellers. Development of systems, components, or services can occur internally within organizations or through external entities. enterprise [CNSSI 4009] An organization with a defined mission/goal and a defined boundary, using systems to execute that mission, and with responsibility for managing its own risks and performance. An enterprise may consist of all or some of the following business aspects: acquisition, program management, human resources, financial management, security, and systems, information and mission management. See organization. enterprise architecture [44 USC 3601] A strategic information asset base, which defines the mission; the information necessary to perform the mission; the technologies necessary to perform the mission; and the transitional processes for implementing new technologies in response to changing mission needs; and includes a baseline architecture; a target architecture; and a sequencing plan. environment of operation [OMB A-130] The physical surroundings in which an information system processes, stores, and transmits information. event [SP 800-61, Adapted] Any observable occurrence in a network or information system. executive agency [OMB A-130] An executive department specified in 5 U.S.C. Sec. 101; a military department specified in 5 U.S.C. Sec. 102; an independent establishment as defined in 5 U.S.C. Sec. 104(1); and a wholly owned Government corporation fully subject to the provisions of 31 U.S.C. Chapter 91.

The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the Nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology. ITL's responsibilities include the development of management, administrative, technical, and physical standards and guidelines for the cost-effective security and privacy of other than national security-related information in federal information systems. The

term security will be used as a shorthand for 'cybersecurity' or 'information security.' Reference to physical security is different and will be labeled as such. · Physical security

) requires cost-benefit and other analyses before any rule making if the rule will include a
·Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any 1 year.· The current inflation-adjusted statutory threshold is \$112,300,000. FDA has determined that this final rule does constitute a significant rule under the Unfunded Mandates Reform Act. Most of the requirements of the Unfunded Mandates have been fulfilled in the Executive Order 12866 analysis in the PRIA. The requirements under the Unfunded Mandates Act of 1995 include assessing the rule's effects on future costs; productivity; particular regions, communities, or industrial sectors; economic growth; full employment; job creation; and exports. Future Costs The future costs from the recordkeeping rule include the recurring costs, which reach their long-term value in the third year after promulgation of the final rule. These costs will be incurred by all domestic facilities that manufacture, process, pack, transport, distribute, receive, hold, or import food except very small retail facilities. Recurring costs from collecting new information as well as the learning costs for new entrants will be incurred in each future year. An hourly burden of 30 minutes a week was estimated for the additional monitoring and recordkeeping that will be required from this final rule. This hourly burden estimate was modified for convenience stores to allow for structural differences assumed in their operations. Refer to the PRIA for a fuller illustration of the future costs of the final rule. Table 24.·Future Costs Mean Low High Year 3 and later years \$123,209,200 \$121,980,000 \$125,788,000 Particular Regions, Communities, or Industrial Sectors The costs of the establishment and maintenance of records will be shared among all domestic manufacturers, processors, packers, transporters, receivers, holders, and importers of food, except very small retail facilities that are exempted from the final rule. The higher costs incurred by domestic suppliers as a result of these regulations will mostly be passed on to consumers in the form of higher food prices. Because consumer demand for food is highly inelastic, almost all of the higher costs incurred by food suppliers will be passed on to consumers. Consequently, higher food prices will reduce real incomes for all consumers. However, we believe that the benefits from these regulations will justify the reduction in real incomes. These benefits are measured as an improved ability by the FDA to respond to and contain threats of serious adverse health consequences from accidental or deliberate contamination of food. National Productivity, Economic Growth, Job Creation, and Full Employment

, because it will not result in an annual effect on the economy of \$100 million or more; a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets. Sec. 202, Public Law 104-4 , ·Unfunded Mandates Reform Act· It has been certified that 32 CFR part 236 does not contain a Federal mandate that may result in expenditure by State, local and tribal governments, in aggregate, or by the private sector, of \$100 million or more in any one year. Public Law 96-354, ·Regulatory Flexibility Act· (5 U.S.C. 601) It has been certified that 32 CFR part 236 is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. DIB participation in the DIB CS/IA Program is voluntary. Public Law 96-511, ·Paperwork Reduction Act· (44 U.S.C. Chapter 35) Sections 236.4 and 236.5 and 236.7 of this interim final rule contain information collection requirements. DoD has submitted the following proposal to Office of Management and Budget (OMB) under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35). Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of DoD, including whether the information will have practical utility; (b) the accuracy of the estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including the use of automated collection techniques or other forms of information technology. (a) Title: Defense Industrial Base Cyber Security/Information Assurance (DIB CS/IA) Points of Contact Information. Type of Request: New. Projected Responses per Respondent: One response is required initially and thereafter only on an ·as needed/required· basis, as changes to the points of contact occur. Annual Responses: 275, which includes the additional responses required on an ·as needed/required· basis. Average Burden per Response: 20 minutes. Annual Burden Hours: Total

annual burden for respondents 92 hours. Total Annualized Cost to Respondents: One-time cost of ~\$12 per respondent. Total cumulative annual cost for 250 respondents (275 responses) is \$3,337. Needs and Uses:

At Level 2, CMMC adds a requirement for contractors and applicable subcontractors to verify that all applicable security requirements outlined in NIST SP 800-171 Rev 2 and required via DFARS clause 252.204-7012 have been implemented. As determined by DoD, program contracts will include either a CMMC Level 2 Self-Assessment requirement or a CMMC Level 2 Certification Assessment requirement to verify a contractor's implementation of the CMMC Level 2 security requirements. Selected requirements are allowed to have a Plan of Action and Milestones (POA&M) that must be closed out within 180 days of the assessment (see § 170.21 for details on POA&M). This self-assessment must be performed on a triennial basis and the results must be entered electronically in SPRS (see § 170.16 for details on CMMC Level 2 Self-Assessment requirements and procedures, and specifically § 170.16(a)(1)(i) for information collection). c. Affirmation Requirements (New) A senior official from the prime contractor and any applicable subcontractor will be required to affirm continuing compliance with the specified security requirements after every assessment, including POA&M closeout, and annually thereafter. Affirmations are entered electronically in SPRS (see § 170.22 for details on Affirmation requirements and procedures). 3. Contracts or Subcontracts With a CMMC Level 2 Certification Assessment Requirement a. Security Requirements For CMMC Level 2 Certification Assessment, contractors and applicable subcontractors are already required to implement the security requirements currently required by the DFARS clause 252.204-7012, which are aligned with NIST SP 800-171 Rev 2. b. Assessment Requirements (New) At Level 2, CMMC adds a requirement for contractors and applicable subcontractors to verify that all applicable security requirements outlined in NIST SP 800-171 Rev 2 and required via DFARS clause 252.204-7012 have been implemented. As determined by DoD, program contracts will include either a CMMC Level 2 Self-Assessment requirement or a CMMC Level 2 Certification Assessment requirement to verify a contractor's implementation of the CMMC Level 2 security requirements. Selected requirements are allowed to have a POA&M that must be closed out within 180 days of the assessment (see § 170.21 for details on POA&M). The final certification will have up to a three-year duration. The third-party assessment organization will enter the assessment information electronically into the CMMC Enterprise Mission Assurance Support Service (eMASS), that will electronically transmit the assessment results into SPRS (see § 170.17 for details on CMMC Level 2 Certification Assessment requirements and procedures, and specifically § 170.17(a)(1)(i) for information collection). c. Affirmation Requirements (New)

During the processing of a Freedom of Information Act/Privacy Act request (which may include access requests, amendment requests, and requests for review for initial denials of such requests), exempt materials from other systems of records may, in turn, become part of the case record in this system. To the extent that copies of exempt records from those other systems of records are entered into this system, the Defense Logistics Agency claims the same exemptions for the records from those other systems that are entered into this system, as claimed for the original primary system of which they are a part. (ii) Authority. 5 U.S.C. 552a(j)(2) , (k)(1) through (7). (iii) Reasons. Records are only exempt from pertinent provisions of 5 U.S.C. 552a to the extent such provisions have been identified and an exemption claimed for the original record and the purposes underlying the exemption for the original record still pertain to the record which is now contained in this system of records. In general, the exemptions were claimed in order to protect properly classified information relating to national defense and foreign policy; to avoid interference during the conduct of criminal, civil, or administrative actions or investigations; to ensure protective services provided the President and others are not compromised; to protect the identity of confidential sources incident to Federal employment, military service, contract, and security clearance determinations; to preserve the confidentiality and integrity of Federal testing materials; and to safeguard evaluation materials used for military promotions when furnished by a confidential source. The exemption rule for the original records will identify the specific reasons why the records are exempt from specific provisions of 5 U.S.C. 552a . (7) System identifier and name. S240.28 DoD (Specific exemption), Case Adjudication Tracking System (CATS). (i) Exemption. (A) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. (printed page 14778) (B) Therefore, portions of this system may be exempt pursuant to 5 U.S.C. 552a(k) (5) from the following subsections of 5 U.S.C. 552a(c)(3) , (d)(1)(2)(3)(4), and (e)(1). (i) Authority. 5 U.S.C.

We also recognized that entities could minimize risk through their security practices, but likely could never completely eliminate all risk. In the preamble to the 2003 Final Rule, the Department acknowledged that there is no such thing as a totally secure system that carries no risks to security. [88] The Department opined that Congress' intent in the use of the word 'ensure' in section 1173(d) of the SSA was to set an exceptionally high goal for the security of ePHI. However, we also recognized that Congress anticipated that some trade-offs would be necessary, and that 'ensuring' protection did not mean doing so without any regard to the cost. [89] As such, the Department explained that we expected a covered entity to protect that information to the best of its ability. [90] Thus, a covered entity would be expected to balance the identifiable risks to and vulnerabilities of ePHI with the cost of various protective measures, while also taking into consideration the size, complexity, and capabilities of the covered entity. [91] In the 2003 Final Rule, the Department introduced the concept of 'addressable' implementation specifications, which it distinguished from 'required' implementation specifications. The goal was to provide covered entities with even more flexibility. [92] While none of the implementation specifications were optional, designating some of the implementation specifications as addressable provided each covered entity with the ability to determine whether certain implementation specifications were reasonable and appropriate safeguards for that entity, based on its risk analysis, risk mitigation strategy, previously implemented security measures, and the cost of implementation. [93]

3. 2009 Delegation of Authority On October 7, 2003, the Secretary delegated authority for administering and enforcing the Security Rule to the Administrator of the Centers for Medicare & Medicaid Services (CMS). [94] The Secretary issued a notice on August 4, 2009, superseding the previous delegation and replacing it with a delegation authority to the Director of OCR effective July 27, 2009. [95]

4. 2013 Omnibus Rulemaking Following the enactment of the HITECH Act, the Department issued an NPRM, entitled 'Modifications to the HIPAA Privacy, Security, and Enforcement Rules Under the Health Information Technology for Economic and Clinical Health [HITECH] Act' ('2010 Proposed Rule'), [96] to propose implementation of certain HITECH Act requirements. In the 2010 Proposed Rule, the Department noted that it had not amended the Security Rule since 2003. [97] We further explained that information gleaned from contact with the public since that time, OCR's enforcement experience, and technical corrections needed to eliminate ambiguity provided the impetus for the Department's actions to propose certain regulatory changes beyond those required by the HITECH Act. [98]

Contractor employees shall also take any additional training described in the SF XXX sections on training. This additional training augments the general CUI training and may include specialized training for a particular category of CUI or for certain employees handling CUI in a specific situation, or other similar circumstances. (g) CUI incidents. (1) For CUI in a Federally-controlled facility, the Contractor shall report CUI incidents in accordance with agency policy. (2) For CUI in a non-Federally-controlled facility, the Contractor shall report: (i) Any suspected or confirmed CUI incident to the agency website or single point of contact identified in Part C, Section IV of the SF XXX; if there is no point of contact identified there the Contractor should contact the Contracting Officer for instructions; (ii) Within 8 hours of discovery; and (iii) As many of the applicable data elements located at <https://dibnet.dod.mil/portal/intranet/> as are available in the initial report and provide any remaining applicable data elements as soon as they become available. (3) When the Contractor discovers a suspected or confirmed CUI incident, the Contractor shall: (i) Determine and inventory what CUI was or could have been improperly accessed, created, collected, used, processed, stored, maintained, disseminated, disclosed, or disposed of; (ii) Construct a timeline of user activity; (iii) Determine methods and techniques used to access CUI; and (iv) Cooperate and exchange information with agency officials, as determined necessary by the agency, in order to effectively report and manage a suspected or confirmed CUI incident. (4) If the suspected or confirmed CUI incident has occurred on an information system, preserve and protect images of all known affected information systems and all relevant monitoring and packet capture data until the Government declines interest or 90 days from the date of the submission of the report passes without the Government requesting the media and data, whichever is sooner. (5) Unmarked or mismarked CUI is not considered a CUI incident unless the mismarking or lack of marking has resulted in the mishandling or improper dissemination of the information. (6) If the Contractor is a FedRAMP authorized (Joint Authorization Board or Agency) cloud service provider, the Contractor shall also report to the point(s) of contact specified in the FedRAMP incident reporting guidelines as documented in the Cloud Service Provider Incident Response Plan. (7) The reporting requirements of

this clause do not relieve the Contractor from the requirement to follow any applicable laws, regulations, or policies outside of this clause. (8) If the Contractor is determined to be at fault for a CUI incident (e.g.,

The Department also recognizes that there may be some costs that are not readily quantifiable, notably, actions that regulated entities may take to comply with existing requirements more fully as a result of proposed clarifications. For example, this would include completing a technology asset inventory, which is a baseline expectation for the existing requirement of conducting a risk assessment; documenting completion of existing requirements; adding more specificity to the required contingency plan, such as designating staff roles with specific responsibilities when a contingency occurs; testing safeguards as part of reviewing and updating policies and procedures and technical controls; and deploying encryption for ePHI in a more concerted manner (including documenting provision of notification in response to individuals' access requests for transmission of ePHI in an unencrypted manner and has been informed of the risks associated with the transmission, receipt, and storage of unencrypted ePHI). These activities are specified in the NPRM, but they would be more in the nature of clarifications to and increased specificity of existing requirements. Because the degree of additional effort by regulated entities to meet these requirements would be dependent on multiple factors and likely to be highly variable, the additional cost is difficult to quantify. We acknowledge that there may be a small burden associated with documenting that an individual was informed of the risks of unencrypted transmission of ePHI; however, we believe there are few requests that fall into this category. Because we do not have a basis to make an estimate, we have requested data on potential burdens associated with this proposed exception to the proposed standard for encryption in the preamble discussion of 45 CFR 164.312 . The cost of complying with the exceptions to encryption and MFA for medical devices authorized by the U.S. Food & Drug Administration for marketing may depend in part on the extent to which a regulated entity relies on legacy devices because the regulated entity may be required to adopt compensating controls. New devices are likely to have encryption and MFA built into them, not requiring compensating controls. The Department is unable to estimate the range of costs to adopt compensating controls for legacy devices because there is no reliable data to accurately assess the extent to which legacy devices are used in the United States. [939] The Department requests comment on the number of legacy devices in use and the costs of applying compensating controls to such devices. 2. Baseline Conditions

3.1.3 | 3.1.3 Automate Selected Defect Checks The sub-steps for automating selected defect checks are described in this section.

The purpose of a MAC is to authenticate both the source of a message and its integrity without the use of any additional mechanisms. HMACs have two functionally distinct parameters, a message input and a secret key known only to the message originator and intended receiver(s). Additional applications of keyed-hash functions include their use in challenge-response identification protocols for computing responses, which are a function of both a secret key and a challenge message. Providing a way to check the integrity of information transmitted over or stored in an unreliable medium is a prime necessity in the world of open computing and communications. Mechanisms that provide such integrity checks based on a secret key are usually called message authentication codes (MACs). Typically, message authentication codes are used between two parties that share a secret key in order to authenticate information transmitted between these parties. This Standard defines a MAC that uses a cryptographic hash function in conjunction with a secret key. This mechanism is called HMAC [HMAC]. HMAC shall use an Approved cryptographic hash function [FIPS 180-3]. HMAC uses the secret key for the calculation and verification of the MACs.

3.5.3 | Attribute Transformation... 3.5.3 Attribute Transformation Attributes that are typically assigned to very large numbers of subjects and many types of objects can lead to administrative difficulties from different perspectives for access control.

- improvement opportunities for the organization's policies, plans, processes, procedures, and practices that support cybersecurity risk management to inform efforts under all six Functions. - PROTECT (PR) -Safeguards to manage the organization's cybersecurity risks are used. Once assets and risks are identified and prioritized, PROTECT supports the ability to secure those assets to prevent or lower the likelihood and impact of adverse cybersecurity events, as well as to increase the likelihood and impact of taking advantage of opportunities. Outcomes covered by this Function

include identity management, authentication, and access control; awareness and training; data security; platform security (i.e., securing the hardware, software, and services of physical and virtual platforms); and the resilience of technology infrastructure. - DETECT (DE) -Possible cybersecurity attacks and compromises are found and analyzed. DETECT enables the timely discovery and analysis of anomalies, indicators of compromise, and other potentially adverse events that may indicate that cybersecurity attacks and incidents are occurring. This Function supports successful incident response and recovery activities. - RESPOND (RS) -Actions regarding a detected cybersecurity incident are taken. RESPOND supports the ability to contain the effects of cybersecurity incidents. Outcomes within this Function cover incident management, analysis, mitigation, reporting, and communication. - RECOVER (RC) -Assets and operations affected by a cybersecurity incident are restored. RECOVER supports the timely restoration of normal operations to reduce the effects of cybersecurity incidents and enable appropriate communication during recovery efforts. Cybersecurity risk management is essential for addressing privacy risks related to the loss of the confidentiality, integrity, and availability of individuals' data. For example, data breaches could lead to identity theft.

There may be references in this publication to other publications currently under development by NIST in accordance with its assigned statutory responsibilities. The information in this publication, including concepts and methodologies, may be used by federal agencies even before the completion of such companion publications. Thus, until each publication is completed, current requirements, guidelines, and procedures, where they exist, remain operative. For planning and transition purposes, federal agencies may wish to closely follow the development of these new publications by NIST. The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the Nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology. ITL's responsibilities include the development of management, administrative, technical, and physical standards and guidelines for the cost-effective security and privacy of other than national security-related information in federal information systems. These capabilities were developed in the context of NISTIR 8259, Foundational Cybersecurity Activities for IoT Device Manufacturers [2], which discusses considerations for manufacturers to help guide them in choosing and implementing the device cybersecurity capabilities their IoT devices will provide. NISTIR 8259 also defines terminology and concepts that provide critical context for understanding device cybersecurity capabilities as one part of the entire IoT cybersecurity ecosystem. Thus, though both NISTIR 8259 and this publication have manufacturers as the intended audience, the considerations and capabilities discussed across the two publications can be used by manufacturers, integrators, or consumers.

Additionally, the Department proposes to modify the general requirements of paragraph (a)(2) to require each regulated entity to protect against any reasonably anticipated threats or hazards to the confidentiality, integrity, or availability of all ePHI, instead of to the security or integrity of ePHI. We believe that this proposal would better align this requirement with the general requirement at 45 CFR 164.306(a)(1), and confidentiality, integrity, and availability are generally considered the three basic elements of security. [422] Additionally, the Department proposes a minor change to paragraph (a)(3) to refer specifically to ePHI, rather than using a more general term. We believe that both proposals would constitute technical revisions and that neither would alter the meaning of 45 CFR 164.306(a)(2) or (3), respectively. Finally, the Department proposes to modify paragraph (a)(4) so that each regulated entity would be required to ensure that its workforce complies not only with the Security Rule, but also all administrative, physical, and technical safeguards implemented in accordance with this subpart. These proposals would better align the language of the general requirements in paragraph (a) of 45 CFR 164.306 with the statute [423] and 45 CFR 164.530(c). [424] These proposals are also consistent with our proposals to revise the introductory language for each of the safeguard provisions to clarify the provisions therein would be the minimum regulated entities are to implement, i.e., that the security measures required by the Security Rule constitute a floor of protections, not a ceiling.

b. Section 164.306(b)-Flexibility of Approach The Department's proposals generally retain the flexible approach described in paragraph (b). As discussed above, the Security Rule carefully balances the benefits of safeguarding against risks to security and the burdens of implementing protective measures by, for example, enabling regulated entities to take into account specified factors when determining how to implement security measures in a manner that complies with the

Security Rule. To acknowledge the rapid evolution of technology and increasing threats, the Department proposes to clarify (printed page 933)

3.1.2 | Time Spent on Security Awareness ... 3.1.2 Time Spent on Security Awareness ## Focus Groups
The focus group demographic survey asked what percentage of time participants spend on their security awareness duties.

media [FIPS 200] Physical devices or writing surfaces including, but not limited to, magnetic tapes, optical disks, magnetic disks, Large-Scale Integration memory chips, and printouts (but excluding display media) onto which information is recorded, stored, or printed within a system.

NIST SP 800-37, REVISION 2 RISK MANAGEMENT FRAMEWORK FOR INFORMATION SYSTEMS AND ORGANIZATIONS A System Life Cycle Approach for Security and Privacy

APPENDIX B PAGE 101 This publication is available free of charge from:

<https://doi.org/10.6028/NIST.SP.800-37r2> moderate-impact system [FIPS 200] A system in which at least one security objective (i.e., confidentiality, integrity, or availability) is assigned a FIPS Publication 199 potential impact value of moderate and no security objective is assigned a potential impact value of high. national security system [44 USC 3552] Any system (including any telecommunications system) used or operated by an agency or by a contractor of an agency, or other organization on behalf of an agency: (i) the function, operation, or use of which involves intelligence activities; involves cryptologic activities related to national security; involves command and control of military forces; involves equipment that is an integral part of a weapon or weapons system; or is critical to the direct fulfillment of military or intelligence missions (excluding a system that is to be used for routine administrative and business applications, for example, payroll, finance, logistics, and personnel management applications); or (ii) is protected at all times by procedures established for information that have been specifically authorized under criteria established by an Executive Order or an Act of Congress to be kept classified in the interest of national defense or foreign policy. network A system implemented with a collection of interconnected components. Such components may include routers, hubs, cabling, telecommunications controllers, key distribution centers, and technical control devices. network access Access to a system by a user (or a process acting on behalf of a user) communicating through a network (e.g., a local area network, a wide area network, and Internet). operational technology Programmable systems or devices that interact with the physical environment (or manage devices that interact with the physical environment). These systems/devices detect or cause a direct change through the monitoring and/or control of devices, processes, and events. Examples include industrial control systems, building management systems, fire control systems, and physical access control mechanisms. operations technology See operational technology. organization [FIPS 200, Adapted] An entity of any size, complexity, or positioning within an organizational structure (e.g., federal agencies, private enterprises, academic institutions, state, local, or tribal governments, or as appropriate, any of their operational elements). organizationally-tailored control baseline A control baseline tailored for a defined notional (type of) information system using overlays and/or system-specific control tailoring, and intended for use in selecting controls for multiple systems within one or more organizations.

DFARS 204.7603, Procedures, was updated under paragraph (a), Item Risk, to clarify that a SPRS item risk search is required for any end product that did not have an item risk search performed prior to solicitation to ensure that item risk searches in SPRS only occur if an end product did not have an item risk search performed prior to solicitation; and paragraph (b), Price Risk, applies when procuring a service or an end product identified by an available material identifier. An editorial change was made throughout to correct an administrative error by removing the words "or services" from the definition of "item risk", as item risk does not apply to services. III. Applicability to Contracts at or Below the Simplified Acquisition Threshold, for Commercial Services, and for Commercial Products, Including Commercially Available Off-the-Shelf Items This rule creates a new solicitation provision, DFARS 252.204-7024, Notice on the Use of the Supplier Performance Risk System. The provision at DFARS 252.204-7024 is prescribed at DFARS 204.7604 for use in in solicitations for supplies and services, including solicitations using FAR part 12 procedures for the acquisition of commercial products and commercial services. The provision is applicable to acquisitions at or below the simplified acquisition threshold (SAT) and to acquisitions of commercial products, including commercially available off-the-shelf (COTS) items, and commercial services. Not applying this provision to contracts at or below the SAT and for the acquisition of

commercial products, including COTS items, and commercial services would exclude contracts intended to be covered by this rule and undermine the overarching purpose of the rule. Consequently, DoD is applying the rule to contracts below the SAT, for the acquisition of commercial services, and for the acquisition of commercial products, including COTS items. IV. Executive Orders 12866 and 13563 Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. V. Congressional Review Act As required by the Congressional Review Act (5 U.S.C. 801-808

Under the proposed transition provisions, a business associate would be permitted to create, receive, maintain, or transmit ePHI pursuant to an existing business associate agreement or other written arrangement with another regulated entity that does not require the regulated entity to obtain satisfactory assurances that meet the requirements of the revised Security Rule for up to one year after the revised Security Rule becomes effective, assuming that a final Security Rule is published; and that the agreement is compliant with the Security Rule at the time the final rule is published and that it is not renewed or modified between the effective and compliance dates. [870] The transition provisions would also allow for the business associate to create, receive, maintain, or transmit ePHI on behalf of another regulated entity where the existing business associate agreement does not require that the regulated entity verify that the (printed page 987) business associate has deployed technical safeguards in accordance with the Security Rule under the same circumstances as those described above. [871] During the transition period, the Department proposes to allow a business associate to create, receive, maintain, or transmit ePHI pursuant to a business associate agreement or other written arrangement with another regulated entity without including in the agreement that the business associate will: (1) comply with the revised Security Rule; [872] (2) ensure that any subcontractors that create, receive, maintain, or transmit ePHI on behalf of the business associate agree to comply with the revised Security Rule by entering into a business associate agreement or other arrangement that meets the requirements of the revised rule; [873] and (3) report to the covered entity [874] activation of its contingency plan. [875] Additionally, the Department intends that, in cases where a contract renews automatically without any change in terms or other action by the parties (also known as "evergreen contracts"), such contracts would be eligible for the extension if they automatically renew between the effective and compliance dates. Thus, regulated entities with an evergreen contract will be deemed to be in compliance with the Security Rule's requirements for business associate agreements or other written arrangements and such deemed compliance would not terminate when these contracts automatically renew. These transition provisions would apply to written contracts or other written arrangements as specified above.

The language, which has been revised and relocated to 252.245-7004(j)(4), specifies that informal bid procedures shall be used unless the plant clearance officer directs otherwise. Comment: A respondent recommended that formal sales be considered a part of the Contract Data Requirements List (CDRL). DoD Response: There is no basis for such policy. Including this on the CDRL would make the Government liable for directly reimbursing a contractor for costs incurred in conducting surplus property sales. However, such expenses are a normal part of contractor responsibilities under FAR 52.245-1(b)(2) and are not subject to direct reimbursement. Comment: A respondent recommended removing the dollar threshold at 252.245-70XX(l)(6) and requiring the plant clearance officer, not the contractor, to send the sales notice to FedBizOps. DoD Response: The plant clearance officer, not the contractor, is the appropriate sender of the sales notice; therefore, the requirement has been deleted. A more general requirement on the use of FedBizOps has been included in the DFARS companion resource, Procedures, Guidance, and Information (PGI) for the plant clearance officer. Comment: A respondent recommended changing the second sentence of 252.245-70XX(e)(9)(7) to, "(b)id openings will be submitted to the plant clearance officer, either electronically or manually, two copies of the bid abstract." DoD Response: The language has been revised and relocated to paragraph (j)(8) of 252.245-7004, and clarifies that the contractor shall provide two copies of the bid abstract to the plant clearance officer. Comment: A respondent recommended deleting the phrase "(f)forwarded to the plant clearance officer" from 252.245-70XX(c), Proceeds from sale of surplus inventory. DoD Response: The language at 252.245-7004(c) has been clarified to require proceeds to

be forwarded to the contracting officer or plant clearance officer, credited to the Government through a settlement agreement, credited to the contract, applied to the contract as directed by the contracting officer, or forwarded to the plant clearance officer unless otherwise provided for in the contract. Comment: In reference to 252.245-70XX (I), a respondent asked if plant clearance officers must draw up and provide terms and conditions for the contractor to use on surplus sales. The respondent also requested that terms and conditions be included in this clause. DoD Response: Contractors are required to use Government-provided sales terms and conditions. This is not (printed page 52141)

- then the subsequent treatment (and full life cycle costs of each) can be estimated more fully. - A total cost of operations analysis might help avoid a situation where risk practitioners consider only the direct and immediate expense of treating a risk (or pursuing an opportunity). For example, a manager might list the direct cost of a network firewall appliance to mitigate the risk scenario of an external hacker exfiltrating corporate secrets through a web server vulnerability. The response costs should also include hardware and software maintenance of the device, installation, operational labor, and -eventually -secure disposal of that appliance.

(2) The Components reserve the discretionary authority, and have the obligation, to impose any security procedure, safeguard, or restriction they believe necessary to ensure that unauthorized access to classified information is effectively precluded and that performance of classified contracts, as defined in DoD 5220.22-M, is not adversely affected by FOCI. (b) Procedures · (1) Criteria. A U.S. company is considered to be under FOCI whenever a foreign interest has the power, direct or indirect (whether or not exercised, and whether or not exercisable through the ownership of the U.S. company's securities, by contractual arrangements or other means), to direct or decide matters affecting the management or operations of the company in a manner that may result in unauthorized access to classified information or may adversely affect the performance of classified contracts. (2) FOCI Analysis. Conducting an analysis of available information on a company to determine the existence, nature, and source of FOCI is a critical aspect of evaluating previously uncleared companies for FCLs and also in determining continued eligibility of contractors for FCLs. (i) A U.S. company determined to be under FOCI is ineligible for an FCL unless and until security measures have been put in place to mitigate FOCI. (ii) In making a determination as to whether a company is under FOCI, DSS will consider the information provided by the company or its parent entity on the Standard Form (SF) 328, ·Certificate Pertaining to Foreign Interests,· (available at <http://www.dtic.mil/whs/directives/infomgt/forms/eforms/sf0328.pdf>) and any other relevant information (e.g., filings with the Securities and Exchange Commission (for publicly traded companies), articles of incorporation, by-laws, and loan and shareholder agreements, as well as other publicly available information about the company. Depending on specific circumstances (e.g., extensive minority foreign ownership at a cleared subsidiary in the corporate family), DSS may request one or more of the legal entities that make up a corporate family to submit individual SF 328s and will determine the appropriate FOCI action plan(s) that must be put in place. (iii) When a contractor has been determined to be under FOCI, the primary consideration will be the safeguarding of classified information. DSS is responsible for taking whatever interim action is necessary to safeguard classified information, in coordination with other affected agencies as appropriate consistent with §.117.54.

MA.L2-3.7.6 · Maintenance Personnel CMMC Assessment Guide · Level 2 | Version 2.13 156 FURTHER DISCUSSION Individuals without proper permissions must be supervised while conducting maintenance on organizational machines. Consider creating temporary accounts with short- term expiration periods rather than regular user accounts. Additionally, limit the permissions and access these accounts have to the most restrictive settings possible. Example One of your software providers has to come on- site to update the software on your company-s computers. You give the individual a temporary logon and password that expires in 12 hours and is limited to accessing only the computers necessary to complete the work [a]. This gives the technician access long enough to perform the update. You monitor the individual-s physical and network activity while the maintenance is taking place [a] and revoke access when the job is done. Potential Assessment Considerations · Are there processes for escorting and supervising maintenance personnel without required access authorization (e.g., vendor support personnel, short- term maintenance contractors) during system maintenance [a]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.7.6

To provide the DoD with an automated system to clear and audit travel within the United States

European Command's area of responsibility and to ensure compliance with the specific clearance requirements outline in the DoD Foreign Clearance Guide; to provide individual travelers with intelligence and travel warnings; and to provide the Defense Attaché and other DoD authorized officials with information necessary to verify official travel by DoD personnel. Routine uses of records maintained in the system, including categories of users and the purposes of such uses: In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, these records or information contained therein may specifically be disclosed outside the DoD as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows: To the Department of State Regional Security Officer, U.S. Embassy officials, and foreign police for the purpose of coordinating security support for DoD travelers. The DoD Blanket Routine Uses set forth at the beginning of the Army's compilation of systems of records notices also apply to this system. Policies and practices for storing, retiring, accessing, retaining, and disposing of records. Storage: Electronic storage media. Retrievability: Retrieved by individual's surname, Social Security Number and/or passport number. Safeguards: Electronic records are located in the United States European Command's Theater Requirements Automated Clearance System (TRACS) computer database with built in safeguards. Computerized records are maintained in controlled areas accessible only to authorized personnel with an official need to know access. In addition, automated files are password protected and in compliance with the applicable laws and regulations. Another built in safeguard of the system is records are access to the data through secure network. Retention and disposal: Records are destroyed 3 months after travel is completed. System manager(s) and address: Special Assistant for Security Matters, Headquarters, United States European Command, Unit 30400, P.O. Box 1000, APO AE 09131-1000. Notification procedures: Individuals seeking to determine whether information about themselves is contained in this system of records should address written inquiries to the Special Assistant for Security Matters, Headquarters, United States European Command, Unit 30400, P.O. Box 1000, APO AE 09131-1000. Requests should contain individual's full name, Social Security Number, and/or passport number. Record access procedures: Individuals seeking to access information about themselves that is contained in this system of records should address written inquiries to the Special Assistant for Security Matters, Headquarters, United States European Command, Unit 30400, P.O. Box 1000, APO AE 09131-1000. Requests should contain individual's full name, Social Security Number, and/or passport number. Contesting record procedures:

es guidelines for selecting and specifying security controls for organizations and systems supporting the executive agencies of the Federal Government to meet the requirements of FIPS Publication 200. - SP 800-53A Assessing Security and Privacy Controls in Systems and Organizations: Building Effective Assessment Plans , provides (i) guidelines for building effective security assessment plans and privacy assessment plans; and (ii) a comprehensive set of procedures for assessing the effectiveness of security controls and privacy controls employed in systems and organizations supporting the executive agencies of the Federal Government. - SP 800-60 Guide for Mapping Types of Information and Information Systems to Security Categories , assists agencies in consistently mapping security impact levels to types of: (i) information (e.g., privacy, medical, proprietary, financial, contractor sensitive, trade secret, investigation); and (ii) systems (e.g., mission critical, mission support, administrative).

(2) Do not include a person's SSN on an emergency recall roster or their spouse's name. (3) Commanders and supervisors should give consideration to those individuals with unlisted phone numbers. Commanders and supervisors should consider limiting access to an unlisted number within the unit. (g) Social Rosters. (1) Before including personal information such as a spouse's name, home addresses, home phone numbers, and similar information on social rosters or social directories, which will be shared with individuals, always ask for the individual's written consent. Without their written consent, do not include this information. (2) Collection of this information will require a Privacy Act Statement which clearly tells the individual what information is being solicited, the purpose, to whom the disclosure of the information is made, and whether collection of the information is voluntary or mandatory. (h) Disclosure of personal information on group orders. (1) Personal information will not be posted on group orders so that everyone on the orders can view it. Such a disclosure of personal information violates the Privacy Act and this part. (2) The following are some examples of personal information that should not be contained in group orders. The following list is not all-inclusive: (i) Complete SSN; (ii) Home addresses and phone numbers; or (iii) Date of birth. (i) Disclosures for established routine uses. (1) Records may be disclosed outside the DOD without the consent of the individual to whom they pertain for an established routine use. (2) A routine use shall: (i) Be compatible with and related to the

purpose for which the record was compiled; (ii) Identify the persons or organizations to which the records may be released; and (iii) Have been published previously in the Federal Register . (3) Establish a routine use for each user of the information outside the Department of Defense who needs official access to the records. (4) Routine uses may be established, discontinued, or amended without the consent of the individuals involved. However, new or changed routine uses (printed page 46064) must be published in the Federal Register at least 30 days before actually disclosing any records. (5) In addition to the routine uses listed in the applicable systems of records notices, Blanket Routine Uses for all DOD maintained systems of records have been established. These Blanket Routine Uses are applicable to every record system maintained within the DOD unless specifically stated otherwise within a particular record system. The Blanket Routine Uses are listed at appendix C of this part. (j) Disclosure accounting. (1) System managers must keep an accurate record of all disclosures made from DA Privacy Act system of records, including those made with the consent of the individual, except when records are (i) Disclosed to DOD officials who have a need to know the information to perform official government duties; or

(K) Require CMMC Ecosystem members to utilize official training content developed by a CMMC training organization approved by the CAICO in all CMMC certification courses. (iii) Ethics policy. The Ethics policy shall: (A) Require CMMC Ecosystem members to report to the Accreditation Body within 30 days of convictions, guilty pleas, or no contest pleas to crimes of fraud, larceny, embezzlement, misappropriation of funds, misrepresentation, perjury, false swearing, conspiracy to conceal, or a similar offense in any legal proceeding, civil or criminal, whether or not in connection with activities that relate to carrying out their role in the CMMC Ecosystem. (B) Prohibit harassment or discrimination by CMMC Ecosystem members in all interactions with individuals whom they encounter in connection with their roles in the CMMC Ecosystem. (C) Require CMMC Ecosystem members to have and maintain a satisfactory record of integrity and business ethics. § 170.9 CMMC Third-Party Assessment Organizations (C3PAOs). (a) Roles and responsibilities. C3PAOs are organizations that are responsible for conducting Level 2 certification assessments and issuing Certificates of CMMC Status to OSCs based on the results. C3PAOs must be accredited or authorized by the Accreditation Body in accordance with the requirements set forth. (b) Requirements. C3PAOs shall: (1) Obtain authorization or accreditation from the Accreditation Body in accordance with § 170.8(b)(3)(i) and (ii). (2) Comply with the Accreditation Body policies for Conflict of Interest, Code of Professional Conduct, and Ethics set forth in § 170.8(b)(17); and achieve and maintain compliance with ISO/IEC 17020:2012(E) (incorporated by reference, see § 170.2) within 27 months of authorization. (3) Require all C3PAO company personnel participating in the Level 2 certification assessment process to complete a Tier 3 background investigation resulting in a determination of national security eligibility. This includes the CMMC Assessment Team and the quality (printed page 83223) assurance individual. This Tier 3 background investigation will not result in a security clearance and is not being executed for the purpose of government employment. The Tier 3 background investigation is initiated using the Standard Form (SF) 86 (www.gsa.gov/reference/forms/questionnaire-for-national-security-positions). These positions are designated as non-critical sensitive with a risk designation of Moderate Risk in accordance with 5 CFR 1400.201(b) and (d) and the investigative requirements of 5 CFR 731.106(c)(2) . (4) Require all C3PAO company personnel participating in the Level 2 certification assessment process who are not eligible to obtain a Tier 3 background investigation to meet the equivalent of a favorably adjudicated Tier 3 background investigation. DoD will determine the Tier 3 background investigation equivalence for use with the CMMC Program only. (5) Comply with Foreign Ownership, Control or Influence (FOCI) by:

The proposed rule changes seek to provide clarification on safeguarding terminology and correct identified paragraph numbering errors, as well as (printed page 86291) address comments from regulated parties seeking more detail or guidance on existing requirements from the final rule published December 21, 2020. The proposed changes are mostly insignificant in that by themselves, these proposed changes create no additional requirements to current NISP policy. For example, a paragraph on subcontracting was removed because it was deemed to be guidance for the government, rather than contractors (i.e., the regulated parties). Also, the references to the Joint Personnel Adjudication System as the system of record for personnel security clearance processing were removed and replaced with the current system of record, Defense Information System for Security. These changes create no additional burden or cost to contractors; but rather seek to provide updated, accurate information. The proposed changes also seek to clarify terminology in relation to safeguarding requirements, which were initially incorporated into the final rule

published December 21, 2020 to be in line with 32 CFR part 2001. These changes are not expected to result in any changes to cost estimates or burden on the regulated parties, but rather provide a more consistent, uniform means to comply with existing NISP requirements across the federal government. Costs As stated under the Discussion of Comments and Changes section, DoD received one comment that the cost for implementing SEAD 3 was underestimated in the original rule. DoD agrees with the commenter and the cost estimates have been updated accordingly. We are including here the summary of information on the baseline cost from the original rule for reference. DCSA began the cost analysis for the baseline costs for fiscal year 2017 by randomly selecting active NISP contractor facilities that have existing DoD approval for classified storage at their own physical locations and having those facilities submit security costs. The randomly selected contractor facilities also have an active facility security clearance and a permanent Commercial and Government Entity (CAGE) Code. In addition to the randomly selected cleared facilities having approved classified storage, DCSA categorizes these contractor facilities for the survey based on the size, scope, and complexity of each contractor's security program.

required a review of agency-specific cybersecurity requirements that currently exist as a matter of law, policy, or contract to form the recommendation for the standardized contract language proposed in this rule. As a result, this rule may duplicate, overlap, or conflict with existing agency-specific cybersecurity contract clauses. Section 2. Paragraph (k) of the E.O. resolves the issue of duplication, overlap, or conflict by requiring agencies, upon final publication of this rule, to update their agency-specific cybersecurity requirements to remove any requirements that are duplicative of this rule. There are no known significant alternative approaches to the proposed rule. The Regulatory Secretariat Division has submitted a copy of the IRFA to the Chief Counsel for Advocacy of the Small Business Administration. A copy of the IRFA may be obtained from the Regulatory Secretariat Division. DoD, GSA, and NASA invite comments from small business concerns and other interested parties on the expected impact of this rule on small entities. DoD, GSA, and NASA will also consider comments from small entities concerning the existing regulations in subparts affected by the rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (FAR Case 2021-019), in correspondence. VII. Paperwork Reduction Act The Paperwork Reduction Act (44 U.S.C. 3501-3521) applies because the proposed rule contains information collection requirements. Accordingly, the Regulatory Secretariat Division has submitted a request for approval of a new information collection requirement concerning Standardizing Cybersecurity Requirements for Unclassified Federal Information Systems to the Office of Management and Budget. A. Public Reporting Burden for This Collection of Information 1. Submit Annual Assessment of FIS Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. The annual reporting burden estimated as follows: Respondents/Recordkeepers: 27. Total Annual Responses: 54. Total Burden Hours: 54. This estimate is based on two responses per respondent. 2. Maintain and Submit a List of Operational Technology Equipment The public recordkeeping burden for this collection of information is estimated to annually require one recordkeeper who spends 80 hours per contract to maintain the list: Recordkeepers: 28. Total annual records: 28. Total recordkeeping burden hours: 2,240. The public reporting burden for this collection of information is estimated to average 1 hour per response to review and submit the list. The annual reporting burden is estimated as follows: Respondents: 6. Total Annual Responses: 6. Total Burden Hours: 6. This estimate is based on one response per respondent. 3. Submit Continuous Monitoring Strategy

means a discrete set of information resources organized for the collection, processing, maintenance, use, sharing, dissemination, or disposition of information (44 U.S.C. 3502(8)). Information resources, as used in this definition, includes any ICT. Information technology * * * * *

(3) * * * (ii) Is operational technology. * * * * * Internet of Things (IoT) devices

means, consistent with section 2 paragraph 4 of Public Law 116-207, devices that: (1) Have at least one transducer (sensor or actuator) for interacting directly with the physical world, have at least one network interface, and are not conventional information technology devices, such as smartphones and (printed page 68414) laptops, for which the identification and implementation of cybersecurity features is already well understood; and (2) Can function on their own and are not only able to function when acting as a component of another device, such as a processor. * * * *

* Operational technology means programmable systems or devices that interact with the physical environment (or manage devices that interact with the physical environment). These systems or

devices detect or cause a direct change through the monitoring and/or control of devices, processes, and events. Examples of operational technology include industrial control systems, building management systems, fire control systems, and physical access control mechanisms (NIST SP 800-160 vol 2). * * * * * Telecommunications equipment means equipment used to transmit, emit, or receive signals, signs, writing, images, sounds, or intelligence of any nature, by wire, cable, satellite, fiber optics, laser, radio, or any other electronic, electric, electromagnetic, or acoustically coupled means. Telecommunications services means services used to transmit, emit, or receive signals, signs, writing, images, sounds, or intelligence of any nature, by wire, cable, satellite, fiber optics, laser, radio, or any other electronic, electric, electromagnetic, or acoustically coupled means. * * * * * PART 4-ADMINISTRATIVE AND INFORMATION MATTERS 4.1301 [Amended] 4. Amend section 4.1301 by removing from paragraphs (a) and (b) ·Federally-controlled information· and adding ·Federal information· in their places; respectively. 4.1303 [Amended] 5. Amend section 4.1303 by removing from the text ·Federally-controlled information· and adding ·Federal information· in its place. 4.1901 [Amended] 6. Amend section 4.1901 by removing the definitions of ·Information· and ·Information system·. PART 7-ACQUISITION PLANNING 7. Amend section 7.103 by· a. Removing from paragraph (q) ·information and communication technology· and adding ·information and communications technology· in its place; and b. Adding paragraph (z). The addition reads as follows. 7.103 Agency-head responsibilities. * * * * *

One comment questioned the requirement for a Tier 3 background investigation for CCPs and another suggested the validity period of CCP certification should be determined by the CAICO. Yet another comment suggested changing certification periods from 3 to 4 years for those certified prior to the rule becoming effective. One comment suggested there is insufficient clarity regarding the role CCPs may play in an assessment and another asked whether a CCPs was allowed to review more than just Level 1 requirements. Two other comments recommended updating CCP training to include Level 2 practices. Another comment noted that assessor cannot be robotic and that they must be allowed to evaluate the situation as it pertains to the company being evaluated. One comment asked for clarification on Lead CCA requirements and requested a reduction in the management experience to 2 years. Two other comments recommended adding IT and cybersecurity experience as relevant skills. One comment also recommended that Lead CCAs have industry-specific knowledge of the industry in which the OSC being assessed participates. Another comment requested clarification whether years of experience are cumulative for the Lead CCA. One comment recommended changing the name of Lead CCA and adding roles and responsibilities requirements. One stated that the rule's CCA prerequisites is too low a skill set and recommended increasing the requirements for both CCAs and Lead CCAs. While another comment noted the rule referenced both DoD Manual 8570 and DoD Manual 8140.03 and one or the other should be used. One commenter suggested that should sufficient assessors not be available to meet demand, the DoD should provide a delay or ·grace period· to meet certification requirements. Response: The CMMC rule provides detail on anticipated impacts on the DIB in the Impact and Cost Analysis summary of the preamble. Speculation on market forces on roles in the CMMC ecosystem such as CCPs and CCAs are outside of the scope of the CMMC program rulemaking. Likewise, limitations on career opportunities and associated issues such as burn-out or job satisfaction are beyond the scope of the program. The DoD updated the rule to clarify that CCAs must meet all the requirements set forth in §·170.11(b) and modified the rule in §·170.10(b)(10) to include CMMC Certified Professionals (CCPs). §·170.13(b)(6) was changed to conform to rule text in §·170.11(b)(9) and to clarify with whom information may be shared. The DoD determined the certification requirements specified in §·170.11(b)(6) meet the needs of ensuring certified assessors have the required depth of cybersecurity knowledge and experience that is beyond what the CMMC-specific training provides.

n management, because each guest OS can be derived from a parent guest OS, providing a consistent security baseline and reducing the time and effort required to configure and patch individual servers. Organizations taking advantage of virtualization may benefit from improved incident handling; servers can be reverted to an uninfected state quickly, while the complete state (including RAM) of the compromised guest OS can be saved in a snapshot for later examination.

Machine Learning for Access Control Policy Verification ## Machine Learning for Access Control Policy Verification Access control policy verification ensures that there are no faults within the policy that leak or block access privileges. As a software test, access control policy verification relies on methods such as model proof, data structure, system simulation, and test oracle to verify that the policy logic functions as expected. However, these methods have capability and performance issues related to inaccuracy and complexity limited by applied technologies. For instance, model

proof, test oracle, and data structure methods initially assume that the policy under verification is faultless unless the policy model cannot hold for test cases. Thus, the challenge of the method is to compose test cases that can comprehensively discover all faults. Alternatively, a system simulation method requires translating the policy to a simulated system. The translation between systems may be difficult or impractical to implement if the policy logic is complicated or the number of policy rules is large. To answer these challenges, this internal report (IR) proposes an efficient and straightforward method for access control policy verification by applying a classification algorithm of machine learning, which does not require comprehensive test cases, oracle, or system translation but rather checks the logic of policy rules directly, making it more efficient and feasible compared to traditional methods.

SI.L2-3.14.2 · Malicious Code Protection [CUI Data] CMMC Assessment Guide · Level 2 | Version 2.13

250 Unicode), contained within compressed or hidden files, or hidden in files using techniques such as steganography. Malicious code can be inserted into systems in a variety of ways including web accesses, electronic mail, electronic mail attachments, and portable storage devices. Malicious code insertions occur through the exploitation of system vulnerabilities. Malicious code protection mechanisms include anti-virus signature definitions and reputation-based technologies. A variety of technologies and methods exist to limit or eliminate the effects of malicious code. Pervasive configuration management and comprehensive software integrity controls may be effective in preventing execution of unauthorized code. In addition to commercial off-the-shelf software, malicious code may also be present in custom-built software. This could include logic bombs, back doors, and other types of cyber-attacks that could affect organizational missions/business functions. Traditional malicious code protection mechanisms cannot always detect such code. In these situations, organizations rely instead on other safeguards including secure coding practices, configuration management and control, trusted procurement processes, and monitoring technologies to help ensure that software does not perform functions other than the functions intended. NIST SP 800-83 provides guidance on malware incident prevention. FURTHER DISCUSSION A designated location may be a network device such as a firewall or an end user's computer. Malicious code, which can be delivered by a range of means (e.g., email, removable media, or websites), includes the following:

- virus · program designed to damage, steal information, change data, send email, show messages, or any combination of these things;
- spyware · program designed to gather information about a person's activity in secret when they click on a link, usually installed without the person knowing ;
- trojan horse · type of malware made to look like legitimate software and used by cyber criminals to get access to a company's systems; and
- ransomware · type of malware that threatens to publish the victim's data or perpetually block access to it unless a ransom is paid. Use anti-malware tools to stop or lessen the impact of malicious code. Example You are buying a new computer and want to protect your company's information from viruses, spyware, etc. You buy and install anti-malware software [a,b].

Potential Assessment Considerations · Are system components (e.g., workstations, servers, email gateways, mobile devices) for which malicious code protection must be provided identified and documented [a]?

set of emerging standards that support novel forms of IDMSs-and blockchain-based ones in particular-using features and properties provided by blockchain, cryptography, and other related technologies.

They include: | Layer | Description | |-----|-----|

-----| Application |

Applications that interact with a given identity management system through library integrations and API calls | | Implementation | Libraries that integrate the system in third-party applications | | Payload | Message formats, such as JWT, used to exchange data between participants | | Encoding | Methods for encoding data at both the encryption and payload layers | | Encryption | Methods for encrypting messages between participants as well as encrypting the data held by the identifier owner | | DID Authentication | Methods to authenticate a participant using their DID | | Transport | Transport protocols used for sharing data between participants and devices, such as HTTP or QR code | | DID Resolution | DID Resolver used to convert a DID into its corresponding DID document | | DID Operation | Create, Read, Update, and Delete operations for a DID document | | DID Storage | Methods for storing DID Documents and DIDs | | DID Anchor | Networks that serve as medium for DIDs |

DoD responds to an average of 2,000 questions each year and these responses are estimated to take 20 minutes per response. If it takes 20 minutes to respond to each question, it will take 667 hours to respond to questions. At an hourly wage of \$51.16, [13] it will cost the DoD \$34,107 dollars to respond to questions ($\$51.16 \times (.333 \times 2,000) = \$34,107$). Costs to the government are incurred

when a company applies to the DIB CS Program to validate and store POC information and to perform follow-up activities with a company when the information is outdated. The processing time for these activities is estimated to be one hour per company. If 8,000 companies participate in the program and 10% of the companies update information with the program annually the labor cost to the government is expected to be \$450,208 = (8,800 × \$51.16). In addition, there is a cost incurred by the DoD to receive cyber threat information submitted by defense contractors to have it analyzed by cyber threat experts at DC3. By year 9 of the expanded program, it is estimated DC3 will receive 40,000 responses per year, based on the estimate that each participating company elects to submit 5 informational reports (8,000 participants × 5 reports). Each product takes approximately two hours to create and incurs an hourly labor cost of \$51.16 per hour. This equals \$102.32 (2 hours × 51.16) per response. The labor cost to the government is forecasted to be \$4,092,800 annually after 9 years of growth. In addition to processing cyber threat information, the DoD incurs operational and maintenance costs for the system receiving and storing cyber threat information. This system costs the DoD \$5,100,000 annually to maintain (covered under information collection 0704-0489). Benefits

however no attacks are known. NIST would encourage further analysis of all aspects of this scheme.

3.19 FALCON Falcon is a lattice-based signature scheme, based on GPV (Gentry-Peikert-Vaikuntanathan) Gaussian sampling, using the NTRU lattice. The main novelty is a very fast recursive algorithm for Gaussian sampling, using a tree data structure (the "Falcon tree"). The best known attacks against Falcon are based on lattice basis reduction, without significantly exploiting the special structure of the NTRU lattice. Falcon has a formal security proof in the quantum random oracle model. Falcon offers very good performance. However, it is quite complicated to implement, as it relies heavily on the "tower of fields" structure of the number field and requires double-precision floating-point arithmetic. More work is needed to ensure that the signing algorithm is secure against side-channel attacks. ## 3.20 qTESLA qTESLA is a lattice-based signature scheme which uses the assumption that RLWE distributions are indistinguishable from random. The public key in qTESLA is, roughly speaking, a sample of a RLWE distribution. The signer keeps secret information about this sample and uses that information along with a hash function to produce signatures. Signature verification involves some simple arithmetic within the chosen ring, and then the recomputation of a hash function. qTESLA has reasonably good performance parameters that are comparable to the other latticebased signature schemes. The submitters of qTESLA have claimed a tight security proof for the schemes in the quantum random oracle model.

- RISK - VULNERABILITY - EXPOSURE - THE CONDITION OF BEING UNPROTECTED - INFORMATION - KNOWLEDGE OR INTELLIGENCE THAT IS REPRESENTED IN A COMPUTER BY DATA .TEXT, VOICE, OR IMAGE. - BUSINESS CONTROLS - COMBINATION OF ADMINISTRATIVE AND TECHNICAL CONTROLS THAT PROVIDE A REASONABLE ASSURANCE THAT THE ENTERPRISE'S OBJECTIVES WILL BE EXECUTED AS PLANNED.

- 1 . What are Potential Roadblocks to Harmonization? 58 - a. Assurance Approaches 58 - b. Protection Profiles in the FC versus Security Targets and Functionality Classes in the ITSEC 59 - c. International Protection Profiles 59 2. Phase-in to Harmonization 60 - a. What Should be the Steps to Harmonization? 61 - b. How Should Users & Suppliers Proceed during Convergence? 61 - c. How Should Backward Compatibility with National Criteria be Handled? 62 - d. How Does this Work on Common Criteria Relate to ISO SC27? 62 Part of the problem is semantic. The definitions appear to be overloaded. 'Systems' appears to refer to both actual environments of use as well as assemblies of products. The definitions also seem to be dependent on the observers viewpoint A supplier may be a 'system integrator' who employs 'products' to produce a 'system.' But to the integrator's customers, the resultant integration may be a "product" offered for sale. Approximately 25 other individuals were present, including representatives from various US government agencies, other European organizations, and several representatives of muldnational computer product suppliers.

(Comment 46) One comment believes that direct marketing facilities should be explicitly exempted from maintaining records of immediate subsequent recipients. The comment believes that direct marketers that sell their food directly to consumers are functionally no different than brick-and-mortar retail establishments. Moreover, FDA's proposal already explicitly exempts other entities that sell food directly to consumers (farms, some roadside stands, and restaurants). Direct marketers thus should be exempt from another and different mandated recordkeeping protocol. Direct marketers already must meet the recordkeeping requirements of taxing authorities. Adding another enormous, needless recordkeeping requirement for consumers who purchase their food directly would do nothing to achieve the aims of the Bioterrorism Act at the expense of increased costs to marketers

and, thus, their customers. The comment urges FDA to revise the exclusion for retail facilities by explicitly stating that direct marketing facilities are likewise exempt from the one-down requirements of § 1.345. (Response) Neither the proposed nor final rule distinguishes between persons that sell to consumers as direct marketers, including those selling products over the Internet, and other persons selling to consumers from establishments. Therefore, if a direct marketer sells food directly to a consumer, he or she is exempt from establishing and maintaining records of the immediate subsequent recipients of that food. Under § 1.327(e) of this final rule, persons who operate retail food establishments that distribute food to persons who are not consumers are subject to all of the requirements in subpart J of this final rule. However, for retail food establishments, the requirements in § 1.345 to establish and maintain records to identify the nontransporter and transporter immediate subsequent recipients that are not consumers applies as to those transactions only, and only to the extent the information is reasonably available. In addition, retail food establishments that employ 10 or fewer full-time equivalent employees are excluded from all of the requirements of subpart J of this final rule, except the record access provisions for existing records under §§ 1.361 and 1.363. (See response to comment 38 of this document for a further discussion of FDA's rationale underlying this exclusion.) For a further discussion of direct sellers' responsibilities under this rulemaking, see response to comment 50 in the following paragraphs.

Integrity 18 Integrity 19 - The unbundling of functional requirements from each other and from assurances. - The creation of protection profiles by assembling pre-defined components and elaborating them to specific product targets. - The explicit separation of documentation, process, and evaluation assurance. - Recognition of Ease of Use, Physical Protection, and Flaw Remediation (this & thought to be especially important to retain) as requirements.

All three small business entities, and up to seven small business subcontractor entities, awarded a contract annually to develop, implement, operate, or maintain a non-cloud FIS will be required to submit a copy of their continuous monitoring strategy for the FIS that demonstrates an ongoing awareness of information security, vulnerabilities, and threats in order to support risk management decisions, and applies the use of automation, wherever possible; protects vulnerability scan data, logs, and telemetry; and applies the guidance of NIST SP 800-137, Information Security Continuous Monitoring (ISCM) for Federal Information Systems and Organizations. A small business will need at least one employee within an information system occupation series (e.g., computer system analyst, information security analyst, system administrator, network architect) to review and submit the continuous monitoring strategy. D. Submit Annual Assessments Of the 140 non-cloud FISs currently being operated or maintained by contractors on behalf of the Government, the Government estimates that approximately 95 percent of those systems are designated as moderate or high FIPS 199 impacts. Applying that percentage to the estimated number of contractors annually awarded a contract to develop, implement, operate, or maintain a non-cloud FIS, it is estimated that 27 contractors (95 percent * 28 contractors), of which 2 are estimated to be small business, will be subject to the annual assessment requirements. These two small business entities, and up to seven small business subcontractor entities, will be awarded a contract with a FIS designated as moderate or high FIPS Publication 199 impact and be required to submit the results of the two annual assessments to the Government. The assessment of the security of the FIS must be an independent assessment that is not conducted by the contractor. The cyber threat hunting and vulnerability assessment may be completed by the contractor. A small business must submit the results of both assessments, including any recommended improvements or risk mitigations identified for the FIS, to the Government. A small business will need at least one employee within an information system occupation series to review and submit the annual assessments to the Government, as well as implement any recommended solutions resulting from the assessments. If an entity chooses to conduct the cyber threat hunting and vulnerability assessment on their own, the entity will need at least one subject matter expert in cyber threat hunting and vulnerability assessment, as well as experience with system assessment, analysis, and audit. This rule proposes to standardize common cybersecurity contractual requirements across Federal agencies. To do so, E.O. 14028

For CMMC Levels 1 and 2, cost estimates are based upon assessment, reporting, and affirmation activities that a contractor or subcontractor will need to take to verify implementation of existing security requirements set forth in FAR clause 52.204-21, effective June 15, 2016, to protect FCI, and DFARS clause 252.204-7012 which required implementation of NIST SP 800-171 requirements not later than December 31, 2017, to protect CUI. As such, cost estimates are not included for an entity

to implement the CMMC Level 1 or 2 security requirements, maintain implementation of these existing security requirements, or remediate a plan of action for unimplemented requirements. For CMMC Level 3, the cost estimates factor in the assessment, reporting, and affirmation activities in addition to estimates for NRE and RE to implement and maintain CMMC Level 3 security requirements. In addition to implementing the CMMC Level 2 security requirements, CMMC Level 3 requires implementing selected security requirement set forth in NIST SP 800-172 Feb2021 as described in §.170.14(c)(4) which are not currently required through other regulations. CMMC Level 3 is expected to apply only to a small subset of defense contractors and subcontractors. The Cost Categories used for each CMMC Level are described: 1. Nonrecurring Engineering Costs: Estimates consist of hardware, software, and the associated labor to implement the same. Costs associated with implementing the requirements set forth in FAR clause 52.204-21 and NIST SP 800-171 R2 are assumed to have been already implemented and, therefore, are not accounted for in this cost estimate. As such, these costs only appear in CMMC Level 3. If nonrecurring engineering costs are referenced, they are only accounted for as a one-time occurrence and are reflected in the year of the initial assessment. 2. Recurring Engineering Costs: Estimates consist of annually recurring fees and associated labor for technology refresh. Costs associated with implementing the requirements set forth in FAR clause 52.204-21 and NIST SP 800-171 R2 are assumed to have been already implemented and, therefore, are not accounted for in this cost estimate. As such, these costs only appear in CMMC Level 3. 3. Assessment Costs: Estimates consist of activities for pre-assessment preparations (which includes gathering and/or developing evidence that the assessment objectives for each requirement have been satisfied), conducting and/or participating in the actual assessment, and completion of any post-assessment work. Assessment costs are represented by notional phases. Assessment costs assume the OSA passes the assessment on the first attempt (conditional-with an allowable POA&M or final). Each phase includes an estimate of hours to conduct the assessment activities including: (a) Labor hour estimates for a company (and any ESP support) to prepare for and participate in the assessment. (printed page 83180) (b) C3PAO cost estimates for companies pursuing a certification

The record retention periods for nontransporters have been changed to: (1) 6 months for food for which a significant risk or spoilage, loss of value, or loss of palatability occurs within 60 days after the date you receive or release the food; (2) 1 year for food for which a significant risk of spoilage, loss of value, or loss of palatability occurs only after a minimum of 60 days, but within 6 months, after the date you receive or release the food; and (3) 2 years for food for which a significant risk of spoilage, loss of value, or loss of palatability does not occur sooner than 6 months after the date you receive or release the food, including foods preserved by freezing, dehydrating, or being placed in a hermetically sealed container. The record retention periods for transporters (or specified persons who agree to establish and maintain required records under agreements with transporters) have been changed to 6 months for any food having a significant risk or spoilage, loss of value, or loss of palatability within 60 days after the date the food is received or released and 1 year for any food having a significant risk or spoilage, loss of value, or loss of palatability only after a minimum of 60 days after the date the food is received or released. The record availability requirements have been changed from 4 hours/8 hours to ·as soon as possible, not to exceed 24 hours from the time of receipt of the official request.· The compliance date for these regulations has changed to December 9, 2005. Small businesses have June 9, 2005, of this final rule to come into compliance with these regulations, and very small businesses have December 11, 2006, of this final rule to come into compliance with these regulations. The qualifying language ·food intended for consumption in the United States· has been removed from this final rule to ensure that all persons that manufacture, process, pack, transport, distribute, receive, hold, or import food in the United States that is intended for consumption are subject to this final rule unless otherwise exempt. III. Comments on the Proposed Rule FDA received approximately 212 timely submissions in response to the proposed rule, which raised approximately 220 major issues. To make it easier to identify comments and FDA's responses to the comments, the word ·Comment· will appear in parentheses before the description of the comment, and the word ·Response· will appear in parentheses before FDA's response. FDA has also numbered each comment to make it easier to identify a particular comment. The number assigned to each comment is purely for organizational purposes and does not signify the comment's value or importance or the order in which it was submitted. A. General Comments

The proposed requirement to obtain verification of compliance with technical safeguards also would apply to business associates with respect to their subcontractors. However, we believe that a much smaller number of business associates rely on subcontractors compared to the number of covered

entities that rely on business associates to conduct activities on their behalf. Thus, we estimate that, on average, business associates would need 5 minutes annually to obtain verification from their subcontractors that the subcontractors have complied with technical safeguards as required by the Security Rule. The estimate includes only the time needed for business associates to send a mass email to subcontractors because we have already addressed the burden on business associates of producing the verification in the previous section and that estimate includes burdens on subcontractors. The high estimate for this activity would be an average of 15 minutes per business associate, and a low estimate would be for business associates to 2 minutes on this activity. At the wage rate of an information security analyst, this would add estimated total costs for business associates of \$9,995,000 [= 1,000,000 business associates × 0.083 hours × \$119.94], with a high estimate of \$29,985,000 [= 1,000,000 business associates × .25 hours × \$119.94].

d. Cost Related to Notification of Termination or Change of Workforce Members' Access to ePHI The Department estimates that regulated entities are likely to incur additional costs to implement a process to notify other regulated entities when a workforce member's access to ePHI is terminated or changed under proposed 45 CFR 164.308(a)(9)(ii). This estimate assumes that notifications will take an average of 1 hour annually per regulated entity. This results in new estimated costs totaling \$84,021,860 [= 1,822,600 regulated entities × 1 hour × \$46.10]. [962]

e. Cost Related to Regulated Entities Deploying Multi-Factor Authentication The Department estimates that, on average, regulated entities would have an information security analyst spend 1.5 hours deploying MFA, as specifically required under proposed 45 CFR 164.312(f)(2)(ii)

, and which is required to be kept secret in the interest of national defense or foreign policy. Exempted portions of this system may also contain information considered relevant and necessary to make a determination as to qualifications, eligibility, or suitability for access to classified information, and which was obtained by providing an express or implied promise to the source that his or her identity would not be revealed to the subject of the record. Exempted portions of this system may also contain information collected and maintained in connection with providing protective services to the President and other individuals protected pursuant to 18 U.S.C. 3056. Exempted portions of this system may also contain investigative records compiled for law enforcement purposes, the disclosure of which could reveal the identity of sources who provide information under an express or implied promise of confidentiality, compromise investigative techniques and procedures, jeopardize the life or physical safety of law-enforcement personnel, or otherwise interfere with enforcement proceedings or adjudications. (2) System identifier and name. N01131-1, Officer Selection and Appointment System. (i) Exemption. (A) Information specifically authorized to be classified under E.O. 12958, as implemented by DOD 5200.1-R, may be exempt pursuant to 5 U.S.C. 552a(k)(1). (B) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5), but only to the extent that such material would reveal the identity of a confidential source. (C) Testing or examination material used solely to determine individual qualifications for appointment or promotion in the Federal service may be exempt pursuant to 5 U.S.C. 552a(k)(6), if the disclosure would compromise the objectivity or fairness of the test or examination process. (D) Evaluation material used to determine potential for promotion in the Military Services may be exempt pursuant to 5 U.S.C. 552a(k)(7), but only to the extent that the disclosure of such material would reveal the identity of a confidential source. (E) Portions of this system of records are exempt from the following subsections of the Privacy Act: (c)(3), (d), (e)(1), (e)(4)(G) through (I), and (f). (ii) Authority. 5 U.S.C. 552a(k)(1), (k)(5), (k)(6), and (k)(7). (iii) Reasons. Granting individuals access to portions of this system of records could result in the disclosure of classified material, or the identification of sources who provided information to the government under an express or implied promise of confidentiality. Material will be screened to permit access to unclassified material and to information that does not disclose the identity of a confidential source. (3) System identifier and name. N01133-2, Recruiting Enlisted Selection System. (i) Exemption.

officer to delay payments and requiring in any case the burden on data collecting, validating, etc. on both the Supplier and the Buyer. This respondent also raised the issue of how data on incurred costs will be stored and managed and who will have access to the database created with these costs. The respondent questioned how the contracting officer will be able to find applicable previous cases. Response: In accordance with FAR 15.403-3(b), the contracting officer may require data other than certified cost or pricing data to support a determination of a fair and reasonable price.

In negotiations, one way to ensure a fair and reasonable price is through the use of various price analysis techniques and procedures to include a comparison of proposed prices to historical prices (i.e., incurred costs) paid for the same or similar items. Use of prior incurred costs in negotiations are not meant to create never-ending discussions, but to facilitate negotiation of a fair and reasonable price for all concerned parties. The requirement to provide incurred cost data is not a new requirement, and this data has been available for use in negotiations for many years. As with any sensitive information, all incurred cost data will be maintained in the official contract file for official use only. There is no intent to create a new database.

5. Requirement for Title Comment: Two respondents addressed the requirement in FAR 52.232-32(f) that the Government take title to work in progress immediately upon the date of the receipt of a PBP payment. Two respondents stated that the requirement for title conflicts with 10 U.S.C. 2307(b)(4)(A), which states that in order to receive performance-based payments, a contractor's accounting system shall be in compliance with GAAP, and there shall be no requirement for a contractor to develop Government-unique accounting systems or practices as a prerequisite for agreeing to receive performance-based payments. According to the respondents, because many GAAP-compliant accounting systems are unable to isolate the work in process associated with a particular unit from the rest of the supply chain until delivery, requiring a contractor to deliver title to such goods is therefore de facto requirement for a Government-unique accounting system. One respondent also stated that requiring title to work in progress immediately upon receipt of a PBP payment represents bad policy. According to the respondent, allowing contractors to aggregate component purchases across multiple contracts can reduce costs and improve schedules. To maximize this flexibility, contractors need to be able to reallocate common parts between contracts based on customer needs and vendor availability. This benefits DoD. Two respondents pointed out that DoD has existing flexibility in 10 U.S.C. 2307(d)

While the Department values the input provided by small business stakeholders and understands the desire for flexibilities, including the use of POA&Ms during the initial implementation phase, it must carefully balance multiple factors to ensure the effectiveness and integrity of the CMMC Program.

SBA Comment 6: Advocacy's chief concerns surround a lack of clarity on key aspects of the proposed rule. Advocacy requests clarification from DoD as to how to create enclaves within businesses. Encouraging the use of ESPs and incentivizing large prime contractors to keep all subcontractors from being subject to high levels of cybersecurity will be key in keeping small businesses engaged in DoD contracting. Guidance documents for small businesses (especially aimed at the smallest of small businesses) and ESPs will create an easier ramp for small business compliance. Advocacy requests clarity from DoD regarding the role of C3PAOs and encourages the DoD to ensure small businesses can obtain certification from C3PAOs in a timely manner. Further, the DoD should clarify the enforcement and procedural repercussions for a failure to meet various CMMC levels. Lastly, the DoD (printed page 83204) should set achievable goals as CMMC is implemented, ensuring that current small businesses contracting with the agency can continue work with the government while ensuring our nation's defense.

DoD Response: The DoD acknowledges the SBA advocacy chief's concerns and will make additional training resources available following finalization of this rule. The DoD deems that the level of detail on the topics identified is appropriate for codification in the 32 CFR part 170 CMMC Program rule. The DoD will resume outreach efforts with the aim of promoting CMMC familiarization among small businesses once the rule is final and effective and any constraints on such engagements no longer apply. However, DoD caveats that providing any specific instructions for configuring corporate information systems into enclaves is beyond the guidance that DoD intends to provide, as such decisions are unique to each company. The role of C3PAOs is thoroughly described in § 170.9 CMMC Third-Party Assessment Organizations (C3PAOs) and in the supplemental documents. In terms of enforcement, since CMMC will be implemented as a pre-award requirement, the repercussions of failure to meet CMMC requirements will include failure to be selected for contract award, or standard contractual and other remedies for failure to timely and satisfactorily close-out a POA&M and meet or maintain the contractual CMMC requirements.

As described in Section 5.2, the overall security strength of a digital signature is limited by the collision resistance strength of the hash function. However, when using the randomized hashing technique specified in SP 800-106 [SP 800-106], a randomized hash function may support a higher level of security with respect to a particular potential vulnerability, offering enhanced protection to a message signer against a collision attack by a malicious message preparer who formulates the message to be signed, but does not actually sign the message.

(1) The Secretary of Homeland Security has the authority to determine the eligibility for personnel security clearances and to administer the sharing of relevant classified NSI with certain private sectors or non-federal partners for the purpose of furthering cybersecurity information sharing among critical infrastructure partners pursuant to E.O. 13691 . (2) DHS provides security oversight and assumes security responsibilities similar to those of an FSO, unless otherwise provided in this section. Participating entities will cooperate with DHS security officials to ensure the entity is in compliance with requirements in this rule. § 117.23 Supplement to this rule: Security Requirements for Alternative Compensatory Control Measures (ACCM), Special Access Programs (SAPs), Sensitive Compartmented Information (SCI), Restricted Data (RD), Formerly Restricted Data (FRD), Transclassified Foreign Nuclear Information (TFNI), and NNPI. (a) General. Given the sensitive nature of Alternative Compensatory Control Measures (ACCM), SAPs, SCI, RD, FRD, TFNI, and NNPI, the security requirements prescribed in this section exceed baseline standards for this rule and must be applied, as applicable, through specific contract requirements. (1) Compliance. The contractor will comply with the security measures reflected in this section and other documents specifically referenced, when applied by the GCA or designee as part of a contract. Acceptance of the contract security measures is a prerequisite to any negotiations leading to program participation and an area accreditation (e.g., an SCI facility or SAP facility accreditation). (2) CSA-imposed higher standards. In some cases, security or sensitive factors of a CSA-created program may require security measures that exceed the standards of this section. In such cases, the CSA-imposed higher standards specifically detailed in the contract or conveyed through other applicable directives will be binding on USG and contractor participants. In cases of doubt over the specific provisions, the contractor should consult the program security officer and the contracting officer before taking any action or expending program-related funds. In cases of extreme emergencies requiring immediate attention, the action taken should protect the USG's interest and the security of the program from loss or compromise. (3) Waivers. Every effort will be made to avoid waivers to established standards unless they are in the best interest of the USG. In those cases where waivers are deemed necessary, a request will be submitted in accordance with the procedures established by the CSA. (b) Intelligence information.

AU.L2-3.3.6 · Reduction & Reporting CMMC Assessment Guide · Level 2 | Version 2.13 84 FURTHER DISCUSSION Raw audit log data is difficult to review, analyze, and report because of the volume of data. Audit record reduction is an automated process that interprets raw audit log data and extracts meaningful and relevant information without altering the original logs. An example of log reduction for files to be analyzed would be the removal of details associated with nightly backups. Report generation on reduced log information allows you to create succinct customized reports without the need to burden the reader with unimportant information. In addition, the security-relevant audit information must be made available to personnel on demand for immediate review, analysis, reporting, and event investigation support. Performing audit log reduction and providing on-demand reports may allow the analyst to take mitigating action before an adversary completes its malicious actions. Example You are in charge of IT operations in a company that processes CUI. You are responsible for providing audit record reduction and report generation capability. To support this function, you deploy an open-source solution that will collect and analyze data for signs of anomalies. The solution queries your central log repository to extract relevant data and provide you with a concise and comprehensive view for further analysis to identify potentially malicious activity [a]. In addition to creating on-demand data sets for analysis, you create customized reports explaining the contents of the data set [b]. Potential Assessment Considerations · Does the system support on-demand audit review, analysis, and reporting requirements and after-the-fact security investigations [b]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.3.6

There is no CMMC Level 4. The CMMC 2.0 framework established by 32 CFR Part 170 defines three levels: - Level 1: 15 basic safeguarding requirements from FAR 52.204-21 (self-assessment) - Level 2: 110 security requirements from NIST SP 800-171 Rev 2/Rev 3 (self-assessment or C3PAO certification) - Level 3: Enhanced requirements from NIST SP 800-172 (government-led assessment by DIBCAC) The original CMMC 1.0 model had five levels, but CMMC 2.0 consolidated these into three. Levels 4 and 5 from the original model no longer exist.

However, the HITECH Act amendment did not require the Secretary to accept a regulated entity's implementation of recognized security practices as an alternative to compliance with the Security Rule, nor did it provide that such implementation was sufficient to meet the security objectives of HIPAA or the HITECH Act. Accordingly, it is appropriate for the Department to develop and adopt its

own standards to meet the statutory objective of ensuring the security of ePHI. The standards and implementation specifications proposed herein take into consideration not only those promulgated by NIST, but also guidelines, best practices, methodologies, processes, and procedures published by CISA, the HHS 405(d) program, CMS, State governments, and others. The proposals also enable regulated entities to adopt security measures that ensure the confidentiality, integrity, and availability of ePHI; protect against any reasonably anticipated threats or hazards to the security or integrity of ePHI and unauthorized uses or disclosures of such ePHI; ensure compliance with the Security Rule by the workforce members of regulated entities, while also taking into account the technical capabilities of record systems used to maintain ePHI; the costs of such measures; the need for training users who have access to ePHI; the value of audit trails in computerized record systems; and the needs and capabilities of small and rural health care providers. The Department has consulted with and relied on the recommendations of NCVHS in the formulation of this proposed rule [331] and intends to continue to engage in these consultations before finalizing the rule. [332] We also expect to consult with the National Uniform Billing Committee, the National Uniform Claim Committee, the Workgroup for Electronic Data Interchange, and the American Dental Association before finalizing this rule, as required by section 1172(c)(3)(A)(ii) of HIPAA. [333]

IV. Section-by-Section Description of the Proposed Amendments to the Security Rule

means a document that identifies tasks needing to be accomplished. It details resources required to accomplish the elements of the plan, any milestones in meeting the tasks, and scheduled completion dates for the milestones, as defined in NIST SP 800-115 Sept2008 (incorporated by reference, see §.170.2). Prime Contractor is defined in 48 CFR 3.502-1 . Process, store, or transmit means data can be used by an asset (e.g., accessed, entered, edited, generated, manipulated, or printed); data is inactive or at rest on an asset (e.g., located on electronic media, in system component memory, or in physical format such as paper documents); or data is being transferred from one asset to another asset (e.g., data in transit using physical or digital transport methods). (CMMC-custom term) Restricted Information Systems means systems (and associated IT components comprising the system) that are configured based on government requirements (e.g., connected to something that was required to support a functional requirement) and are used to support a contract (e.g., fielded systems, obsolete systems, and product deliverable replicas). (CMMC-custom term) Risk means a measure of the extent to which an entity is threatened by a potential circumstance or event, and is typically a function of: (i) The adverse impacts that would arise if the circumstance or event occurs; and (ii) The likelihood of occurrence, as defined in NIST SP 800-53 R5 (incorporated by reference, see §.170.2). Risk Assessment means the process of identifying risks to organizational operations (including mission, functions, image, reputation), organizational assets, individuals, other organizations, and the Nation, resulting from the operation of a system. Risk Assessment is part of risk management, incorporates threat and vulnerability analyses, and considers mitigations provided by security controls planned or in place. Synonymous with risk analysis, as defined in NIST SP 800-39 Mar2011 (incorporated by reference, see §.170.2). Security Protection Assets (SPA) means assets providing security functions or capabilities for the OSA's CMMC Assessment Scope. (CMMC-custom term) Security Protection Data (SPD) means data stored or processed by Security Protection Assets (SPA) that are used to protect an OSC's assessed environment. SPD is security relevant information and includes but is not limited to: configuration data required to operate an SPA, log files generated by or ingested by an SPA, data related to the configuration or vulnerability status of in-scope assets, and passwords that grant access to the in-scope environment. (CMMC-custom term) Specialized Assets means types of assets considered specialized assets for CMMC: Government Furnished Equipment, Internet of Things (IoT) or Industrial Internet of Things (IIoT), Operational Technology (OT), Restricted Information Systems, and Test Equipment. (CMMC-custom term) Subcontractor is defined in 48 CFR 3.502-1 . Supervisory Control and Data Acquisition (SCADA)

Consistent with our proposals to require that regulated entities maintain their technical controls, we also propose to require a regulated entity to review and test the effectiveness of its technical controls for guarding against unauthorized access to ePHI that is being transmitted over an electronic communications network. We propose that such review and testing occur at least once every 12 months or in response to environmental or operational changes, whichever is more frequent, and modify such technical controls as reasonable and appropriate. The Department also proposes to remove the implementation specification for integrity controls at 45 CFR 164.312(e)(2)(i) because these requirements are incorporated in the standard for integrity at proposed 45 CFR 164.312(e) , discussed above. A regulated entity would continue to be required to review the current methods used

to transmit ePHI and then deploy appropriate solutions to protect ePHI from improper alteration or destruction. [791] i. Section 164.312(h)(1)-Standard: Vulnerability Management Hackers can penetrate a regulated entity's network and gain access to ePHI by exploiting publicly known vulnerabilities. [792] Exploitable vulnerabilities can exist in many parts of the technology infrastructure of a regulated entity's relevant electronic information systems (e.g., server, desktop, and mobile device operating systems; application, database, and web software; router, firewall, and other device firmware). [793] A regulated entity can identify technical vulnerabilities in multiple, complementary ways, including: Subscribing to CISA alerts [794] and bulletins. [795] Subscribing to alerts from the HHS Health Sector Cybersecurity Coordination Center. [796] Participating in an information sharing and analysis center (ISAC) or information sharing and analysis organization (ISAO). Implementing a vulnerability management program that includes using a vulnerability scanner to detect vulnerabilities such as obsolete software and missing patches. Periodically conducting penetration tests to identify weaknesses that could be exploited by an attacker. Additionally, CISA has compiled a database of free cybersecurity services and tools, some provided directly by CISA and others provided by private and public sector organizations. [797] For example, public and private critical infrastructure organizations may avail themselves of CISA's Cyber Hygiene Services. [798] These services are available at no cost to such organizations and can help regulated entities reduce their risk level, identify vulnerabilities that could otherwise go unmanaged and increase the accuracy and effectiveness of their response activities, among other benefits, putting them in a better place to make risk-informed decisions. CISA's Cyber Hygiene Services include both vulnerability scanning and web application scanning. CISA also has compiled a specific suite of tools and services for high-risk communities. [799]

DoD agrees with the need for added clarity around internal ESPs and the rule was modified to remove the term internal ESP. An ESP that provides staff augmentation, where the OSA provides all processes, technology, and facilities, does not need CMMC assessment. Alternatively, an ESP can be part of the same organizational structure but still be external to the OSA, such as a centralized SOC or NOC which supports multiple business units. The CMMC requirements apply and are based on whether the ESP provides cloud services and whether the ESP processes, stores, or transmits CUI on their systems. The OSA's contractual rights with its CSP are beyond the scope of this rule. The rule states requirements for the OSA, not the ESP. The rule requires OSAs that process, store, or transmit FCI and CUI to protect that data. If those OSAs elect to use an ESP, and that ESP processes, stores, or transmits FCI or CUI from the OSA, then the OSA must require that the ESP protect the FCI and CUI and the ESP will be assessed as part of the OSA's assessment or require FedRAMP Moderate or equivalent. Specifically for Level 3, if an OSC is seeking Level 3 certification and uses an ESP that is not a CSP and that DOES process, store, or transmit CUI, then the ESP will need to be assessed by DIBCAC (printed page 83137) against the same Level 3 requirements as the OSC as part of the OSC's assessment unless the ESP voluntarily seeks a DIBCAC Assessment. If an OSC is seeking Level 3 certification and uses an ESP that DOES NOT process, store, or transmit CUI, then the ESP will NOT need to be assessed by DIBCAC against the same Level 3 requirements as the OSC. ESPs provide a service that meets the requirements specified by the OSA, and therefore ESPs are not subcontractors on a DoD contract and are not bound by subcontractor flow down requirements. d. Assessment of ESPs Comment: There were multiple comments regarding the assessment of an ESP. One comment recommends the rule be revised to identify the specific assessment requirements that would be considered NOT MET by the OSA when using a non-compliant ESP, and to further require C3PAOs to validate the OSCs use of compliant ESPs during a CMMC Level 2 assessment. One comment asks if an ESP, when assessed, will require a CAGE code, and enter scores into SPRS. Another comment asked whether CMMC certification would be required when offering full IT management and online storage, including CUI, if the MSP policies prevent employees from accessing customer data.

AT.L2-3.2.2 · Role-Based Training CMMC Assessment Guide · Level 2 | Version 2.13 69 validation, security assessors, and other personnel having access to system-level software, security-related technical training specifically tailored for their assigned duties. Comprehensive role-based training addresses management, operational, and technical roles and responsibilities covering physical, personnel, and technical controls. Such training can include policies, procedures, tools, and artifacts for the security roles defined. Organizations also provide the training necessary for individuals to carry out their responsibilities related to operations and supply chain security within the context of organizational information security programs. NIST SP 800

-181 provides guidance on role-based information security training in the workplace. SP 800-161 provides guidance on supply chain risk management. FURTHER DISCUSSION Training imparts skills and knowledge to enable staff to perform a specific job function. Training should be available to all employees for all organizational roles to accommodate role changes without being constrained by the training schedule. Awareness training and role-based training are different. Awareness training provides general security training to influence user behavior and is covered by AT.L2-3.2.1. This requirement, AT.L2-3.2.2, covers role-based training that focuses on the knowledge, skills, and abilities needed to complete a specific job. Role-based training may include awareness topics specific to individual roles such as ensuring systems administrators understand the risk associated with using an administrative account. Example Your company upgraded the firewall to a newer, more advanced system to protect the CUI it stores. You have been identified as an employee who needs training on the new device [a,b,c]. This will enable you to use the firewall effectively and efficiently. Your company considered training resources when it planned for the upgrade and ensured that training funds were available as part of the upgrade project [c]. Potential Assessment Considerations · Are the duties, roles, and responsibilities that impact, directly or indirectly, the information security of the company or its systems defined and documented [a]? · Do information security-related tasks have accountable owners, and is a strictly limited group of individuals assigned to perform them [b]? · Are personnel who are assigned information security-related duties, roles, and responsibilities trained on those responsibilities, including the security requirements unique or inherent to their roles or responsibilities [c]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.2.2

Technology professionals who want to implement an approach like this can make use of NIST SP 180010C: How-To Guides. It provides specific product installation, configuration, and integration instructions for building the example implementation, allowing you to replicate all or parts of this project. NIST Cybersecurity Practice Guides (Special Publication 1800 series) target specific cybersecurity challenges in the public and private sectors. They are practical, user-friendly guides that facilitate the adoption of standards-based approaches to cybersecurity. They show members of the information security community how to implement example solutions that help them align more easily with relevant standards and best practices, and provide users with the materials lists, configuration files, and other information they need to implement a similar approach. integrity-checking, change control management, and user authentication and authorization. The solution was tested in two distinct lab settings: a discrete manufacturing workcell, which represents an assembly line production, and a continuous process control system (PCS), which represents chemical manufacturing industries.

From the NIST SP 800-172 Rev 3 Final Public Draft: Organization-Defined Parameters 3161 This appendix lists the ODPs that are included in the enhanced security requirements in Sec. 3. The ODPs are listed sequentially by requirement family, beginning with the first requirement containing an ODP in the Access Control family and ending with the last requirement containing an ODP in the Supply Chain Risk Management family. Embedded ODPs are listed as a single entry in the table. Table 4. Organization-defined parameters ENHANCED SECURITY REQUIREMENT ORGANIZATION-DEFINED PARAMETER 03.01.01E [Assignment: organization-defined privileged commands and/or other organization-defined actions] 03.01.02E [Assignment: organization-defined restrictions] 03.01.04E [Assignment: organization-defined account and/or account type] 03.01.04E [Assi

AC.L2-3.1.2 · Transaction & Function Control CMMC Assessment Guide · Level 2 | Version 2.13 18 FURTHER DISCUSSION Limit users to only the information systems, roles, or applications they are permitted to use and are needed for their roles and responsibilities. Limit access to applications and data based on the authorized users' roles and responsibilities. Common types of functions a user can be assigned are create, read, update, and delete. Example Your team manages DoD contracts for your company. Members of your team need to access the contract information to perform their work properly. Because some of that data contains CUI, you work with IT to set up your group's systems so that users can be assigned access based on their specific roles [a]. Each role limits whether an employee has read-access or create/read/delete/update-access [b]. Implementing this access control restricts access to CUI information unless specifically authorized. Potential Assessment Considerations · Are access control lists used to limit access to applications and data based on role and/or identity [a]? · Is access for authorized users restricted to those parts of the system they are explicitly permitted to use (e.g., a person who only performs word-processing cannot access developer tools) [b]? KEY REFERENCES · NIST SP 800-171 Rev. 2 3.1.2 · FAR Clause

(b) Restaurants are excluded from all of the requirements in this subpart. A restaurant/retail facility is excluded from all of the requirements in this subpart if its sales of food it prepares and sells to consumers for immediate consumption are more than 90 percent of its total food sales.

(c) Fishing vessels, including those that not only harvest and transport fish but also engage in practices such as heading, eviscerating, or freezing intended solely to prepare fish for holding on board a harvest vessel, are excluded from all of the requirements in this subpart, except §§ 1.361 and 1.363. However, those fishing vessels otherwise engaged in processing fish are subject to all of the requirements in this subpart. For the purposes of this section, *processing* means handling, storing, preparing, shucking, changing into different market forms, manufacturing, preserving, packing, labeling, dockside unloading, holding or heading, eviscerating, or freezing other than solely to prepare fish for holding on board a harvest vessel.

(d) Persons who distribute food directly to consumers are excluded from the requirements in § 1.345 to establish and maintain records to identify the nontransporter and transporter immediate subsequent recipients as to those transactions. The term *consumers* does not include businesses. (printed page 71652)

(e) Persons who operate retail food establishments that distribute food to persons who are not consumers are subject to all of the requirements in this subpart. However, the requirements in § 1.345 to establish and maintain records to identify the nontransporter and transporter immediate subsequent recipients that are not consumers applies as to those transactions only to the extent the information is reasonably available.

(1) For purposes of this section, retail food establishment is defined to mean an establishment that sells food products directly to consumers as its primary function. The term *consumers* does not include businesses.

(2) A retail food establishment may manufacture/process, pack, or hold food if the establishment's primary function is to sell from that establishment food, including food that it manufactures/processes, packs, or holds, directly to consumers.

(3) A retail food establishment's primary function is to sell food directly to consumers if the annual monetary value of sales of food products directly to consumers exceeds the annual monetary value of sales of food products to all other buyers.

(4) A *retail food establishment* includes grocery stores, convenience stores, and vending machine locations.

(f) Retail food establishments that employ 10 or fewer full-time equivalent employees are excluded from all of the requirements in this subpart, except §§ 1.361 and 1.363. The exclusion is based on the number of full-time equivalent employees at each retail food establishment and not the entire business, which may own numerous retail stores.

) Contact DSS to determine an alternative method to the proposed SSA when the GCA chooses not to issue a NID (e.g., a contract modification, a contract novation, or a PA or VTA authorized by the Program Executive Officer). (5) Notify DSS in writing when NSA, ODNI, or DOE renders a decision on a proposed NID involving access to COMSEC, SCI, or RD, respectively. A GCA's NID decision is not final until NSA, ODNI, or DOE, as applicable, respond regarding access to COMSEC, SCI, or RD. (6)

) When denying a NID, retain documentation explaining the rationale for the decision. (6)

Government Security Committee (GSC). (i) Under a VTA, PA, SSA, or SCA, DSS will ensure that the contractor establishes a permanent committee of its Board of Directors or similar body known as the GSC. (A) The members of the GSC are required in accordance with DoD 5220.22-M to ensure that the contractor maintains policies and procedures to safeguard classified and export controlled information entrusted to it, and that violations of those policies and procedures are promptly investigated and reported to the appropriate authority when it has been determined that a violation has occurred. (B) The GSC will also take the necessary steps in accordance with DoD 5220.22-M to ensure that the contractor complies with U.S. export control laws and regulations and does not take action deemed adverse to performance on classified contracts. This will include the appointment of a Technology Control Officer and the establishment of Technology Control Plan (TCP). (ii) DSS will provide oversight, advice, and assistance to GSCs. These measures are intended to ensure that GSCs:

(A) Maintain policies and procedures to safeguard classified information and export-controlled unclassified information in the possession of the contractor with no adverse impact on the performance of classified contracts. (B) Verify contractor compliance with the DD Form 441 or its successor form, the FOCI mitigation agreement or negation agreement and related documents, contract security requirements, USG export control laws, and the NISP. (printed page 19476) (iii) In the case of an SSA, DSS will ensure that the number of outside directors exceeds the number of inside directors, as defined in DoD 5220.22-M. DSS will determine if the outside directors should be a majority of the Board of Directors based on an assessment of security risk factors pertaining to the contractor's access to classified information. In the case of an SCA, DSS will require the

contractor to have at least one outside director, but may require more than one outside director based on an assessment of security risk factors.

(5) Requesters who seek records about themselves contained in a Privacy Act system of records (1st party requesters) and who cite or imply only the Privacy Act, will have their request processed under the provisions of both the PA and the Freedom of Information Act. If the information requested is not contained in a Privacy Act system of records or is not about the requester, the individual's request will be processed under the provisions of the Freedom of Information Act only, and the Freedom of Information Act processing requirements/time lines will apply. (6) Third party information. (i) Third party information contained in a Privacy Act system of records that does not pertain to the requester, such as SSN, home addresses, and other purely personal information that is not about the requester, will be processed under the provisions of Freedom of Information Act only. Third party information that is not about the requester is not subject to the Privacy Act's first party access provision. (ii) Information about the relationship between the first party requester and a third party is normally disclosed as pertaining to the first party requester. Consult your servicing Staff Judge Advocate if there is a question about the release of third party information to a first party requester. (7) If an individual requests information about them contained in a Privacy Act system of records, the individual may be denied the information only if the information is exempt under both the PA and the Freedom of Information Act. Both PA and Freedom of Information Act exemptions will be cited in the denial letter and appeals will be processed in accordance with both Acts. (8) Each time a first party requester cites or implies the PA, perform this analysis: (i) Is the request from a United States living citizen or an alien lawfully admitted for permanent residence? (ii) Is the individual requesting an agency record? (iii) Are the records within a PA system of records that are filed and retrieved by an individual's name or other personal identifier? (If the answer is 'yes' to all of these questions, then the records should be processed under the 'Privacy Act') and (iv) Does the information requested pertain exclusively to the requester? (A) If yes, no further consideration of Freedom of Information Act exemptions required. Release all information unless a PA exemption authorizes withholding. (B) If no, process the information that is not about the requester under the Freedom of Information Act and withhold only if a proper Freedom of Information Act exemption applies. (h) Functional requests.

AC.L2-3.1.6 · Non-Privileged Account Use CMMC Assessment Guide · Level 2 | Version 2.13 27
AC.L2-3.1.6 · NON-PRIVILEGED ACCOUNT USE Use non-privileged accounts or roles when accessing nonsecurity functions. ASSESSMENT OBJECTIVES [NIST SP 800-171A]21 Determine if: [a] nonsecurity functions are identified; and [b] users are required to use non-privileged accounts or roles when accessing nonsecurity functions. POTENTIAL ASSESSMENT METHODS AND OBJECTS [NIST SP 800-171A]21 Examine [SELECT FROM: Access control policy; procedures addressing least privilege; system security plan; list of system-generated security functions assigned to system accounts or roles; system configuration settings and associated documentation; system audit logs and records; other relevant documents or records]. Interview [SELECT FROM: Personnel with responsibilities for defining least privileges necessary to accomplish specified organizational tasks; personnel with information security responsibilities; system or network administrators]. Test [SELECT FROM: Mechanisms implementing least privilege functions]. DISCUSSION [NIST SP 800-171 REV. 2]22 This requirement limits exposure when operating from within privileged accounts or roles. The inclusion of roles addresses situations where organizations implement access control policies such as role-based access control and where a change of role provides the same degree of assurance in the change of access authorizations for the user and all processes acting on behalf of the user as would be provided by a change between a privileged and non-privileged account. FURTHER DISCUSSION A user with a privileged account can perform more tasks and access more information than a person with a non-privileged account. Tasks (including unauthorized tasks orchestrated by attackers) performed when using the privileged account can have a greater impact on the 21 NIST SP 800-171A, p. 11. 22 NIST SP 800-171 Rev. 2, p. 12.

) to extend until August 24, 2022, the implementation date for those contractors under DoD security cognizance to report and obtain pre-approval of unofficial foreign travel to the DoD. The technical amendment was effective on August 19, 2021 and was done to allow DoD to make modifications to its information technology (IT) systems. The technical amendment addressed comments from regulated parties on the burdensome nature of submitting individual foreign travel reports for those contractors under DoD security cognizance. The technical amendment allowed DoD more time to make the necessary changes to the IT system for multiple foreign travel reports in a single submission. This

proposed rule addresses the comments received on the final rule published in December 2020 and further amends the 32 CFR 117 to make the following changes as discussed below. Discussion of Comments and Changes The December 21, 2020 final rule received nine sets of public comments from five individuals who provided 11 comments, two companies that provided 41 comments, an industry representative organization that provided 28 comments, and a law firm that provided four comments, for a total of 84 comments. Clarification on Procedures The vast majority of the comments related to a request for clarification on procedures for those contractors under DoD security cognizance. Many of the comments did not result in a change to the rule because they related to procedures that a NISP CSA would provide to supplement unique CSA mission requirements. For contractors under DoD security cognizance, DoD provides unique CSA mission guidance via industrial security letters (ISLs) when applicable. ISLs are published on the Defense Counterintelligence and Security Agency (DCSA) website (<https://www.dcsa.mil/>) and will address the comments received and re-issue previous NISPOM ISLs, as needed. Previous ISLs were tied to the content of the NISPOM when it was a DoD manual. Some of the guidance contained in prior ISLs has been incorporated into the rule and is no longer needed. Those ISLs that are still needed in order to provide further guidance to those contractors under DoD security cognizance will be re-issued in accordance with the rule. Comments Related to SEAD 3 Implementation Many comments were received on § 117.8, relating to implementation of SEAD 3, Reporting Requirements for Personnel with Access to Classified Information or Who Hold a Sensitive Position,

One person suggested that DoD's Zero-Trust approach would provide a higher level of security for CUI data than the CMMC program. One commenter stated the Department should develop clear, flexible guidelines and alternative pathways for global companies to achieve CMMC compliance without relying on enclave architectures and recommended that this approach rely on Zero Trust principals. One comment noted that under FAR clause 52.204-21, FCI does not include simple transactional information (STI) and asked if certain data would be considered STI and therefore not subject to CMMC. One comment stated that conflicting regulatory guidance exists between the content of E.O. 15028 , NIST SP 800-218, NIST SP 800-171 R2, and NIST SP 800-171 Revision 3. Response: One comment lacked clarity and failed to clearly articulate (printed page 83107) any relevance to the content of this rule, so no response can be provided. SPRS will be used for reporting CMMC Status of all contractors, regardless of which service issued the contract. Publication of this rule follows completion of OMB's formal rulemaking process, which includes both DoD internal coordination (including the USD(A&S) and USD(R&E)) and Interagency coordination. CMMC is consistent with Section 3.4 of DoDI 8582.01, Validation and Compliance. CMMC does not specify the content and format of plans of action beyond what is specified in NIST SP 800-171 R2, which is required under DoDI 8582.01. Clinger Cohen Act requirements, which apply to DoD's IT investments, are not relevant to CMMC Program requirements, which apply to contractor-owned information systems. The classification marking of existing DoD documentation is beyond the scope of this rule, as is engagement with INCOSE and ISO/IEC certification organizations. Executive Orders state mandatory requirements for the Executive Branch and have the effect of law. E.O. 14028 --Improving the Nation's Cybersecurity- (issued May 12, 2021) requires agencies to enhance cybersecurity and software supply chain integrity. NIST SP 800-171 R2 and NIST SP 800-218 are guidelines, not regulations. NIST SP 800-171 Revision 3 is not currently applicable to this rule.

There may be references in this publication to other publications currently under development by NIST in accordance with its assigned statutory responsibilities. The information in this publication, including concepts, practices, and methodologies may be used by federal agencies even before the completion of such companion publications. Thus, until each publication is completed, current requirements, guidelines, and procedures, where they exist, remain operative. For planning and transition purposes, federal agencies may wish to closely follow the development of these new publications by NIST. The National Institute of Standards and Technology (NIST) Information Technology Laboratory (ITL) promotes the U.S. economy and public welfare by providing technical leadership for the Nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology (IT). ITL's responsibilities include the development of management, administrative, technical, and physical standards and guidelines for the cost-effective security of other than national security-related information in federal information systems. The Special Publication 800-series reports on ITL's research, guidelines, and outreach efforts in information systems security and privacy and its collaborative activities with industry, government, and academic organizations. DEVELOPMENT OF INFORMATION SYSTEMS, COMPONENTS, AND

SERVICES

FDA is announcing the availability of a request for comment on its draft strategy, entitled "FDA Information Technology Strategy". The Office of Digital Transformation (ODT) was established in September 2021 and reports directly to the Office of the Commissioner. ODT provides the vision and leadership in information technology, data, and cybersecurity needed to advance FDA's mission and strategic priorities. ODT has published a series of strategy documents known as the FDA Modernization Framework. The framework includes the Technology Modernization Action Plan, Data Modernization Action Plan, Enterprise Modernization Action Plan, Cybersecurity Modernization Action Plan, and the Leadership Modernization Action Plan. The FDA Modernization Framework aims to develop an integrated technology, data, cybersecurity, business, and leadership approach to advancing FDA's public health mission in collaboration with industry. As part of FDA's fulfillment of requirements in section 3627 of the Consolidated Appropriations Act, 2023 (Pub. L. 117-328), and commitments described in section IV.A.2. of the "PDUFA Reauthorization Performance Goals and Program Enhancements Fiscal Years 2023-2027" (PDUFA VI commitment letter), FDA will work with industry while developing a comprehensive framework for guiding the Agency's work and allocating annual technology budgets and resources. The FDA IT Strategy, covering Fiscal Years 2024-2026, defines and shapes the future course of FDA's data and technology capabilities as FDA transitions to the next phase of its journey. The Agency took a collaborative approach to strategy development by gathering input from numerous internal and external stakeholders that resulted in the draft FDA IT Strategy. Stakeholder input is crucial for developing a comprehensive plan that best meets the needs and goals of industry and the Agency. Comments on the strategy will be considered for future iterations of the FDA IT Strategy. Once adopted, this strategy will serve as the basis for developing an internal operational plan with objectives, tactics, and performance measures. As part of this effort, FDA will hold an FDA Digital Transformation Symposium on December 4 to 7, 2023, to discuss this groundbreaking IT Strategy and encourage further collaboration, innovation, and transformation. On December 4 and 5, the Symposium will be shaped around the six new strategic goals, highlighting supporting objectives and initiatives. The FDA Digital Transformation Symposium will extend to December 6 and 7 to engage IT vendors in a Reverse Industry Day and other vendor-focused events. Registration information will be found on www.FDA.gov for this event. (printed page 64437) II. Requested Feedback Interested persons are invited to provide detailed comments to ODT (see ADDRESSES

(A) Investigatory material compiled for law enforcement purposes, other than material within the scope of subsection 5 U.S.C. 552a(j)(2) , may be exempt pursuant to 5 U.S.C. 552a(k)(2) . However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of the information, the individual will be provided access to the information exempt to the extent that disclosure would reveal the identity of a confidential source. Note 1 to paragraph (c)(14)(i)(A). When claimed, this exemption allows limited protection of investigative reports maintained in a system of records used in personnel or administrative actions. (B) Records maintained solely for statistical research or program evaluation purposes and which are not used to make decisions on the rights, benefits, or entitlement of an individual except for census records which may be disclosed under 13 U.S.C. 8 , may be exempt pursuant to 5 U.S.C. 552a(k)(4) . (C) Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5) , but only to the extent that such material would reveal the identity of a confidential source. (D) All portions of this system of records which fall within the scope of (printed page 14797) 5 U.S.C. 552a(k)(2) , (k)(4), and (k)(5) may be exempt from the provisions of 5 U.S.C. 552a(c)(3) , (d), (e)(1), (e)(4)(G), (e)(4)(H), (e)(4)(I) and (f). (ii) Authority. 5 U.S.C. 552a(k)(2) , (k)(4), and (k)(5). (iii) Reasons. (A) From subsection (c)(3) because the release of the disclosure accounting would place the subject of an investigation on notice that they are under investigation and provide them with significant information concerning the nature of the investigation, thus resulting in a serious impediment to law enforcement investigations. (B) From subsections (d) and (f) because providing access to records of a civil or administrative investigation and the right to contest the contents of those records and force changes to be made to the information contained therein would seriously interfere with and thwart the orderly and unbiased conduct of the investigation and impede case preparation. Providing access rights normally afforded under the Privacy Act would provide the subject with valuable information that would allow interference with or compromise of witnesses or render witnesses reluctant to cooperate; lead to suppression, alteration, or destruction of

evidence; enable individuals to conceal their wrongdoing or mislead the course of the investigation; and result in the secreting of or other disposition of assets that would make them difficult or impossible to reach in order to satisfy any Government claim growing out of the investigation or proceeding.

The DoD does not use mercenaries. Article 47 of Additional Protocol I to Geneva Conventions provides an internationally accepted definition of mercenaries. The elements of that definition clearly exclude PSCs under contract to DoD. Private security contractors do not perform military functions, but rather, they carry out functions similar to those performed by security guards in the United States and elsewhere. We agree that the behavior of PSCs may affect the national security goals of the U.S. and for this reason we have published guidance on the selection, oversight, and management of private security contractors operating in contingency operations. Comment: DoD personnel do not want PSCs in a combat situation Response: The primary role of the armed forces is combat: to close with and destroy enemy armed forces through firepower, maneuver, and shock action. Defense of military personnel and activities against organized attack is a military responsibility. DoD allocates military personnel to these high priority combat and other critical combat support missions. Private Security Companies contracted by the U.S. government protect personnel, facilities and activities against criminal activity, including individual acts of terrorism. They are specifically prohibited from engaging in combat (offensive) operations and certain security functions. DoD PSCs have performed well and are very important to our mission accomplishment in the CENTCOM area of responsibility. Comment: PSCs should receive Veteran's Affairs benefits for injuries sustained while protecting the country Response: PSCs and other contractors employed by the U.S. government who perform work outside of the United States are covered by the Longshore and Harbor Workers' Compensation Act (LHWCA). The LHWCA provides disability compensation and medical benefits to employees and death benefits to eligible survivors of employees of U.S. government contractors who perform work overseas. The Defense Base Act is an extension of the LHWCA. The Defense Base Act covers the following employment activities: (1) Work for private employers on U.S. military bases or on any lands used by the U.S. for military purposes outside of the United States, including those in U.S. Territories and possessions; (2) Work on public work contracts with any U.S. government agency, including construction and service contracts in connection with national defense or with war activities outside the United States; (3) Work on contracts approved and funded by the U.S. under the Foreign Assistance Act, which among other things provides for cash sale of military equipment, materials, and services to its allies, if the contract is performed outside of the United States; or (4) Work for American employers providing welfare or similar services outside the United States for the benefit of the Armed Services, e.g.

From the NIST SP 800-172 Rev 3 Final Public Draft: Concealment and misdirection techniques may provide additional time to perform NIST SP 800-172r3 fpd (Final Public Draft) Enhanced Security Requirements for Protecting CUI September 2025 core mission and business functions. The implementation of concealment and 1808

According to Cryptographic Key Management Workshop Summary -- June 8-9, 2009, 2.1.5 Internet Key Management Security: Russ Housley, IETF Chair, Vigil Sec.: increases complexity, but also allows transition more easily when an algorithm gets old or broken. - There have been a lot of transitions from one algorithm to another in encryption and secure hashing. The Internet community sees a need to respond to these changes in algorithms, especially when a security flaw is found, but seldom in other circumstances. A transition takes 5 to 15 years, and the cost of implementation, testing and deployment are high because it causes a loss of interoperability in some circumstances.

The requester is responsible to provide a description of the desired record that enables the Government to locate the record with a reasonable amount of effort. Generally, a reasonable description contains sufficient information to permit the conduct of an organized, non-random search for the record based on the DoD Component's filing arrangements and existing retrieval systems. The DoD Component's decision on the reasonableness of the description must be based on a knowledge of its files, and not on the potential volume of records that may be located and the concurrent review effort to determine releasability. The fact that a FOIA request appears broad or burdensome does not, in itself, entitle the DoD Component to deny the request on the grounds that it does not reasonably describe the record sought. (h) Consultations and referrals. The DoD FOIA referral procedures are based on the concept that the originator of information contained within a record shall make a release determination on that information. (1) If the DoD Component receives a request

for records originated by another DoD Component, it should contact that Component to determine if it also received the request, and if not, obtain concurrence to transfer the request or to advise the requester to send the request to the correct Component. If the request is to be transferred, the requester shall be advised of the action taken, unless exempt information would be revealed by the fact of the referral. Any DoD Component receiving a request that has been misaddressed shall transfer the request to the proper address and advise the requester. DoD Components transferring requests shall include point of contact name, telephone number, and e-mail address in the cover memorandum. (2) The DoD Component holding a record originated by another DoD Component or agency outside the Department of Defense shall refer a FOIA request for that record, as well as the record, to the originating agency for response directly to the requester. If the DoD Component holding the record has an equity in the document, it shall provide an opinion on the releasability of the record with the referral. If appropriate, the name of the IDA responsible for the decision to withhold all or parts of the record should be provided. Whenever a record is referred to another DoD Component or to an agency outside of the Department of Defense for a release determination and direct response, the requester shall be informed of the referral, unless it has been determined that notification would reveal exempt information. Referred records shall only be identified to the extent consistent with security requirements. DoD Components referring requests shall include point of contact name, telephone number, and e-mail address in the cover memorandum. (3) At times, a DoD Component may locate a responsive record that it (printed page 71851)

Document Headings Document headings vary by document type but may contain the following: the agency or agencies that issued and signed a document the number of the CFR title and the number of each part the document amends, proposes to amend, or is directly related to the agency docket number / agency internal file number the RIN which identifies each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions See the Document Drafting Handbook for more details. Department of Health and Human Services Food and Drug Administration 21 CFR Parts 1 and 11 [Docket No. 2002N-0277] RIN 0910-AC39 AGENCY: Food and Drug Administration, HHS. ACTION: Final rule. SUMMARY: The Food and Drug Administration (FDA) is issuing a final regulation that requires the establishment and maintenance of records by persons who manufacture, process, pack, transport, distribute, receive, hold, or import food in the United States. Such records are to allow for the identification of the immediate previous sources and immediate subsequent recipients of food. The final rule implements the Public Health Security and Bioterrorism Preparedness and Response Act of 2002 (the Bioterrorism Act), and is necessary to help address credible threats of serious adverse health consequences or death to humans or animals. The requirement to establish and maintain records is one of several tools that will help improve FDA's ability to respond to, and further contain, threats of serious adverse health consequences or death to humans or animals from accidental or deliberate contamination of food. In the event of an outbreak of foodborne illness, such information will help FDA and other authorities determine the source and cause of the event. In addition, the information will improve FDA's ability to quickly notify the consumers and/or facilities that might be affected by the outbreak. DATES: Effective Date : This final rule is effective February 7, 2005. Compliance Dates : The compliance date is December 9, 2005; except that for small businesses employing fewer than 500, but more than 10 full-time equivalent employees, the compliance date is June 9, 2005; and except that for very small businesses that employ 10 or fewer full-time equivalent employees, the compliance date is December 11, 2006. FOR FURTHER INFORMATION CONTACT: Nega Beru, Center for Food Safety and Applied Nutrition (HFS-305), Food and Drug Administration, 5100 Paint Branch Pkwy., College Park, MD 20740, 301-436-1400. SUPPLEMENTARY INFORMATION: Table of Contents I. Background and Legal Authority II. Highlights of the Final Rule and Summary of the Significant Changes Made to the Proposed Rule A. Highlights of This Final Rule B. Significant Changes FDA Made to the Proposed Rule III. Comments on the Proposed Rule A. General Comments B. Foreign Trade Issues C. Comments on Who is Subject to This Subpart? (Proposed § 1.326) D. Comments on Who is Excluded From All or Part of the Regulations in this Subpart? (Proposed § 1.327)

In the past year, NIST continued to support the EAC in finalizing changes to the Voluntary Voting System Guidelines (VVSG) 1.1. The security guidelines were updated in FY 2012 to improve the auditability of voting systems, to provide greater software integrity protections, to expand and improve access-control requirements, and to help ensure - Updates on the OCR audit and enforcement programs; - Use of the NIST Cybersecurity Framework in the healthcare sector; - Safeguarding data using cryptographic technologies and strong identity and access management; - Strategies for engaging the executive leadership to privacy and security risks; and - Case studies on safeguarding

patient information, and lessons learned for health data breaches. This year's annual two-day offsite meeting featured updates on the computer security activities of the Government Accountability Office (GAO), General Services Administration (GSA), Bureau of the Fiscal Service, Department of State, National Security Council, Department of Homeland Security (DHS), and NIST. Technical sessions included briefings on updates from NIST Computer Security Division (CSD), FedRAMP Overview and Security Processes, Supply Chain Risk Management, Ongoing Authorization, Fiscal Service's Risk-Based ISCM Strategy, Derived PIV Credentials, Cybersecurity Training, Incident Response, White House Initiatives, FY 2015 FISMA Metrics and recent updates to the FISMA publications.

(B) The CSA will provide transmission instructions to the contractor. The material will be (printed page 83357) addressed to a U.S. organization at NATO, which will then place the material into NATO security channels. The material will be accompanied by a letter to the U.S. organization that provides transfer instructions and assurances that the material has been authorized for release to NATO. The inner wrapper will be addressed to the intended NATO recipient. (C) Material to be sent to NATO via mail will be routed through the U.S. Postal Service and U.S. military postal channels to the U.S. organization that will make the transfer. (ii) A record will be maintained that identifies the originator and source of classified information that are used in the preparation of documents for release to NATO. The record will be provided with any request for release authorization. (22) Visits. NATO visits will be handled in accordance with the requirements in paragraph (e) of this section. A NATO Certificate of Security Clearance will be included with the visit request. (i) NPLO and NATO industrial advisory group (NIAG) recurring visits. NATO has established special procedures for recurring visits involving contractors, government departments and agencies, and NATO commands and agencies that are participating in a NPLO or NIAG contract or program. The NATO management office or agency responsible for the NPLO program will prepare a list of the government and contractor facilities participating in the program. For NIAG programs, the list will be prepared by the responsible NATO staff element. The list will be forwarded to the appropriate clearance agency of the participating nations, which will forward it to the participating contractor. (ii) Visitor record. The contractor will maintain a record of NATO visits including those by U.S. personnel assigned to NATO. The records will be maintained for three years. (h) Security and export control violations involving foreign nationals. Contractors will report any violation of administrative security procedures or export control regulations that would subject classified information to possible compromise by foreign visitors or foreign national employees to the applicable CSA. (i) Transfers of defense articles to the UK or AUS without a license or other written authorization. (1) Treaties with AUS and UK. Exemptions in ITAR parts 126.16 and 126.17 implement the Defense Trade Cooperation Treaty between the Government of the United States of America and the Government of the UK of Great Britain and Northern Ireland and the Defense Trade Cooperation Treaty between the Government of the United States of America and the Government of AUS, also known as the U.S.-UK Treaty and U.S.-AUS Treaty, respectively, referred to collectively in this rule as the Treaties.

is required to perform regular third-party assessments, including penetration testing and vulnerability assessments. Palo Alto Networks' products are not built or packaged for any particular customer. Rather, the CM prepares prepackaged inventory to satisfy sales forecasts and prevent would-be attackers from targeting specific customers during the production phase.

(B) From subsection (d) because these provisions concern individual access to and amendment of open or closed investigation records contained in this system, including law enforcement and investigatory records. Compliance with these provisions would provide the subject of an investigation of the fact and nature of the investigation, and/or the investigative interest of the Pentagon Force Protection Agency; compromise sensitive information related to national security; interfere with the overall law enforcement process by leading to the destruction of evidence, improper influencing of witnesses, fabrication of testimony, and/or flight of the subject; could identify a confidential informant or disclose information which would constitute an unwarranted invasion of another's personal privacy; reveal a sensitive investigative or constitute a potential danger to the health or safety of law enforcement personnel, confidential informants, and witnesses. Amendment of investigative records would interfere with open or closed administrative or civil law enforcement investigations and analysis activities and impose an excessive administrative burden by requiring investigations, analyses, and reports to be continuously reinvestigated and revised. (C) From subsections (e)(1) through (e)(3) because it is not always possible to determine what

information is relevant and necessary in open or closed investigations. (D) From subsections (e)(4)(G) through (I) (Agency Requirements) because portions of this system are exempt from the access and amendment provisions of subsection (d). (E) From subsection (e)(5) because the requirement that investigative records be maintained with attention to accuracy, relevance, timeliness, and completeness would unfairly hamper the criminal, administrative, or civil investigative process. It is the nature of Internal Affairs investigations to uncover the commission of illegal acts and administrative violations. It is frequently impossible to determine initially what information is accurate, relevant, timely, and least of all complete. With the passage of time, seemingly irrelevant or untimely information may acquire new significance as further investigation brings new details to light. (F) From subsection (f) because requiring the Agency to grant access to records and establishing agency rules for amendment of records would compromise the existence of any criminal, civil, or administrative enforcement activity. To require the confirmation or denial of the existence of a record pertaining to a requesting individual may in itself provide an answer to that individual relating to the existence of an on-going investigation. The investigation of possible unlawful activities would be jeopardized by agency rules requiring verification of the record, disclosure of the record to the subject, and record amendment procedures.

This publication differs significantly from previous versions of NIST IR 7298. Previous versions contained a subset of basic terms that were most frequently used in NIST publications. This method was valuable, but greater demand and frequent updates to NIST's publication suite has necessitated the adoption of a more flexible solution. ## 3 Feedback & Updates

mission, functions, image, and reputation), organizational assets, individuals, other organizations, and the Nation resulting from the operation and use of federal information systems. SP 800-39 provides a structured, yet flexible approach for managing risk that is intentionally broad-based, with the specific details of assessing, responding to, and monitoring risk on an ongoing basis provided by other supporting NIST security standards and guidelines. The guidance provided in this publication is not intended to replace or subsume other risk-related activities, programs, processes, or approaches that organizations have implemented or intend to implement addressing areas of risk management covered by other legislation, directives, policies, programmatic initiatives, or mission/business requirements. Rather, the risk management guidance described herein is complementary to and should be used as part of a more comprehensive Enterprise Risk Management (ERM) program. This document is incorporated by reference as a source for definitions. (e) NIST SP 800-53, revision 5, titled "Security and Privacy Controls for Information Systems and Organizations" provides a catalog of security and privacy controls for information systems and organizations to protect organizational operations and assets, individuals, other organizations, and the Nation from a diverse set of threats and risks, including hostile attacks, human errors, natural disasters, structural failures, foreign intelligence entities, and privacy risks. The controls are flexible and customizable and implemented as part of an organization-wide process to manage risk. The controls address diverse requirements derived from mission and business needs, laws, executive orders, directives, regulations, policies, standards, and guidelines. Finally, the consolidated control catalog addresses security and privacy from a functionality perspective (i.e., the strength of functions and mechanisms provided by the controls) and from an assurance perspective (i.e., the measure (printed page 89062) of confidence in the security or privacy capability provided by the controls). Addressing functionality and assurance helps to ensure that information technology products and the systems that rely on those products are sufficiently trustworthy. This document is incorporated by reference as a source for definitions.

(k)(7) Exemption for promotion evaluation materials used by the Armed Forces. Yes No (l)(1) Records stored in GSA records centers. Yes No (l)(2) Records archived before September 27, 1975. Yes No (l)(3) Records archived on or after September 27, 1975. (printed page 18786) Yes No (m) Applicability to Government contractors. Yes No (n) Mailing lists. Yes 1 No (o) Reports on new systems. Yes 1 No (p) Annual report. 1 See paragraph (d) of §-310.26. Appendix E to Part 310-Sample of New or Altered System of Records Notice in Federal Register Format (See paragraph (f) of §-310.30) New system of records notice DEPARTMENT OF DEFENSE Office of the Secretary Privacy Act of 1974; System of Records AGENCY: Office of the Secretary, DoD. ACTION: Notice to add a system of records. SUMMARY: The Office of the Secretary of Defense proposes to add a system of records to its inventory of record systems subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended. DATES: The changes will be effective on (insert date thirty days after publication in the Federal Register) unless comments are received that would result in a contrary determination. ADDRESSES: Send comments to OSD Privacy Act Coordinator, Records Management Section, Washington Headquarters Services, 1155 Defense Pentagon, Washington, DC 20301-1155. FOR FURTHER INFORMATION CONTACT: Ms. Mary Smith at (703) 000-0000. SUPPLEMENTARY INFORMATION: The Office of the Secretary of Defense notices for systems of records subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the Federal Register and are available from the address above. The proposed systems reports, as required by 5 U.S.C. 552a(r) of the Privacy Act of 1974, as amended, were submitted on January 20, 2006, to the House Committee on Government Reform, the Senate Committee on Homeland Security and Governmental Affairs, and the Office of Management and Budget (OMB) pursuant to paragraph 4c of Appendix I to OMB Circular No. A-130, Federal Agency Responsibilities for Maintaining Records About Individuals, dated February 8, 1996 (February 20, 1996, 61 FR 6427). Dated: February 1, 2006. John Miller, OSD Federal Register Liaison Officer, Department of Defense. NSLRB 01 System name: The National Security Labor Relations Board (NSLRB). System location: National Security Labor Relations Board (NSLRB), 1401 Wilson Boulevard, Arlington, VA 22209-2325. Categories of individuals covered by the system: Current and former civilian Federal Government employees who have filed unfair labor practice charges, negotiability disputes, exceptions to arbitration awards, and impasses with the National Security Labor Relations Board (NSLRB) pursuant to the National Security Personnel System (NSPS). Categories of records in the system:

Below is a summary of the findings and observations made during the agency security needs study, expressed in terms of issues that emerge from the study. As may be expected, remarks made in the interviews and additional comments offered by survey respondents do not fall into neat, distinct categories. Overlaps and interrelationships exist.

ESPs that are not CSPs may request voluntary CMMC assessments of their environment and use that as a business discriminator. The marketplace for ESP services will adjust to find the efficient manner for ESPs to support OSA assessments that may include their services. With respect to requirement AC.L3-3.1.2e, when an OSA adds an ESP's services to its network, the ESP is considered to be provisioned by the OSA. It is subject to the requirements for the use of an ESP. A common carrier's information system is not within the contractor's CMMC Assessment Scope if CUI is properly encrypted during transport across the common carrier's information system. In a cloud model, the end-to-end encryption would apply when transmitting between OSA CUI assets and a cloud service. Once within the security boundary of the CSP, the common carrier's system no longer contributes to the handling of the CUI and the CSP's security practices apply. If an OSA chooses to use a CSP to process, store, or transmit CUI, FedRAMP Moderate or equivalency requirements apply. The rule has been updated to include the use of a Customer Responsibility Matrix by all ESPs, not just CSPs. Obtaining a copy of a CSP's SSP is not required for a CSP that is FedRAMP Authorized. Documentation on the services provided by the CSP and a CRM will be required. e. Capacity for Assessment of ESPs Comment: Some comments questioned whether the CMMC ecosystem would be adequate to provide the number of CMMC assessments necessary for ESPs. In response, some comments recommend ESPs be given priority for completing assessments. Others recommend different phasing or forms of assessment and certification during ramp up. Response: DoD declines to make suggested changes to the ramp up and phasing of assessments for ESPs. DoD considered many alternatives before deciding upon the current CMMC assessment structure. By design, the CMMC program depends on the supply and demand dynamics of the free market, enabling it to naturally scale and adapt to capacity requirements. DoD declines to set priorities for the assessment marketplace. The DoD has utilized a phased implementation approach to

reduce implementation risk. DoD expects that the public has utilized the lead-time prior to the publication of this rule to prepare for CMMC implementation and buy-down risk. CMMC Program requirements make no changes to existing policies for information security requirements implemented by the DoD. It is beyond the scope of this rule for DoD to determine the order in which organizations are assessed. f. Remote Access by ESPs Comment: Two comments ask for clarification on requirements for remote access by an ESP to an OSA, whether with OSA provided equipment or a VPN. Response:

3.3.2 Collateral Damage Potential (CDP) The Collateral Damage Potential metric measures the potential for loss of life or physical assets through damage or theft of property or equipment.

Offerors and contractors are required to notify the contracting officer representative or other designated agency official concerning any unmarked or mismarked CUI if discovered. These potential costs are not quantified since such occurrences are expected to be rare. In addition, to the maximum extent practicable, the offeror or contractor shall identify and mark its proprietary business and attributional information. These costs are also not quantified since an offeror or contractor usually marks its proprietary information as a best business practice to protect its own interests and information. Finally, offerors are required to notify the contracting officer of a potential CUI incident within 8 hours of discovery. Such occurrences are expected to be rare and are assumed to be accounted for under the public cost estimate for CUI incident reporting in section IV.C.2.b. of this preamble. 2. Non-Defense Contractors and Subcontractors a. Comply With NIST SP 800-171 Revision 2 A contractor may need to depend on the expertise of information security specialists to develop and document processes and procedures associated with each security requirement, perform the periodic scans, tests, and assessments necessary for some of the security requirements, and analyze the results. The amount of time necessary to perform the various tasks will vary by contractor depending on the number of employees and the complexity of its information systems. Some contractors may already have personnel performing some of the functions as a matter of good business practice to protect their (printed page 4284) networks, while others may be starting with no in-house expertise. The total estimated labor cost for a small business in the initial year is approximately \$148,200 (average of 1,560 hours * \$95), with a recurring annual labor cost of approximately \$98,800 (1,040 hours * \$95). The total estimated labor cost for a business other than a small business in the initial year is approximately \$543,400 (average of 5,720 hours * \$95), with a recurring annual labor cost of approximately \$494,000 (5,200 hours * \$95). Note, this does not include the time expected to maintain the system security plan (see section IV.C.2.d. of this preamble). Businesses may also need to install software and/or hardware to implement NIST SP 800-171 Revision 2. Similar to the labor costs, the cost of the specific software or hardware varies based on the solution selected by the business, a decision that will take into consideration the number of users, the types of devices used, and the complexity of the network, among other things. The Government estimates that a small business, on average, may spend \$27,500 on hardware and software during initial implementation and \$5,000 annually thereafter to maintain compliance. On average, a business other than a small business may spend \$140,000 on hardware and software in the initial year and \$80,000 annually thereafter.

(A) AC.L2-3.1.20 External Connections (CUI Data). (B) AC.L2-3.1.22 Control Public Information (CUI Data). (C) PE.L2-3.10.3 Escort Visitors (CUI Data). (D) PE.L2-3.10.4 Physical Access Logs (CUI Data). (E) PE.L2-3.10.5 Manage Physical Access (CUI Data). (3) CMMC Level 3 Certification Assessment. An OSC is only permitted to have a POA&M for CMMC Level 3 if all the following conditions are met: (printed page 89136) (i) The assessment score divided by the total number of CMMC Level 3 security requirements is greater than or equal to 0.8; and (ii) The POA&M does not include any of following security requirements: (A) IR.L3-3.6.1e Security Operations Center. (B) IR.L3-3.6.2e Cyber Incident Response Team. (C) RA.L3-3.11.1e Threat-Informed Risk Assessment. (D) RA.L3-3.11.6e Supply Chain Risk Response. (E) RA.L3-3.11.7e Supply Chain Risk Plan. (F) RA.L3-3.11.4e Security Solution Rationale. (G) SI.L3-3.14.3e Specialized Asset Security. (b) POA&M Closeout assessment. The closing of a POA&M must be confirmed by a POA&M Closeout assessment within 180-days of the initial assessment. A POA&M Closeout assessment is a CMMC assessment that assesses only the NOT MET requirements that were identified with POA&M in the initial assessment. (1) CMMC Level 2 Self-Assessment. For a CMMC Level 2 Self-Assessment, the POA&M Closeout assessment shall be performed by the OSA in the same manner as the initial self-assessment. (2) CMMC Level 2 Certification Assessment. For CMMC Level 2 Certification Assessment, the POA&M Closeout assessment must be performed by an authorized or accredited C3PAO. (3) CMMC Level 3

Certification Assessment. For CMMC Level 3 Certification Assessment, DCMA DIBCAC will perform the POA&M Closeout Assessment of the CMMC Level 3 security requirements. § 170.22 Affirmation. (a) General. The OSA must affirm continuing compliance with the appropriate level CMMC Self-Assessment or CMMC Certification Assessment. The affirmation shall be submitted in accordance with the following requirements: (1) Affirming official. All CMMC affirmations shall be submitted by the OSA senior official who is responsible for ensuring OSA compliance with CMMC Program requirements. (2) Affirmation content. Each CMMC affirmation shall include the following information: (i) Name, title, and contact information for the affirming official; and (ii) Affirmation statement attesting that the OSA has implemented and will maintain implementation of all applicable CMMC security requirements for all information systems within the relevant CMMC Assessment Scope at the applicable CMMC Level. (3) Affirmation submission. The affirming official shall submit a CMMC affirmation in the following instances: (i) Upon completion of the assessment (conditional or final); (ii) Annually thereafter; and (iii) Following a POA&M closeout assessment, as applicable. (b) Submission procedures.

Nothing in this section shall alter the requirements of a covered entity or business associate to comply with applicable provisions of this part other than §§ 164.308(b) and 164.314(a). § 164.320 Severability. If any provision of this subpart is held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, or stayed pending further agency action, it shall be construed so as to give it maximum effect permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event such provision shall be severable from this subpart and shall not affect the remainder thereof or the application of such provision to other persons not similarly situated or to other dissimilar circumstances. (printed page 1021)

· Conducted by OSA every 3 years · Results entered into SPRS (or its successor capability). · CMMC Status will be valid for three years from the CMMC Status Date as defined in § 170.4. · Permitted as defined in § 170.21(a)(2) and must be closed out within 180 days · Final CMMC Status will be valid for three years from the Conditional CMMC Status Date. · After each assessment and annually thereafter. · Assessment will lapse upon failure to annually affirm. · Entered into SPRS (or its successor capability). Level 2 (C3PAO) · 110 NIST SP 800-171 R2 required by DFARS clause 252.204-7012 · Conducted by C3PAO every 3 years · Results entered into CMMC Enterprise Mission Assurance Support Service (eMASS) (or its successor capability). · CMMC Status will be valid for three years from the CMMC Status Date as defined in § 170.4. · Permitted as defined in § 170.21(a)(2) and must be closed out within 180 days · Final CMMC Status will be valid for three

years from the Conditional CMMC Status Date. · After each assessment and annually thereafter. · Assessment will lapse upon failure to annually affirm. · Entered into SPRS (or its successor capability). Level 3 (DIBCAC) · 110 NIST SP 800-171 R2 required by DFARS clause 252.204-7012 · 24 selected from NIST SP 800-172 Feb2021, as detailed in table 1 to §170.14(c)(4). · Pre-requisite CMMC Status of Level 2 (C3PAO) for the same CMMC Assessment Scope, for each Level 3 certification assessment · Conducted by Defense Contract Management Agency (DCMA) Defense Industrial Base Cybersecurity Assessment Center (DIBCAC) every 3 years. · Results entered into CMMC eMASS (or its successor capability). · CMMC Status will be valid for three years from the CMMC Status Date as defined in §170.4. · Permitted as defined in §170.21(a)(3) and must be closed out within 180 days · Final CMMC Status will be valid for three years from the Conditional CMMC Status Date. · After each assessment and annually thereafter. · Assessment will lapse upon failure to annually affirm. · Level 2 (C3PAO) affirmation must also continue to be completed annually. · Entered into SPRS (or its successor capability). Program Walkthrough-Contractor Perspective This section will provide a simplified walkthrough of the CMMC Program from the perspective of an Organization Seeking Assessment (OSA) seeking to comply with program requirements. CMMC Level Selection An OSA will select the CMMC level it desires to attain. Once the CMMC Program is implemented, a DoD solicitation will specify the minimum CMMC Status required to be eligible for award. One of four CMMC Statuses will be specified: Level 1 (Self) is a self-assessment to secure FCI processed, stored, or transmitted in the course of fulfilling the contract. The OSA must comply with the 15 security requirements set by FAR clause 52.204-21. All 15 requirements must be met in full-no exceptions are allowed.

the CSA can determine that TOP SECRET material stored in an electronic format on an authorized classified information system does not need to be individually numbered in series provided the contractor has in place controls in place to address accountability, need to know and retention). As stated in this paragraph: · . . . Contractors will establish controls for TOP SECRET information and material to validate procedures are in place to address accountability, need to know and retention, e.g., demonstrating that TOP SECRET material stored in an electronic format on an authorized classified information system does not need to be individually numbered in series. These controls are in addition to the information management system and must be applied, unless otherwise directed by the applicable CSA, regardless of the media of the TOP SECRET information, to include information processed and stored on authorized information systems. Unless otherwise directed by the applicable CSA, the contractor will establish the following additional controls . . . · §117.15(d)(4) Installation: Clarifies that an Intrusion Detection System (IDS) shall be installed by a Nationally Recognized Testing Laboratory (NRTL)-approved entity to make it clear that any NRTL-approved entity may do such (printed page 83305) installations. ·The IDS will be installed by a NRTL-approved entity or by an entity approved in writing by the CSA . . . · §117.7(b)(2) Senior Management Official: Clarifies responsibilities of the Senior Management Official of each cleared entity to better reflect the critical role and accountability of this position for entity compliance with the NISPOM. This change further emphasizes the essential role of the Senior Management Official with the entity's security staff to ensure NISPOM compliance. · §117.13(d)(5) Clarifies to the contractor that upon completion of a classified contract, the contractor must return all government provided or deliverable information to the custody of the government. Such clarification ensures the contractor is not retaining official government records without specific authorization from the government customer. ·(i) If the GCA does not advise to the contrary, the contractor may retain copies of the government material for a period of 2 years following the completion of the contract. The contract security classification specification, or equivalent, will continue in effect for this 2-year period. (ii) If the GCA determines the contractor has a continuing need for the copies of the government material beyond the 2-year period, the GCA will issue a final contract security classification specification, or equivalent, for the classified contract and will include disposition instructions for the copies. · Costs The DoD invites comment from the members of the public on the costs estimated to implement this rule. the OSA provides all processes, technology, and facilities, does not need CMMC assessment. When ESPs are assessed as part of an OSA's assessment, the assessment type is dictated by the OSA's DoD contract CMMC requirement. The DoD declines to make any other suggested changes to the assessment of

ESPs. b. Definitions Comment: Multiple comments state that the definition of CSP in the rule is overly broad and overlaps with the definition of ESP. One comment questioned whether a C3PAO is also a Security Protection Asset and by extension an ESP. Two comments requested change to the definition of Out-of-Scope Assets to stipulate that SPD is Out-of-Scope. Response: Several comments requested clarification on when an ESP would be considered a CSP. CSPs, MSPs, and MSSPs are always considered ESPs. The DoD has updated the rule to narrow the definition of Cloud Service Provider based on the definition for cloud computing from NIST SP 800-145 Sept2011. An ESP would be considered a CSP when it provides its own cloud services based on a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing that can be rapidly provisioned and released with minimal management effort or service provider interaction on the part of the OSA. An ESP (not a CSP) that provides technical support services to its clients would be considered an MSP. It does not host its own cloud platform offering. An ESP may utilize cloud offerings to deliver services to clients without being a CSP. An ESP that manages a third-party cloud service on behalf of an OSA would not be considered a CSP. C3PAOs need not receive security protection data as part of an assessment; they view the security protection data while on premises at the OSC for the assessment. A C3PAO is not an ESP or security protection asset and is therefore not within the OSA assessment boundary. DoD declines to delete the phrase "except for assets that provide security protection for a CUI asset" from the definition of Out-of-Scope Assets. Assets that provide security protection for CUI are not Out-of-Scope Assets. A CMMC definition for Security Protection Data has been added to the rule. c. OSA Relationship to ESP Comment: Several comments request clarification related to use of an ESP that is internal to the OSA. One comment requested that DoD require CSPs grant the US Government, as part of the contract between the OSA and the CSP, access to any CUI that is subject to CMMC requirements in the event of contractual failures, criminal actions or other legal situations that warrant seizure of CUI data. Some comments also asked whether the DoD has standing or authority to require C3PAO assessment or conduct CMMC level 3 assessments of ESPs, given that the ESP's direct contractual relationship is not with the Government but with the OSA. Two comments suggest that ESPs will be covered by the subcontractor flow down requirements from an OSA. Response:

33] assessment costs, and affirmation costs for each CMMC Level. For CMMC Levels 1 and 2, the cost estimates are based only upon the assessment, certification, and affirmation activities that a defense contractor, subcontractor, or ecosystem member must take to allow DoD to verify implementation of the relevant underlying security requirements, i.e., for CMMC Level 1, the security requirements set forth in FAR clause 52.204-21, and for CMMC Level 2, the security requirements set forth in NIST SP 800-171 Rev 2. DoD did not consider the cost of implementing the security requirements themselves because implementation is already required by FAR clause 52.204-21, effective June 15, 2016, and by DFARS clause 252.204-7012, requiring implementation by Dec. 31, 2017, respectively; therefore, the costs of implementing the security requirements for CMMC Levels 1 and 2 should already have been incurred and are not attributed to this rule. As such, the nonrecurring engineering and recurring engineering costs to implement the security requirements defined for CMMC Level 1 and Level 2 are not included in this economic analysis. However, cost estimates to implement CMMC Level 3, are included, as that CMMC level will require defense contractors and subcontractors, as applicable, to implement a DoD-defined subset of the security requirements set forth in NIST SP 800-172, a new addition to current security protection requirements. In estimating the public cost for a defense contractor small entity to comply with CMMC Program requirements for each CMMC level, DoD considered non-recurring engineering costs, recurring engineering costs, assessment costs, and affirmation costs for each CMMC Level. These costs include labor and consulting. Estimates include size and complexity assumptions to account for typical organizational differences between small entities and other than small entities with respect to the handling of Information Technology (IT) and cybersecurity: small entities are likely to have a less complex, less expansive operating environment and IT/Cybersecurity infrastructure compared to larger defense contractors small entities are likely to outsource IT and cybersecurity to an External Service Provider (ESP) entities (small and other than small) pursuing CMMC Level 2 Self-Assessment are likely to seek consulting or implementation assistance from an ESP to either help them prepare for the assessment technically or participate in the assessment with the C3PAOs. Estimates do not include the cost to implement (Non-recurring Engineering Costs (NRE)) or maintenance costs (Recurring Engineering (RE)) the (printed page 89088) security requirements prescribed in current regulations.

. Not allowing for a transition period could have an opportunity cost whereby regulated entities

spend their limited time revising business associate agreements instead of enhancing their cybersecurity posture. The Department believes that this could result in duplicative costs because some regulated entities may identify the need for additional changes to business associate agreements after they have fully evaluated their changed cybersecurity needs. The Department estimates that small regulated entities may be more likely to experience that outcome without a transition period, and thus the alternative of no transition period would cause a potential one-time increase in costs of \$278,332,891 $[(1,822,600 \text{ regulated entities} \times .9) \times 1 \text{ hour} \times \$169.68 \text{ lawyer hourly wage}]$. Relatedly, the Department considered proposing similar transition provisions for group health plans and plan sponsors that would provide these entities with additional time to update plan documents to align with new proposed requirements in this NPRM, if adopted. However, the Department believes that affected plans and plan sponsors would be able to complete any necessary updates by the proposed compliance date. The Department believes that updating plan documents is not as complex a task as evaluating potential new contractual needs to meet business associate obligations. Additionally, plan sponsors do not have Security Rule obligations independent of plan documents, and thus would not be obligated to implement the requirements proposed in this NPRM absent updates to the plan documents. The result of a transition period for updating plan documents would be merely to delay compliance with the changed Security Rule requirements, and therefore, delay improvements to their cybersecurity posture, not to reduce costs. Accordingly, we are not proposing such transition provisions in this NPRM.

C. Regulatory Flexibility Act-Small Entity Analysis The Department has examined the economic implications of this proposed rule as required by the RFA. If a rule has a significant economic impact on a substantial number of small entities, the RFA requires agencies to analyze regulatory options that would reduce the economic effect of the rule on small entities. As discussed in greater detail below, this analysis concludes, and the Secretary proposes to certify, that the proposed rule, if finalized, would not (printed page 1007) result in a significant economic effect on a substantial number of small entities.

(Comment 112) Some comments state that if foods are distributed to the store via direct store delivery (DSD) (i.e., baked goods, breads, soda, snack foods, beer/wine, ice, and milk) the vendor provides the food directly to the store and sometimes stocks the shelves. DSD has no system to track the information the FDA will require. Several comments note that protecting public health does not necessitate the maintenance of records in every step of the distribution process. The comments state that the current recall system is the most efficient and practical way to identify and remove product from distribution. These comments state that consumers typically return all products in a recall with no regard to the lot code, and that this is the most appropriate response in the event of a terrorist attack. In these comments' opinion, complex lot numbers may slow or substantially limit the recall of contaminated food. Additionally, requiring distributors to compromise the integrity of food packaging to determine lot codes defeats the purpose of the proposal. Some comments state that this requirement represents a disproportionate burden to packaged food distributors. Some comments state that food manufacturers may use independent delivery persons who pick up product from several manufacturers for delivery to retailers. There may be as many as 75 to 100 different products on each truck. The independent delivery person has no capability to capture the lot numbers of the products of several different manufacturers. (Response) (Response) The final rule does not require distributors to track lot/code numbers or other identifiers. DSD vendors will not be subject to the lot code requirement in § 1.345(a)(4) for activities other than manufacturing, processing, and packing food. Thus, activities such as holding and transportation are not subject to the requirements. (Comment 113) Many comments request clarifications for the terms 'other identifiers' and 'to the extent information this information exists.' (Response) FDA acknowledges that most firms use lot or code numbers to identify specific batches of their products. However, some may use other technologies such as barcodes. The term 'other identifier' is intended to capture any other methods that the food industry may be using to identify specific lots of product. FDA is mandating that this information be captured in the records, where required, to the extent this information exists. It is conceivable that certain sectors of the industry may not use lot or code numbers, or other identifiers to identify specific lots of products. In this case, the regulations do not specify that these sectors start using such identifiers. The identifiers are required only to the extent that they already exist. (Comment 114) A number of comments suggest that, in lieu of lot numbers, purchase orders numbers would serve as acceptable identifiers.

Number of Facilities with Approved Classified Storage (Of Over 12,000 NISP Cleared Facilities): 3658 A single, integrated, cohesive industrial security program to protect classified information and to preserve our Nation's economic and technological interests. Facilities Randomly Selected and

Responding to Data Collection: 1038 Maximum uniformity and consistency by contractors who support the Executive branch to effectively protect and safeguard classified information through all phases of the contracting process for any classified information an Agency releases to a contractor. Estimated Total NISP Security Costs for Facilities with Approved Classified Storage (With 95% Margin of Error to give 95% Upper Confidence Limit): \$1,413,150,249 + \$72,968,977 = \$1,486,119,226 Contractors must comply, when levied by the FAR security requirements clause or equivalent clauses in contracts involving access to classified information, with uniform procedures for the proper safeguarding of classified information to reduce the risk of unauthorized disclosure of classified information. Based on the data collected from the survey, we can be 95% confident the true 2017 total NISP security cost for contractor facilities with approved classified storage is less than \$1.486B. Assumptions and Notes: · Of over 12,000 NISP cleared facilities, 3,658 facilities are approved for classified storage and 1,038 responded to the survey. (printed page 83306) · Companies were selected at random according to survey methodology. · The applicable NISP CSA, based on a valid requirement for access to classified information (e.g., contract or bid), funds the costs for evaluating and processing a contractor for an entity eligibility determination (facility clearance) and the costs of personnel security vetting requirements for required access to classified information by any contractor employees. · The security cost profile for non-responding companies is assumed to be similar to that of responding companies. · Outlying survey data points were removed from data analysis. · Overall DoD contract spending for 2017 was \$331 billion; but DoD does not have such data for these contractor cleared facilities in the NISP for performance on contracts requiring access to classified information. · DoD has not collected security costs from those contractor cleared facilities that are not authorized to store classified information at their own contractor locations.

3.1.4 | Environment Condition Preparation ... 3.1.4 Environment Condition Preparation Environment condition refers to context information that is generally not associated with any specific subject or object but is required in the decision process.

Not a CSP CUI (with or without SPD) The CSP shall meet the FedRAMP requirements in 48 CFR 252.204-7012 The services provided by the ESP are in the OSA's assessment scope and shall be assessed as part of the OSA's assessment. SPD (without CUI) The services provided by the CSP are in the OSA's assessment scope and shall be assessed as Security Protection Assets The services provided by the ESP are in the OSA's assessment scope and shall be assessed as Security Protection Assets. Neither CUI nor SPD A service provider that does not process CUI or SPD does not meet the CMMC definition of an ESP A service provider that does not process CUI or SPD does not meet the CMMC definition of an ESP. (ii) The use of an ESP, its relationship to the OSA, and the services provided need to be documented in the OSA's SSP and described in the ESP's service description and customer responsibility matrix (CRM), which describes the responsibilities of the OSA and ESP with respect to the services provided. Note that the ESP may voluntarily undergo a CMMC certification assessment to reduce the ESP's effort required during the OSA's assessment. The minimum assessment type for the ESP is dictated by the OSA's DoD contract requirement. (d) CMMC Level 3 scoping. Prior to performing a Level 3 certification assessment, the CMMC Assessment Scope must be specified. (1) The CMMC Assessment Scope for Level 3 is based on the specification of asset categories and their respective requirements as set forth in table 5 to this paragraph (d)(1). Additional information is available in the guidance document listed in paragraph (g) of appendix A to this part. Table 5 to § 170.19 (d)(1) · CMMC Level 3 Asset Categories and Associated Requirements

Asset category	Asset description	OSC requirements	CMMC assessment requirements
Assets that are in the Level 3 CMMC Assessment Scope	Controlled Unclassified Information (CUI) Assets	Assets that process, store, or transmit CUI	Assets that can, but are not intended to, process, store, or transmit CUI (defined as Contractor Risk Managed Assets in table 1 to paragraph (c)(1) of this section CMMC Scoping).
	Document in the asset inventory	Document asset treatment in the System Security Plan (SSP).	Document in the network diagram of the CMMC Assessment Scope.
	Prepare to be assessed against CMMC Level 2 and Level 3 security requirements.	Limited check against Level 2 and assess against all Level 3 CMMC security requirements.	Security Protection Assets
	Assets that provide security functions or capabilities to the OSC's CMMC Assessment Scope, irrespective of whether or not these assets process, store, or transmit CUI	Document in the asset inventory	Document asset treatment in the SSP.
	Document in the network diagram of the CMMC Assessment Scope.	Prepare to be assessed against CMMC Level 2 and Level 3 security requirements.	

NoSQL systems can handle fast-paced agile development, the storage of large volumes of structured

and semi-structured data, the requirements for scale-out architecture, and modern application paradigms (e.g., microservices and real-time streaming) [MO]. However, they also face many challenges with regard to access control, such as a lack of proper authentication, encryption, dynamic model support, and fine-grained authorization (as described in Sec. 3.3). Therefore, careful considerations need to be made when implementing access control on NoSQL databases to address these issues effectively. Due to NoSQL's distributed nature, security becomes a more significant concern compared to central management-oriented RDBMS. From the perspective of data at rest and data in transit (i.e., communications between databases), NoSQL databases generally provide weaker security features when compared to RDBMS. The security of data in transit and communications in horizontally scaled NoSQL databases is a critical issue. Some systems use symmetric key algorithms to encrypt data based on the NoSQL structure (i.e., types). For example, in a key-value system, the value of the key is the encrypted data, including all of the other key values being concatenated and encrypted. When a query is created, the system retrieves data entities and then uses the symmetric key to decrypt the data [ZM]. As a result, the data is protected by encryption even if the key is intercepted while in transit between different NoSQL hosts.

) on the specific IT Strategy Goals and Objectives within FDA's Agency-wide IT Strategy. To facilitate comment, FDA has developed a series of questions in this section. The questions are not meant to be exhaustive, and FDA is also interested in any other pertinent information stakeholders would like to share on this topic. FDA encourages stakeholders to provide the specific rationale and basis for their comments, including any available supporting data and information.

1. Which goals and objectives are most important to you? Why?
2. Describe up to five ways the FDA IT Strategy will impact your industry?
3. What gaps do you see in the FDA IT Strategy's goals or objectives?
4. What challenges or risks do you foresee in executing the FDA IT Strategy?

III. FDA IT Strategy Goals and Objectives

Goal 1: Create a Shared OneFDA Ecosystem: Establish greater access to trusted data and shared resources across Centers, Offices, and external stakeholders. Encourage and facilitate cross-functional investment in technology to support enterprise business objectives for speed, scale, and value through robust Agency level governance processes, enhanced collaboration channels, and technology products and services. Shift FDA's culture to make sharing across Centers and Offices and with external stakeholders (where appropriate) the norm where prioritizing Agency-level public health outcomes improves results for everyone.

Objectives

Enhance Communication and Collaboration: Foster information and resource sharing with internal and external stakeholders to achieve both Agency and specific stakeholder outcomes, using a variety of communication channels to reach broader audiences. Enable collaboration and develop strong partnerships across Centers and Offices through integrated technologies and platforms.

Promote Transparency: Actively involve impacted stakeholders in IT solution planning, development, and execution to drive expected outcomes.

Optimize Investments: Align the diverse needs across FDA to the overarching strategy through stronger financial fidelity, enhanced budget coordination, and improved financial planning. Ensure effective IT resource utilization, transparency in IT budget allocation, and measurement of results achieved.

Strengthen Governance: Ensure the effective and efficient use of IT in enabling FDA to achieve mission outcomes through established standards, responsible procurement, and more robust decision-making and accountability mechanisms.

Goal 2: Strengthen IT Infrastructure:

Continue to modernize and secure the foundational IT infrastructure for all IT services and solutions. Proactively provide the ability to adapt to changes in workload demand, detect issues before they impact stakeholders, and quickly resolve technology issues to avoid disruptions to day-to-day operations.

Objectives

Provide Flexible Infrastructure Offerings:

(1) The SMO or other KMP are not appointed as the FSO or ITPSO. FSOs and ITPSOs may not be temporarily excluded. A cleared employee must always be appointed to fulfill the requirements of these positions in accordance with this rule. (2) An employee, cleared to the level of the entity eligibility determination, (printed page 83327) must be able to fulfill the NISP responsibilities of the temporarily excluded KMP in accordance with this rule while the temporary exclusion is in effect. (3) The applicable CSA may provide additional guidance on the duration of a temporary exclusion from access to classified information based on circumstances, business structure, and other relevant security information. (4) The contractor's governing board affirms the exclusion action, and provides a copy of the exclusion action to the CSA. The organization's governing body will document this action.

Table 1 to Paragraph (g)(4) Temporary Exclusion Resolutions

Type of affirmation	Language to be used in exclusion action
Affirmation for Temporary Exclusion from Access to Classified Information	Pending a final determination of eligibility for access to classified information by the U.S. Government, [insert name and position] will not

require, will not have, and can be effectively and formally excluded from access to all classified information disclosed to the entity. Affirmation for Temporary Exclusion from Higher Level Classified Information Pending a final determination of eligibility for access to classified information at the [insert SECRET or TOP SECRET] level, [insert name and position] will not have, and can be effectively and formally excluded from access to higher-level classified information [specify which higher level of information]. (h) Interim entity eligibility determinations. The CSA may make an interim entity eligibility determination for access to classified information, in the sole discretion of the CSA. See §.117.10(l) for access limitations that also apply to interim entity eligibility determinations. (i) An interim entity eligibility determination is made on a temporary basis pending completion of the full investigative requirements. (ii) If the contractor with an interim entity eligibility determination is unable or unwilling to comply with the requirements of this rule and CSA-provided guidance regarding the process to obtain a final entity eligibility determination, the CSA will withdraw the interim entity eligibility. (i) Multiple facility organizations. The home office must have an entity eligibility determination at the same level as the highest entity eligibility determination of an entity within the MFO. The CSA will determine whether branch offices are eligible for access to classified information if the branch offices need access and meet all other requirements. (j) Parent-subsidiary relationships. When a parent-subsidiary relationship exists, the CSA will process the parent and the subsidiary separately for entity eligibility determinations.

- Anti-forensics (e.g., obfuscation, data hiding, malware). Anti-forensics are a set of techniques used specifically to prevent or mislead forensic analysis. Anti-forensic challenges in cloud forensics include: - o The use of obfuscation, malware, data hiding, or other techniques to compromise the integrity of evidence - o Malware may circumvent virtual machine isolation methods - Incident first responders (e.g., trustworthiness of cloud Providers, response time, reconstruction). Incident first responder challenges in cloud forensics include: - o Confidence, competence, and trustworthiness of the cloud Providers to act as first responders and perform data collection - o Difficulty in performing initial triage - o Processing a large volume of collected forensic artifacts - Role management (e.g., data owners, identity management, users, access control). Role management challenges in cloud forensics include: - o Uniquely identifying the owner of an account - o Decoupling between cloud user credentials and physical users - o Ease of anonymity and creating fictitious identities online - o Determining exact ownership of data - o Authentication and access control - Legal (e.g., jurisdictions, laws, service level agreements, contracts, subpoenas, international cooperation, privacy, ethics) . Legal challenges in cloud forensics include: - o Identifying and addressing issues of jurisdictions for legal access to data - o Lack of effective channels for international communication and cooperation during an investigation - o Data acquisition that relies on the cooperation of cloud Providers, as well as their competence and trustworthiness - o Missing terms in contracts and service level agreements - o Issuing subpoenas without knowledge of the physical location of data - Standards (e.g., standard operating procedures, interoperability, testing, validation).

(2) If the contractor must use, have access to, or disseminate individually identifiable information subject to this part in order to perform any part of a contract, and the information would have been collected, maintained, used, or disseminated by the DoD Component but for the award of the contract, these contractor activities are subject to this part. (3) The restriction in paragraphs (a)(1) and (2) of this section do not apply to records: (i) Established and maintained to assist in making internal contractor management decisions, such as records maintained by the contractor for use in managing the contract; (ii) Maintained as internal contractor employee records even when used in conjunction with providing goods and services to the Department of Defense; or (iii) Maintained as training records by an educational organization contracted by a DoD Component to provide training when the records of the contract students are similar to and commingled with training records of other students (for example, admission forms, transcripts, academic counseling and similar records). (iv) Maintained by a consumer reporting agency to which records have been disclosed under contract in accordance with the Federal Claims Collection Act of 1966, 31 U.S.C. 3711(e) . (v) Maintained by the contractor incident to normal business practices and operations. (4) The DoD Components shall publish instructions that: (i) Furnish DoD Privacy Program guidance to their personnel who solicit, award, or administer Government contracts; (ii) Inform prospective contractors of their responsibilities, and provide training as appropriate, regarding the DoD Privacy Program; and (iii) Establish an internal system of contractor performance review to ensure compliance with the DoD Privacy Program. (b) Contracting procedures. The Defense Acquisition Regulations Council shall

develop the specific policies and procedures to be followed when soliciting bids, awarding contracts or administering contracts that are subject to this part. (c) Contractor compliance. Through the various contract surveillance programs, ensure contractors comply with the procedures established in accordance with § 310.12(b). (d) Disclosure of records to contractors. Disclosure of records contained in a system of records by a DoD Component to a contractor for use in the performance of a DoD contract is considered a disclosure within the Department of Defense (see § 310.21(b)). The contractor is considered the agent of the contracting DoD Component and to be maintaining and receiving the records for that Component. § 310.13 Safeguarding personal information. (a) General responsibilities.

HIPAA Security Rule section 164.312 (Technical Safeguards) addresses person or entity authentication. Covered entities and business associates must implement appropriate safeguards to protect electronic protected health information (ePHI). For person or entity authentication, organizations should: 1. Establish and document policies specific to person or entity authentication 2. Implement technical and procedural controls 3. Train workforce members on their responsibilities 4. Conduct periodic risk assessments addressing person or entity authentication 5. Maintain documentation of compliance efforts Under 45 CFR 164.312, this is a technical safeguards requirement that applies to all covered entities and business associates that create, receive, maintain, or transmit ePHI.

These controls are useful for recording and examining information system activity, especially when determining whether a security violation has occurred. [675] The Security Rule does not identify data that must be gathered by the audit controls or how often the audit reports should be reviewed. [676] Instead, a regulated entity must consider its risk analysis and organizational factors, such as current technical infrastructure and hardware and software security capabilities, to determine reasonable and appropriate audit controls for information systems that contain or use ePHI. [677] The audit controls standard has no implementation specifications. Section 164.312(c)(1), the standard for integrity, requires a regulated entity to implement policies and procedures to protect ePHI from improper alteration or destruction. The integrity of data can be compromised by both technical and non-technical sources. Workforce members or business associates may make accidental or intentional changes that improperly alter or destroy ePHI. Data can also be altered or destroyed without human intervention, such as by electronic media errors or failures. [678] The purpose of this standard is to establish and implement policies and procedures for protecting ePHI from being compromised regardless of the source. Improperly altered or destroyed ePHI can result in clinical quality problems for a covered entity, including patient safety issues. [679] Section 164.312(c)(2) contains the addressable implementation specification for the integrity standard that requires a regulated entity, when reasonable and appropriate, to implement electronic mechanisms to corroborate that ePHI has not been altered or destroyed in an unauthorized manner. To determine which electronic mechanisms should be implemented to ensure the integrity of ePHI, a regulated entity must consider the various risks to the integrity of ePHI identified during the risk analysis. Once a regulated entity has identified risks to the integrity of its data, it must identify security measures that will reduce the risks. [680] The standard for person or entity authentication at 45 CFR 164.312(d) requires a regulated entity to establish policies and procedures for verifying that a person seeking access to ePHI is the one claimed. This standard addresses technical controls for ensuring access is allowed only to those persons or software programs that have been granted access rights under the administrative safeguard for information access management at 45 CFR 164.308(a)(4) . This standard has no implementation specifications. Under the standard for transmission security at 45 CFR 164.312(e)(1) , a regulated entity is required to implement technical security measures to guard against unauthorized access to ePHI when transmitted electronically, such as through the internet. A regulated entity must identify the available and appropriate means to protect ePHI as it is transmitted, select appropriate solutions, and document its decisions. [681]

(iv) All requests for amendment must include all information necessary to make a determination on the request for amendment, as outlined in 32 CFR part 310, subpart D . (v) Requestors affiliated with the DoD may not use official government supplies or equipment to include mailing addresses, work phones/faxes, or DoD-issued email accounts to make requests for amendment. If requests are received using DoD equipment, the requestor will be advised to make a new request, using non-DoD equipment, and processing of their request will begin only after such new request is received. (3) When a request for amendment is received, the System Manager shall: (i) Mail a written

acknowledgement of the request for amendment to the individual within 10 working days of receipt. Such acknowledgement shall identify the request and may, if necessary, request any additional information needed to make a determination, advising the requestor that they have 20 calendar days to reply. No acknowledgement is necessary if the request can be reviewed and processed, to include notification to the individual of a grant or denial of amendment within the 10 working day period. Whenever practical, the decision to amend shall be made within 30 working days. For requests presented in person, written acknowledgement may be provided at the time the request is presented. (ii) Determine whether the requester has adequately supported his or her claim that the record is inaccurate, irrelevant, untimely, or incomplete. (A) If it is determined the individual's request for amendment is being granted, the System Manager will proceed to amend the records in accordance with existing statutes, regulations, or administrative procedures. The requestor will then be notified in writing of the agreement to amend and all previous holders of the records will be notified of the amendment as required by 32 CFR part 310, subpart D . (B) If it is determined that any, or all, of the record should not be amended, the original request, along with the record requested for amendment, and justification for recommended denial (printed page 24131) action shall be forwarded through their Director to the Chief of the OIP within 10 working days of receipt for a decision by the IDA. (C) If the request for an amendment pertains to a record controlled and maintained by another Federal agency, the amendment request shall be referred to the appropriate agency and the requestor will be notified in writing of the referral and contact information for the agency. (4) The Chief of the OIP will use the following procedures for any recommended denials of amendment: (i) The specific reason for denial of amendment cited by the System Manager shall be evaluated and a recommendation presented to the IDA on whether to support the recommendation to deny amendment to the record. (ii) If the request to amend the record is denied, a written letter will be sent to the requestor using procedures outlined in 32 CFR part 310, subpart D

(c) To qualify for the (j)(2) exemption, the system of records must be maintained by a DoD Component, or element thereof, that performs as its principal function any activity pertaining to the enforcement of criminal laws, such as the U.S. Army Criminal Investigation Command, the Naval Investigative Service, the Air Force Office of Special Investigations, and military police activities. However, where DoD offices perform multiple functions, but have an investigative component, such as the DoD Inspector General Defense Criminal Investigative Service or Criminal Law Divisions of Staff Judge Advocates Offices, the exemption may be claimed. Law enforcement includes police efforts to detect, prevent, control, or reduce crime, to apprehend or identify criminals; and the activities of military trial counsel, correction, probation, pardon, or parole authorities. (d) Information that may be protected under the (j)(2) exemption includes: (1) Records compiled for the purpose of identifying criminal offenders and alleged offenders consisting only of identifying data and notations of arrests, the nature and disposition of criminal charges, sentencing, confinement, release, parole, and probation status (so-called criminal history records); (2) Reports and other records compiled during criminal investigations, including supporting documentation. (3) Other records compiled at any stage of the criminal law enforcement process from arrest or indictment through the final release from parole supervision, such as pre-sentence and parole reports. (e) The (j)(2) exemption does not apply to: (1) Investigative records prepared or maintained by activities without primary law-enforcement missions. It may not be claimed by any activity that does not have law enforcement as its principal function except as indicated in paragraph (c) of this section. (2) Investigative records compiled by any activity concerning employee suitability, eligibility, qualification, or for individual access to classified material regardless of the principal mission of the compiling DoD Component. §-310.29 Specific exemptions. (a) Use of specific exemptions. The specific exemption established by 5 U.S.C. 552a(k) of the Privacy Act may be claimed to protect records that meet the following criteria (parenthetical references are to the appropriate subsection of the Act: (1) (k)(1). Information subject to 5 U.S.C. 552(b)(1) , (DoD 5200.1-R) (see also paragraph (c) of this section). (2) (k)(2).

(2) Contractors will establish and apply a graduated scale of administrative and disciplinary actions in the event of employee security violations or negligence in the handling of classified information. CSAs may provide guidance to contractors with examples of administrative or disciplinary actions that the contractor may consider implementing in the event of employee violations or negligence. Contractors are required to submit a final report to the CSA with the findings of an employee's culpability and what corrective actions were taken. (3) Contractors will include a statement of the administrative or disciplinary actions taken against an employee in a final report to the CSA. A statement must be included when the individual responsible for a security

violation can be determined. Contractors' final reports will indicate whether one or more of the following factors are evident: (i) Involved a deliberate disregard of security requirements. (ii) Involved negligence in the handling of classified material. (iii) Was not deliberate in nature but reflects a recent or recurring pattern of questionable judgment, irresponsibility, negligence, or carelessness. (f) CDC cyber incident reports. This paragraph applies only to CDCs and sets forth reporting requirements pursuant to 10 U.S.C. 391 and 393 and Defense Federal Acquisition Regulation Supplement Clause 252.204-7012. The reporting requirements of paragraph (f) of this section are in addition to the requirements in paragraphs (b) and (d) of this section, which can include certain activities occurring on unclassified information systems. DoD will provide detailed reporting instructions for contractors affected by these references via industrial security letter in accordance with DoDI 5220.22. (1) Reports to be submitted to the designated DoD CSO. CDCs will immediately report to the DoD CSO, any cyber incident on a classified covered information system that has been approved by that CSO to process classified information. (i) At a minimum, the report will include: (A) A description of the technique or method used in the cyber incident. (B) A sample of the malicious software involved in the cyber incident, if discovered and isolated by the CDC, (C) A summary of information in connection with any DoD program that has been potentially compromised due to the cyber incident. (ii) Information that is reported by the CDC (or derived from information reported by the CDC) will be safeguarded, used, and disseminated in a manner consistent with DoD procedures governing the handling of such information pursuant to Public Law 112-239 and 10 U.S.C. 391. (iii) Reports involving classified foreign government information will be reported to the Director, Defense Technology Security Administration (DoD). (2) Reports on non-Federal information systems not authorized to process classified information. CDCs will report cyber incidents on non-Federal, unclassified information systems in accordance with contract requirements. (3)

It is the vehicle for disseminating security information that the workforce, including managers, needs to do their jobs. These programs will ensure that personnel at all levels of the organization understand their information security responsibilities to properly use and protect the information resources entrusted to them. Awareness is a blended solution of activities that promotes security, establishes accountability, and informs the workforce of security news. Training strives to produce relevant and needed security knowledge and skills within the workforce. Training supports competency development and helps personnel understand and learn how to perform their security role. Education integrates all of the security skills and competencies of the various functional specialties into a common body of knowledge and adds a multidisciplinary study of concepts, issues, and principles (technological and social). NIST SP 800-50, Building an Information Technology Security Awareness and Training Program | Information Security Governance | The purpose of information security governance is to ensure that agencies are proactively implementing appropriate information security controls to support their mission in a cost-effective manner, while managing evolving information security risks. Information security governance has its own set of requirements, challenges, activities, and types of possible structures. Information security governance also has a defining role in identifying key information security roles and responsibilities, and it influences information security policy development and oversight and ongoing monitoring activities.

Congress gave FDA the discretion to issue regulations regarding the establishment and maintenance of records under section 306 of the Bioterrorism Act. Charitable food establishments, such as food banks, stand in place of the consumer and FDA will treat them as consumers for purposes of this final rule. Therefore, grocery stores, catering facilities, and others giving a charitable donation of food to a food bank, soup kitchen, or other similar charitable entity are not required to keep records of the immediate subsequent recipients of the food, and the charitable food establishment does not need to keep records of the immediate previous sources of that food or the immediate subsequent recipients of that food. FDA has determined that it does not need records of food donated to food banks to address credible threats of serious adverse health consequences or death to humans or animals. In the event of a traceback investigation, FDA believes that it is likely to have the ability to trace the immediate previous source of contaminated food by other means. Unless the source of the contamination is at the food bank itself, other consumers of that same food obtained from a grocery store are likely to identify that grocery store as a link in the chain-of-distribution of the contaminated product. In the case of a trace forward investigation, records will likely exist from the donor of the food to the charitable food establishment. FDA believes that the likelihood of the existence of such records is great given the tax benefits available to the persons donating goods to establishments that are 501(c)(3) establishments under the Internal Revenue Code.

Therefore, FDA does not believe that exempting such charitable entities from these requirements would interfere with the goals of the Bioterrorism Act or subpart J of this final rule. With respect to the ·reclamation centers· mentioned by the comment, FDA understands that most reclamation centers are actually owned by the (printed page 71579) grocery store or grocery chain. Such reclamation centers will be treated as if they are part of the grocery store and must keep the records that must be kept by the grocery store. For instance, if food from the reclamation center is donated to a food bank, the exclusion described previously applies. If food is sold to consumers, the exclusion for foods sold directly to consumers applies. If food is returned to the manufacturer, or sold to another nonconsumer, the reclamation center must keep records of the immediate subsequent recipients of food, to the extent this information is reasonably available.

that the information contained within the financial statements complies with GAAP in all material respects. Therefore, in order to improve the clarity of the final rule, the requirement for compliance with GAAP in order to receive PBPs is now applied to ·the contractor's financial statements· rather than ·the output of the contractor's accounting system· (see 232.1003-70 and 252.232-7015). c. Representation is unnecessary. Comment: One respondent stated that the proposed representation at DFARS 252.232-7015 with regard to compliance with GAAP is unnecessary, since costs incurred have no bearing on the amounts billed under PBPs. Response: The fact that incurred costs no longer have bearing on the amounts billed under PBPs has no relevance to the requirement for representation by the offeror that its financial statements are, or are not, in compliance with GAAP. Section 831, as codified at 10 U.S.C. 2307(b)(4) , requires compliance with GAAP in order to receive performance-based payments. Providing a representation is one of the least burdensome ways to demonstrate compliance with GAAP. 4. Reporting of Incurred Costs Most respondents had objections to the continued requirement for reporting of incurred costs in the clauses at (printed page 19684) DFARS 252.232-7012 and 252.232-7013. a. Requirement for Government-unique accounting system. Comment: One respondent noted that 10 U.S.C. 2307 expressly states that the Secretary of Defense shall ensure that nontraditional defense contractors and other private sector companies are eligible for performance-based payments and that there shall be no requirements for a contractor to develop Government-unique accounting systems or practice as a prerequisite for agreeing to receive PBPs. Some respondents believed that retention of the requirement to report cumulative contract costs incurred to date, as a condition of receiving PBPs, imposes a requirement to develop a Government-unique accounting system, and therefore is inconsistent with 10 U.S.C. 2307(b)(4)(A) , as amended by section 831. For example, one respondent stated that the cost reporting in the proposed rule would require a Government-unique job order cost accounting system to generate FAR- and DFARS-compliant cost reports. Response: The reporting of incurred costs does not require a Government-unique cost accounting system. Systems that identify costs with the projects for which they are incurred (·job costing·, as a broad term) are not at all unique to Government requirements. It would be highly unlikely for a fiscally sound company to have no means of identifying the costs of performing a contract. Furthermore, the rule does not require any particular accounting system; rather, the rule states that ·incurred cost is determined by the Contractor's accounting books and records·. Comment:

DoD considered many alternatives before deciding which NIST SP 800-172 Feb2021 requirements to include as part of CMMC Level 3. NIST SP 800-172 Feb2021 notes that ·There is no expectation that all of the enhanced security requirements will be selected by Federal agencies implementing this guidance·. For a variety of reasons, including DoD's estimation of cybersecurity maturity and complexity across the DIB, and potential cost of certain Level 3 requirements compared with the benefit, the DoD has included a limited set of NIST SP 800-172 Feb2021 requirements. On a contract-by-contract basis, additional requirements may be added. OSAs are at liberty to implement additional requirements. The intent of AC.L3-3.1.2e, which requires restricted access to systems and system components, is not that DIB companies issue laptops to external users wishing to access Level 3 enclaves. While laptop issuance is one solution, other options are available. The important concept in this requirement is ·comply to connect·, and it applies to all users, both within the OSA and externally, equally. In complying with this requirement, GFE may be considered provisioned by the OSC and therefore is not restricted under that requirement. DoD defines the ODPs for NIST SP 800-172 Feb2021 included in CMMC Level 3. This eliminates the risk of different parameters being set for different DoD programs. Rulemaking requirements dictate that table 1 to 170.14(c)(4) be codified in the rule. The Assessment Guide is an optional document. DoD declines to accept the risk of removing security requirement CM.L3-3.4.2e. The Assessment Guide has been updated to include additional discussion on this security requirement. Feedback on individual security requirements

should be direct to NIST. Any relationship to the NIST SP 800-53 R5 controls is for information only. The requirements that must be implemented for CMMC Level 3 are defined in the rule table 1 to § 170.14(c)(4). IA:L3-3.5.3e and CM:L2-3.4.7 are different requirements. The L2 requirement is about functionality, and the L3 requirement is about trust. Feedback on individual security requirements should be direct to NIST. 24. CMMC Annual Affirmation Requirements Comment: One commenter recommended the affirmation statement include a statement confirming the scope has not changed and requested the rule be modified to identify types of changes that would constitute a change of system scope. Another commenter recommended removing any requirement for affirmation after assessment certificate issuance or else revising the rule to identify any benefits the affirmation provides that conducting an independent assessment does not already provide. Another commenter recommended the DoD clarify that out-of-cycle affirmations are not needed.

Personnel investigations and vetting records may contain evaluation material used to determine potential for promotion in the armed services. In some cases, such records may contain information pertaining to the identity of a source who furnished information to the Government under an express promise that the source's identity would be held in confidence (or prior to the effective date of the Privacy Act, under an implied promise). Application of exemption (k)(7) for such records may be necessary because access to, amendment of, or release of the accounting of disclosures of such records could identify these confidential sources who might not have otherwise come forward to assist the Government, hinder the Government's ability to obtain information from future confidential sources, and result in an unwarranted invasion of the privacy of others. Amendment of such records could also impose a highly impracticable administrative burden by requiring investigations to be continuously reinvestigated. (B) Subsections (d)(3) and (4). These subsections are inapplicable to the extent an exemption is claimed from (d)(1) and (2). Moreover, applying the (printed page 14736) amendment appeal procedures toward background investigation and vetting records could impose a highly impracticable administrative burden by requiring investigations to be continuously reinvestigated. (C) Subsection (e)(1). In the collection of information for authorized vetting purposes, it is not always possible to conclusively determine the relevance and necessity of particular information in the early stages of the investigation or adjudication. In some instances, it will be only after the collected information is evaluated in light of other information that its relevance and necessity for effective investigation and adjudication can be assessed. Collection of such information permits more informed decision-making by the Department when making required suitability, eligibility, fitness, and credentialing determinations. Accordingly, application of exemptions (k)(1), (k)(2), (k)(3), (k)(5), (k)(6), and (k)(7) may be necessary. (iv) Exempt records from other systems. In addition, in the course of carrying out personnel vetting, including records checks for continuous vetting, exempt records from other systems of records may in turn become part of the records maintained in this system. To the extent that copies of exempt records from those other systems of records are maintained into this system, the DoD claims the same exemptions for the records from those other systems that are entered into this system, as claimed for the original primary system of which they are a part. § 310.14 Department of the Air Force exemptions. (a) All systems of records maintained by the Department of the Air Force shall be exempt from the requirements of 5 U.S.C. 552a(d) pursuant to 5 U.S.C. 552a(k)(1) to the extent that the system contains any information properly classified under Executive Order 12958

(ii) Upon receipt of changes to the SF 328 from contractors, DSS will assess the changes to determine if they are material; if they require the imposition of new FOCI mitigation or modification of existing FOCI mitigation; or if they warrant the termination of existing FOCI mitigation. DSS will periodically review the definition of material change with regard to FOCI and publish updated guidance as to what constitutes a reportable material change in coordination with OUSD(I) Security Directorate. (13) Limited FCL. (i) A Limited FCL may be an option for a single, narrowly defined purpose when there is foreign ownership or control of a U.S. company. In that respect, a Limited FCL is similar to an LAA for a non-U.S. citizen. Consideration of a Limited FCL includes a DSS determination that the company is under FOCI and that the company is either unable or unwilling to implement FOCI negation or mitigation. A GCA or a foreign government may sponsor a (printed page 19477) Limited FCL consistent with the provisions of paragraphs (b)(13)(iii)(A) through (b)(13)(iii)(D) of this section. (ii) DSS will: (A) Document the requirements of each Limited FCL, including the limitations of access to classified information. (B) Verify a Limited FCL only to the sponsoring GCA or foreign government. (C) Ensure, in accordance with paragraph (b)(7) of this section, that the contractor has and implements a TCP consistent with DoD 5220.22-M.

(D) Process a home office along with a branch or division, when the GCA or foreign government sponsors the branch or division for a Limited FCL and ensure that the limitations of the Limited FCL are applied to the home office as well as the branch or division. (E) Administratively terminate the Limited FCL when the FCL is no longer required. (iii) There are four types of Limited FCLs: (A) A GCA may sponsor a joint venture company established in the United States for the purpose of supporting a cooperative arms program involving DoD. An authorized GCA official, at the PEO level or higher, must certify in writing that the classified information to be provided to the company has been authorized for disclosure to the participating governments in compliance with U.S. National Disclosure Policy NDP-1, 'National Policy and Procedures for the Disclosure of Classified Military Information to Foreign Governments and International Organizations,' (available to designated disclosure authorities on a need-to-know basis from the Office of the Deputy Under Secretary of Defense for Policy Integration and Chief of Staff to the Under Secretary of Defense for Policy). Key management personnel (KMPs) and employees may be citizens of the countries of ownership, if DSS is able to obtain security assurances. The non-U.S. citizens retain their foreign government issued personnel security clearances. The company FSO must be a cleared U.S. citizen as set forth in DoD 5220.22-M.
